3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

Installation Checklist

A. Application Data

Equipment ID:
Area Served:
Location:

B. Model Data

1-Manufacturer	Submitted Data
	Actual
2-Model Number	Submitted Data
	Actual
3-Serial Number	Actual

C. Design Requirements

2- Heating Coil Capacity (MBH)	Submitted Data
	Actual
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data
	Actual

D. Install Checks

General Installation

Unit is free of visible damage
Permanent nameplate affixed to unit
Unit is accessible for routine maintenance
Permanent electrical service is available
Unit is installed level.
Unit is securely anchored / mounted.

Pre-Functional Checklist

Equipment ID:	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Hot Water Coil

Piping is supported independently at coil	
Piping system flushed, cleaned, and pressure tested	
Coil is clean with no damage to fins	
Access provided to coil	
All valves and strainers installed in the correct flow direction	
Pipes insulated and labeled	
Hydronic components checked for leaks	
Manual valves fully open and close	

Supply Fan

Vibration Isolation Installed	
Fan Guard Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation

C. Installation Checks

Pumps

Unit is free of visible damage.			
Permanent nameplate affixed to unit.			
Unit is accessible for routine maintenance.			
Unit anchored to resist movement.			
Motor and pump alignment complete.			
Bearing protective cover installed.			

Piping

No apparent leakage at flanges/fittings.			
Piping is insulated.			
Piping is supported independently of equipment allowing routine maintenance.			

Hydronic Specialies

Valves installed in the correct direction with respect to flow.			
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.			
Manual valves fully open and close.			
Strainers installed in the correct direction with respect to flow.			
Flow direction of pump is correct.			

Controls

Control wiring complete.			

Electrical

Motor Volts / Phases / Amps	Submitted Data	460 / 3 / 60	460 / 3 / 60	
	Actual			
Motor RPM / HP	Submitted Data	1780 / 25	1780 / 25	
	Actual			
All wiring is protected and terminated.				
Conduit is supported.				
Electrical disconnect installed and labeled near unit.				

Equipment ID:	CP-1	CP-2	TAG-8

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

Load / Area Served:							
Installed Location:							

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

D. Install Checks		
General Installation		
Unit is free of visible damage		
Permanent nameplate affixed to unit		
Unit is accessible for routine maintenance		
Access doors can be fully opened and closed.		
Doors and penetrations in unit are sealed		
Permanent electrical service is available		
Unit is installed level.		
Unit is securely anchored / mounted.		
Controls		
Control wiring complete		
Electrical		
Conduit is supported		
Power disconnects labeled and installed		
Grounding installed for unit and unit components		
Wiring is protected		
Refrigerant Piping		
Refrigerant piping is installed		
Refrigerant piping is insulated		
Refrigerant lines slope 1" per 16 feet of horizontal run in the direction of flow		
Hydronic components checked for leaks		
Condenser Fan		
Fan rotates in the proper direction		
No unusual noise or vibration during operation

D. Install Checks						
General Installation						
Unit is free of visible damage						
Permanent nameplate affixed to unit						
Unit is accessible for routine maintenance						
Access doors can be fully opened and closed.						
Doors and penetrations in unit are sealed						
Permanent electrical service is available						
Unit is installed level.						
Unit is securely anchored / mounted.						
Controls						
Control wiring complete						
Electrical						
Conduit is supported						
Power disconnects labeled and installed						
Grounding installed for unit and unit components						
Wiring is protected						
Refrigerant Piping						
Refrigerant piping is installed						
Refrigerant piping is insulated						
Refrigerant lines slope 1" per 16 feet of horizontal run in the direction of flow						
Hydronic components checked for leaks						
Condenser Fan						
Fan rotates in the proper direction						
No unusual noise or vibration during operation

Installed Location:	Level 1 - Mechanical Room	

C. Installation Checks

Pumps

Unit is free of visible damage.		
Permanent nameplate affixed to unit.		
Unit is accessible for routine maintenance.		
Unit anchored to resist movement.		
Motor and pump alignment complete.		
Bearing protective cover installed.		

Piping

No apparent leakage at flanges/fittings.		
Piping is insulated.		
Piping is supported independently of equipment allowing routine maintenance.		

Hydronic Specialies

Valves installed in the correct direction with respect to flow.		
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.		
Manual valves fully open and close.		
Strainers installed in the correct direction with respect to flow.		
Flow direction of pump is correct.		

Controls

Control wiring complete.		

Electrical

Motor Volts / Phases / Amps	Submitted Data	460 / 3 / 60	
	Actual		
Motor RPM / HP	Submitted Data	1725 / 1.5	
	Actual		
All wiring is protected and terminated.			
Conduit is supported.			
Electrical disconnect installed and labeled near unit.			

Equipment ID:	HWP-1	TAG-8
Load / Area Served:	Domestic Hot Water

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data

Load / Area Served:							
Installed Location:							

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

Load / Area Served:									
Floor:									
Installed Location:									

Ductwork

Water heater flue installed									
Ductwork seams sealed.									
Combustion air intake installed.									

Piping

Piping connections complete and supported independently of unit allowing for maintenance.									
Piping has been tested for leaks.									
No apparent leaks.									
All valves and strainers installed in the correct flow direction.									
Pressure relief and drain lines piped to nearby floor drain.									

Gas Train

Pressure gauge installed.									
Required gas pressure at inlet (psig)									
Actual gas pressure at inlet (psig)									
Verify correct gas pressure at gas train inlet.									

Electrical

All wiring is protected and terminated.									
Conduit is supported.									
Electrical disconnect installed and labeled near unit.

C. Design Requirements

3 - Exhaust Fan Motor Volts / Phases / Amps	Submitted Data		
	Actual		

Pre-Functional Checklist

Equipment ID:	TAG-6	TAG-7
D. Install Checks		
General Installation		
Unit is free of visible damage		
Permanent nameplate affixed to unit		
Unit is accessible for routine maintenance		
Penetrations in unit are sealed		
Dampers installed		
Birdscreen is installed		
Permanent electrical service is available		
Vented extended roof curb and grease drain/trap installed (KEF-1 only)		
Unit is installed level.		
Unit is securely anchored / mounted.		
Ductwork		
Ductwork is clean, free of debris and flow restrictions		
Ductwork connected and clean		
Ductwork seams sealed		
Controls		
Control wiring complete		
Electrical		
Conduit is supported		
Power disconnects labeled and installed		
Grounding installed for unit and unit components		
Wiring is protected		

Pre-Functional Checklist

Equipment ID:	TAG-6	TAG-7

Exhaust Fan

Vibration Isolation Installed		
Fan rotates in the proper direction		
No unusual noise or vibration during operation		
VFD programmed and functions properly

Pre-Functional Checklist

Job:	Webster ISB
Proj.#:	1136-16

General Notes:

All items complete unless noted Project Manager's Name (Printed):	
Project Manager's Signature:	

Instructions:

Provide " ✔ " for all all successful checks.
Use keyed notes at bottom for failed checks.

Initials:							
Start Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /
Start Time:	:	:	:	:	:	:	:
End Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /
End Time:	:	:	:	:	:	:	:

Installation Checklist

A. Application Data

Equipment ID:	TAG-78	TAG-79	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84
Area Served:							
Location:							

B. Model Data

1-Manufacturer	Submitted Data							
	Actual							
2-Model Number	Submitted Data							
	Actual							
3-Serial Number	Actual							

C. Design Requirements

3 - Exhaust Fan Motor Volts / Phases / Amps	Submitted Data							
	Actual							

Pre-Functional Checklist

Equipment ID:	TAG-78	TAG-79	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84
D. Install Checks							
General Installation							
Unit is free of visible damage							
Permanent nameplate affixed to unit							
Unit is accessible for routine maintenance							
Penetrations in unit are sealed							
Dampers installed							
Birdscreen is installed							
Permanent electrical service is available							
Vented extended roof curb and grease drain/trap installed (KEF-1 only)							
Unit is installed level.							
Unit is securely anchored / mounted.							
Ductwork							
Ductwork is clean, free of debris and flow restrictions							
Ductwork connected and clean							
Ductwork seams sealed							
Controls							
Control wiring complete							
Electrical							
Conduit is supported							
Power disconnects labeled and installed							
Grounding installed for unit and unit components							
Wiring is protected							

Pre-Functional Checklist

Equipment ID:	TAG-78	TAG-79	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84
Exhaust Fan							
Vibration Isolation Installed							
Fan rotates in the proper direction							
No unusual noise or vibration during operation							
VFD programmed and functions properly

Installation Checklist

A. Application Data

Equipment ID:	FCU -	ACCU -
Area Served:		
Location:		

B. Model Data

1-Manufacturer	Submitted Data (Pre-populate)		
	Actual		
2-Model Number	Submitted Data (Pre-populate)		
	Actual		
3-Serial Number	Actual		

C. Design Requirements

1- Cooling Coil Capacity (MBH)	Submitted Data (Pre-populate)		
	Actual		
3 - Supply Fan Motor Volts / Phases / Amps	Submitted Data (Pre-populate)		
	Actual		

Pre-Functional Checklist

Equipment ID:	FCU -	ACCU -

D. Install Checks

General Installation

Unit is free of visible damage		
Permanent nameplate affixed to unit		
Unit is accessible for routine maintenance		
Access doors can be fully opened and closed.		
Doors and penetrations in unit are sealed		
Permanent electrical service is available		
Filter is installed.		
Unit is installed level.		
Unit is securely anchored / mounted.		

Controls

Control wiring complete		

Electrical

Conduit is supported		
Power disconnects labeled and installed		
Grounding installed for unit and unit components		
Wiring is protected		

Refrigerant Piping

Refrigerant piping is installed		
Refrigerant piping is insulated		
Condensate drain line installed		
Condensate drain line insulated		
Condesnate pump installed and free of damage		
Condensate pump anchored to resist movement		
Condensate drain functions and is indirectly connected to drain		
Condensate drain functions at full speed of fan		

Supply Fan

Vibration Isolation Installed		
Fan rotates in the proper direction		
No unusual noise or vibration during operation		

Pre-Functional Checklist

Equipment ID:	FCU -	ACCU -

Equipment ID:	TAG-43	TAG-44	TAG-45	TAG-46	TAG-47	TAG-48
D. Install Checks						
General Installation						
Unit is free of visible damage						
Permanent nameplate affixed to unit						
Unit is accessible for routine maintenance						
Access doors can be fully opened and closed.						
Doors and penetrations in unit are sealed						
Permanent electrical service is available						
Filter is installed.						
Unit is installed level.						
Unit is securely anchored / mounted.						
Controls						
Control wiring complete						
Electrical						
Conduit is supported						
Power disconnects labeled and installed						
Grounding installed for unit and unit components						
Wiring is protected						
Refrigerant Piping						
Refrigerant piping is installed						
Refrigerant piping is insulated						
Condensate drain line installed						
Condensate drain line insulated						
Condesnate pump installed and free of damage						
Condensate pump anchored to resist movement						
Condensate drain functions and is indirectly connected to drain						
Condensate drain functions at full speed of fan						
Supply Fan						
Vibration Isolation Installed						
Fan rotates in the proper direction						
No unusual noise or vibration during operation

Electrical			
Conduit is supported			
Power disconnects labeled and installed			
Grounding installed for unit and unit components			
Wiring is protected			
Refrigerant Piping			
Refrigerant piping is installed			
Refrigerant piping is insulated			
Condensate drain line installed			
Condensate drain line insulated			
Condesnate pump installed and free of damage			
Condensate pump anchored to resist movement			
Condensate drain functions and is indirectly connected to drain			
Condensate drain functions at full speed of fan			
Supply Fan			
Vibration Isolation Installed			
Fan rotates in the proper direction			
No unusual noise or vibration during operation

	Actual								
2 - Flow (gpm)	Submitted Data (Pre-populate)								
	Actual								

D. Install Checks

General Installation

Unit is free of visible damage								
Permanent nameplate affixed to unit								
Unit is accessible for routine maintenance								
Permanent electrical service is available								
Unit is installed level.								
Unit is securely anchored / mounted.								

Pre-Functional Checklist

Equipment ID:	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84	TAG-85	TAG-86	TAG-87
Controls								
Control wiring complete								
Electrical								
Conduit is supported								
Grounding installed for unit and unit components								
Wiring is protected								
Radiator								
Radiator is correct length compared to schedule								
Headers include all required connections								
Shut off valve, strainer, and balancing device all have been installed								
Hydronic components checked for leaks								
Installer has provided adequate expansion compensation for radiator								
Radiator has been provided with 3/4" piping connection

Pumps

Unit is free of visible damage.			
Permanent nameplate affixed to unit.			
Unit is accessible for routine maintenance.			
Unit anchored to resist movement.			
Motor and pump alignment complete.			
Bearing protective cover installed.			

Piping

No apparent leakage at flanges/fittings.			
Piping is insulated			
Piping is supported independently of equipment allowing routine maintenance.			

Hydronic Specialies

Valves installed in the correct direction with respect to flow.			
Manual air vent, manual valves, and thermometers are installed			
Manual valves fully open and close			
Flow direction of pump is correct.			

Controls

Control wiring complete.			

Electrical

Motor Volts / Phases / Amps	Submitted Data	460 / 3 / 60	460 / 3 / 60	
	Actual			
Motor RPM / HP	Submitted Data	1770 / 15	1770 / 15

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, and thermometers are installed							
Manual valves fully open and close							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, and thermometers are installed							
Manual valves fully open and close							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, and thermometers are installed							
Manual valves fully open and close							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
Manual air vent, manual valves, thermometers, strainers, and test plugs installed.							
Manual valves fully open and close.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.

D. Install Checks
General Installation

Unit is free of visible damage						
Permanent nameplate affixed to unit						
Unit is accessible for routine maintenance						
Unit does not block access to existing equipment						
Permanent electrical service is available						
Unit is installed level.						
Unit is securely anchored / mounted.

Boiler Cabinet

Unit is free of visible damage.		
Permanent nameplate affixed to unit.		
Unit is accessible for routine maintenance (i.e. pulling boiler tubes).		
Unit is anchored to resist movement.		
Unit has been tested for leaks.		
Boiler inspection complete by responsible party.		
Combustion air fan is clean of debris and rotates free.		
Combustion air fan inlet is covered to prevent debris from entering blower.		

Ductwork

Boiler flue installed		
Ductwork seams sealed.		
Combustion air intake installed.		

Piping

Piping connections complete and supported independently of unit allowing for maintenance.		
Hydronic piping has been checked for leaks.		
Air vents installed at system high point and are operational.		
All valves and strainers installed in the correct flow direction.		
Pressure relief and drain lines piped to nearby floor drain.		

Pre-Fuctional Checklist

Proj.#:	1136-16

General Notes:

All items complete unless noted Project Manager's Name (Printed):	
Project Manager's Signature:	

Instructions:

Provide " ✔ " for all all successful checks.

Use keyed notes at bottom for failed checks.

Initials:								
Start Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /
Start Time:	:	:	:	:	:	:	:	:
End Date:	/ /	/ /	/ /	/ /	/ /	/ /	/ /	/ /
End Time:	:	:	:	:	:	:	:	:

Installation Checklist

A. Application Data

Equipment ID:	TAG-27	TAG-28	TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34
Area Served:								
Location:								

B. Model Data

1-Manufacturer	Submitted Data								
	Actual								
2-Model Number	Submitted Data								
	Actual								
3-Serial Number	Actual								
4-Boiler Input (MBH)	Submitted Data								
	Actual								
5-Boiler Output (MBH)	Submitted Data								
	Actual								
6-Min. Supply Gas Press. (PSIG)	Submitted Data								
	Actual								
7-Burner Blower HP	Submitted Data								
	Actual								

Pre-Fuctional Checklist

Equipment ID:	TAG-27	TAG-28	TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34
Area Served:								
Location:								

C. Installation Checks

Boiler Cabinet

Unit is free of visible damage.								
Permanent nameplate affixed to unit.								
Unit is accessible for routine maintenance (i.e. pulling boiler tubes).								
Unit is anchored to resist movement.								
Unit has been tested for leaks.								
Boiler inspection complete by responsible party.								
Combustion air fan is clean of debris and rotates free.								
Combustion air fan inlet is covered to prevent debris from entering blower.								

Ductwork

Boiler flue installed								
Ductwork seams sealed.								
Combustion air intake installed.								

Piping

Piping connections complete and supported independently of unit allowing for maintenance.								
Hydronic piping has been checked for leaks.								
Air vents installed at system high point and are operational.								
All valves and strainers installed in the correct flow direction.								
Pressure relief and drain lines piped to nearby floor drain.								

Pre-Fuctional Checklist

Equipment ID:	TAG-27	TAG-28	TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34
Area Served:								
Location:								
Gas Train								
Pressure gauge installed.								
Required gas pressure at inlet (psig)								
Actual gas pressure at inlet (psig)								
Controls								
High temperature limit switch installed.								
Low air differential pressure switch installed								
Blocked flue switch installed								
High and low gas pressure switches installed								
Control wiring complete.								
Electrical								
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.								

Pre-Fuctional Checklist

Equipment ID:	TAG-27	TAG-28	TAG-29	TAG-30	TAG-31	TAG-32	TAG-33	TAG-34

Installation Checklist

A. Application Data

Equipment ID:	TAG-91	TAG-92	TAG-93	TAG-94	TAG-95	TAG-96	TAG-97	TAG-98
Area Served:								
Location:								

B. Model Data

1-Manufacturer	Submitted Data								
	Actual								
2-Model Number	Submitted Data								
	Actual								
3-Serial Number	Actual								
4-Boiler Input (MBH)	Submitted Data								
	Actual								
5-Boiler Output (MBH)	Submitted Data								
	Actual								
6-Min. Supply Gas Press. (PSIG)	Submitted Data								
	Actual								
7-Burner Blower HP	Submitted Data								
	Actual								

Pre-Fuctional Checklist

Equipment ID:	TAG-91	TAG-92	TAG-93	TAG-94	TAG-95	TAG-96	TAG-97	TAG-98
Area Served:								
Location:								

C. Installation Checks

Boiler Cabinet

Unit is free of visible damage.								
Permanent nameplate affixed to unit.								
Unit is accessible for routine maintenance (i.e. pulling boiler tubes).								
Unit is anchored to resist movement.								
Unit has been tested for leaks.								
Boiler inspection complete by responsible party.								
Combustion air fan is clean of debris and rotates free.								
Combustion air fan inlet is covered to prevent debris from entering blower.								

Ductwork

Boiler flue installed								
Ductwork seams sealed.								
Combustion air intake installed.								

Piping

Piping connections complete and supported independently of unit allowing for maintenance.								
Hydronic piping has been checked for leaks.								
Air vents installed at system high point and are operational.								
All valves and strainers installed in the correct flow direction.								
Pressure relief and drain lines piped to nearby floor drain.								

Pre-Fuctional Checklist

Equipment ID:	TAG-91	TAG-92	TAG-93	TAG-94	TAG-95	TAG-96	TAG-97	TAG-98
Area Served:								
Location:								
Gas Train								
Pressure gauge installed.								
Required gas pressure at inlet (psig)								
Actual gas pressure at inlet (psig)								
Controls								
High temperature limit switch installed.								
Low air differential pressure switch installed								
Blocked flue switch installed								
High and low gas pressure switches installed								
Control wiring complete.								
Electrical								
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.								

Pre-Fuctional Checklist

Installation Checklist

A. Application Data

Equipment ID:	HEF-1
Area Served:	Lab Exhaust System
Location:	Roof

B. Model Data

1-Manufacturer	Submitted Data	Greenheck
	Actual	
2-Model Number	Submitted Data	Vektor-MD-27-2-85-LV-HPW
	Actual	
3-Serial Number	Actual	

C. Design Requirements

3 - Exhaust Fan Motor Volts / Phases / Amps	Submitted Data	460 / 60 / 3
	Actual	

Pre-Functional Checklist

Equipment ID:	HEF-1

D. Install Checks

General Installation

Unit is free of visible damage	
Permanent nameplate affixed to unit	
Unit is accessible for routine maintenance	
Access doors open opposite of static pressure	
Access doors can be fully opened and closed.	
Doors and penetrations in unit are sealed	
Dampers installed	
Permanent electrical service is available	
Unit is installed level.	
Unit is securely anchored / mounted.	
Stack silencer nozzle is installed.	
Rain hood is installed.	
Drain holes installed in the correct locations	

Heat Recovery Coil

Piping is supported independently at coil	
Pipes insulated.	
Access provided to coil	
Coil is clean with no damage to fins	
All valves installed in the correct location	
Manual valves fully open and close	
Hydronic components checked for leaks	
No air bypassing around coil	

Pre-Functional Checklist

Equipment ID:	HEF-1

Ductwork

Ductwork is clean, free of debris and flow restrictions	
Ductwork connected and clean	
Ductwork seams sealed	
Isolation damper strokes fully and easily	
Duct smoke detector installed	

Controls

Control wiring complete	

Electrical

Conduit is supported	
Power disconnects labeled and installed	
Grounding installed for unit and unit components	
Wiring is protected	

Exhaust Fan

Vibration Isolation Installed	
Fan rotates in the proper direction	
No unusual noise or vibration during operation	
VFD programmed and functions properly	

Pre-Functional Checklist

Equipment ID:	HEF-1

D. Install Checks					
General Installation					
Unit is free of visible damage					
Permanent nameplate affixed to unit					
Unit is accessible for routine maintenance					
Access doors open opposite of static pressure					
Access doors can be fully opened and closed.					
Doors and penetrations in unit are sealed					
Dampers installed					
Permanent electrical service is available					
Unit is installed level.					
Unit is securely anchored / mounted.					
Stack silencer nozzle is installed.					
Rain hood is installed.					
Drain holes installed in the correct locations					
Heat Recovery Coil					
Piping is supported independently at coil					
Pipes insulated.					
Access provided to coil					
Coil is clean with no damage to fins					
All valves installed in the correct location					
Manual valves fully open and close					
Hydronic components checked for leaks					
No air bypassing around coil					

Pre-Functional Checklist

Equipment ID:	TAG-33	TAG-34	TAG-35	TAG-36	TAG-37
Ductwork					
Ductwork is clean, free of debris and flow restrictions					
Ductwork connected and clean					
Ductwork seams sealed					
Isolation damper strokes fully and easily					
Duct smoke detector installed					
Controls					
Control wiring complete					
Electrical					
Conduit is supported					
Power disconnects labeled and installed					
Grounding installed for unit and unit components					
Wiring is protected					
Exhaust Fan					
Vibration Isolation Installed					
Fan rotates in the proper direction					
No unusual noise or vibration during operation					
VFD programmed and functions properly

Ductwork is clean, free of debris and flow restrictions					
Ductwork connected and clean					
Ductwork seams sealed					
Isolation damper strokes fully and easily					
Duct smoke detector installed					
Controls					
Control wiring complete					
Electrical					
Conduit is supported					
Power disconnects labeled and installed					
Grounding installed for unit and unit components					
Wiring is protected					
Exhaust Fan					
Vibration Isolation Installed					
Fan rotates in the proper direction					
No unusual noise or vibration during operation					
VFD programmed and functions properly

D. Install Checks					
General Installation					
Unit is free of visible damage					
Permanent nameplate affixed to unit					
Unit is accessible for routine maintenance					
Access doors open opposite of static pressure					
Access doors can be fully opened and closed.					
Doors and penetrations in unit are sealed					
Dampers installed					
Permanent electrical service is available					
Unit is installed level.					
Unit is securely anchored / mounted.					
Stack silencer nozzle is installed.					
Rain hood is installed.					
Drain holes installed in the correct locations					
Heat Recovery Coil					
Piping is supported independently at coil					
Pipes insulated.					
Access provided to coil					
Coil is clean with no damage to fins					
All valves installed in the correct location					
Manual valves fully open and close					
Hydronic components checked for leaks					
No air bypassing around coil

C. Installation Checks

Pumps

Unit is free of visible damage.					
Permanent nameplate affixed to unit.					
Unit is accessible for routine maintenance.					
Unit anchored to resist movement.					
Motor and pump alignment complete.					
Bearing protective cover installed.					

Piping

No apparent leakage at flanges/fittings.					
Piping is insulated.					
Piping is supported independently of equipment allowing routine maintenance.					

Hydronic Specialies

Valves installed in the correct direction with respect to flow.					
P/T ports provided.					
Strainers installed in the correct direction with respect to flow.					
Flow direction of pump is correct.					

Controls

Control wiring complete.

Installed Location:							

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data							
	Actual							
Motor RPM / HP	Submitted Data							
	Actual							
All wiring is protected and terminated.								
Conduit is supported.								
Electrical disconnect installed and labeled near unit.

C. Installation Checks

Pumps

Unit is free of visible damage.							
Permanent nameplate affixed to unit.							
Unit is accessible for routine maintenance.							
Unit anchored to resist movement.							
Motor and pump alignment complete.							
Bearing protective cover installed.							

Piping

No apparent leakage at flanges/fittings.							
Piping is insulated.							
Piping is supported independently of equipment allowing routine maintenance.							

Hydronic Specialies

Valves installed in the correct direction with respect to flow.							
P/T ports provided.							
Strainers installed in the correct direction with respect to flow.							
Flow direction of pump is correct.							

Controls

Control wiring complete.							

Electrical

Motor Volts / Phases / Amps	Submitted Data	
	Actual	
Motor RPM / HP	Submitted Data	
	Actual	

All wiring is protected and terminated.							
Conduit is supported.							
Electrical disconnect installed and labeled near unit.

D. Install Checks						
General Installation						
Unit is free of visible damage						
Permanent nameplate affixed to unit						
Unit is accessible for routine maintenance						
Unit does not block access to existing equipment						
Permanent electrical service is available						
Unit is installed level.						
Unit is securely anchored / mounted.						
Heating Coil & Piping						
Piping is supported independently at coil						
Piping system flushed, cleaned, and pressure tested. (Attach report)						
Coil has been tested for leaks						
Coil is clean with no damage to fins						
Access provided to coil						
All valves and strainers installed in the correct flow direction						
Pipes insulated						
Pete's plugs, Manual air vent, Manual valves, test plugs, Thermometers and wells are						
Drain valve installed						
Manual valves fully open and close						
Electrical						
Conduit is supported						
Power disconnects labeled and installed						
Grounding installed for unit and unit components						
Wiring inside fan section is in Conduit

Model Number	Submitted Data						
	Actual						
Serial Number	Actual						

C. Design Requirements

Supply Air flow (CFM)	Design MAX						
	Submitted						
Vel= 4005*√ vel press cfm= area*velocity	Actual						
Heating Coil Capacity (MBH)	Design						
	Submitted						
	Actual						
Hot Water Valve (2-Way or 3-Way)	Type Submitted Data						
	Actual						
	Cv Submitted Data						
CV = flow at 1 psi Delta P	Actual						

Pre-Functional Checklist

	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84	TAG-85
D. Install Checks						
General Installation						
Unit is free of visible damage						
Permanent nameplate affixed to unit						
Unit is accessible for routine maintenance						
Unit does not block access to existing equipment						
Permanent electrical service is available						
Unit is installed level.						
Unit is securely anchored / mounted.						
Heating Coil & Piping						
Piping is supported independently at coil						
Piping system flushed, cleaned, and pressure tested. (Attach report)						
Coil has been tested for leaks						
Coil is clean with no damage to fins						
Access provided to coil						
All valves and strainers installed in the correct flow direction						
Pipes insulated						
Pete's plugs, Manual air vent, Manual valves, test plugs, Thermometers and wells are						
Drain valve installed						
Manual valves fully open and close						
Electrical						
Conduit is supported						
Power disconnects labeled and installed						
Grounding installed for unit and unit components						
Wiring inside fan section is in Conduit						

Pre-Functional Checklist

	TAG-80	TAG-81	TAG-82	TAG-83	TAG-84	TAG-85
Controls						
Control sensors located where indicated on construction drawings.						
Control wiring complete						
Control programming complete						
Control point-to-point complete						
Safeties verified						
E: Start-up						
Equipment Startup						
Air flow						
No unusual noise or vibration during operation						
Controls Startup						
Sequence of operation verified						
Trends and alarms complete						
User Interface complete
