Functional Test

Job: Webster ISB	General Notes:
Proj: 1136-16	"F" indicates a field recorded value. Provide c
Cx Agents:	"TP" indicates a test procedure. Insert date M "ER" indicates an expected response. Pass in Fail indicated by # with corresponding keyed
Date:	

Equipment ID:		AHU-1
Location		Mech. Room Central 078
Service		Building Primary Air
Alarms, Safeties and Interlocks		
	Freeze Protection	
TP	Trip the freezestat in the unit	___ / ___ / ___ ___ : ___AM/PM
ER	AHU shuts down	
ER	Freeze alarm indicated on the BAS	
ER	Chilled water valve opens 50%	
ER	Heating water valve opens	
ER	Economizer damper closed	
ER	Heating coil freeze protection pump runs	
TP	Reset the freezestat in the unit	___ / ___ / ___ ___ : ___AM/PM
ER	AHU restarts and resumes normal operation	
ER	Alarm cleared from the BAS	
ER	Supply fan does not pinwheel when starting	
	High/Low Static Pressure	
TP	Trip the low static pressure switch on the return duct section	___ / ___ / ___ ___ : ___AM/PM
ER	AHU shuts down	
ER	Low static pressure alarm indicated on the BAS	
F	Low static trip limit setting at field device (in-wc)	
TP	Reset the low static pressure switch	___ / ___ / ___ ___ : ___AM/PM
ER	AHU restarts and resumes normal operation	
ER	Alarm cleared from the BAS	
ER	Supply fan does not pinwheel when starting	
TP	Trip the high static pressure switch on the supply duct	___ / ___ / ___ ___ : ___AM/PM
ER	AHU shuts down	
ER	High static pressure alarm indicated on the BAS	
F	High static trip limit setting at field device (in-wc)	
TP	Reset the high static pressure switch	___ / ___ / ___ ___ : ___AM/PM
ER	AHU restarts and resumes normal operation	
ER	Alarm cleared from the BAS	
ER	Supply fan does not pinwheel when starting	

Functional Test

	Equipment ID:	AHU-1
	Return Air Smoke Detection	
TP	Trip the return air smoke sensor to generate an alarm	___ / ___ / ___ ___ : ___AM/PM
ER	AHU shuts down	
ER	Return air smoke alarm indicated on the BAS	
TP	Reset the smoke sensor	___ / ___ / ___ ___ : ___AM/PM
ER	AHU restarts and resumes normal operation	
ER	Alarm cleared from the BAS	
ER	Supply fan does not pinwheel when starting	
	Supply Fan Alarms	
TP	Simulate a supply fan failure alarm by commanding the unit ON and override the fan status input to OFF	___ / ___ / ___ ___ : ___AM/PM
F	Fan command	
F	Fan status	
ER	Fan failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the fan OFF and the fan status ON	___ / ___ / ___ ___ : ___AM/PM
F	Fan command	
F	Fan status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a runtime exceeded alarm by changing the user definable runtime limit to a value lower than current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime exceeded alarm indicated on the BAS	
TP	Create a fault/alarm at the VFD	___ / ___ / ___ ___ : ___AM/PM
F	Fan VFD alarm indicated on the BAS	
	Supply Air Static Pressure Alarms	
TP	Simulate a high supply air static pressure alarm (supply air pressure >25% more than the set point)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air static pressure setpoint	
F	Supply air static pressure	
ER	High supply air static pressure alarm indicated on the BAS	
TP	Simulate a low supply air static pressure alarm (supply air pressure >25% less than the set point)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air static pressure setpoint	
F	Supply air static pressure	
ER	Low supply air static pressure alarm indicated on the BAS	

Functional Test

	Equipment ID:	AHU-1
	Supply Air Temperature Alarms	
TP	Simulate a high supply air temperature alarm (SA-T > 5F more than the set point)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature set point	
F	Supply air temperature	
ER	High supply air temperature alarm indicated on the BAS	
TP	Simulate a low supply air temperature alarm (SA-T > 5F less than the set point)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature set point	
F	Supply air temperature	
ER	High supply air temperature alarm indicated on the BAS	
	Heating Coil Pump Alarms	
TP	Simulate a pump failure alarm by commanding the unit ON and override the pump status input to OFF	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Pump failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the pump OFF and the pump status ON.	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	
	Demand Ventilation Alarm	
TP	Simulate a minimum outdoor airflow out of range alarm (>10% away the air flow set point)	___ / ___ / ___ ___ : ___AM/PM
F	Minimum outdoor airflow set point	
F	Actual outdoor airflow	
ER	Demand ventilation alarm indicated on the BAS	

Functional Test

	Equipment ID:	AHU-1
AHU Run Conditions		
	AHU Enabled	
TP	Command the AHU ON	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is enabled	
ER	Supply isolation damper opens	
ER	Return isolation damper opens	
ER	AHU outdoor air damper opens	
ER	Exhaust Fan EF-02 is enabled	
F	Hot water valve position	
F	Chilled water valve position	
F	Supply fan speed set point	
F	Supply fan speed	
F	Duct static pressure set point	
F	Actual duct static pressure	
ER	Supply fan modulates to maintain static pressure of X.X"	
	AHU Disabled	
TP	Command the AHU OFF	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is disabled	
ER	Supply isolation damper closed	
ER	Return isolation damper closed	
ER	AHU outdoor air damper closed	
ER	Exhaust Fan EF-02 is disabled	
ER	Hot water valve closes	
ER	Chilled water valve closes	
ER	Economizer Closed	
Supply Air Temperature Control		
	Setpoint Reset	
TP	Set the outside air temperature above 55F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Supply air temperature setpoint	
F	Supply air temperature	
ER	Supply air temperature setpoint incrementally resets to 52F	
ER	Unit maintains the supply air temperature setpoint	

Functional Test

	Equipment ID:	AHU-1
TP	Set the outside air temperature between 45F and 55F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Supply air temperature setpoint	
F	Supply air temperature	
ER	Supply air temperature setpoint reset to 55F	
ER	Unit maintains the supply air temperature setpoint	
TP	Set the outside air temperature below 45F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Supply air temperature setpoint	
F	Supply air temperature	
ER	Supply air temperature setpoint incrementally resets to 60F	
ER	Unit maintains the supply air temperature setpoint	
TP	Simulate the return air relative humidity above 60% at 75F	___ / ___ / ___ ___ : ___AM/PM
F	Return air relative humidity	
F	Supply air temperature setpoint	
F	Supply air temperature	
ER	Supply air temperature setpoint incrementally resets to 52F	
ER	Unit maintains the supply air temperature setpoint	
	Cooling Mode	
TP	Enable the cooling coil by simulating the outside air temperature being greater than 60F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Economizer is disabled or fully open	
ER	Supply fan status is ON	
ER	Heating valve is closed	
ER	Chilled water valve is open to maintain discharge air temperature	
TP	Disable the cooling coil by simulating an outsider air temperature less than 60F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Chilled water valve is closed	

Functional Test

	Equipment ID:	AHU-1
	Heating Mode	
TP	Enable the heating coil by simulating the outside air temperature less than 65F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Heating water valve position	
ER	Supply fan status is ON	
ER	Chilled water valve is closed	
ER	Heating water valve is open to maintain discharge air temperature	
TP	Simulate the outside air temperature less than 38F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Heating water valve position	
ER	Heating coil freeze prevention pump enabled	
Economizer		
	Enabled	
TP	Simulate an outside air temperature less than 65F and verify that it is less than the return air temperature	___ / ___ / ___ ___ : ___AM/PM
TP	Simulate the outside air enthalpy is less than 22 BTU/lb. and verify that it is less than the return air enthalpy	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Return air temperature	
F	Outside air enthalpy	
F	Return air enthalpy	
ER	Supply fan status is ON	
ER	Economizer is enabled	
ER	Outside air damper maintains a minimum position of 20%	
ER	Economizer dampers are modulating to maintain a setpoint of 2F less than the supply air temperature setpoint	
ER	Heat recovery bypass damper open	
	Disabled	
TP	Simulate an outside air temperature above 65F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
ER	Economizer is disabled	
TP	Enable the Economizer by making sure all the necessary parameters are simulated	___ / ___ / ___ ___ : ___AM/PM
ER	Economizer is enabled	
TP	Simulate an outside air temperature less than 65F	___ / ___ / ___ ___ : ___AM/PM
TP	Simulate the outside air temperature being greater than the return air temperature	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
ER	Economizer is disabled	

Functional Test

Equipment ID:		AHU-1
Demand Ventilation Optimization		
	Outside Airflow Setpoint	
TP	Confirm the minimum outside airflow values for the outside air damper	___ / ___ / ___ ___ : ___AM/PM
F	Occupied minimum outside airflow setpoint	
F	Unoccupied minimum outside airflow setpoint	
F	Unoccupied exhaust airflow	
ER	The occupied minimum outside airflow setpoint will not drop below 20,000 CFM	
ER	The unoccupied minimum outside airflow setpoint will not drop below 15,000 CFM	
ER	The unoccupied minimum outside airflow setpoint is equal to the exhaust airflow plus 2,000 CFM

		Supply Fan 1 Command	Supply Fan 2 Command	Heating Coil Pump Command	Preheat Output	Cooling Output	Supply Fan 1 Output	Supply Fan 2 Output
Alarms, Interlocks, and Safeties								
	Verify AHU shut down for duct detection of smoke							
TP	Very supply duct detector will shut down the AHU when tripped							
ER	AHU shuts down							
TP	Verify return duct detectro will shut down the AHU when tripped							
ER	AHU shuts downs							
	AHU Safeties: Shut down & Alarm at FMCS							
TP	Trip the low static pressure switch on the return duct section							
ER	AHU shuts down							
ER	R-A low static pressure alarm at the FMCS							
TP	Trip the low static pressure switch at the M-A section							
ER	AHU shuts down							
ER	M-A low static pressure alarm at the FMCS							
TP	Trip the high static pressure switch on the supply duct							
ER	AHU shuts down							
ER	High static pressure alarm at the FMCS							
TP	Trip the freeze stat							
ER	AHU shuts down							
ER	Freeze stat alarm at the FMCS							
	AHU Contiued operation & Alarm at FMCS							
TP	Simulate insufficient current flow with the heating coil circulation pump commanded to run							
ER	AHU continues to run							
ER	Current flow alarm indicated at the FMCS							
TP	Create an alarm condition at any supply fan VFD							
ER	AHU continues to run							
ER	VFD alarm indicated at the FMCS							
TP	Simulate DA-T 5F above setpoint							
ER	AHU continues to run							
ER	DA-T alarm indicated at the FMCS							
TP	Simulate DA-T 5F below setpoint							
ER	AHU continues to run							
ER	DA-T alarm indicated at the FMCS							
AHU Shutdown								
	Objective: Verify response of equipment to AHU shutdown							
TP	Shut down the AHU							
ER	Isolation dampers 100% closed							
ER	HC HWP and HW control valve shall remain under control of its input sensor							
ER	All smoke dampers 100% closed							
ER	All combination fire/smoke dampers 100% closed							
ER	ChW valve 100% closed							
ER	Supply fan VFDs off							
Graphic Display								
TP	Verify that the graphic displays the Global OA-T and Humidity							
F	Record the OA-T							
F	Record the Humidity							
TP	Verify that the OA-T is equal to the the difference between the Supply Air Temperature and Return Air Temperature.							
AHU Indexed to Run								
	Objective: Verify response of equipment to AHU enabled							
TP	Index the AHU to run							
ER	Supply fan VFDs ON							
ER	VFD goes to 22% until isolation dampers proves open							
ER	Isolation dampers opened							
ER	Supply fan enabled to ramp past minimum speed							
ER	Supply fan modulates to maintain static pressure of 1.5"							
	Discharge Air Temperature Setpoint							
TP	Verify the DA-T setpoint is at 55F							
TP	Simulate OA-T above 60F							
ER	DA-T setpoint resets to 55F							
TP	Simulate OA-T below 50F							
ER	DA-T setpoint resets to 60F							
	Ventilation							
TP	Verify that the OA intake is fully open							
TP	Verify that the return air damper modulates to maintain building pressure at +.01							
	Cooling Coil Operation							
TP	Simulate a call for cooling

F	Pump command	
F	Pump status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	

	Equipment ID:	AHU-3
AHU Run Conditions		
	AHU Enabled	
TP	Command the AHU ON	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is enabled with the lead AHU	
ER	Lag AHU is off	
ER	Supply isolation damper opens	
ER	Outside air isolation damper opens	
F	Hot water valve position	
F	Chilled water valve position	
F	Supply fan speed set point	
F	Supply fan speed	
F	Record duct static pressure set point	
F	Record actual duct static pressure	
ER	Supply fan modulates to maintain static pressure of X.X"	
	AHU Disabled	
TP	Command the AHU OFF	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is disabled	
ER	Supply isolation damper closed	
ER	Outside air isolation damper closed	
ER	Hot water valve closes	
ER	Chilled water valve closes	
AHU Lead/Lag Operation		
	Lead AHU failure	
F	Indicate the lead AHU	
F	Indicate the lag AHU	
TP	Simulate an AHU failure at the lead AHU	___ / ___ / ___ ___ : ___AM/PM
F	Lead AHU / Lag AHU	
ER	After the lead AHU stops the lag AHU begins to run	
	Lead/Lag AHU Designation	
TP	Indicate was method is used to rotate the designated lead AHU	___ / ___ / ___ ___ : ___AM/PM
F	Method used to rotate lead AHU	

	Equipment ID:	AHU-3
	Supply Air Duct Static Pressure Control	
	Minimum Speed Requirements	
TP	Verify that the supply fan VFD minimum speed does not drop below 15%	___ / ___ / ___ ___ : ___AM/PM
F	Supply fan VFD minimum speed (%)	
ER	Supply fan VFD minimum speed does not drop below 15%	
	Duct Static Pressure Maintained	
TP	Verify that the supply fan VFD speed is able to maintain the fixed duct static pressure set point	___ / ___ / ___ ___ : ___AM/PM
F	Supply duct static pressure setpoint	
F	Supply duct static pressure	
F	Supply fan speed set point	
F	Supply fan speed	
ER	Supply fan VFD correctly modulates to maintain the fixed duct static pressure set point	
	Supply Air Temperature Control	
	Constant	
TP	Confirm the supply air temperature set point is a constant value	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature setpoint at constant value	
ER	Supply air temperature setpoint at constant value	
	Cooling Mode	
TP	Enable the cooling coil by simulating the outside air temperature being greater than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Economizer is disabled or fully open	
ER	Supply fan status is ON	
ER	Heating valve is closed	
ER	Chilled water valve is open to maintain discharge air temperature	
TP	Disable the cooling coil by simulating an outsider air temperature less than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Chilled water valve is closed	
	Heating Mode	
TP	Enable the heating coil by simulating the outside air temperature less than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Heating water valve position	
ER	Supply fan status is ON	
ER	Chilled water valve is closed	
ER	Heating water valve is open to maintain discharge air temperature	
TP	Simulate the outside air temperature less than 38F	___ / ___ / ___ ___ : ___AM/PM

Functional Test

	Equipment ID:	AHU-3
F	Outside air temperature	
F	Heating water valve position	
ER	Heating coil freeze prevention pump enabled	
DX Cooling System		
	Enabled	
TP	Enable the condensing units by simulating the campus chilled water system failing	___ / ___ / ___ ___ : ___AM/PM
F	Discharge air temperature set point	
F	Discharge air temperature	
ER	Condensing units enabled	
ER	Condensing units control the discharge air temperature	
	Disabled	
TP	Confirm the DX cooling system is disabled when the chilled water system is able to maintain the discharge air temperature	___ / ___ / ___ ___ : ___AM/PM
F	Discharge air temperature set point	
F	Discharge air temperature	
F	Chilled water temperature	
ER	DX cooling system is disabled

	Heating Coil Pump Alarms	
TP	Simulate a pump failure alarm by commanding the unit ON and override the pump status input to OFF	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Pump failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the pump OFF and the pump status ON.	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	

	Equipment ID:	AHU-4
AHU Run Conditions		
	AHU Enabled	
TP	Command the AHU ON	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is enabled with the lead AHU	
ER	Lag AHU is off	
ER	Supply isolation damper opens	
ER	Outside air isolation damper opens	
F	Hot water valve position	
F	Chilled water valve position	
F	Supply fan speed set point	
F	Supply fan speed	
F	Record duct static pressure set point	
F	Record actual duct static pressure	
ER	Supply fan modulates to maintain static pressure of X.X"	
	AHU Disabled	
TP	Command the AHU OFF	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is disabled	
ER	Supply isolation damper closed	
ER	Outside air isolation damper closed	
ER	Hot water valve closes	
ER	Chilled water valve closes	
AHU Lead/Lag Operation		
	Lead AHU failure	
F	Indicate the lead AHU	
F	Indicate the lag AHU	
TP	Simulate an AHU failure at the lead AHU	___ / ___ / ___ ___ : ___AM/PM
F	Lead AHU / Lag AHU	
ER	After the lead AHU stops the lag AHU begins to run	
	Lead/Lag AHU Designation	
TP	Indicate was method is used to rotate the designated lead AHU	___ / ___ / ___ ___ : ___AM/PM
F	Method used to rotate lead AHU	

	Equipment ID:	AHU-4
	Supply Air Duct Static Pressure Control	
	Minimum Speed Requirements	
TP	Verify that the supply fan VFD minimum speed does not drop below 15%	___ / ___ / ___ ___ : ___AM/PM
F	Supply fan VFD minimum speed (%)	
ER	Supply fan VFD minimum speed does not drop below 15%	
	Duct Static Pressure Maintained	
TP	Verify that the supply fan VFD speed is able to maintain the fixed duct static pressure set point	___ / ___ / ___ ___ : ___AM/PM
F	Supply duct static pressure setpoint	
F	Supply duct static pressure	
F	Supply fan speed set point	
F	Supply fan speed	
ER	Supply fan VFD correctly modulates to maintain the fixed duct static pressure set point	
	Supply Air Temperature Control	
	Constant	
TP	Confirm the supply air temperature set point is a constant value	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature setpoint at constant value	
ER	Supply air temperature setpoint at constant value	
	Cooling Mode	
TP	Enable the cooling coil by simulating the outside air temperature being greater than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Economizer is disabled or fully open	
ER	Supply fan status is ON	
ER	Heating valve is closed	
ER	Chilled water valve is open to maintain discharge air temperature	
TP	Disable the cooling coil by simulating an outsider air temperature less than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Chilled water valve position	
ER	Chilled water valve is closed	
	Heating Mode	
TP	Enable the heating coil by simulating the outside air temperature less than 50F	___ / ___ / ___ ___ : ___AM/PM
F	Outside air temperature	
F	Heating water valve position	
ER	Supply fan status is ON	
ER	Chilled water valve is closed	
ER	Heating water valve is open to maintain discharge air temperature	
TP	Simulate the outside air temperature less than 38F	___ / ___ / ___ ___ : ___AM/PM

Functional Test

	Equipment ID:	AHU-4
F	Outside air temperature	
F	Heating water valve position	
ER	Heating coil freeze prevention pump enabled	
DX Cooling System		
	Enabled	
TP	Enable the condensing units by simulating the campus chilled water system failing	___ / ___ / ___ ___ : ___AM/PM
F	Discharge air temperature set point	
F	Discharge air temperature	
ER	Condensing units enabled	
ER	Condensing units control the discharge air temperature	
	Disabled	
TP	Confirm the DX cooling system is disabled when the chilled water system is able to maintain the discharge air temperature	___ / ___ / ___ ___ : ___AM/PM
F	Discharge air temperature set point	
F	Discharge air temperature	
F	Chilled water temperature	
ER	DX cooling system is disabled

		Supply Fan 1 Command	Supply Fan 2 Command	Heating Coil Pump Command	Preheat Output	Cooling Output	Supply Fan 1 Output	Supply Fan 2 Output
Alarms, Interlocks, and Safeties								
	Verify AHU shut down for duct detection of smoke							
TP	Very supply duct detector will shut down the AHU when tripped							
ER	AHU shuts down							
TP	Verify return duct detectro will shut down the AHU when tripped							
ER	AHU shuts downs							
	AHU Safeties: Shut down & Alarm at FMCS							
TP	Trip the low static pressure switch on the return duct section							
ER	AHU shuts down							
ER	R-A low static pressure alarm at the FMCS							
TP	Trip the low static pressure switch at the M-A section							
ER	AHU shuts down							
ER	M-A low static pressure alarm at the FMCS							
TP	Trip the high static pressure switch on the supply duct							
ER	AHU shuts down							
ER	High static pressure alarm at the FMCS							
TP	Trip the freeze stat							
ER	AHU shuts down							
ER	Freeze stat alarm at the FMCS							
	AHU Contiued operation & Alarm at FMCS							
TP	Simulate insufficient current flow with the heating coil circulation pump commanded to run							
ER	AHU continues to run							
ER	Current flow alarm indicated at the FMCS							
TP	Create an alarm condition at any supply fan VFD							
ER	AHU continues to run							
ER	VFD alarm indicated at the FMCS							
TP	Simulate DA-T 5F above setpoint							
ER	AHU continues to run							
ER	DA-T alarm indicated at the FMCS							
TP	Simulate DA-T 5F below setpoint							
ER	AHU continues to run							
ER	DA-T alarm indicated at the FMCS							
AHU Shutdown								
	Objective: Verify response of equipment to AHU shutdown							
TP	Shut down the AHU							
ER	Isolation dampers 100% closed							
ER	HC HWP and HW control valve shall remain under control of its input sensor							
ER	All smoke dampers 100% closed							
ER	All combination fire/smoke dampers 100% closed							
ER	ChW valve 100% closed							
ER	Supply fan VFDs off							
Graphic Display								
TP	Verify that the graphic displays the Global OA-T and Humidity							
F	Record the OA-T							
F	Record the Humidity							
TP	Verify that the OA-T is equal to the the difference between the Supply Air Temperature and Return Air Temperature.							
AHU Indexed to Run								
	Objective: Verify response of equipment to AHU enabled							
TP	Index the AHU to run							
ER	Supply fan VFDs ON							
ER	VFD goes to 22% until isolation dampers proves open							
ER	Isolation dampers opened							
ER	Supply fan enabled to ramp past minimum speed							
ER	Supply fan modulates to maintain static pressure of 1.5"							
	Discharge Air Temperature Setpoint							
TP	Verify the DA-T setpoint is at 55F							
TP	Simulate OA-T above 60F							
ER	DA-T setpoint resets to 55F							
TP	Simulate OA-T below 50F							
ER	DA-T setpoint resets to 60F							
	Ventilation							
TP	Verify that the OA intake is fully open							
TP	Verify that the return air damper modulates to maintain building pressure at +.01							
	Cooling Coil Operation							
TP	Simulate a call for cooling

ER	Runtime exceeded alarm indicated on the BAS	
TP	Create a fault/alarm at the VFD	___ / ___ / ___ ___ : ___AM/PM
F	Fan VFD alarm indicated on the BAS	
	Heating Coil Pump Alarms	
TP	Simulate a pump failure alarm by commanding the unit ON and override the pump status input to OFF	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Pump failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the pump OFF and the pump status ON.	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	

Functional Test

	Equipment ID:	AHU-5
AHU Run Conditions		
	AHU Enabled	
TP	Command the AHU ON	___ / ___ / ___ ___ : ___AM/PM
ER	Supply fan runs continuously	
F	Chilled water valve position	
F	Supply fan speed	
F	Space temperature set point	
F	Space temperature	
ER	Supply fan maintains temperature set point	
	AHU Disabled	
TP	Command the AHU OFF	___ / ___ / ___ ___ : ___AM/PM
ER	Supply Fan is disabled	
ER	Chilled water valve closes	
Supply Air Temperature Control		
TP	Confirm the supply air temperature set point is a constant value (60F adj.)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature setpoint	
ER	Supply air temperature setpoint at constant value	
TP	Override the supply air temperature so that it is above the supply air temperature set point (>5F)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature setpoint	
F	Supply air temperature	
F	Chilled water valve position	
ER	Chilled water valve opens in order to maintain the supply air temperature set point	
ER	Chilled water circulating pump is enabled	
TP	Override the supply air temperature so that it is below the supply air temperature set point (>5F)	___ / ___ / ___ ___ : ___AM/PM
F	Supply air temperature setpoint	
F	Supply air temperature	
F	Chilled water valve position	
ER	Chilled water valve closed	
ER	Chilled water circulating pump is disabled	

Functional Test

	Equipment ID:	AHU-5
Temperature Control		
	Setpoint Maintained	
TP	Simulate the zone temperature being equal to the zone temperature set point	___ / ___ / ___ ___ : ___AM/PM
F	Space temperature	
F	Space temperature setpoint	
F	Supply fan speed	
F	Supply fan speed set point	
ER	Supply fan modulates to maintain space temperature setpoint	
ER	Unit maintains supply air temperature set point	
	Cooling Call	
TP	Simulate the zone temperature above the zone temperature set point	___ / ___ / ___ ___ : ___AM/PM
F	Space temperature	
F	Space temperature setpoint	
F	Supply fan speed	
F	Supply fan speed set point	
ER	Supply fan speed increases to maintain space temperature setpoint	
ER	Unit maintains supply air temperature set point	
	Heating Call	
TP	Simulate the zone temperature below the zone temperature set point	___ / ___ / ___ ___ : ___AM/PM
F	Space temperature	
F	Space temperature setpoint	
F	Supply fan speed

	Pump Alarms	
TP	Simulate a pump failure alarm by commanding the unit ON and overriding the status OFF	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Pump failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the pump OFF and the pump status ON.	___ / ___ / ___ ___ : ___AM/PM
F	Pump command	
F	Pump status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than the current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	
TP	Create a fault at the VFD	___ / ___ / ___ ___ : ___AM/PM
ER	VFD fault alarm indicated on the BAS.	
	Heat Recovery Loop Temperature Alarm	
TP	Simulate a heat recovery loop return to exhaust coil temperature alarm by having the heating water supply temperature less than 34F.	___ / ___ / ___ ___ : ___AM/PM
ER	Heat recovery loop alarm indicated on the BAS	
	Heat Recovery Pump Operation	
	Enabled/Disabled	
TP	Verify that AHU-1 and/or AHU-2 are operating	___ / ___ / ___ ___ : ___AM/PM
TP	Verify that outside air temperature is less than 55F or greater than 75F	___ / ___ / ___ ___ : ___AM/PM
F	Indicate which pump is the lead	
F	Indicate which pump is the lag	
ER	Heat recovery pump system enabled	

Equipment ID:		Heat Recovery System
TP	Shut off AHU-1 and AHU-2	___ / ___ / ___ ___ : ___AM/PM
ER	Heat recovery pump system disabled	
TP	Restart AHU-1 and/or AHU-2	___ / ___ / ___ ___ : ___AM/PM
ER	Heat recovery pump system enabled	
TP	Simulate the outside air temperature being between 55F and 75F	___ / ___ / ___ ___ : ___AM/PM
ER	Heat recovery pump system disabled	
TP	Simulate the outside air temperature being outside of the range 55F to 75F	___ / ___ / ___ ___ : ___AM/PM
ER	Heat recovery pump system enabled	
	Lead/Lag Operation	
F	Indicate which pump is the lead	
F	Indicate which pump is the lag	
TP	Simulate a pump failure at the lead pump	___ / ___ / ___ : ___AM/PM
ER	After the lead pump stops the lag pump begins to run	
	Lead/Lag Pump Designation	
TP	Indicate was method is used to rotate the designated lead pump	___ / ___ / ___ ___ : ___AM/PM
ER	Method used to rotate lead pump	
AHU 3-way Control Valve **Maintain HR Return Temp to Exhaust Coil**		
TP	Verify that the AHU-1 & AHU-2 3 way-valve modulates to maintain set point above 38F	___ / ___ / ___ ___ : ___AM/PM
F	Heat recovery loop return temperature	
F	AHU-1 3-way valve position	
F	AHU-2 3-way valve position	
ER	Valves modulates to maintain set point above 38F	

Equipment ID:	Heat Recovery System

Equipment ID:		Heating Water System
Location		HWP in Basement Mech, Boilers in 1st floor Mech
Service		Building Hot Water
Alarms, Safeties, and Interlocks		
	Boiler Alarms	
TP	Simulate a general boiler alarm at the boiler	__/__/__ __:__ AM/PM
F	Record what boiler alarm condition is simulated	
ER	Boiler alarm indicated on the BAS	
TP	Simulate a low water flow through the boiler	__/__/__ __:__ AM/PM
ER	Low water flow alarm indicated on the BAS	
	Heating Water Supply Temperature Alarms	
TP	Simulate a high heating water supply temperature (>160F)	__/__/__ __:__ AM/PM
ER	High heating water supply temperature alarm indicated on the BAS	
TP	Simulate a low heating water supply temperature (<70F)	__/__/__ __:__ AM/PM
ER	Low heating water supply temperature alarm indicated on the BAS	
	Heating Water Pump Alarms	
TP	Simulate a Heating Water Pump failure alarm by commanding the Heating Water Pump ON and overriding the status to OFF	__/__/__ __:__ AM/PM
F	Heating Water Pump command	
F	Heating Water Pump Status	
ER	Heating Water Pump Failure alarm indicated on the BAS	
TP	Simulate a running in hand alarm by commanding the Heating Water Pump OFF and the Heating Water Pump status ON	__/__/__ __:__ AM/PM
F	Heating Water Pump command	
F	Heating Water Pump Status	
ER	Running in hand alarm indicated on the BAS	
TP	Simulate a Runtime Exceeded alarm by changing the user definable runtime limit to a value lower than the current runtime	___ / ___ / ___ ___ : ___AM/PM
F	Status runtime	
F	Status runtime limit	
ER	Runtime Exceed alarm indicated on the BAS	
TP	Create an alarm at the pump VFD	__/__/__ __:__ AM/PM
ER	VFD alarm indicated on the BAS	

Functional Test

	Equipment ID:	Heating Water System
	Heating Water Differential Pressure Alarms	
TP	Simulate a high heating water supply differential pressure (supply differential pressure >25% more than the set point)	__/__/__ __:__ AM/PM
F	Differential Pressure setpoint	
F	Actual differential pressure	
ER	High heating water differential pressure alarm indicated on the BAS	
TP	Simulate a low heating water supply differential pressure (supply differential pressure >25% less than the set point)	__/__/__ __:__ AM/PM
F	Differential Pressure setpoint	
F	Actual differential pressure	
ER	Low heating water supply temperature alarm indicated on the BAS	
	Heating Water Loop Temperature Monitoring Alarms	
TP	Simulate a high heating water loop supply temperature (>160F)	__/__/__ __:__ AM/PM
ER	High heating water supply temperature alarm indicated on the BAS	
TP	Simulate a low heating water loop supply temperature (<60F)	__/__/__ __:__ AM/PM
ER	Low heating water supply temperature alarm indicated on the BAS	
Boiler System Operation	**Run Conditions**	
TP	Verify that the boilers are operating in occupied mode	__/__/__ __:__ AM/PM
F	Record the boiler schedule	
F	Record the boiler output	
ER	Boilers enabled	
TP	Disable the boilers at the disconnect switch	__/__/__ __:__ AM/PM
ER	Boiler disabled	

Functional Test

	Equipment ID:	Heating Water System
	Cascade Controls	
F	Indicate which boiler is the lead	
F	Indicate which boiler is the lag	
TP	Simulate the heating water supply temperature set point being equal to the heating water supply temperature	__/__/__ __:__ AM/PM
F	Heating water supply temperature set point	
F	Heating water supply temperature	
TP	Verify that only one boiler is currently in operation to maintain heating water supply temperature set point	__/__/__ __:__ AM/PM
TP	Simulate the heating water supply temperature being less than the set point until the lag boiler turns on	
F	Heating water supply temperature set point	
F	Heating water supply temperature	
ER	Lag boiler stages on	
ER	Lead and lag boiler run in unison to maintain the heating water temperature set point	
TP	Verify that both boilers are in operation	__/__/__ __:__ AM/PM
TP	Simulate the heating water supply temperature being more than the set point until the lag boiler stages off	
ER	Lag boiler stages off	
ER	Lead boiler remains on to maintain temperature set point	
	Cascade Control - Lead/Lag Boiler Designation	
TP	Indicate was method is used to rotate the designated lead boiler	__/__/__ __:__ AM/PM
ER	Method used to rotate lead boiler	
	Boiler Heating Water Temperature Reset	
TP	Simulate an OA-T <0F	__/__/__ __:__ AM/PM
F	Outside air temperature	
F	Heating water supply temperature set point	
ER	Set point modulates to 140F	
TP	Simulate an OA-T >60F	__/__/__ __:__ AM/PM
F	Outside air temperature	
F	Heating water supply temperature set point	
ER	Set point modulates to 90F	
Heating Water Pump Operation		
	Run Conditions	
TP	Verify the pumps are enabled in occupied mode	__/__/__ __:__ AM/PM
F	Record the number of heating water valves open in the building	
F	Record the pump speed	
ER	Pump enabled	

Functional Test

	Equipment ID:	Heating Water System
TP	Disable the pumps from the disconnect switch	__/__/__ __:__ AM/PM
ER	Pump disabled	
	Freeze Protection	
TP	Confirm that the pumps will run for freeze protection by simulating an outside air temperature less than 38F	__/__/__ __:__ AM/PM
F	Outside air temperature	
ER	Pumps enabled	
	Lead/Lag Operation	
F	Indicate which pump is the lead	
F	Indicate which pump is the lag	
TP	Simulate a pump failure at the lead pump	__/__/__ __:__ AM/PM
ER	After the lead pump stops the lag pump begins to run	
	Lead/Lag Pump Designation	
TP	Indicate what method is used to rotate the designated lead pump	__/__/__ __:__ AM/PM
ER	Method used to rotate lead pump	
	Heating Water Differential Pressure Control	
TP	Simulate the heating water differential pressure set point being equal to the heating water differential pressure	__/__/__ __:__ AM/PM
F	Pump speed set point	
F	Pump speed	
F	Heating water differential pressure	
F	Heating water differential pressure set point	
ER	Pump is able to maintain set point	
TP	Verify that only one pump is in operation	__/__/__ __:__ AM/PM
TP	Increase the heating water differential pressure set point in order to bring on the additional pump	__/__/__ __:__ AM/PM
F	Lead pump	
F	Lag pump	
F	Pump speed	
F	Heating water differential pressure	
F	Heating water differential pressure set point	
ER	Lag pump is enabled once the VFD speed for the lead pump reaches 90%	
ER	Lead and lag pump run in unison to maintain differential pressure set point	

Functional Test

Equipment ID:		Heating Water System
TP	Verify that both pumps are in operation	__/__/__ __:__ AM/PM
TP	Decrease the heating water differential pressure set point in order to have the lag pump stage off	__/__/__ __:__ AM/PM
F	Lead pump	
F	Lag pump	
F	Pump speed	
F	Heating water differential pressure	
F	Heating water differential pressure set point	
ER	Lag pump is disabled when the VFD speeds drop down to 60%	
ER	Lead pump runs to maintain pressure set point on its own	
Heating Water Loop / Cross Connection Valves		
TP	Verify that the heating water loop temperatures and the EAB cross connection valves are monitored on the BAS	__/__/__ __:__ AM/PM
F	Heating water loop supply temperature	
F	Heating water loop return temperature	
F	Cross connection valve position	
ER	All points are included on the BAS

C. Installation Checks

Pumps

Unit is free of visible damage.						
Permanent nameplate affixed to unit.						
Unit is accessible for routine maintenance.						
Unit anchored to resist movement.						
Motor and pump alignment complete.						
Bearing protective cover installed.						

Piping

No apparent leakage at flanges/fittings.						
Piping is insulated.						
Piping is supported independently of equipment allowing routine maintenance.						

Hydronic Specialies

Valves installed in the correct direction with respect to flow.						
P/T ports provided.						
Flow direction of pump is correct.						

Controls

Control wiring complete.						

Electrical

Motor Volts / Phases / Amps	Submitted Data	460 / 3 / 60	460 / 3 / 60	115 / 1 / 60	115 / 1 / 60

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

Installed Location:							

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

Installation Checklist
A. Application Data

Equipment ID:	AHU-1	AHU-2	
Area Served:	Building Primary Air	Building Primary Air	
Location:	Level 0 - Mechanical Room	Level 0 - Mechanical Room	

B. Model Data

1-Manufacturer	Submitted Data	Daikin	Daikin	
	Actual			
2-Model Number	Submitted Data	CAH068GDHM	CAH068GDHM	
	Actual			
3-Serial Number	Actual			

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data	1718	1718	
	Actual			
2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data	460 / 60 / 3	460 / 60 / 3	
	Actual			

Pre-Functional Checklist

Equipment ID:		AHU-1	AHU-2	
D. Install Checks				
General Installation				
Unit is free of visible damage				
Permanent nameplate affixed to unit				
Unit is accessible for routine maintenance				
Access doors open opposite of static pressure				
Access doors can be fully opened and closed.				
Doors and penetrations in unit are sealed				
Filters installed				
Permanent electrical service is available				
Light fixtures and switches have been installed in unit				
Unit is installed level.				
Unit is securely anchored / mounted.				
Ductwork				
Pre-filter MERV rating	Submitted Data	MERV 8	MERV 8	
	Actual			
Filter MERV rating	Submitted Data	MERV 14	MERV 14	
	Actual			
Ductwork is clean, free of debris and flow restrictions				
Ductwork connected and clean				
Ductwork seams sealed				
Supply ductwork is insulated				
Mixed air duct insulated.				
Duct smoke detector installed				
No air bypassing around filters				

Pre-Functional Checklist

Equipment ID:		AHU-1	AHU-2	
Controls				
Control wiring complete				
Electrical				
Conduit is supported				
Power disconnects labeled and installed				
Grounding installed for unit and unit components				
Heat Recovery Coil				
HR Water Valve (2-Way or 3-Way)	Submitted Data	3-Way	3-Way	
	Actual			
Piping is supported independently at coil				
Pipes insulated.				
Access provided to coil				
Coil is clean with no damage to fins				
Manual air vents, Manual valves, and Thermometers all installed.				
All valves and strainers installed in the correct flow direction				
Manual valves fully open and close				
Hydronic components checked for leaks				
No air bypassing around the heat recovery coil				

Pre-Functional Checklist

Equipment ID:		AHU-1	AHU-2	
Cooling Coil				
Chilled Water Valve (2-Way or 3-Way)	Submitted Data Data	2-Way	2-Way	
	Actual			
Piping is supported independently at coil				
Pipes insulated.				
Access provided to coil				
Coil is clean with no damage to fins				
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed				
All valves and strainers installed in the correct flow direction				
Manual valves fully open and close				
Hydronic components checked for leaks				
Drain installed				
Condensate drain functions and is connected to drain with a vacuum break				
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear foot				
Condensate drain functions at full speed of fan				
No condensate carryover from coil				
P-Trap installed with correct height				
No air bypassing the cooling coil				
Heating Coil				
Hot Water Valve (2-Way or 3-Way)	Submitted Data	2-Way	2-Way	
	Actual			
Piping is supported independently at coil				
Pipes insulated.				
Access provided to coil				
Coil is clean with no damage to fins				
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed				
All valves and strainers installed in the correct flow direction				
Hydronic components checked for leaks				
No air bypassing the heating coil				

Pre-Functional Checklist

Equipment ID:	AHU-1	AHU-2	
E: Supply Fan			
Vibration Isolation Installed			
Fan rotates in the proper direction			
No unusual noise or vibration during operation			
VFD programmed and functions properly

HR Water Valve (2-Way or 3-Way) — Submitted Data							
HR Water Valve (2-Way or 3-Way) — Actual							
Piping is supported independently at coil							
Pipes insulated.							
Access provided to coil							
Coil is clean with no damage to fins							
Manual air vents, Manual valves, and Thermometers all installed.							
All valves and strainers installed in the correct flow direction							
Manual valves fully open and close							
Hydronic components checked for leaks							
No air bypassing around the heat recovery coil							

Pre-Functional Checklist

Equipment ID:		TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34	TAG-35
Cooling Coil								
Chilled Water Valve (2-Way or 3-Way)	Submitted Data Data							
	Actual							
Piping is supported independently at coil								
Pipes insulated.								
Access provided to coil								
Coil is clean with no damage to fins								
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed								
All valves and strainers installed in the correct flow direction								
Manual valves fully open and close								
Hydronic components checked for leaks								
Drain installed								
Condensate drain functions and is connected to drain with a vacuum break								
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear foot								
Condensate drain functions at full speed of fan								
No condensate carryover from coil								
P-Trap installed with correct height								
No air bypassing the cooling coil								

Heating Coil								
Hot Water Valve (2-Way or 3-Way)	Submitted Data							
	Actual							
Piping is supported independently at coil								
Pipes insulated.								
Access provided to coil								
Coil is clean with no damage to fins								
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed								
All valves and strainers installed in the correct flow direction								
Hydronic components checked for leaks								
No air bypassing the heating coil								

Pre-Functional Checklist

Equipment ID:	TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34	TAG-35
E: Supply Fan							
Vibration Isolation Installed							
Fan rotates in the proper direction							
No unusual noise or vibration during operation							
VFD programmed and functions properly

Area Served:							
Location:							

B. Model Data

1-Manufacturer	Submitted Data							
	Actual							
2-Model Number	Submitted Data							
	Actual							
3-Serial Number	Actual							

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data							
	Actual							
2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data							
	Actual							

Pre-Functional Checklist

Equipment ID:	TAG-36	TAG-37	TAG-38	TAG-39	TAG-40	TAG-41	TAG-42
D. Install Checks							
General Installation							
Unit is free of visible damage							
Permanent nameplate affixed to unit							
Unit is accessible for routine maintenance							
Access doors open opposite of static pressure							
Access doors can be fully opened and closed.							
Doors and penetrations in unit are sealed							
Filters installed							
Permanent electrical service is available							
Light fixtures and switches have been installed in unit							
Unit is installed level.							
Unit is securely anchored / mounted.							

Ductwork								
Pre-filter MERV rating	Submitted Data							
	Actual							
Filter MERV rating	Submitted Data							
	Actual							
Ductwork is clean, free of debris and flow restrictions								
Ductwork connected and clean								
Ductwork seams sealed								
Supply ductwork is insulated								
Mixed air duct insulated.								
Duct smoke detector installed								
No air bypassing around filters								

Pre-Functional Checklist

Equipment ID:	TAG-36	TAG-37	TAG-38	TAG-39	TAG-40	TAG-41	TAG-42
Controls							
Control wiring complete							
Electrical							
Conduit is supported							
Power disconnects labeled and installed							
Grounding installed for unit and unit components							
Heat Recovery Coil							
HR Water Valve (2-Way or 3-Way) — Submitted Data							
HR Water Valve (2-Way or 3-Way) — Actual

Light fixtures and switches have been installed in unit							
Unit is installed level.							
Unit is securely anchored / mounted.							

Ductwork								
Pre-filter MERV rating	Submitted Data							
	Actual							
Filter MERV rating	Submitted Data							
	Actual							
Ductwork is clean, free of debris and flow restrictions								
Ductwork connected and clean								
Ductwork seams sealed								
Supply ductwork is insulated								
Mixed air duct insulated.								
Duct smoke detector installed								
No air bypassing around filters								

Pre-Functional Checklist

Equipment ID:	TAG-71	TAG-72	TAG-73	TAG-74	TAG-75	TAG-76	TAG-77
Controls							
Control wiring complete							
Electrical							
Conduit is supported							
Power disconnects labeled and installed							
Grounding installed for unit and unit components							
Heat Recovery Coil							
HR Water Valve (2-Way or 3-Way) — Submitted Data							
HR Water Valve (2-Way or 3-Way) — Actual							
Piping is supported independently at coil							
Pipes insulated.							
Access provided to coil							
Coil is clean with no damage to fins							
Manual air vents, Manual valves, and Thermometers all installed.							
All valves and strainers installed in the correct flow direction							
Manual valves fully open and close							
Hydronic components checked for leaks							
No air bypassing around the heat recovery coil							

Pre-Functional Checklist

Equipment ID:		TAG-71	TAG-72	TAG-73	TAG-74	TAG-75	TAG-76	TAG-77
Cooling Coil								
Chilled Water Valve (2-Way or 3-Way)	Submitted Data Data							
	Actual							
Piping is supported independently at coil								
Pipes insulated.								
Access provided to coil								
Coil is clean with no damage to fins								
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed								
All valves and strainers installed in the correct flow direction								
Manual valves fully open and close								
Hydronic components checked for leaks								
Drain installed								
Condensate drain functions and is connected to drain with a vacuum break								
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear foot								
Condensate drain functions at full speed of fan								
No condensate carryover from coil								
P-Trap installed with correct height								
No air bypassing the cooling coil								

Heating Coil								
Hot Water Valve (2-Way or 3-Way)	Submitted Data							
	Actual							
Piping is supported independently at coil								
Pipes insulated.								
Access provided to coil								
Coil is clean with no damage to fins								
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed								
All valves and strainers installed in the correct flow direction								
Hydronic components checked for leaks								
No air bypassing the heating coil								

Pre-Functional Checklist

Equipment ID:	TAG-71	TAG-72	TAG-73	TAG-74	TAG-75	TAG-76	TAG-77
E: Supply Fan							
Vibration Isolation Installed							
Fan rotates in the proper direction							
No unusual noise or vibration during operation							
VFD programmed and functions properly

2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data	
	Actual	

Pre-Functional Checklist

Equipment ID:	TAG-7

D. Install Checks

General Installation

Unit is free of visible damage	
Permanent nameplate affixed to unit	
Unit is accessible for routine maintenance	
Access doors open opposite of static pressure	
Access doors can be fully opened and closed.	
Doors and penetrations in unit are sealed	
Filters installed	
Permanent electrical service is available	
Unit is installed level.	
Unit is securely anchored / mounted.	

Ductwork

Pre-filter MERV rating	Submitted Data	
	Actual	
Filter MERV rating	Submitted Data	
	Actual	
Ductwork is clean, free of debris and flow restrictions		
Ductwork connected and clean		
Ductwork seams sealed		
Supply ductwork is insulated		
No air bypassing around filters		

Pre-Functional Checklist

Equipment ID:	TAG-7

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	

Cooling Coil

Chilled Water Valve (2-Way or 3-Way)	Submitted Data	
	Actual	
Piping is supported independently at coil		
Pipes insulated.		
Access provided to coil		
Coil is clean with no damage to fins		
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed		
All valves and strainers installed in the correct flow direction		
Manual valves fully open and close		
Hydronic components checked for leaks		
Drain installed		
Condensate drain functions and is connected to drain with a vacuum break		
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear		
Condensate drain functions at full speed of fan		
No condensate carryover from coil		
P-Trap installed with correct height		
No air bypassing the cooling coil		

Direct Expansion Coil

Refrigerant piping is supported independently at coil	
Refrigerant piping is insulated	
Refrigerant lines slope 1" per 16 feet of horizontal run in the direction of flow	
Condensate drain line installed	
Condensate drain line insulated	
Access provided to coil	
Coil is clean with no damage to fins	
Thermostatic valve, sight glass, solenoid valve, filter drier, and traps are installed	
Manual valves fully open and close	
Hydronic components checked for leaks	

Pre-Functional Checklist

Equipment ID:		TAG-7
Heating Coil		
Hot Water Valve (2-Way or 3-Way)	Submitted Data	
	Actual	
Piping is supported independently at coil		
Pipes insulated.		
Access provided to coil		
Coil is clean with no damage to fins		
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed		
All valves and strainers installed in the correct flow direction		
Hydronic components checked for leaks		
No air bypassing the heating coil		

E: Supply Fan	
Vibration Isolation Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation	
VFD programmed and functions properly	

Pre-Functional Checklist

Equipment ID:	TAG-7

Pre-Functional Checklist

Job:	Webster ISB
Proj.#:	1136-16

General Notes:

All items complete unless noted Project Manager's Name (Printed):		
Project Manager's Signature:		

Instructions:
Provide " ✔ " for all all successful checks.
Use keyed notes at bottom for failed checks.

Initials:										
Start Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /
Start Time:	:	:	:	:	:	:	:	:	:	:
End Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /
End Time:	:	:	:	:	:	:	:	:	:	:

Installation Checklist
A. Application Data

Equipment ID:	TAG-58	TAG-59	TAG-60	TAG-61	TAG-62	TAG-63	TAG-64	TAG-65	TAG-66	TAG-67
Area Served:										
Location:										

B. Model Data

1-Manufacturer	Submitted Data										
	Actual										
2-Model Number	Submitted Data										
	Actual										
3-Serial Number	Actual										

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data										
	Actual										
2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data										
	Actual										

Pre-Functional Checklist

Equipment ID:	TAG-58	TAG-59	TAG-60	TAG-61	TAG-62	TAG-63	TAG-64	TAG-65	TAG-66	TAG-67
D. Install Checks										
General Installation										
Unit is free of visible damage										
Permanent nameplate affixed to unit										
Unit is accessible for routine maintenance										
Access doors open opposite of static pressure										
Access doors can be fully opened and closed.										
Doors and penetrations in unit are sealed										
Filters installed										
Permanent electrical service is available										
Unit is installed level.										
Unit is securely anchored / mounted.										

Ductwork

Pre-filter MERV rating	Submitted Data										
	Actual										
Filter MERV rating	Submitted Data										
	Actual										
Ductwork is clean, free of debris and flow restrictions											
Ductwork connected and clean											
Ductwork seams sealed											
Supply ductwork is insulated											
No air bypassing around filters											

Pre-Functional Checklist

Equipment ID:	TAG-58	TAG-59	TAG-60	TAG-61	TAG-62	TAG-63	TAG-64	TAG-65	TAG-66	TAG-67
Controls										
Control wiring complete										
Electrical										
Conduit is supported										
Power disconnects labeled and installed										
Grounding installed for unit and unit components										
Cooling Coil										
Chilled Water Valve (2-Way or 3-Way) — Submitted Data										
Chilled Water Valve (2-Way or 3-Way) — Actual										
Piping is supported independently at coil										
Pipes insulated.										
Access provided to coil										
Coil is clean with no damage to fins										
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed										
All valves and strainers installed in the correct flow direction										
Manual valves fully open and close										
Hydronic components checked for leaks										
Drain installed										
Condensate drain functions and is connected to drain with a vacuum break										
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear										
Condensate drain functions at full speed of fan										
No condensate carryover from coil										
P-Trap installed with correct height										
No air bypassing the cooling coil										
Direct Expansion Coil										
Refrigerant piping is supported independently at coil										
Refrigerant piping is insulated										
Refrigerant lines slope 1" per 16 feet of horizontal run in the direction of flow										
Condensate drain line installed										
Condensate drain line insulated										
Access provided to coil										
Coil is clean with no damage to fins										
Thermostatic valve, sight glass, solenoid valve, filter drier, and traps are installed										
Manual valves fully open and close										
Hydronic components checked for leaks										

Pre-Functional Checklist

Equipment ID:		TAG-58	TAG-59	TAG-60	TAG-61	TAG-62	TAG-63	TAG-64	TAG-65	TAG-66	TAG-67
Heating Coil											
Hot Water Valve (2-Way or 3-Way)	Submitted Data										
	Actual										
Piping is supported independently at coil											
Pipes insulated.											
Access provided to coil											
Coil is clean with no damage to fins											
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed											
All valves and strainers installed in the correct flow direction											
Hydronic components checked for leaks											
No air bypassing the heating coil											
E: Supply Fan											
Vibration Isolation Installed											
Fan rotates in the proper direction											
No unusual noise or vibration during operation											
VFD programmed and functions properly											

Pre-Functional Checklist

Equipment ID:	TAG-58	TAG-59	TAG-60	TAG-61	TAG-62	TAG-63	TAG-64	TAG-65	TAG-66	TAG-67

	Actual		
Piping is supported independently at coil			
Pipes insulated.			
Access provided to coil			
Coil is clean with no damage to fins			
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed			
All valves and strainers installed in the correct flow direction			
Manual valves fully open and close			
Hydronic components checked for leaks			
Drain installed			
Condensate drain functions and is connected to drain with a vacuum break			
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear			
Condensate drain functions at full speed of fan			
No condensate carryover from coil			
P-Trap installed with correct height			
No air bypassing the cooling coil			

Pre-Functional Checklist

Equipment ID:	AHU-5	
E: Supply Fan		
Vibration Isolation Installed		
Fan rotates in the proper direction		
No unusual noise or vibration during operation		
VFD programmed and functions properly

Installation Checklist

A. Application Data

Equipment ID:	TAG-4	TAG-5	TAG-6	TAG-7
Area Served:				
Location:				

B. Model Data

1-Manufacturer	Submitted Data				
	Actual				
2-Model Number	Submitted Data				
	Actual				
3-Serial Number	Actual				

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data				
	Actual				
2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data				
	Actual				

Pre-Functional Checklist

Equipment ID:	TAG-4	TAG-5	TAG-6	TAG-7
D. Install Checks				
General Installation				
Unit is free of visible damage				
Permanent nameplate affixed to unit				
Unit is accessible for routine maintenance				
Access doors open opposite of static pressure				
Access doors can be fully opened and closed.				
Doors and penetrations in unit are sealed				
Filters installed				
Permanent electrical service is available				
Unit is installed level.				
Unit is securely anchored / mounted.				

Ductwork

Filter MERV rating	Submitted Data				
	Actual				
Ductwork is clean, free of debris and flow restrictions					
Ductwork connected and clean					
Ductwork seams sealed					
Supply ductwork is insulated					
No air bypassing around filters					

Pre-Functional Checklist

Equipment ID:	TAG-4	TAG-5	TAG-6	TAG-7
Controls				
Control wiring complete				
Electrical				
Conduit is supported				
Power disconnects labeled and installed				
Grounding installed for unit and unit components				
Wiring inside fan section is in Conduit				
Cooling Coil				
Chilled Water Valve (2-Way or 3-Way) — Submitted Data				
Chilled Water Valve (2-Way or 3-Way) — Actual				
Piping is supported independently at coil				
Pipes insulated.				
Access provided to coil				
Coil is clean with no damage to fins				
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed				
All valves and strainers installed in the correct flow direction				
Manual valves fully open and close				
Hydronic components checked for leaks				
Drain installed				
Condensate drain functions and is connected to drain with a vacuum break				
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear				
Condensate drain functions at full speed of fan				
No condensate carryover from coil				
P-Trap installed with correct height				
No air bypassing the cooling coil				

Pre-Functional Checklist

Equipment ID:	TAG-4	TAG-5	TAG-6	TAG-7
E: Supply Fan				
Vibration Isolation Installed				
Fan rotates in the proper direction				
No unusual noise or vibration during operation				
VFD programmed and functions properly

Ductwork

Filter MERV rating	Submitted Data							
	Actual							
Ductwork is clean, free of debris and flow restrictions								
Ductwork connected and clean								
Ductwork seams sealed								
Supply ductwork is insulated								
No air bypassing around filters								

Pre-Functional Checklist

Equipment ID:	TAG-50	TAG-51	TAG-52	TAG-53	TAG-54	TAG-55	TAG-56
Controls							
Control wiring complete							
Electrical							
Conduit is supported							
Power disconnects labeled and installed							
Grounding installed for unit and unit components							
Wiring inside fan section is in Conduit							
Cooling Coil							
Chilled Water Valve (2-Way or 3-Way) — Submitted Data							
Chilled Water Valve (2-Way or 3-Way) — Actual							
Piping is supported independently at coil							
Pipes insulated.							
Access provided to coil							
Coil is clean with no damage to fins							
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed							
All valves and strainers installed in the correct flow direction							
Manual valves fully open and close							
Hydronic components checked for leaks							
Drain installed							
Condensate drain functions and is connected to drain with a vacuum break							
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear							
Condensate drain functions at full speed of fan							
No condensate carryover from coil							
P-Trap installed with correct height							
No air bypassing the cooling coil							

Pre-Functional Checklist

Equipment ID:	TAG-50	TAG-51	TAG-52	TAG-53	TAG-54	TAG-55	TAG-56
E: Supply Fan							
Vibration Isolation Installed							
Fan rotates in the proper direction							
No unusual noise or vibration during operation							
VFD programmed and functions properly

End Time:

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data
	Actual
2 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

Pre-Functional Checklist

Equipment ID:	

D. Install Checks

General Installation

Unit is free of visible damage	
Permanent nameplate affixed to unit	
Unit is accessible for routine maintenance	
Access doors open opposite of static pressure	
Access doors can be fully opened and closed.	
Doors and penetrations in unit are sealed	
Filters installed	
Permanent electrical service is available	
Unit is installed level.	
Unit is securely anchored / mounted.	

Ductwork

Filter MERV rating	Submitted Data
	Actual

Ductwork is clean, free of debris and flow restrictions	
Ductwork connected and clean	
Ductwork seams sealed	
Supply ductwork is insulated	
No air bypassing around filters	

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete

Electrical

Conduit is supported
Power disconnects labeled and installed
Grounding installed for unit and unit components
Wiring inside fan section is in Conduit

Cooling Coil

Chilled Water Valve (2-Way or 3-Way)	Submitted Data
	Actual

Piping is supported independently at coil
Pipes insulated.
Access provided to coil
Coil is clean with no damage to fins
Manual air vent, Manual valves, test plugs, Thermometers and wells are installed
All valves and strainers installed in the correct flow direction
Manual valves fully open and close
Hydronic components checked for leaks
Drain installed
Condensate drain functions and is connected to drain with a vacuum break
Condensate line maintains a minimum horizontal slope of not less than 1/8" per linear
Condensate drain functions at full speed of fan
No condensate carryover from coil
P-Trap installed with correct height
No air bypassing the cooling coil

Pre-Functional Checklist

Equipment ID:	

E: Supply Fan

Vibration Isolation Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation	
VFD programmed and functions properly

D. Install Checks

General Installation

Unit is free of visible damage								
Permanent nameplate affixed to unit								
Unit is accessible for routine maintenance								
Permanent electrical service is available								
Unit is installed level.								
Unit is securely anchored / mounted.								

Pre-Functional Checklist

Equipment ID:	TAG-64	TAG-65	TAG-66	TAG-67	TAG-68	TAG-69	TAG-70	TAG-71
Controls								
Control wiring complete								
Electrical								
Conduit is supported								
Power disconnects labeled and installed								
Grounding installed for unit and unit components								
Wiring is protected								
Hot Water Coil								
Piping is supported independently at coil								
Piping system flushed, cleaned, and pressure tested								
Coil is clean with no damage to fins								
Access provided to coil								
All valves and strainers installed in the correct flow direction								
Pipes insulated and labeled								
Hydronic components checked for leaks								
Manual valves fully open and close								
Supply Fan								
Vibration Isolation Installed								
Fan Guard Installed								
Fan rotates in the proper direction								
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

End Time:

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

2- Heating Coil Capacity (MBH)	Submitted Data	
	Actual	
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data	
	Actual	

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation
