1. The values listed above are ultimate and allowable load capacities for anchors in sand-lightweight concrete over metal deck.
2. Allowable loads capacities are calculated using an applied safety factor of 4.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.
3. Tabulated load values are for anchors installed in the center of the flute. Spacing distances shall be in accordance with the spacing lightweight concrete table listed in the Design Criteria section.
4. Anchors are permitted to be installed in the lower or upper flute of the metal deck provided the proper installed procedures are maintained.

PERFORMANCE DATA

1. Tabulated load values are for carbon and stainless steel anchors installed in minimum 6-inch wide, Grade N, Type II, medium and normal-weight concrete masonry units. Mortar must be minimum Type N. Masonry prism compressive strength must be 1,500 psi minimum at the time of installation.
2. Allowable loads are for carbon and stainless steel anchors and are based on average ultimate values using a safety factor of 5.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.
3. Linear interpolation may be used for allowable loads for intermediate embedment depths.
4. The tabulated values are for anchors installed at a minimum of 12 anchor diameters on center for 100 percent capacity. Spacing distances may be reduced to 6 anchor diameters on center provided the capacities are reduced by 50 percent. Linear interpolation may be used for intermediate spacings.
5. Anchors with diameters of 1/2" and larger installed in hollow concrete masonry units are limited to one anchor per unit cell.
6. Anchors shall be of suitable length for the masonry wall thickness and attachment.

1. Tabulated load values are for carbon and stainless steel anchors installed in Grade SW multiple wythe, solid brick masonry conforming to ASTM C62.
2. Allowable loads are calculated using an applied safety factor of 5.0.Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.
3. The tabulated values are for anchors installed at a minimum of 12 anchor diameters on center for 100 percent capacity. Spacing distances may be reduced to 6 anchor diameters on center provided the capacities are reduces by 50 percent. Linear interpolation may be used for intermediate spacings.
4. Anchors length shall be of suitable length for the concrete masonry wall thickness and attachment.

DESIGN CRITERIA

Combined Loading

For anchors loaded in both shear and tension, the combination of loads should be proportioned as follows:

$$\left(\frac{N_u}{N_n}\right)^{\frac{5}{3}} + \left(\frac{V_u}{V_n}\right)^{\frac{5}{3}} \leq 1 \quad \text{OR} \quad \left(\frac{N_u}{N_n}\right) + \left(\frac{V_u}{V_n}\right) \leq 1$$

Where: N_u = Applied Service Tension Load
N_n = Allowable Tension Load
V_u = Applied Service Shear Load
V_n = Allowable Shear Load

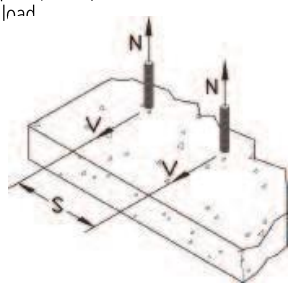
Load Adjustment Factors for Spacing and Edge Distances

Anchor Installed in Normal-Weight Concrete					
Anchor Dimension	Load Type	Critical Distance (Full Anchor Capacity)	Critical Load Factor	Minimum Distance (Reduced Capacity)	Minimum Load Factor
Spacing (s)	Tension and Shear	$s_{cr} = 3.0h_v$	$F_N = F_V = 1.0$	$s_{min} = 1.5h_v$	$F_N = F_V = 0.50$
Edge Distance (c)	Tension	$c_{cr} = 12d$	$F_N = 1.0$	$c_{min} = 5d$	$F_N = 0.70$
	Shear	$c_{cr} = 12d$	$F_V = 1.0$	$c_{min} = 5d$	$F_V = 0.45$

Anchor Installed in Lightweight Concrete					
Anchor Dimension	Load Type	Critical Distance (Full Anchor Capacity)	Critical Load Factor	Minimum Distance (Reduced Capacity)	Minimum Load Factor
Spacing (s)	Tension and Shear	$s_{cr} = 3.0h_v$	$F_N = F_V = 1.0$	$s_{min} = 1.5h_v$	$F_N = F_V = 0.50$
Edge Distance (c)	Tension	$c_{cr} = 12d$	$F_N = 1.0$	$c_{min} = 5d$	$F_N = 0.85$
	Shear	$c_{cr} = 12d$	$F_V = 1.0$	$c_{min} = 5d$	$F_V = 0.40$

1. Allowable load values found in the performance data tables are multiplied by reduction factors when anchor spacing or edge distances are less than critical distances. Linear interpolation is allowed for intermediate anchor spacing and edge distances between critical and minimum distances. When an anchor is affected by both reduced spacing and edge distance, the spacing and edge reduction factors must be combined (multiplied). Multiple reduction factors for anchor spacing and edge distance may be required depending on the anchor group configuration.

(b)



DESIGN CRITERIA

Load Adjustment Factors for Normal-Weight Concrete

Spacing, Tension (F_N) & Shear (F_V)

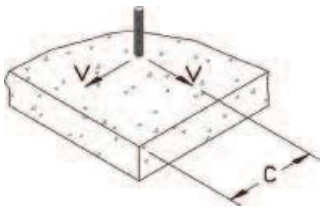
	6				1.00	0.95	0.91
	7 1/2					1.00	0.92
	9						1.00

Notes: For anchors loaded in tension, the critical edge distance (c_{cr}) is equal to 12 anchor diameters ($12d$) at which the anchor achieves 100% of load.



Minimum edge distance (c_{min}) is equal to 5 anchor diameters ($5d$) at which the anchor achieves 85% of load.

Edge Distance, Shear (F_V)							
Dia. (in.)		1/4	5/16	3/8	1/2	5/8	3/4

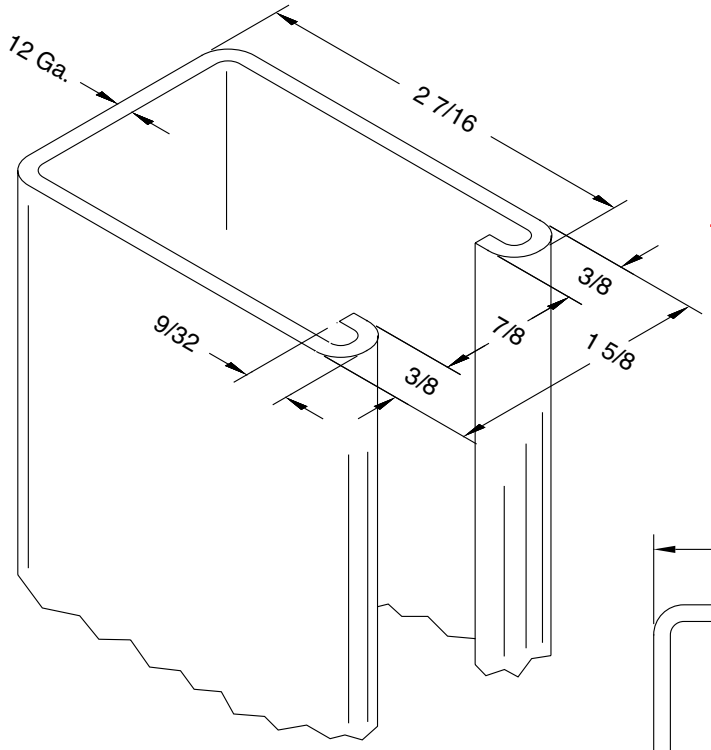
Engineering Data

Mill certification physical/mechanical properties, specification and engineering data for G-STRUT® Channel are as follows:

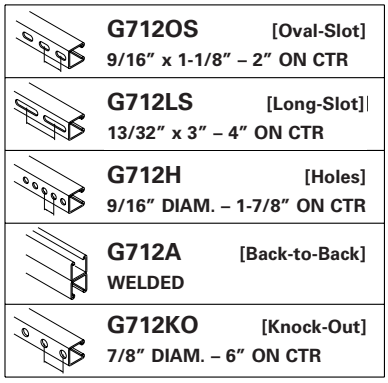
PRODUCT(S) PROFILE TYPES	AVG. YIELD STRENGTH	AVG. TENSILE STRENGTH	ROCKWELL B (RB VALUE)
ALL 1-5/8 industry standard strut profiles in sizes inclusive from 13/16" through 3-1/4"	42,700	62,600	62 –74

G-STRUT® Metal Framing Channel is interchangeable with industry-standard 1-5/8" strut profiles.

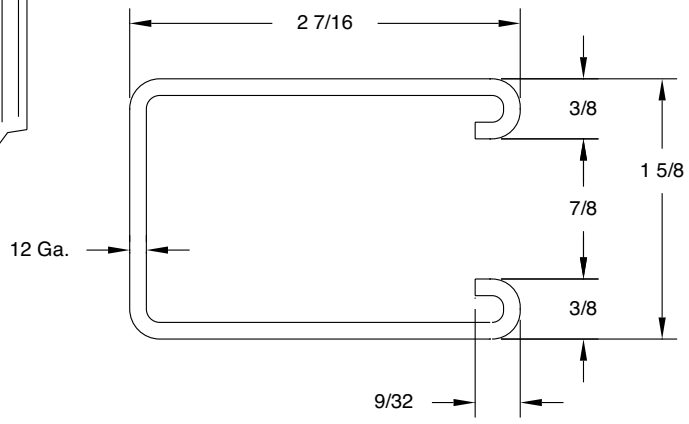
G-STRUT® is cold roll-formed, structural grade (33,000MY, CS Type B), prime carbon steel.



G-STRUT® conforms to ASTM 1011 for hot rolled steel and ASTM 653 for pre-galvanized steel.



Standard finishes include pre-galvanized (G-90 coating weight), painted, galvannealed, pickle & oil plain, and hot dip galvanized.



Painted available in polyester urethane powder coat finish or electro deposition cathodic epoxy e-coating.

Engineering/Load factors (see following pages by channel part number)

G-STRUT® Channel is manufactured exclusively in the USA, Canton, Ohio.

ENGINEERING DATA

115 Surge Restraint

315

- Accommodates multiple sizes of 115 standard duty loop hangers
- Complies with NFPA® 13 standard by restricting the upward surge movement of activated fire sprinkler systems
- Grips the loop hanger, not the nut, allowing fine tuning for height adjustment
- Easily installs by hand before or after pipe is positioned in hanger

Material: Spring Steel
Finish: CADDY ARMOUR

Part Number	Pipe Size	Height H
SR6	1/2" – 2"	1.3"

NFPA is a registered trademark of National Fire Protection Association, Inc. UL, UR, cUL, cUR, cULus and cURus are registered certification marks of UL LLC.

WARNING
Pentair products shall be installed and used only as indicated in Pentair's product instruction sheets and training materials. Instruction sheets are available at erico.pentair.com and from your Pentair customer service representative. Improper installation, misuse, misapplication or other failure to completely follow Pentair's instructions and warnings may cause product malfunction, property damage, serious bodily injury and death and/or void your warranty.

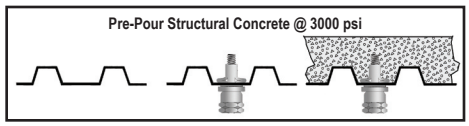
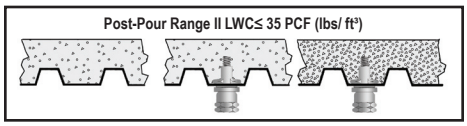
SAMMY X-PRESS®

SAMMYS®

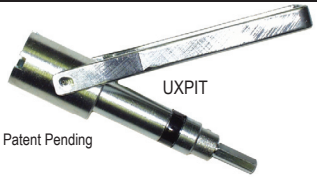
STEEL STEEL STEEL STEEL

Sammy X-Press® *Installs into Metal Deck, Purlin, or Tubular Steel*





Product Features



- The ***Sammy X-Press*** expands to provide direct vertical attachment in:
  - Metal Deck (22-16 gauge)
  - Z-Purlin (18-16 gauge)
- The ***Sammy X-Press Swivel*** allows you to hang plumb in extreme roof pitches:
  - 89° in Z-Purlin
  - 45° in metal deck for 12/12 pitch
- The ***Sammy X-Press Sidewinder*** expands to provide horizontal attachment in:
  - 16 ga - 3/16" steel - purlin, tubular steel.
- Installs in seconds, saving time & installation costs.
- Use in applications where access to the back of the installed fastener is prohibited. ie. metal roof deck, tubular steel, or vapor barrier fabric.
- Less jobsite material needed.
- No retaining nut required.
- Provides design flexibility.

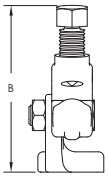
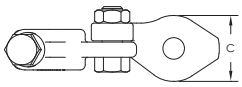
Universal Structural Attachment





- Universal design allows one product to attach directly to concrete, wood, bar joist or I-beam adapters
- Snap-off bolt head helps enable easy installation and inspection of seismic sway braces
- Use for both lateral and longitudinal sway brace applications
- Works with 1" through 2" brace pipes and 1/4" angle iron braces to reduce inventory
- Center bolt does not require tightening
- Meets NFPA®-13 requirements for seismic sway bracing

Standard Universal Sway Brace

- Use for both lateral and longitudinal sway brace applications
- Snap-off bolt head helps enable easy installation and inspection of seismic sway braces
- Works with 1" through 2" brace pipes and 1/4" angle iron braces to reduce inventory
- Slotted design grabs service pipe for added gripping strength
- Meets NFPA®-13 requirements for seismic sway bracing

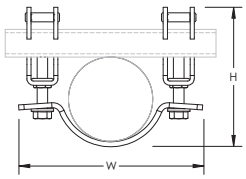
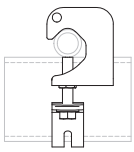
Quick Grip Lateral Sway Brace





The Quick Grip Lateral Brace, part of the CADDY line of fire sprinkler bracing systems from Pentair, is designed to help simplify installations when bracing service pipe for seismic or other catastrophic events. It features an innovative design for quick attachment of brace pipe to service pipe saving time and money.

- Easy two-step installation elminates extra trips between structure and service pipe
- Works with 1" and 1 1/4" (25 mm and 32 mm) brace pipes to reduce inventory
- Yellow tips provide a visual indicator that the bolts have been properly torqued
- Easy installation with an impact wrench from the bottom side of the clamp
- Meets NFPA®-13 requirements for seismic sway bracing

QUICK RESPONSE DRY PENDENT SPRINKLERS

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

Viking Quick Response Dry Pendent Sprinklers are thermosensitive spray sprinklers suitable for use in areas subject to freezing. The sprinklers are designed for dry systems and preaction systems where it is necessary to prevent water or condensation from entering the drop nipple before sprinkler operation. They may also be installed in spaces subject to freezing and supplied from a wet system in an adjacent heated area.

Viking Quick Response Dry Pendent Sprinklers are available in various finishes and temperature ratings to meet design requirements. The special Polyester and Electroless Nickel PTFE (ENT) coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: FM Global has no approval classification for Polyester coatings as corrosion resistant.)

NOTE: When installed in some corrosive environments, the Polyester finish may change color. This natural discoloration over time is not in itself an indication of corrosion and should not be treated as such. All sprinklers installed in corrosive environments should be replaced or tested as described in NFPA 25 on a more frequent basis.

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Classes 2013 and 2015

NYC Approved: MEA 89-92-E Volume 15

Refer to Approval Chart 1 and Design Criteria on page 105d for cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria on page 105e for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)
Maximum Working Pressure: 175 psi (12 bar).
Factory tested pneumatically to 100 psi (6.89 bar)
Thread size: 1” NPT or 25 mm BSP
Nominal K-Factor: 5.6 U.S. (80.6 metric*) for all listed and approved lengths.

* Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Covered by the following U.S. Patents: 8,636,075

Material Standards:

Frame Casting: Brass UNS-C84400
Deflector: Brass UNS-C26000
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Compression Screw: Brass UNS-C36000
Pip Cap: Brass UNS-C31400 or UNS-C31600
Pip Cap Adapter: Brass UNS-C36000
Orifice: Copper UNS-C22000 or UNS-C11000
Tube: ERW Hydraulic Steel Tube
Support (Internal): Stainless Steel UNS-S30400
Barrel: Steel Pipe UNS-G10260, Electrodeposited Epoxy Base finish
Barrel End and Threads: QM Brass
Sleeve (for Adjustable Standard style only): Brass UNS-C26000 or UNS-C26800

Escutcheon Materials:

Adjustable Standard Dry Escutcheons: Brass UNS-C26000 or UNS-C26800
Recessed Dry Escutcheons: Cold Rolled Steel UNS-G10080

QUICK RESPONSE
DRY PENDENT SPRINKLERS

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

ENT Coated Adjustable and Recessed Escutcheons: Stainless Steel UNS-S30400

Ordering Information: (Also refer to the current Viking price list.)

Order Quick Response Dry Pendent Sprinklers by first adding the appropriate suffix for the sprinkler finish, the appropriate suffix for the temperature rating, and then the suffix for the length ("A" dimension) to sprinkler base part number. Order in a specific length noted as the "A" dimension. The "A" dimension is the distance from the face of the fitting (tee) to the desired finished surface of the ceiling.

These sprinklers are listed and approved in lengths from 1-1/2" to 45-1/2" (38.1 mm to 1,156 mm) for the adjustable standard style, 3" to 47" (76.2 mm to 1,194 mm) for the plain barrel style, and 3-1/4" to 47-1/2" (82.5 mm to 1,207 mm) for the adjustable recessed style.

Lengths exceeding the standard lengths are available, with no approvals, on a "made-to-order" basis: Recessed Dry Pendent up to 65-1/2" (1,664 mm). Adjustable Standard Dry Pendent up to 63-1/2" (1,613 mm). Plain Barrel Dry Pendent up to 65" (1,651 mm). Contact the manufacturer for more information.

Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, and ENT = JN

Temperature Suffix: 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, 286 °F (141 °C) = G

For example, sprinkler VK176 with a Chrome finish and a 155 °F (68 °C) temperature rating, and "A" length of 10" = Part No. 08383UFB10.

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:

A. Standard Wrench: Part No. 07297W/B (available since 1991)

B. Wrench for recessed sprinklers: Part No. 07565W/B** (available since 1991)

**A ½" ratchet is required (not available from Viking).

Sprinkler Guard: Chrome, with no listings or approvals, for installation on dry pendent sprinklers made after May 1994 only (Part No. 08954).

Replacement Escutcheons:

A. Adjustable Standard Dry Escutcheon: Base Part No. 07741

B. Recessed Dry Escutcheon Cup: Base Part No. 05459A

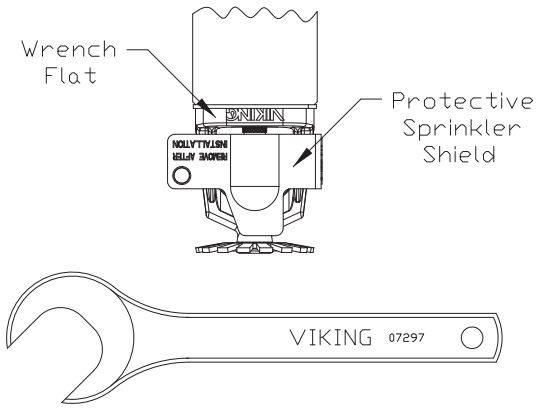

Figure 1: Standard Sprinkler Wrench 07297W/B

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive liquid in the glass bulb expands, causing the glass to shatter, releasing the internal parts to open the waterway. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS & MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

The Viking Quick Response Dry Pendent Sprinkler is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Bulb Color
Ordinary	155 °F (68 °C)	100 °F (38 °C)	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	Green
High	286 °F (141 °C)	225 °F (107 °C)	Blue

Sprinkler Finishes: Brass, Chrome, White Polyester, and ENT

Corrosion-Resistant Coating[3,4]: White Polyester and ENT in all temperature ratings

Footnotes

[1] The sprinkler temperature rating is stamped on the deflector.

[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.

[3] The corrosion-resistant Polyester and ENT coatings have passed the standard corrosion test required by the approving agencies indicated in the Approval Charts. These tests cannot and do not represent all possible corrosive environments. Note: These coatings are NOT corrosion proof. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. Polyester and ENT coatings are applied to the exposed exterior surfaces only. Note that the spring is exposed on sprinklers with Polyester and ENT coatings.

[4] When installed in some corrosive environments, the Polyester finish may change color. This natural discoloration over time is not in itself an indication of corrosion and should not be treated as such. All sprinklers installed in corrosive environments should be replaced or tested as described in NFPA 25 on a more frequent basis.

Approved Temperature Ratings

A - 155 °F (68 °C), 175 °F (79°C), 200 °F (93 °C), and 286 °F (141 °C)
B - 155 °F (68 °C), 175 °F (79°C), and 200 °F (93 °C)

Approved Finishes and “A” Dimensions

1 - Chrome or White Polyester[7] sprinkler with a Chrome or White Polyester Sleeve and Escutcheon with “A” dimensions 1-1/2” to 45-1/2” (38.1 mm to 1,156 mm)
2 - Chrome or White Polyester[7] with “A” dimensions 3-1/4” to 47-1/2” (82.5 mm to 1,207 mm)
3 - Chrome, Brass, White Polyester[7], or ENT[7] with “A” dimensions 3” to 47” (76.2 mm to 1,194 mm)
4 - Chrome or Brass with “A” dimensions 3” to 47” (76.2 mm to 1,194 mm)
5 - ENT[7] sprinkler with an ENT[7] Sleeve and Escutcheon with “A” dimensions 1-1/2” to 45-1/2” (38.1 mm to 1,156 mm)
6 - ENT[7] with “A” dimensions 3-1/4” to 47-1/2” (82.5 mm to 1,207 mm)

Footnotes

[1] Part number shown is the base part number. For complete part number, refer to current Viking price list schedule.

[2] K-Factor applies for standard lengths (“A” Dimensions indicated above).

[3] Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

[4] This chart shows the listings and approvals available at the time of printing. Other approvals may be in process. Check with the manufacturer for any additional approvals.

[5] Listed by Underwriter’s Laboratories for use in the U.S. and Canada.

[6] Accepted for use, City of New York Department of Buildings, MEA Number 89-92-E, Vol. 15.

[7] cULus Listed as corrosion resistant.

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1 above.)

NOTE: When using CPVC fittings with Viking dry sprinklers, use only new Nibco Model 5012-S-BI tees. When selecting other CPVC fittings, contact Viking Technical Services.

cULus Listing Requirements:

Standard Dry Pendent Sprinklers are cULus Listed as indicated in Approval Chart 1 for installation in accordance with the latest edition of NFPA 13 for standard spray sprinklers.

- Designed for use in Light and Ordinary Hazard occupancies.
- The sprinkler installation and obstruction rules contained in NFPA 13 for standard spray pendent sprinklers must be followed.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page DRY1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

[4] This chart shows the FM Approvals available at the time of printing. Other approvals may be in process. Check with the manufacturer for any additional approvals.
[5] FM approved as corrosion resistant.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

NOTE: When using CPVC fittings with Viking dry sprinklers, use only new Nibco Model 5012-S-Bl tees. When selecting other CPVC fittings, contact Viking Technical Services.

FM Approval Requirements:

The Dry Pendent Sprinklers in the Approval Chart above are FM Approved as quick response **Non-storage** standard spray sprinklers as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including 2-0) and Technical Advisory Bulletins. FM Global Loss Prevention Data Sheets and Technical Advisory Bulletins contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page DRY1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

MICROFAST® QUICK RESPONSE UPRIGHT SPRINKLER VK300 (K5.6)

TECHNICAL DATA

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

The Viking Microfast® Quick Response Upright Sprinkler VK300 is a small, thermosensitive, glass-bulb spray sprinkler available in several different finishes and temperature ratings to meet design requirements. The special Polyester and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: **FM global approves the ENT coating as corrosion resistant.** FM Global has no approval classification Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV
FM Approved: Classes 2002 and 2020

Refer to Approval Chart 1 and Design Criteria on for cULus Listing requirements and refer to Approval Chart 2 and Design Criteria FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)*
Maximum Working Pressure: 175 psi (12 bar) wwp.
Factory tested hydrostatically to 500 psi (34.5 bar)
Testing: U.S.A. Patent No. 4,831,870
Thread size: 1/2” NPT, 15 mm BSP
Nominal K-Factor: 5.6 U.S. (80.6 metric**)
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-3/16” (56 mm)

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

Material Standards:

Frame Casting: Brass UNS-C84400 or QM Brass
Deflector: Brass UNS-C23000 or Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT plated

Viking Technical Data may be found on The Viking Corporation’s Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Ordering Information: (Also refer to the current Viking price list.)

Order Viking Microfast® Quick Response Upright Sprinkler VK300 by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, and ENT = JN
Temperature Suffix (°F/°C): 135°/57° = A, 155°/68° = B, 175°/79° = D, 200°/93° = E, and 286°/141° = G
For example, sprinkler VK300 with a 1/2” NPT thread, Brass finish and a 155 °F/68 °C temperature rating = Part No. 12978AB
Available Finishes And Temperature Ratings: Refer to Table 1.
Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)
Sprinkler Wrench: Standard Wrench: Part No. 10896W/B (available since 2000)
Sprinkler Cabinets:
A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

VIKING®

1. DESCRIPTION

The Viking Microfast® Quick Response Pendent Sprinkler VK302 is a small thermosensitive glass bulb spray sprinkler available with various finishes and temperature ratings to meet design requirements. The special Polyester, Polytetrafluoroethelyne (PTFE), and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: **FM Global approves ENT finish as corrosion resistant.** FM Global has no approval classification for PTFE and Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Class Series 2000

VdS Approved: Certificates G414009 and G414010

LPCB Approved

CE Certified: Standard EN 12259-1:1999, A3:2006 Certificate of Constancy of Performance 0832-CPR-S0021

CCCF Approved: Approved by the China Certification Center for Fire Products (CCCF)

Refer to Approval Chart 1 and Design Criteria cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Specifications:
Minimum Operating Pressure: 7 psi (0.5 bar)
Rated to 175 psi (12 bar) water working pressure
Factory tested hydrostatically to 500 psi (34.5 bar)
Thread size: 1/2" NPT, 15 mm BSP
Nominal K-Factor: 5.6 U.S. (80.6 metric**)
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-1/4" (58 mm)

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

Material Standards:
Frame Casting: Brass UNS-C84400 or QM Brass
Deflector: Phosphor Bronze UNS-C51000 or Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For PTFE Coated Sprinklers: Belleville Spring-Exposed, Screw-Nickel Plated, Pip Cap-PTFE Coated
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT plated.

Ordering Information: (Also refer to the current Viking price list.)
Order Quick Response Pendent Sprinklers by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, Black PTFE = N, and ENT = JN
Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, 286 °F (141 °C) = G
For example, sprinkler VK302 with a Brass finish and a 155 °F (68 °C) temperature rating = Part No. 12979AB

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

Available Finishes And Temperature Ratings: Refer to Table 1.
Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)
Sprinkler Wrenches:
A. Standard Wrench: Part No. 10896W/B (available since 2000).
B. Wrench for Recessed Pendent Sprinklers: Part No. 13655W/B** (available since 2006)
C. Optional Protective Sprinkler Cap Remover/Escutcheon Installer Tool*** Part No. 15915 (available since 2010)
**A ½" ratchet is required (not available from Viking).
***Allows use from the floor by attaching a length of 1" diameter CPVC tubing to the tool. Ideal for sprinkler cabinets. Refer to Bulletin F_051808.
Sprinkler Cabinets:
A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive liquid in the glass bulb expands, causing the glass to shatter, releasing the pip cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

The Viking Microfast® Quick Response Pendent Sprinkler VK302 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Bulb Color
Ordinary	135 °F (57 °C)	100 °F (38 °C)	Orange
Ordinary	155 °F (68 °C)	100 °F (38 °C)	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	Green
High	286 °F (141 °C)	225 °F (107 °C)	Blue

Sprinkler Finishes: Brass, Chrome, White Polyester, Black Polyester, Black PTFE, and ENT

Corrosion-Resistant Coatings[3]: White Polyester, Black Polyester, and Black PTFE. ENT in all temperature ratings except 135 °F (57 °C)

Footnotes

[1] The sprinkler temperature rating is stamped on the deflector.

[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.

[3] The corrosion-resistant coatings have passed the standard corrosion test required by the approving agencies indicated in the Approval Charts. These tests cannot and do not represent all possible corrosive environments. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. For automatic sprinklers, the coatings indicated are applied to the exposed exterior surfaces only. Note that the spring is exposed on sprinklers with Polyester, PTFE, and ENT coatings. For ENT coated automatic sprinklers, the waterway is coated

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1 above.)

cULus Listing Requirements:

The Viking Microfast® Quick Response Pendent Sprinkler VK302 is cULus Listed as indicated in the Approval Chart for installation in accordance with the latest edition of NFPA 13 for standard spray sprinklers.

- Designed for use in Light and Ordinary occupancies.
- The sprinkler installation rules contained in NFPA 13 for standard spray pendent sprinklers must be followed.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

The Viking Microfast® Quick Response Pendent Sprinkler VK302 is FM Approved as quick response **Non-storage** upright and pendent sprinklers as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

The Viking Microfast® Quick Response Horizontal Sidewall Sprinkler VK305 is a small thermosensitive glass bulb spray sprinkler available with various finishes and temperature ratings to meet design requirements. The special Polyester and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in Approval Charts.

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Class 2020

Refer to Approval Chart 1 and Design Criteria for cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)
Rated to 175 psi (12 bar) water working pressure
Factory tested hydrostatically to 500 psi (34.5 bar)
Nominal K-Factor: 5.6 U.S. (80.6 metric*)

* Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

Overall Length: 2-3/4" (68 mm)

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Material Standards:

Frame Casting: Brass UNS-C84400 or QM Brass
Deflector: Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring - Exposed, Screw and Pip cap - ENT plated.

Ordering Information: (Also refer to the current Viking price list.)

Order Viking Microfast® Quick Response Horizontal Sidewall Sprinkler VK305 by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, and ENT = JN
Temperature Suffix: 135 °F / 57 °C = A, 155 °F / 68 °C = B, 175 °F / 79 °C = D, 200 °F / 93 °C = E, and 286 °F / 141 °C = G
For example, sprinkler 12997 with a Brass finish and a 155 °F / 68 °C temperature rating = Part No. 12997AB

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:

A. Standard Wrench: Part No. 10896W/B (available since 2000).
B. Wrench for recessed and/or wax coated sprinklers: Part No. 13655W/B** (available since 2006)
**A ½" ratchet is required (not available from Viking).

Sprinkler Cabinets:

A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

VIKING	TECHNICAL DATA	MICROFAST® QUICK RESPONSE HORIZONTAL SIDEWALL SPRINKLER VK305 (K5.6)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive fusible link disengages, the pip cap and spring are released, and the waterway is opened. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking Microfast® Quick Response Horizontal Sidewall Sprinkler VK305 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

[4] Listed by Underwriters Laboratories Inc. for use in the U.S. and Canada.
[5] cULus Listed as corrosion-resistant.
[6] Other colors are available on request with the same Listings and Approvals as the standard colors.

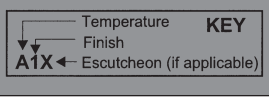
DESIGN CRITERIA - UL

(Also refer to Approval Chart 1.)

cULus Listing Requirements:

Quick Response Horizontal Sprinkler VK305 is cULus Listed as indicated in Approval Chart 1 for installation in accordance with the latest edition of NFPA 13 for sidewall standard spray sprinklers.

- Designed for use in Light and Ordinary Hazard occupancies.
- Locate with the deflector 4" to 12" (102 mm to 305 mm) below the ceiling.
- Protection areas and maximum spacing shall be in accordance with the tables provided in NFPA 13.
- Minimum spacing allowed is 6 ft. (1.8 m).
- Align the top of the deflector parallel with the ceiling.
- Locate no less than 4" (102 mm) from end walls.
- Maximum distance from end walls shall be no more than one-half of the allowable distance between sprinklers. The distance shall be measured perpendicular to the wall.
- The sprinkler installation and obstruction rules contained in NFPA 13 for sidewall standard spray sprinklers must be followed.



IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Approved Temperature Ratings

A - 135 °F (57 °C), 155 °F (68 °C), 175 °F (79 °C), 200 °F (93 °C), and 286 °F (141 °C)
B - 135 °F (57 °C), 155 °F (68 °C), 175 °F (79 °C), and 200 °F (93 °C)

Approved Finishes

1 - Brass

Approved Escutcheons

X - Installed with standard surface-mounted escutcheons or the Viking Microfast® Model F-1 Adjustable Escutcheon, **or** recessed with the Viking Micromatic® Model E-1, E-2, E-3, or G-1 Recessed Escutcheon
Y - Installed with standard surface-mounted escutcheons or the Viking Microfast® Model F-1 Adjustable Escutcheon

Footnotes

[1] Base part number shown. For complete part number, refer to Viking's current price schedule.

[2] Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

[3] This table shows the FM Approvals available at the time of printing. Other approvals may be in process.

[4] Viking vertical sidewall sprinklers may be installed pendent or upright.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

Horizontal Sidewall Sprinkler VK305 is FM Approved as a quick response **Non-Storage** sidewall sprinkler as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

The Viking Microfast® Quick Response Upright Sprinkler VK350 is a small, thermosensitive, glass-bulb spray sprinkler available in several different finishes, temperature ratings, and K-Factors to meet design requirements. The special Polyester, Polytetrafluoroethylene (PTFE), and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: **FM Global approves the ENT coating as corrosion resistant.** FM Global has no approval classification for PTFE and Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV
FM Approved: Class Series 2000
VdS Approved: Certificates G414017 and G414018
LPCB Approved
CE Certified: Standard EN 12259-1, EC-certificate of conformity 0832-CPD-2001 and 0786-CPD-40278

NOTE: Other International approval certificates are available upon request.

Refer to Approval Chart 1 and Design Criteria cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)*
Maximum Working Pressure: 175 psi (12 bar) wwp.
Factory tested hydrostatically to 500 psi (34.5 bar)
Testing: U.S.A. Patent No. 4,831,870
Thread size: 1/2” NPT, 15 mm BSP, 3/4” NPT, 20 mm BSP
Nominal K-Factor: 8.0 U.S. (115.2 metric**)
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-5/16” (59 mm)

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

Viking Technical Data may be found on The Viking Corporation’s Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Material Standards:

Frame Casting: Brass UNS-C84400
Deflector: Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For PTFE Coated Sprinklers: Belleville Spring-Exposed, Screw-Nickel Plated, Pip Cap-PTFE Coated
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT plated.

Ordering Information: (Also refer to the current Viking price list.)

Order Viking Microfast® Quick Response Upright Sprinkler VK350 by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, and Black PTFE = N, ENT = JN
Temperature Suffix (°F/°C): 135°/57° = A, 155°/68° = B, 175°/79° = D, 200°/93° = E, and 286°/141° = G
For example, sprinkler VK350 with a 1/2” thread, Brass finish and a 155 °F/68 °C temperature rating = Part No. 18259AB
Available Finishes And Temperature Ratings: Refer to Table 1.
Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)
Sprinkler Wrench: Standard Wrench: Part No. 10896W/B (available since 2000)
Sprinkler Cabinets:

VIKING®

TECHNICAL DATA

MICROFAST® QUICK RESPONSE UPRIGHT SPRINKLER VK350 (K8.0)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive liquid in the glass bulb expands, causing the glass to shatter, releasing the pip cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

The Viking Microfast® Quick Response Upright Sprinkler VK350 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Bulb Color
Ordinary	135 °F (57 °C)	100 °F (38 °C)	Orange
Ordinary	155 °F (68 °C)	100 °F (38 °C)	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	Green
High	286 °F (141 °C)	225 °F (107 °C)	Blue

Sprinkler Finishes: Brass, Chrome, White Polyester, Black Polyester, Black PTFE, and ENT

Corrosion-Resistant Coatings[3]: White Polyester, Black Polyester, and Black PTFE. ENT in all temperature ratings except 135 °F (57 °C)

Footnotes

[1] The sprinkler temperature rating is stamped on the deflector.
[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.
[3] The corrosion-resistant coatings have passed the standard corrosion test required by the approving agencies indicated on pages 51c-e. These tests cannot and do not represent all possible corrosive environments. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. For automatic sprinklers, the coatings indicated are applied to the exposed exterior surfaces only. Note that the spring is exposed on sprinklers with Polyester, ENT, and PTFE coatings. For ENT coated automatic sprinklers, the waterway is coated.

[6] FM approved as corrosion resistant.

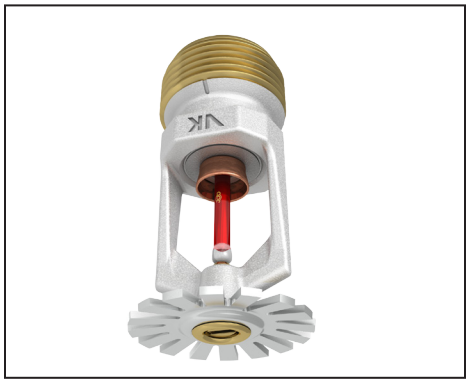
DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

The Microfast® Quick Response Upright Sprinkler VK350 is FM Approved as a quick response **Non-Storage** upright sprinkler as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.



IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is a small thermosensitive glass bulb spray sprinkler available with various finishes and temperature ratings to meet design requirements. The special Polyester, Polytetrafluoroethelyne (PTFE), and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: **FM Global approves ENT finish as corrosion resistant.** FM Global has no approval classification for PTFE and Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Class Series 2000

VdS Approved: Certificates G414019 and G414020

LPCB Approved

CE Certified: Standard EN 12259-1, EC-certificate of conformity 0832-CPD-2001 and 0786-CPD-40279

Refer to Approval Chart 1 and Design Criteria cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)
Rated to 175 psi (12 bar) water working pressure
Factory tested hydrostatically to 500 psi (34.5 bar)
Thread size: 3/4” NPT, 20 mm BSP
Nominal K-Factor: 8.0 U.S. (115.2 metric**)
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-1/4” (58 mm)

Viking Technical Data may be found on The Viking Corporation’s Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

Material Standards:

Frame Casting: Brass UNS-C84400
Deflector: Phosphor Bronze UNS-C51000 or Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For PTFE Coated Sprinklers: Belleville Spring-Exposed, Screw-Nickel Plated, Pip Cap-PTFE Coated
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT plated.

Ordering Information: (Also refer to the current Viking price list.)

Order Quick Response Upright and Pendent Sprinklers by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, Black PTFE = N, and ENT = JN
Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, 286 °F (141 °C) = G
For example, sprinkler VK352 with a Brass finish and a 155 °F (68 °C) temperature rating = Part No. 18258AB

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)

Y - Standard surface-mounted escutcheon or the Viking Microfast® Model F-1 Adjustable Escutcheon, or recessed with the Viking Micromatic® Model E-1 or E-2 Recessed Escutcheon
Z - Standard surface-mounted escutcheon or the Viking Microfast® Model F-1 Adjustable Escutcheon

Footnotes

[1] Base part number shown. For complete part number, refer to Viking’s current price schedule.
[2] Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.
[3] This table shows the listings and approvals available at the time of printing. Other approvals may be in process.
[4] Listed by Underwriters Laboratories Inc. for use in the U.S. and Canada.
[5] cULus Listed as corrosion-resistant.
[6] Other colors are available on request with the same Listings and Approvals as the standard colors.
[7] The 1/2” NPT Large Orifice Sprinkler is listed and approved for retrofit only when installed in accordance with NFPA 13.
[8] CE Certified, Standard EN 12259-1, EC-certificates of conformity 0832-CPD-2001 and 0832-CPD-2003.
[9] CE Certified, Standard EN 12259-1, EC-certificate of conformity 0786-CPD-40279.

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1 above.)

cULus Listing Requirements:

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is cULus Listed as indicated in the Approval Chart for installation in accordance with the latest edition of NFPA 13 for standard spray sprinklers.

- Designed for use in Light, Ordinary, and Extra Hazard occupancies.
- The sprinkler installation rules contained in NFPA 13 for standard spray pendent sprinklers must be followed.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is FM Approved as quick response **Non-storage** upright and pendent sprinklers as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is a small thermosensitive glass bulb spray sprinkler available with various finishes and temperature ratings to meet design requirements. The special Polyester, Polytetrafluoroethelyne (PTFE), and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are listed/approved as corrosion resistant as indicated in the Approval Charts. (Note: **FM Global approves ENT finish as corrosion resistant.** FM Global has no approval classification for PTFE and Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Class Series 2000

VdS Approved: Certificates G414019 and G414020

LPCB Approved

CE Certified: Standard EN 12259-1, EC-certificate of conformity 0832-CPD-2001 and 0786-CPD-40279

Refer to Approval Chart 1 and Design Criteria cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: 7 psi (0.5 bar)
Rated to 175 psi (12 bar) water working pressure
Factory tested hydrostatically to 500 psi (34.5 bar)
Thread size: 3/4” NPT, 20 mm BSP
Nominal K-Factor: 8.0 U.S. (115.2 metric**)
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-1/4” (58 mm)

Viking Technical Data may be found on The Viking Corporation’s Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

Material Standards:

Frame Casting: Brass UNS-C84400
Deflector: Phosphor Bronze UNS-C51000 or Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For PTFE Coated Sprinklers: Belleville Spring-Exposed, Screw-Nickel Plated, Pip Cap-PTFE Coated
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT plated.

Ordering Information: (Also refer to the current Viking price list.)

Order Quick Response Upright and Pendent Sprinklers by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, Black PTFE = N, and ENT = JN
Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, 286 °F (141 °C) = G
For example, sprinkler VK352 with a Brass finish and a 155 °F (68 °C) temperature rating = Part No. 18258AB

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)

Sprinkler Wrenches:

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

A. Standard Wrench: Part No. 10896W/B (available since 2000).
B. Wrench for Recessed Pendent Sprinklers: Part No. 13655W/B** (available since 2006)
C. Optional Protective Sprinkler Cap Remover/Escutcheon Installer Tool*** Part No. 15915 (available since 2010)

**A ½" ratchet is required (not available from Viking).

***Allows use from the floor by attaching a length of 1" diameter CPVC tubing to the tool. Ideal for sprinkler cabinets. Refer to Bulletin F_051808.

Sprinkler Cabinets:

A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive liquid in the glass bulb expands, causing the glass to shatter, releasing the pip cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Bulb Color
Ordinary	135 °F (57 °C)	100 °F (38 °C)	Orange
Ordinary	155 °F (68 °C)	100 °F (38 °C)	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	Green
High	286 °F (141 °C)	225 °F (107 °C)	Blue

Sprinkler Finishes: Brass, Chrome, White Polyester, Black Polyester, Black PTFE, and ENT

Corrosion-Resistant Coatings[3]: White Polyester, Black Polyester, and Black PTFE. ENT in all temperature ratings except 135 °F (57 °C)

Footnotes

[1] The sprinkler temperature rating is stamped on the deflector.

[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.

[3] The corrosion-resistant coatings have passed the standard corrosion test required by the approving agencies indicated in the Approval Charts. These tests cannot and do not represent all possible corrosive environments. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. For automatic sprinklers, the coatings indicated are applied to the exposed exterior surfaces only. Note that the spring is exposed on sprinklers with Polyester, PTFE, and ENT coatings. For ENT coated automatic sprinklers, the waterway is coated

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

The Viking Microfast® Quick Response Pendent Sprinkler VK352 is FM Approved as quick response **Non-storage** upright and pendent sprinklers as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

Viking Mirage® Standard and Quick Response Concealed Pendent Sprinkler VK462 and HP Sprinkler VK463 are thermosensitive glass-bulb spray sprinklers designed for installation on concealed pipe systems where the appearance of a smooth ceiling is desired.

The sprinkler is pre-assembled with a threaded adapter for installation with a low-profile cover assembly that provides up to ½" (12.7 mm) of vertical adjustment. The two-piece design allows installation and testing of the sprinkler prior to installation of the cover plate. The "push-on", "thread-off" design of the concealed cover plate assembly allows easy installation of the cover plate after the system has been tested and the ceiling finish has been applied. The cover assembly can be removed and reinstalled, allowing temporary removal of ceiling panels without taking the sprinkler system out of service or removing the sprinkler. The Electroless Nickel PTFE (ENT) coating has been investigated for installation in corrosive atmospheres and is cULus Listed as corrosion resistant as indicated in the Approval Charts. The ENT finish is only available for the sprinkler assembly, the cover plate is not plated.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approval: Class 2015

NYC Approved: MEA 89-92-E, Volume 32

VdS Approved: Certificate G4080021

LPCB Approved: Ref. No. 096e/12

CE Certified: Standard EN 12259-1, EC-certificate of conformity 0832-CPD-2032

CCCF Approved: Approved by the China Certification Center for Fire Products (CCCF)

Refer to Approval Chart 1 Design Criteria for cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria on page for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:
Available since 2006.
Minimum Operating Pressure: 7 psi (0.5 bar)*
Maximum Working Pressure: Sprinkler VK463 is rated for use with water working pressures ranging from the minimum 7 psi (0.5 bar) up to 250 psi (17.2 bar) for high-pressure systems. High-pressure (HP) sprinklers can be identified by locating "250" stamped on the deflector. Sprinkler VK462 is rated to a maximum 175 psi (12 bar) wwp.
Factory tested hydrostatically to 500 psi (34.5 bar)
Thread size: 1/2" (15 mm) NPT
Nominal K-Factor: 5.6 U.S. (80.6 metric†)
Glass-bulb fluid temperature rated to -65°F (-55°C)
Patents Pending

*cULus Listing, FM Approval, and NFPA 13 installs require a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).

†Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

Material Standards:
Sprinkler Body: Brass UNS-C84400
Deflector: Copper UNS-C19500 for Sprinkler VK462
Phosphor Bronze UNS-C51000 for Sprinkler VK463
Deflector Pins: Stainless Steel Alloy
Bulb: Glass, nominal 3 mm diameter
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
Button: Brass UNS-C36000
Screws: 18-8 Stainless Steel
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with Teflon Tape
Yoke: Phosphor Bronze UNS-C51000
Cover Adapter: Cold Rolled Steel UNS-G10080, Finish: Clear Chromate over Zinc Plating

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

Cover Assembly Materials:
Cover: Copper UNS-C11000
Base: Brass UNS-C26000 or UNS-C26800
Springs: Nickel Alloy
Solder: Eutectic

Ordering Information: (Also refer to the current Viking price list.)
Viking Mirage® Standard and Quick Response Concealed Pendent Sprinklers and Cover Plate Assemblies must be ordered separately:
Sprinkler: Base Part No. VK462 - 13503A for Brass finish and 13503JN for ENT finish. VK463 - HP Base Part No. 13667A
Specify sprinkler temperature rating by adding the appropriate suffix for the temperature rating to the base part number:
Temperature Suffix: 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E
For example, sprinkler VK463 with a 155 °F (68 °C) temperature rating = 13667AB.
Cover Plate Assembly: Base Part No. 13504 (2-3/4" diameter), Base Part No. 13642 (3-5/16" diameter), or Base Part No. 15394 (square cover plate, 3-5/16" diameter)
Specify finish and temperature rating of the cover plate assembly by adding the appropriate suffixes for the finish and the cover temperature rating to the base part number:
Finish Suffix: Polished Chrome = F, Brushed Chrome = F-/B, Bright Brass = B, Antique Brass = B-/A, Brushed Brass = B-/B, Brushed Copper = E-/B, Painted White = M-/W, Painted Ivory = M-/I, Painted Black = M-/B
Temperature Suffix: 135 °F (57 °C) UL (139 °F (59 °C) FM and LPCB) = A, 165 °F (74 °C) = C
For example, cover 13504 with a Polished Chrome finish and a 165 °F (74 °C) temperature rating = 13504FC.

Note: Square cover plate 15394 cULus Listing is for the 135 °F (57 °C) temperature rated cover plate only. Refer to the Approval Chart.

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)
Sprinkler Wrenches:**
A. Heavy Duty Wrench Part No. 14047W/B (available since 2006), or
B. Head Cabinet Wrench Part No. 14031*** (available since 2006)
C. Optional Concealed Cover Plate Installer Tool Part No. 14412 for cover 13504, or Part No. 14867 for the large diameter cover (available since 2007)

**Requires a ½" ratchet (not available from Viking). ***Optional for removal of the protective cap. Ideal for sprinkler cabinets.

Sprinkler Cabinet: Part No. 01731A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, when the temperature around the sprinkler approaches its operating temperature, the cover plate detaches. Continued heating of the exposed sprinkler causes the heat-sensitive liquid in the glass bulb to expand and the bulb to shatter, releasing the yoke, pip-cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking Sprinklers VK462 and VK463 are available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Temperature Rating of Cover Assembly (Required)	Bulb Color
Ordinary	155 °F (68° C)	100 °F (38 °C)	135 °F (57 °C) cULus 139 °F (59 °C) FM and LPCB	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	165 °F (74 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	165 °F (74 °C)	Green

Cover Plate Finishes: Polished Chrome, Brushed Chrome, Bright Brass, Antique Brass, Brushed Brass, Brushed Copper, Painted White, Painted Ivory, or Painted Black

Sprinkler Finishes: Brass and ENT

Corrosion Resistant Coatings[3]: ENT

Footnotes

[1] The sprinkler temperature rating is stamped on the sprinkler deflector.

[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.

[3] The corrosion resistant coatings have passed the standard corrosion test required by the approving agencies indicated in the Approval Charts. These tests cannot and do not represent all possible corrosive environments. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. For automatic sprinklers, the ENT coating is applied to all exposed exterior surfaces, including the waterway, but the Belleville spring is exposed.

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1)

cULus Listing Requirements:

Mirage® Concealed Pendent Sprinklers VK462 and VK463 are cULus Listed as quick response for installation in accordance with the latest edition of NFPA 13 for standard coverage pendent spray sprinklers as indicated below.

- For hazard occupancies up to and including Ordinary Hazard, Group II.
- Protection areas and maximum spacing shall be in accordance with the tables provided in NFPA 13. Maximum spacing allowed is 15 ft. (4.6 m).
- Minimum spacing allowed is 6 ft. (1.8 m) unless baffles are installed in accordance with NFPA 13.
- Minimum distance from walls is 4 in. (102 mm).
- Maximum distance from walls shall be no more than one-half of the allowable distance between sprinklers. The distance shall be measured perpendicular to the wall.
- The sprinkler obstruction rules contained in NFPA 13 for standard coverage pendent spray sprinklers must be followed.

NOTE: Concealed sprinklers must be installed in neutral or negative pressure plenums only.

VdS Approval Requirements:

a) The sprinkler can be installed in a concrete ceiling (massive ceiling) or in a false ceiling made of light materials.

b) This sprinkler is deflector fixed type and can be only activated by heat. The housing is not tight.

c) Follow installation guidelines of current standards, CEA4001VdS and EN12845. These sprinklers can only be installed in LH and OH occupancies, except in OH4.

NOTES: Due to the design the sprinkler type 'Domed-CCP' shall not be installed in false ceilings in which the false ceiling space is protected by a water extinguishing system.

Due to the design the sprinkler type 'Domed-CCP' shall not be installed in false ceilings in which during a fire the pressure above the false ceiling may be assumed to be higher than the pressure below the false ceiling.

The criterion for the dropping of the cover relevant for this approval is heat.

Steps of installation:

1. Prepare the sprinkler key.
2. Remove the plastic cover.
3. Hold the sprinkler with the wrench and fasten it.
4. Replace the plastic cover and do not remove until the cover is installed.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page SR1-3 or QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Identification of Custom Paint Color:
All custom color painted cover plates will have an identifying label affixed to the inside of the cover that indicates custom color and will have a representative sample (a paint dot) of the paint on the label.

Figure 1: Identification of Custom Paint Color for Concealed Covers

NOTE: Custom colors are indicated on a label inside the cover assembly. Refer to Figure 1.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

Viking Concealed Pendent Sprinkler VK462 is FM Approved as a standard response **Non-Storage** concealed pendent sprinkler as indicated in the FM Approval Guide. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheet 2-0). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page SR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Spare Sprinkler Head Storage Cabinet

INSIST ON FPPI®

211313 - Wet-Pipe Sprinkler System

449

Description

Fire Protection Products, Inc. Spare Sprinkler Head Cabinets are designed to allow for spare sprinkler head storage as required by NFPA guidelines. The Spare Sprinkler Head Cabinets are available in six configurations. Three head, six head, six head ESFR, twelve head, twenty-four head and thirty-six head. All six styles are manufactured with “knockouts” to accommodate the most common size sprinklers. The shelf is located to allow for the storage of a typical sprinkler head wrench. Each cabinet is finished with a red enamel finish. Each spare head cabinet comes with a hinged door which remains closed to protect the spare sprinklers from the elements and features two holes on the back panel to allow for attachment to most surfaces utilizing the appropriate fasteners. Not intended for exposed or harsh environments.

Installation

Select the correct Spare Sprinkler Head Cabinet in accordance with the Automatic Sprinkler Systems Handbook. As per the 1989 Edition the correct number of spare sprinkler is as follows:

0-300 sprinklers, not less than 6; 300-1000, not less than 12; 1000 or more, not less than 24. Stock of spare sprinklers shall include all types and ratings installed.*

Once the correct Spare Sprinkler Head Cabinet has been selected, installation is accomplished by inserting the correct fastener in each of the two holes inside the cabinet, securing the cabinet securely to the wall. The insert the correct number and type of sprinklers in accordance with the “handbook”.

**Final determination is subject to approval by the AHJ.*

Sprinkler Cabinets
3, 6, & 12 Sprinklers, 1/2 or 3/4 Inch NPT
6 ESFR Sprinklers, 3/4 or 1 Inch NPT

General Description

Tyco® Sprinkler Cabinets are constructed of metal enclosures with hinged covers designed to provide on-site storage of an emergency supply of sprinklers and a sprinkler wrench.

NFPA 13 requires a representative number of each type of sprinkler used in a sprinkler system to be stored in a cabinet on-site to allow for immediate removal and replacement of sprinklers that may have operated or become damaged.

Sprinkler Cabinets are manufactured of heavy gauge steel with knock-outs to accommodate NPT threaded sprinklers and are painted an attractive red enamel.

WARNINGS

The Sprinkler Cabinets described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. ***Failure to do so may impair the performance of these devices.***

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. The installing contractor or sprinkler manufacturer should be contacted with any questions.

SPRINKLER ESCUTCHEONS

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

Viking sprinkler escutcheons are ornamental plates used with 3/8" NPT (10 mm BSP)*, ½" NPT (15 mm BSP)*, and ¾" NPT (20 mm BSP)* frame-style pendent and sidewall* sprinklers. The escutcheons are installed between the sprinklers and the ceiling or wall for a pleasing appearance. They are available with several finish options to meet design requirements.

Viking recessed and adjustable escutcheons provide a low-profile decorative recessed sprinkler installation. The E-1 Recessed Escutcheon may be recessed up to 5/8" (16 mm). The Model G-1 Recessed Escutcheon allows horizontal sidewall sprinklers to be recessed up to 1/2" (12.7 mm). The Model F-1 Adjustable Escutcheon has ½" (12.7 mm) total adjustment available.

The two-piece design of Viking's recessed and adjustable escutcheons allows installation and testing of the sprinklers prior to installing the ceiling or wall. Viking's Model E-1, F-1, and G-1 Escutcheons feature a slip-on design, while the Model E-2 and E-3 escutcheons are threaded (outer cup threads onto the adapter).

The Viking adjustable and recessed escutcheons are made to allow for minor adjustments due to pipe or ceiling pitch. These escutcheons can be removed and reinstalled, allowing access above removable ceiling panels for servicing building equipment without shutting down the sprinkler system and removing the sprinkler.

Viking standard 1/8" (3 mm) style flat and 1" (25 mm) style raised surface-mounted escutcheons have a one-piece design.

***Refer to the specific sprinkler technical data page for the escutcheon(s) listed and approved for use with the sprinkler.**

2. LISTINGS AND APPROVALS

Refer to the specific sprinkler technical data pages for sprinkler listings and approvals. Sprinklers must be specifically listed and/or approved for recessed installation. When using Viking Model E-1, E-2, E-3, F-1, and G-1 escutcheons for recessed applications, refer to technical data describing the sprinkler model to be used to verify whether the sprinkler is listed and/or approved for recessed installations. **NOTE**: Viking's thread-on style Model E-2 and E-3 Recessed Escutcheons carry the same listings and approvals as the slip-on style Model E-1 Recessed Escutcheons. **Model E-3 Recessed Escutcheon also meets IBC-ASCE/SEI 7 Codes for Seismic Areas C, D, and E.**

3. TECHNICAL DATA

Specifications:

A. Slip-on Style Model E-1 Recessed Escutcheons

Depth of Outer Cup: 1-1/16" (26.9 mm)
Outside Diameter of Outer Cup: 3-1/16" (77.7 mm)
Depth of Center Adapter Ring: 11/32" (8.7 mm) +/- 1/32" (0.8 mm)
Adjustment Range: Flush to 5/8" (16 mm) recessed
NOTE: Escutcheon adapter is stamped "Viking Model E-1".
Available since 1987.

B. Threaded Style Model E-2 Recessed Escutcheons

Depth of Outer Cup: 13/16" (20.6 mm)
Outside Diameter of Outer Cup: 3-1/8" (79.4 mm)
Depth of Center Adapter Ring: 21/32" (16.6 mm)
Adjustment Range: 27/32" (21.4 mm) total adjustment with ½" (12.7 mm) maximum recess available. **Note**: Face of escutcheon adapter may extend up to 11/32" (8.7 mm) beyond edge of escutcheon cup.
Available since 2000.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

C. Threaded Style Model E-3 Recessed Escutcheons
Depth of Outer Cup: 13/16" (20.6 mm)
Outside Diameter of Outer Cup: 5-1/8" (130.2 mm). (See Figure 4)
Depth of Center Adapter Ring: 21/32" (16.6 mm)
Adjustment Range: 27/32" (21.4 mm) total adjustment with ½" (12.7 mm) maximum recess available. **Note**: Face of escutcheon adapter may extend up to 11/32" (8.7 mm) beyond edge of escutcheon cup.
Available since 2012.

D. Model F-1 Adjustable Escutcheons
Depth of Outer Cup: 1-1/16" (26.9 mm)
Outside Diameter of Outer Cup: 3-1/16" (77.7 mm)
Depth of Center Adapter Ring: 23/32" (18.3 mm)
Adjustment Range: ½" (12.7 mm) total adjustment with ¼" (6.4 mm) maximum recess available. **Note**: The face of escutcheon adapter may extend up to ¼" (6.4 mm) beyond the edge of the escutcheon cup.
NOTE: Escutcheon adapter is stamped "Viking Model F-1".
Available since 1988.

E. Slip-on Style Model G-1 Recessed Escutcheons (US Patent No. 8,376,060)
Depth of Outer Cup: 1-1/16" (26.9 mm)
Outside Diameter of Outer Cup: 4" (101.6 mm)
Depth of Center Adapter Ring: 1-7/16" (36.5 mm)
Adjustment Range: Up to 5/8" (16 mm) total adjustment available for use with ceilings sloped up to 8/12 (33.7°). May be recessed up to ½" (12.7 mm), depending on degree of slope. **Note**: The face of escutcheon adapter may extend up to 1/2" (12.7 mm) beyond the edge of the escutcheon cup.
NOTE: Escutcheon adapter is stamped "Viking Model G-1".
Available since 2007.

F. Expansion Plate (optional)

1. Base Part No. 12620 for use with Model E-1, E-2, and F-1 Escutcheons. May also be used with dry recessed sprinklers, dry standard adjustable sprinklers, and flat plate concealed sprinklers.
   Outside Diameter: 5" (127 mm)
   Inside Diameter: 2-3/16" (55.5 mm)
   Available since 2005.
2. Base Part No. 13128 for use with Domed Concealed Sprinklers.
   Outside Diameter: 5" (127 mm)
   Inside Diameter: 2-15/32" (62.7 mm) for Part No. 13128.
   Available since 2005.
3. Base Part No. 16340 for use with Concealed Sprinkler VK636.
   Outside Diameter: 5-5/16" (135 mm)
   Inside Diameter: 2-3/8" (60.6 mm)
   Available since 2010.

G. Standard Flat and Raised Surface-Mounted Escutcheons
Depth of Escutcheons: Flat: 1/8" (3.2 mm), Raised: 1" (25 mm)
Available since 1972.

UNS-S43000

* These may also be special ordered and manufactured from Brass (non-magnetic material). Contact the manufacturer for more information.

Raised Style Part Numbers 01961B and 01016A: Brass UNS-C26000 or UNS-C26800.

Ordering Information: (Also refer to the current Viking price list.)

Viking recessed and adjustable escutcheons are available as escutcheon packages (includes outer cup and adapter). Escutcheon cups are also available to order separately as individual pieces for Model E-1, E-2, E3, or F-1 Escutcheons (refer to Table 1 on page 5. Order Viking escutcheons by adding the appropriate suffix for the finish to the base part number.

A. Model F-1 Adjustable and Model E-1, E-2, E-3, and G-1 Recessed Escutcheons:

1. To order as an escutcheon package (includes outer cup and adapter), specify the appropriate package part number from Table 1.
2. To order individual outer cup separately for Model E-1, E-2, E-3, or F-1 Escutcheons, specify the appropriate part number for the individual piece from Table 1.

B. Standard Flat and Raised Surface-Mounted Escutcheons: Specify the flat or raised escutcheon part number from Table 1.

Finish Suffix: Bright Brass = B, Polished Chrome = F, White Polyester = M-/W, and Black Polyester = M-/B.

For example, the Model E-1 Recessed Escutcheon for 1/2” NPT sprinkler, Brass finish = Part No. 06419AB. The 1/2” Model E-1 Recessed Escutcheon is also available in Antique Brass, Brushed Copper, Brushed Chrome, and Brushed Brass as standard finishes.

NOTE: Sprinklers are not included and must be ordered separately.

4. INSTALLATION

A. If the proposed installation of Model E-1, E-2, E-3, F-1, or G-1 Escutcheons requires recessing any of the heat-sensitive operating element, some Authorities Having Jurisdiction may limit the use, depending on the occupancy classification. Refer to the Authority Having Jurisdiction prior to installation. The use of quick response sprinklers may also be limited due to occupancy and hazard. Refer to the Authority Having Jurisdiction prior to installation.

B. All escutcheon styles are made to thread onto the sprinkler head prior to installing the sprinkler into the fitting. The escutcheon must be attached to the sprinkler prior to applying pipe-joint compound or PTFE tape to the sprinkler threads. **NOTE**: Sprinklers with protective caps or bulb shields must be contained within the caps or shields before applying pipe-joint compound or tape.

C. Refer to the appropriate sprinkler technical data page for additional warnings and installation instructions and then install the escutcheons according to the following sequence.

D. Model F-1 Adjustable and Model E-1, E-2, E-3, and G-1 Recessed Escutcheons:

(Refer to Figures 2-5.)

Step 1: Install all piping and cut the sprinkler nipple so that the reducing coupling is at the desired location and centered in a minimum 2-5/16” (59 mm) to a maximum 2-1/2” (64 mm) diameter opening in the ceiling or wall for Model E-1, E-2, or F-1 Escutcheons, 2-5/16” (59 mm) to 4-1/2” (115mm) for Model E-3, or 2-5/8” (66 mm) to 3-3/4 (95 mm) for Model G-1 Escutcheons.

Step 2: Secure the escutcheon adapter onto the sprinkler by hand turning the adapter clockwise onto the sprinkler threads. The face of the adapter should rest on the shoulder of the sprinkler wrench boss.

Step 3: Apply a small amount of pipe-joint compound or PTFE tape to the external threads of the sprinkler only, taking care not to allow a build-up of compound in the sprinkler inlet. **NOTE**: Sprinklers with protective caps or bulb shields must be contained within the caps or shields before applying pipe-joint compound or tape.

Step 4: Install the sprinkler into the coupling using the special recessed sprinkler wrench only, taking care not to over-tighten or damage the sprinkler operating parts. DO NOT use the escutcheon, sprinkler deflector, or fusible element to start or thread the sprinkler into a fitting.

Step 5: Test the system as required and repair all leaks. If a thread leak occurs, normally the unit must be removed, new pipe-joint compound or PTFE tape applied, and then reinstalled. This is due to the fact that when the joint seal leaks, the sealing compound or tape is washed out of the joint.

Step 6: **Remove plastic protective sprinkler caps and bulb shields AFTER the wall or ceiling finish work is completed where the sprinkler is installed and there no longer is a potential for mechanical damage to the sprinkler operating elements.** To remove the bulb shields, simply pull the ends of the shields apart where they are snapped together. To remove caps from frame style sprinklers, turn the caps slightly and pull them off the sprinklers. **SPRINKLER CAPS AND BULB SHIELDS MUST BE REMOVED FROM SPRINKLERS BEFORE PLACING THE SYSTEM IN SERVICE!** Retain a protective cap in the spare sprinkler cabinet.

Step 7: After installing the ceiling or wall with the required opening size, press on or thread on (depends on the style of escutcheon used) the outer escutcheon cup until the flanges touch the surface of the ceiling or wall.

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

(**NOTE**: If the optional escutcheon expansion plate is used, first slide it onto the escutcheon cup. The flange on the expansion plate should touch the surface of the ceiling or wall.)

With the slip-on style Model E-1 Recessed Escutcheon, the maximum adapter recess is 5/8" (16 mm).

With the threaded style Model E-2 and E-3 Recessed Escutcheons, the maximum recess is ½" (12.7 mm). **Note**: The face of the escutcheon adapter may extend up to 11/32" (8.7 mm) beyond edge of escutcheon cup, resulting in 27/32" (21.4 mm) total adjustment range.

With the Model F-1 Adjustable Escutcheon, the maximum recess is ¼" (6.4 mm). **Note**: The face of the escutcheon adapter may extend up to ¼" (6.4 mm) beyond the edge of the escutcheon cup, resulting in ½" (12.7 mm) total adjustment range.

With the slip-on style Model G-1 Recessed Escutcheon, the maximum adapter recess is 1/2" (12.7 mm).

DO NOT modify the unit. If necessary, re-cut the sprinkler drop nipple as required.

E. Standard Flat and Raised Surface-Mounted Escutcheons:

Step 1: Install all piping and cut the sprinkler nipple so that the reducing coupling is at the desired location and centered in a maximum 2-1/2" (64 mm) diameter opening in the ceiling or wall.

Step 2: Secure the escutcheon onto the sprinkler by hand turning the escutcheon clockwise onto the sprinkler threads. (The convex surface of the escutcheon must face toward the deflector of the sprinkler.)

Step 3: Apply a small amount of pipe-joint compound or PTFE tape to the external threads of the sprinkler only, taking care not to allow a build-up of compound in the sprinkler inlet. **NOTE**: Sprinklers with protective caps or bulb shields must be contained within the caps or shields before applying pipe-joint compound or tape.

Step 4: Install the sprinkler into the coupling using the special sprinkler wrench only, taking care not to over-tighten or damage the sprinkler operating parts. DO NOT use the escutcheon, sprinkler deflector, or fusible element to start or thread the sprinkler into a fitting.

Step 5: After installation, the entire sprinkler system must be tested. The test must be conducted to comply with the installation standards. Make sure the sprinkler is properly tightened. If a thread leak occurs, normally the unit must be removed, new pipe-joint compound or tape applied, and then reinstalled. This is due to the fact that when the joint seal leaks, the sealing compound or tape is washed out of the joint.

Step 6: **Remove plastic protective sprinkler caps and bulb shields AFTER the wall or ceiling finish work is completed where the sprinkler is installed and there no longer is a potential for mechanical damage to the sprinkler operating elements.** To remove the bulb shields, simply pull the ends of the shields apart where they are snapped together. To remove caps from frame style sprinklers, turn the caps slightly and pull them off the sprinklers. **SPRINKLER CAPS AND BULB SHIELDS MUST BE REMOVED FROM SPRINKLERS BEFORE PLACING THE SYSTEM IN SERVICE!** Retain a protective cap in the spare sprinkler cabinet.

DO NOT modify the unit. If necessary, re-cut the sprinkler drop nipple as required.

F. Disassembly:

The outer cups of Viking adjustable and recessed escutcheons can be removed and reinstalled without removing the sprinklers to allow access above the ceiling or to replace it, if necessary.

1. For slip-on style Model E-1 or G-1 Recessed Escutcheons and Model F-1 Adjustable Escutcheons, remove the outer cup simply by pulling it outward and away from the wall or ceiling.
2. To remove the outer cup of the threaded style Model E-2 and E-3 Recessed Escutcheons, turn it counterclockwise to unthread it from the adapter.

If it is necessary to remove the entire unit, the system must be removed from service. Refer to maintenance instructions on the appropriate sprinkler technical data page and follow all warnings and instructions.

5. OPERATION

Refer to the sprinkler technical data page for the sprinkler model used.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking sprinklers and escutcheons are available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

IMPORTANT NOTES

Per the current edition of NFPA 13: "Escutcheons used with recessed, flush-type, or concealed sprinklers shall be part of a listed sprinkler assembly." The Viking Corporation will not authorize the sale of unlisted recessed sprinkler assemblies nor assume any liability involving recessed sprinkler assemblies that are not considered cULus Listed, FM Approved, or in full compliance with NFPA requirements".

Listings and approvals vary, depending on the sprinkler model, temperature rating, finish, and occupancy classification.

⚠WARNING Viking products are manufactured and tested to meet the rigid requirements of the approving agency. The sprinklers are designed to be installed in accordance with recognized installation standards. Deviation from the standards or any alteration to the sprinkler after it leaves the factory including, but not limited to: painting , plating, coating, or modification, may render the sprinkler inoperative and will nullify the approval and any guarantee made by The Viking Corporation.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to the appropriate sprinkler data page. Viking sprinklers are designed to be installed in accordance with the latest edition of Viking technical data, the latest standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards whenever applicable. The use of certain types of sprinklers may be limited due to occupancy and hazard. Refer to the Authority Having Jurisdiction prior to installation.

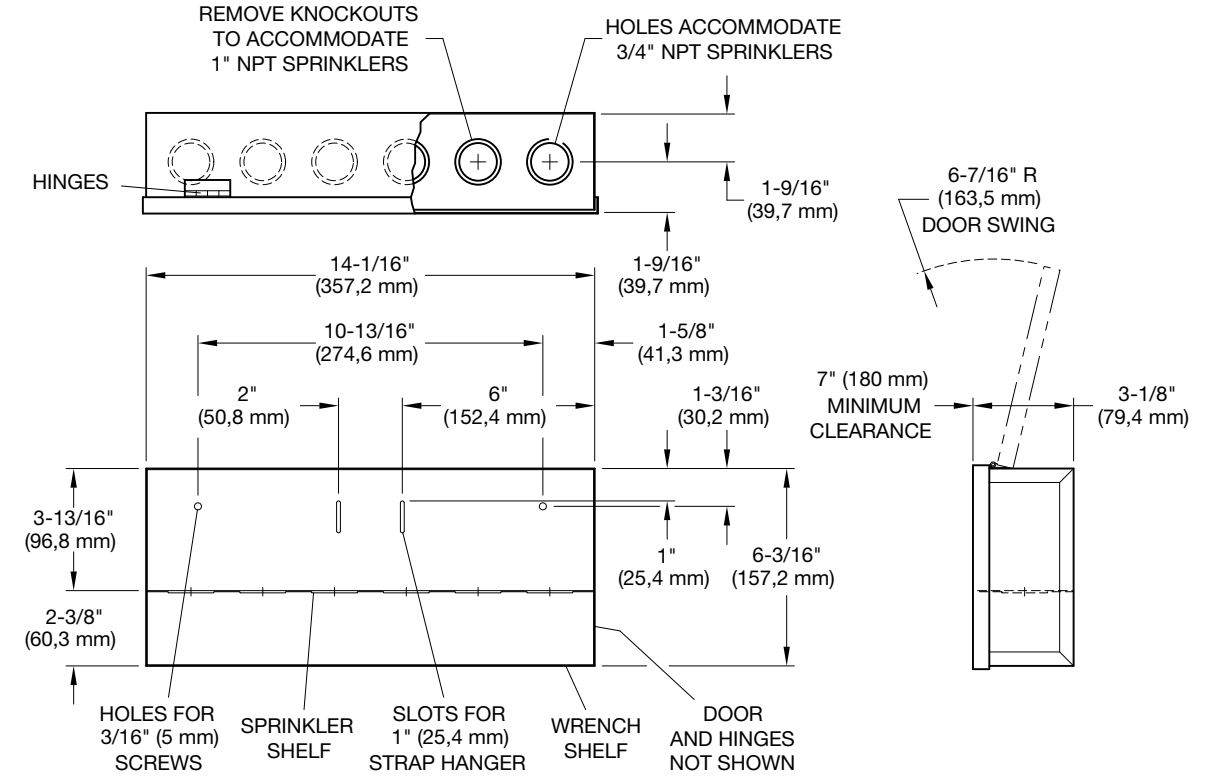

FIGURE 4
6 ESFR SPRINKLER CABINET

Installation

Sprinkler Cabinets are designed with two 3/16 Inch (4,7 mm) diameter holes for wall mounting or direct attachment to the system riser with a strap-type hanger. The Sprinkler Cabinet should be installed at or near the system control valve and must be stocked with an adequate supply of spare sprinklers and a sprinkler wrench.

The stock of spare sprinklers should include sprinklers of each type and temperature rating as are installed in the sprinkler system, in the following quantities:

Sprinklers In System	Spare Sprinklers Required
Under 300	6
300-1000	12
Over 1000	24

The 3, 6, and 12 Sprinkler Cabinets are designed to accept both 1/2 & 3/4 Inch NPT threaded sprinklers, whereas the 6 ESFR Sprinkler Cabinets are designed to accept both 3/4 & 1 Inch NPT threaded sprinklers. As necessary, insert a screwdriver blade from the front top of the shelf and under the near bottom part of the knockout annular ring. Press the screwdriver handle down to remove the knockout ring.

Care and Maintenance

The Sprinkler Cabinet, wrench, and stock of spare sprinklers should be inspected at least quarterly. The following items should be checked:

- The Sprinkler Cabinet should be readily accessible, and not exposed to a corrosive atmosphere or temperatures in excess of 100°F (38°C).
- The stock of spare sprinklers should include an adequate number of each type and temperature rating.
- The stock of sprinklers must be in good condition.
- A sprinkler wrench of the appropriate type must be included in the Sprinkler Cabinet.

Limited Warranty

Products manufactured by Tyco Fire & Building Products (TFBP) are warranted solely to the original Buyer for ten (10) years against defects in material and workmanship when paid for and properly installed and maintained under normal use and service. This warranty will expire ten (10) years from date of shipment by TFBP. No warranty is given for products or components manufactured by companies not affiliated by ownership with TFBP or for products and components which have been subject to misuse, improper installation, corrosion, or which have not been installed, maintained, modified or repaired in accordance with applicable Standards of the National Fire Protection Association, and/or the standards of any other Authorities Having Jurisdiction. Materials found by TFBP to be defective shall be either repaired or replaced, at TFBP's sole option. TFBP neither assumes, nor authorizes any person to assume for it, any other obligation in connection with the sale of products or parts of products. TFBP shall not be responsible for sprinkler system design errors or inaccurate or incomplete information supplied by Buyer or Buyer's representatives.

In no event shall TFBP be liable, in contract, tort, strict liability or under any other legal theory, for incidental, indirect, special or consequential damages, including but not limited to labor charges, regardless of whether TFBP was informed about the possibility of such damages, and in no event shall TFBP's liability exceed an amount equal to the sales price.

The foregoing warranty is made in lieu of any and all other warranties, express or implied, including warranties of merchantability and fitness for a particular purpose.

This limited warranty sets forth the exclusive remedy for claims based on failure of or defect in products, materials or components, whether the claim is made in contract, tort, strict liability or any other legal theory.

This warranty will apply to the full extent permitted by law. The invalidity, in whole or part, of any portion of this warranty will not affect the remainder.

Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

The Viking Sprinkler Guard is a hard-wire cage designed to encase the sprinkler and protect it from mechanical damage. It is recommended for areas where the sprinkler is installed at a low elevation and/or near areas of high human or mechanical activity.

The Model D-1 Sprinkler Guard is for use with Viking standard and large orifice, standard and quick response upright and pendent frame style sprinklers.

The Dry Pendent Sprinkler Guard is for use with Viking standard and large orifice, standard and quick response dry upright, dry vertical sidewall, and dry pendent sprinklers.

2. LISTINGS AND APPROVALS

A. Model D-1 Sprinkler Guard:

cULus Listed: Category VFJV

FM Approved: Class 2091

cULus Listed and/or FM Approved for use with standard and large orifice, standard and quick response upright and pendent frame style sprinklers, including the following: VK001, VK003, VK100, VK102, VK108, VK110, VK122, VK124, VK130, VK132, VK200, VK202, VK204, VK206, VK300, VK301, VK302, VK303, VK350, VK352, VK377, and VK536.

B. Dry Sprinkler Guard: No Listings or Approvals

3. TECHNICAL DATA

Specifications:

A. Model D-1 Sprinkler Guard

Dimensions: 3-1/8" (79 mm) diameter, 3-1/8" (79 mm) high.

B. Dry Sprinkler Guard:

Dimensions: 2" (51 mm) diameter, 2-1/8" (54 mm) high.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Material Standards:

A. Model D-1 Sprinkler Guard:

Guard: Bright Basic Steel UNS-G10100
Guard Finish: Clear Chromate over Zinc Plating
Screws: Two Self-Tapping 6-32 x ½" (Combination Head): Steel
Screw Finish: Zinc Plated
Stainless Steel Model D-1 Sprinkler Guard:
Guard: T302/T304 Electro-Polished Stainless Steel
Screws: Two 6-32 x ½" (Combination Head): Stainless Steel UNS-S41000

B. Dry Sprinkler Guard:

Guard and Ring: Bright Basic Steel UNS-G10100
Finish: Clear Chromate over Zinc Plating

Ordering Information: (Also refer to the current Viking price list.)

A. Model D-1 Sprinkler Guard:

The Model D-1 Sprinkler Guard may be ordered separately or factory installed on Viking upright and pendent standard or large orifice, standard or quick response frame style sprinklers.

NOTICE **The Model D-1 Sprinkler Guard is NOT designed to be used on sidewall sprinklers, or sprinklers installed in recessed escutcheons.**

To order the Model D-1 Sprinkler Guard separately (Figure 1 - Top):

1. Order Viking Part No. 10325 or
2. Order Viking Part No. 12198 (Stainless Steel)

To order the Model D-1 Sprinkler Guard factory installed:

1. Refer to the Viking Price Book to select the appropriate base part number (plus appropriate suffixes for temperature and finish) for the sprinkler used.

Model D-1 Sprinkler Guard
Order Sprinkler Guard Separately or Factory Installed
(See Ordering Instructions)

Model D-1 Sprinkler Guard on Upright and Pendent Frame-Style Sprinklers*

*The standard response sprinklers with 5 mm glass bulb shown above are representative only. The Model D-1 Guard may be used with standard and large orifice, upright or pendent standard response sprinklers with 5 mm glass bulbs; standard response fusible link sprinklers; and quick response sprinklers with 3 mm glass bulbs and QR fusible element sprinklers VK301 and VK303.

Figure 1

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

2. To order the Model D-1 Sprinkler Guard factory installed on the sprinkler, add the suffix "G".

B. To order the Viking Dry Sprinkler Guard (Figure 2 - Top): Order Viking Part No. 08954.

NOTICE **The Dry Sprinkler Guard is NOT Listed or Approved.**

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:

For frame style sprinklers equipped with Model D-1 Sprinkler Guard, use Wrench Part No. 10896W/B (available since 2000) or 05000CW/B (no longer available). For ELO sprinklers use Wrench Part No. 05118CW/B.

Model E-1 Water Shield for frame style upright sprinklers equipped with Model D-1 Sprinkler Guards: Part No. 10326 (see form F_012498).

Model F-1 Water Shield for frame style pendent sprinklers equipped with Model D-1 Sprinkler Guards (see form F_012498):

- For use on ½" NPT Sprinklers, order Part No. 10323
- For use on 3/4" NPT Sprinklers (standard and large orifice only, NOT ELO), order Part No. 10324

Dry Sprinkler Guard
(Order sprinkler guard separately from sprinklers.)

The standard response dry pendent sprinkler with 5 mm glass bulb shown above is representative only. The Dry Sprinkler Guard may be used with Viking standard or quick response dry upright, dry vertical sidewall, and dry pendent (including adjustable recessed) sprinklers.

Figure 2

4. INSTALLATION

A. Installing the Model D-1 Sprinkler Guard: Model D-1 Sprinkler Guards can be retrofitted onto sprinklers that have already been installed on the system. However, it is recommended to install the guard onto the sprinkler prior to installing the sprinkler on the system and prior to applying any pipe-joint compound or tape to the external threads of the sprinkler. Consider ordering the guard factory installed on the sprinkler used.

a. Loosen the screws in the brackets at the base of the sprinkler guard.
b. Spread and hold the two bracket halves (at the base of the sprinkler guard) apart just enough to place the guard over the deflector and wrench boss of the sprinkler.
c. With the sprinkler inside the sprinkler guard, position the guard so the two halves of the bracket grip the sprinkler just below the wrench boss, but above the threads.

NOTICE **Orient the sprinkler guard so the screw openings in the base of the guard are located at the ends of the sprinkler wrench boss** (where the sprinkler frame arms contact the wrench boss). See Figure 1.

d. Thread both screws into the openings provided in the opposite bracket half and tighten to secure the base of the guard to the sprinkler.
e. Apply a small amount of pipe-joint compound or tape to the external threads only, taking care not to allow a build-up of compound in the sprinkler orifice.
f. Install the sprinkler on the piping using the special sprinkler wrench. DO NOT use the guard to start or thread the sprinkler into the fitting.

B. Installing the Dry Sprinkler Guard: Dry sprinklers must be installed on the system prior to installing the guard onto the dry sprinklers. Note: When installing the Dry Sprinkler Guard on recessed Dry Pendent or recessed Vertical Dry Sidewall Sprinklers, the Viking Recessed Escutcheon Cup must be removed and the sprinkler centered in a minimum 2-1/8" (54 mm) diameter hole prior to installation of the Dry Sprinkler Guard.

a. Remove the retaining ring from the Dry Sprinkler Guard.
b. Spread and hold the two "C" shaped halves of the bracket (at the base of the guard) apart just enough to place the guard over the deflector and wrench boss of the sprinkler.
c. With the sprinkler inside the guard, position the guard so the "C" shaped bracket halves of the guard grip the sprinkler in the slot provided just below the wrench boss.

NOTICE **Orient the sprinkler guard so two of the four guard wires align with the frame arms of the sprinkler.** See Figure 2.

d. Push the retaining ring over the guard toward the base of the sprinkler until the ring snaps firmly into the depression provided on each of the four wire members of the guard.
e. For recessed dry pendent or recessed vertical dry sidewall sprinklers, re-install the Viking recessed escutcheon cup.

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

NOTICE

The Model D-1 Sprinkler Guard is NOT designed to be used on sidewall sprinklers, or sprinklers installed in recessed escutcheons.

The Model D-1 Sprinkler Guard is cULus Listed and/or FM Approved for use with standard and large orifice, standard and quick response upright and pendent frame style sprinklers, including the following: VK001, VK003, VK100, VK102, VK108, VK110, VK122, VK124, VK130, VK132, VK200, VK202, VK204, VK206, VK300, VK301, VK302, VK303, VK350, VK352, VK377, and VK536.

Model D-1 Sprinkler Guards can be retrofitted onto sprinklers that have already been installed on the system. However, it is recommended to install the guard onto the sprinkler prior to installing the sprinkler on the system and prior to applying any pipe-joint compound or tape to the external threads of the sprinkler. Consider ordering the guard factory installed on the sprinkler used.

⚠WARNING Viking products are manufactured and tested to meet the rigid requirements of the approving agency. The sprinklers are designed to be installed in accordance with recognized installation standards. Deviation from the standards or any alteration to the sprinkler after it leaves the factory including, but not limited to: painting, plating, coating, or modification, may render the sprinkler inoperative and will nullify the approval and any guarantee made by The Viking Corporation.

The Dry Sprinkler Guard is NOT Listed or Approved.

NOTICE **Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to the appropriate sprinkler data page. Viking sprinklers are designed to be installed in accordance with the latest edition of Viking technical data, the latest standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards whenever applicable. The use of certain types of sprinklers may be limited due to occupancy and hazard. Refer to the Authority Having Jurisdiction prior to installation.**

5. OPERATION

Refer to the sprinkler technical data page for the sprinkler model used. The Sprinkler Guard is a hard-wire cage designed to encase the sprinkler and protect it from mechanical damage.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking sprinklers and sprinkler guards are available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

VIKING®	TECHNICAL DATA	STANDARD/QUICK RESPONSE EXTENDED COVERAGE UPRIGHT SPRINKLER VK532 (K11.2)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

Viking EC/QREC Upright Sprinkler VK532 is a thermosensitive spray sprinkler available in several different finishes and temperature ratings to meet varying design requirements. The extra-large orifice produces the flows required to meet Light and Ordinary Hazard density requirements at lower pressures than standard orifice or large orifice sprinklers. The glass bulb operating element and special deflector characteristics meet the challenges of quick response extended coverage standards. Upright Sprinkler VK532 is cULus Listed as standard and quick response and FM Approved as quick response. The special Polyester and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, ENT coating has been investigated for installation in corrosive atmospheres. See Approval Charts.

2. LISTINGS AND APPROVALS

cULus Listed: Category VNIV

FM Approved: Class 2022

Refer to Approval Chart 1 and Design Criteria for cULus Listing requirements, and refer to Approval Chart 2 and Design Criteria for FM Approval requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Minimum Operating Pressure: Refer to the Approval Charts.
Maximum Working Pressure: 175 psi (12 Bar). Factory tested hydrostatically to 500 psi (34.5 bar).
Factory tested hydrostatically to 500 psi (34.5 bar).
Thread size: 3/4" (20 mm) NPT
Nominal K-Factor: 11.2 U.S. (161.3 metric†)

† Metric K-factor measurement shown is in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-5/16 (59 mm)

Material Standards:

Sprinkler Frame: Brass UNS-C84400
Deflector: Copper UNS-C19500
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with Teflon Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinkler: Belleville Spring-Exposed, Screw and Pipcap-ENT plated.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Ordering Information: (Also refer to the current Viking price list.)

Order Viking EC/QREC Upright Sprinkler VK532 by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, and ENT = JN
Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, and 286 °F (141 °C) = G
For example, sprinkler VK532 with a Brass finish and a 155 °F (68 °C) temperature rating = Part No. 08687AB

Available Finishes And Temperature Ratings:

Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:

A. Standard Wrench: Part No. 05118CW/B (available since 1981)
B. Wrench for recessed pendent sprinkler: Part No. 11663W/B** (available since 2001)
**A ½" ratchet is required (not available from Viking).

VIKING®	TECHNICAL DATA	STANDARD/QUICK RESPONSE EXTENDED COVERAGE UPRIGHT SPRINKLER VK532 (K11.2)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

Sprinkler Cabinets:

A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, the heat-sensitive liquid in the glass bulb expands, causing the glass to shatter, releasing the pip cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking Sprinkler VK532 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

TABLE 1: AVAILABLE SPRINKLER TEMPERATURE RATINGS AND FINISHES

Sprinkler Temperature Classification	Sprinkler Nominal Temperature Rating[1]	Maximum Ambient Ceiling Temperature[2]	Bulb Color
Ordinary	135 °F (57 °C)	100 °F (38 °C)	Orange
Ordinary	155 °F (68 °C)	100 °F (38 °C)	Red
Intermediate	175 °F (79 °C)	150 °F (65 °C)	Yellow
Intermediate	200 °F (93 °C)	150 °F (65 °C)	Green
High	286 °F (141 °C)	225 °F (107 °C)	Blue

Sprinkler Finishes: Brass, Chrome, White Polyester[3], Black Polyester[3], and ENT

Corrosion-Resistant Coatings[4]: ENT

Footnotes

[1] The sprinkler temperature rating is stamped on the deflector.

[2] Based on NFPA-13. Other limits may apply, depending on fire loading, sprinkler location, and other requirements of the Authority Having Jurisdiction. Refer to specific installation standards.

[3] For automatic sprinklers, the coatings indicated are applied to the exposed exterior surfaces only. Note that the spring is exposed on sprinklers with Polyester.

[4] The corrosion-resistant coatings have passed the standard corrosion test required by the approving agencies indicated in the Approval Chart. These tests cannot and do not represent all possible corrosive environments. Prior to installation, verify through the end-user that the coatings are compatible with or suitable for the proposed environment. For ENT sprinklers, all exposed surfaces and the waterway are coated, but note that the spring is exposed.

Approved Temperature Ratings

A - 135 °F (57 °C) and 175 °F (79 °C)
B - 135 °F (57 °C), 155 °F (68 °C), and 175 °F (79 °C)
C - 155 °F (68 °C), 175 °F (79 °C), 200 °F (93 °C), and 286 °F (141 °C)
D - 155 °F (68 °C)
E - 155 °F (68 °C), and 175 °F (79 °C)
F - 175 °F (79 °C)

Approved Finishes

1 - Brass, Chrome, White Polyester, and Black Polyester
2 - ENT[6]

Footnotes

[1] Part number shown is the base part number. For complete part number, refer to current Viking price list schedule.

[2] Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

[3] This chart shows listings and approvals available at time of printing. Check with the manufacturer for any additional approvals.

[4] cULus Listed for use in the U.S. and Canada.

[5] To determine "Minimum Water Supply Requirement" for areas of coverage where length and width of actual sprinkler spacing are not equal, select the "Maximum Sprinkler Spacing" from the chart that is equal to or greater than the larger of the actual spacing (length or width) dimensions used. Example: When using 10'-6" x 13'-0" sprinkler spacing, provide the "Minimum Water Supply Requirement" listed in the chart for 14'-0" x 14'-0" spacing. For areas of coverage smaller than shown, use the "Minimum Water Supply Requirement" in the appropriate hazard group for the next larger area listed. The distance from sprinklers to walls shall not exceed one-half the "Maximum Sprinkler Spacing" listed for the "Minimum Water Supply Requirement" used.

[6] cULus Listed as corrosion-resistant.

VIKING®	TECHNICAL DATA	STANDARD/QUICK RESPONSE EXTENDED COVERAGE UPRIGHT SPRINKLER VK532 (K11.2)

Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1.)

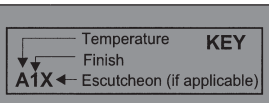
cULus Listing Requirements:

EC-ELO Upright Sprinkler VK532 is cULus Listed as indicated in Approval Chart 1 for installation in accordance with the latest edition of NFPA 13 for extended coverage upright sprinklers as indicated below:

- The minimum water supplies and maximum areas of coverage shown in Approval Chart 1 are designed to provide the following design densities: 0.10 gpm/ft² (4.1 mm/min) for Light Hazard densities; 0.15 gpm/ft² (6.1 mm/min) for Ordinary-Hazard Group I densities; 0.2 gpm/ft.² (8.1 mm/min) for Ordinary-Hazard Group II densities.
- The sprinkler installation rules contained in NFPA 13 for extended coverage upright and pendent spray sprinklers must be followed.
- Viking EC-ELO Upright Sprinklers are cULus Listed for use in unobstructed construction, and noncombustible obstructed construction consisting of solid steel and/or concrete beams as defined in the latest edition of NFPA 13.
- Ceiling slope not to exceed 2/12 (9.5°).

Also, Viking ECOH-ELO Upright Sprinkler VK532 is specifically cULus Listed for Ordinary Hazard Occupancies:

- For non-combustible obstructed construction within trusses or bar joists having non-combustible web members greater than 1" (25.4 mm) when applying the 4 times obstruction criteria rule as defined in NFPA 13 under "Obstructions to Sprinkler Discharge Pattern Development".
- For installation under concrete tees when installed as follows:
  1. The stems of the concrete tee construction must be spaced between 3 ft (0.9 m) and 7 ft-6 in (2.3 m) on center. The depth of the concrete tees must not exceed 30 in (762 mm). The maximum permitted concrete tee length is 32 ft (9.8 m). However, where the concrete tee length exceeds 32 ft (9.8 m), non-combustible baffles, equal in height to the depth of the tees, can be installed so that the space between the tees does not exceed 32 ft (9.8 m).
  2. The sprinkler deflector is to be located in a horizontal plane at or above 1" (25.4 mm) below the bottom of the concrete tee stems.
  3. When the sprinkler deflector is located higher than a horizontal plane 1" (25.4 mm) beneath the bottom of the concrete tee stems, the obstruction to sprinkler discharge criteria requirements of NFPA 13 for extended coverage upright sprinklers applies.



IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to pages EC1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Footnotes

[1] This chart shows the FM Approvals available at time of printing. Check with the manufacturer for any additional approvals.

[2] To determine "Minimum Water Supply Requirement" for areas of coverage where length and width of actual sprinkler spacing are not equal, select the "Maximum Sprinkler Spacing" from the chart that is equal to or greater than the larger of the actual spacing (length or width) dimensions used. Example: When using 10'-6" x 13'-0" sprinkler spacing, provide the "Minimum Water Supply Requirement" listed in the chart for 14'-0" x 14'-0" spacing. For areas of coverage smaller than shown, use the "Minimum Water Supply Requirement" in the appropriate hazard group for the next larger area listed. The distance from sprinklers to walls shall not exceed one-half the "Maximum Sprinkler Spacing" listed for the "Minimum Water Supply Requirement" used.

[3] FM Approved as corrosion-resistant.

DESIGN CRITERIA - FM

(Also refer to Approval Chart 2 above.)

FM Approval Requirements:

Sprinkler VK532 is FM Approved as a quick response **Non-Storage** extended coverage upright sprinkler as indicated in the FM Approval Guide for use in occupancy hazard classifications HC-1, HC-2, and HC-3. For specific application and installation requirements, reference the latest applicable FM Loss Prevention Data Sheets (including Data Sheets 2-0 and 3-26). FM Global Loss Prevention Data Sheets contain guidelines relating to, but not limited to: minimum water supply requirements, hydraulic design, ceiling slope and obstructions, minimum and maximum allowable spacing, and deflector distance below the ceiling.

NOTE: The FM installation guidelines may differ from cULus and/or NFPA criteria.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page EC1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

VIKING®	TECHNICAL DATA	STANDARD/QUICK RESPONSE EXTENDED COVERAGE PENDENT SPRINKLER VK534 (K11.2)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

Viking EC/QREC Pendent Sprinkler VK534 is a thermosensitive spray sprinkler available in several different finishes and temperature ratings to meet varying design requirements. The extra-large orifice produces the flows required to meet Light and Ordinary Hazard density requirements at lower pressures than standard orifice or large orifice sprinklers. The glass bulb operating element and special deflector characteristics meet the challenges of quick response extended coverage standards. Pendent Sprinkler VK534 is cULus Listed as standard and quick response. The special Polyester and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, ENT coating has been investigated for installation in corrosive atmospheres. See Approval Charts.

2. LISTINGS AND APPROVALS

c(UL)us **cULus Listed:** Category VNIV
Refer to Approval Chart 1 and Design Criteria cULus Listing requirements.

3. TECHNICAL DATA

Specifications:
Minimum Operating Pressure: Refer to the Approval Charts.
Maximum Working Pressure: 175 psi (12 Bar). Factory tested hydrostatically to 500 psi (34.5 bar).
Factory tested hydrostatically to 500 psi (34.5 bar).
Thread size: 3/4" (20 mm) NPT
Nominal K-Factor: 11.2 U.S. (161.3 metric†)
† Metric K-factor measurement shown is in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.
Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Overall Length: 2-3/8" (61 mm)

Material Standards:
Sprinkler Frame: Brass UNS-C84400
Deflector: Brass UNS-C26000
Bulb: Glass, nominal 3 mm diameter
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Screw: Brass UNS-C36000
Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
For Polyester Coated Sprinklers: Belleville Spring-Exposed
For ENT Coated Sprinkler: Belleville Spring-Exposed, Screw and Pipcap-ENT plated.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

Ordering Information: (Also refer to the current Viking price list.)
Order Viking EC/QREC Pendent Sprinkler VK534 by first adding the appropriate suffix for the sprinkler finish and then the appropriate suffix for the temperature rating to the sprinkler base part number.
Finish Suffix: Brass = A, Chrome = F, White Polyester = M-/W, Black Polyester = M-/B, and ENT = JN
Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E, and 286 °F (141 °C) = G
For example, sprinkler VK534 with a Brass finish and a 155 °F (68 °C) temperature rating = Part No. 08340AB

Available Finishes And Temperature Ratings:
Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:
A. Standard Wrench: Part No. 05118CW/B (available since 1981)
B. Wrench for recessed pendent sprinkler: Part No. 11663W/B** (available since 2001)
**A ½" ratchet is required (not available from Viking).

Sprinkler Cabinets:
A. Six-head capacity: Part No. 01724A (available since 1971)
B. Twelve-head capacity: Part No. 01725A (available since 1971)

20 ft. x 20 ft. (6.1 m x 6.1 m)	400 ft² (37.2 m²)	40 gpm @ 12.8 psi (151.4 L/min @ .88 Bar)	--	--	A1Y, G2Z

Approved Temperature Ratings

A - 135 °F (57 °C) and 175 °F (79 °C)
B - 135 °F (57 °C), 155 °F (68 °C), and 175 °F (79 °C)
C - 155 °F (68 °C), 175 °F (79 °C), 200 °F (93 °C), and 286 °F (141 °C)
D - 155 °F (68 °C), 175 °F (79 °C), and 200 °F (93 °C)
E - 155 °F (68 °C)
F - 155 °F (68 °C), and 175 °F (79 °C)
G - 175 °F (79 °C)

Approved Finishes

1 - Brass, Chrome, White Polyester, and Black Polyester
2 - ENT[6]

Approved Escutcheons

W - Standard surface-mounted escutcheons only
X - Standard surface-mounted escutcheons or the Micro-fast® Model F-1 Adjustable Escutcheon
Y - Standard surface-mounted escutcheons or the Microfast® Model F-1 Adjustable Escutcheon, or recessed with the Micromatic® Model E-1, E-2, or E-3 Recessed Escutcheon
Z - Standard surface-mounted escutcheons or the Micromatic Model E-1 Recessed Escutcheon.

Footnotes

[1] Part number shown is the base part number. For complete part number, refer to current Viking price list schedule.

[2] Metric K-factor measurement shown is when pressure is measured in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

[3] This chart shows listings and approvals available at time of printing. Check with the manufacturer for any additional approvals.

[4] cULus Listed for use in the U.S. and Canada.

[5] To determine "Minimum Water Supply Requirement" for areas of coverage where length and width of actual sprinkler spacing are not equal, select the "Maximum Sprinkler Spacing" from the chart that is equal to or greater than the larger of the actual spacing (length or width) dimensions used. Example: When using 10'-6" x 13'-0" sprinkler spacing, provide the "Minimum Water Supply Requirement" listed in the chart for 14'-0" x 14'-0" spacing. For areas of coverage smaller than shown, use the "Minimum Water Supply Requirement" in the appropriate hazard group for the next larger area listed. The distance from sprinklers to walls shall not exceed one-half the "Maximum Sprinkler Spacing" listed for the "Minimum Water Supply Requirement" used.

[6] cULus Listed as corrosion-resistant.

VIKING®	TECHNICAL DATA	STANDARD/QUICK RESPONSE EXTENDED COVERAGE PENDENT SPRINKLER VK534 (K11.2)

DESIGN CRITERIA - UL

(Also refer to Approval Chart 1.)

cULus Listing Requirements:

EC-ELO Pendent Sprinkler VK534 is cULus Listed as indicated in Approval Chart 1 for installation in accordance with the latest edition of NFPA 13 for extended coverage pendent spray sprinklers as indicated below:

- The minimum water supplies and maximum areas of coverage shown in Approval Chart 1 are designed to provide the following design densities: 0.10 gpm/ft^2 (4.1 mm/min) for Light Hazard densities; 0.15 gpm/ft^2 (6.1 mm/min) for Ordinary-Hazard Group I densities; 0.2 gpm/ft.^{2} (8.1 mm/min) for Ordinary-Hazard Group II densities.
- The sprinkler installation rules contained in NFPA 13 for extended coverage pendent spray sprinklers must be followed.
- Viking EC-ELO Pendent Sprinklers are cULus Listed for use in unobstructed construction, and noncombustible obstructed construction consisting of solid steel and/or concrete beams as defined in the latest edition of NFPA 13.
- Ceiling slope not to exceed 2/12 (9.5°).

Also, Viking ECOH-ELO Pendent Sprinkler VK534 is specifically cULus Listed for Ordinary Hazard Occupancies:

- For non-combustible obstructed construction within trusses or bar joists having non-combustible web members greater than 1" (25.4 mm) when applying the 4 times obstruction criteria rule as defined in NFPA 13 under "Obstructions to Sprinkler Discharge Pattern Development".
- For installation under concrete tees when installed as follows:
  1. The stems of the concrete tee construction must be spaced between 3 ft (0.9 m) and 7 ft-6 in (2.3 m) on center. The depth of the concrete tees must not exceed 30 in (762 mm). The maximum permitted concrete tee length is 32 ft (9.8 m). However, where the concrete tee length exceeds 32 ft (9.8 m), non-combustible baffles, equal in height to the depth of the tees, can be installed so that the space between the tees does not exceed 32 ft (9.8 m).
  2. The sprinkler deflector is to be located in a horizontal plane at or above 1" (25.4 mm) below the bottom of the concrete tee stems.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to pages EC1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

1. DESCRIPTION

Viking Mirage® Quick Response Extended Coverage Concealed Pendent Sprinkler VK632 and VK634 are thermosensitive glass-bulb spray sprinkler designed for installation on concealed pipe systems where the appearance of a smooth ceiling is desired. The glass bulb operating element and special deflector characteristics meet the challenges of quick response extended coverage standards.

The sprinkler is pre-assembled with a threaded adapter for installation with a low-profile cover assembly that provides up to ½" (12.7 mm) of vertical adjustment. The two-piece design allows installation and testing of the sprinkler prior to installation of the cover plate. The "push-on", "thread-off" design of the concealed cover plate assembly allows easy installation of the cover plate after the system has been tested and the ceiling finish has been applied. The cover assembly can be removed and reinstalled, allowing temporary removal of ceiling panels without taking the sprinkler system out of service or removing the sprinkler.

For Light Hazard Occupancies Only

2. LISTINGS AND APPROVALS

c(UL)us **cULus Listed:** Category VNIV

Refer to the Approval Chart on page 92c and Design Criteria on page 92d for cULus Listing requirements that must be followed.

3. TECHNICAL DATA

Specifications:

Available since 2007.
Minimum Operating Pressure: 7 psi (0.5 bar)
Maximum Working Pressure: 175 psi (12 Bar).
Factory tested hydrostatically to 500 psi (34.5 bar)
Thread sizes: Sprinkler VK632: 1/2" (15 mm) NPT,
Sprinkler VK634: 3/4" (20 mm) NPT
Nominal K-Factors: Sprinkler VK632: 5.6 U.S. (80.6 metric*)
Sprinkler VK634: 8.0 U.S. (115.2 metric*)

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.

* Metric K-factor measurement shown is in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.

Glass-bulb fluid temperature rated to -65 °F (-55 °C)
Patents Pending

Material Standards:

Sprinkler Body: Brass UNS-C84400
Deflector: Copper UNS-C19500
Deflector Pins: Stainless Steel Alloy
Bulb: Glass, nominal 3 mm diameter
Pip Cap: Leaded Bronze UNS-C31400 or UNS-C31600, or Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
Button: Brass UNS-C36000
Screws: 18-8 Stainless Steel
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
Yoke: Phosphor Bronze UNS-C51000
Cover Adapter: Cold Rolled Steel UNS-G10080, Finish: Clear Chromate over Zinc Plating

Cover Assembly Materials:

Cover: Copper UNS-C11000
Base: Brass UNS-C26000 or UNS-C26800
Springs: Nickel Alloy
Solder: Eutectic

Ordering Information: (Also refer to the current Viking price list.)

TECHNICAL DATA

MIRAGE® QUICK RESPONSE EXTENDED COVERAGE CONCEALED PENDENT SPRINKLERS (VK632 AND VK634)

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

Viking Mirage® Quick Response Extended Coverage Concealed Pendent Sprinklers and Cover Plate Assemblies must be ordered separately:

Sprinkler: Base Part No. 14613A or 14535A

Specify sprinkler temperature rating by adding the appropriate suffix for the temperature rating to the base part number:

Temperature Suffix: 135 °F (57 °C) = A, 155 °F (68 °C) = B, 175 °F (79 °C) = D, 200 °F (93 °C) = E

For example, sprinkler VK634 with a 155 °F (68 °C) temperature rating = 14535AB.

Cover Plate Assembly: Base Part No. 13504 (2-3/4" diameter), Base Part No. 13642 (3-5/16" diameter), or Base Part No. 15394 (square cover plate, 3-5/16" diameter)

Specify finish and temperature rating of the cover plate assembly by adding the appropriate suffixes for the finish and the cover temperature rating to the base part number:

Finish Suffix: Polished Chrome = F, Brushed Chrome = F-/B, Bright Brass = B, Antique Brass = B-/A, Brushed Brass = B-/B, Brushed Copper = E-/B, Painted White = M-/W, Painted Ivory = M-/I, Painted Black = M-/B

Temperature Suffix: 135 °F (57 °C) = A , 165 °F (74 °C) = C

For example, cover 13504 with a Polished Chrome finish and a 165 °F (74 °C) temperature rating = 13504FC.

Note: Square cover plate 15394 cULus Listing is for the 135°F (57°C) temperature rated cover plate only. Refer to the Approval Chart.

Available Finishes And Temperature Ratings:

Refer to Table 1.

Accessories: (Also refer to the "Sprinkler Accessories" section of the Viking data book.)

Sprinkler Wrenches:**

A. Heavy Duty Wrench Part No. 14047W/B or

B. Head Cabinet Wrench Part No. 14031***

C. Optional Concealed Cover Plate Installer Tool Part No. 14412 for cover 13504, or Part No. 14867 for the large diameter cover (available since 2007)

**Requires a ½" ratchet (not available from Viking). ***Also optional for removal of the protective cap. Ideal for sprinkler cabinets.

Sprinkler Cabinet: Part No. 01731A (available since 1971)

4. INSTALLATION

Refer to appropriate NFPA Installation Standards.

5. OPERATION

During fire conditions, when the temperature around the sprinkler approaches its operating temperature, the cover plate detaches. Continued heating of the exposed sprinkler causes the heat-sensitive liquid in the glass bulb to expand and the bulb to shatter, releasing the yoke, pip-cap and sealing spring assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE

Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY

Viking Sprinklers VK632 and VK634 are available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

May 20, 2013 Sprinkler 92c

DESIGN CRITERIA

(Also refer to the Approval Chart on page 92c.)

cULus Listing Requirements: Mirage® Quick Response Extended Coverage Concealed Pendent Sprinklers VK632 and VK634 are cULus Listed for installation in accordance with the latest edition of NFPA 13 for extended coverage pendent spray sprinklers:

- Limited to Light Hazard occupancies, with smooth, flat, horizontal ceilings only.
- Minimum spacing allowed is 8 ft. (2.4 m) unless baffles are installed in accordance with NFPA 13.
- Minimum distance from walls is 4 in. (102 mm).
- Maximum distance from walls shall be no more than one-half of the allowable distance between sprinklers. The distance shall be measured perpendicular to the wall.
- The sprinkler installation and obstruction rules contained in NFPA 13 for extended coverage pendent spray sprinklers must be followed.

NOTE: Concealed sprinklers must be installed in neutral or negative pressure plenums only.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to pages EC1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Identification of Custom Paint Color:
All custom color painted cover plates will have an identifying label affixed to the inside of the cover that indicates custom color and will have a representative sample (a paint dot) of the paint on the label.

Model G5-56 Dry (SIN RA5114) K5.6 (80 metric) Concealed Dry Pendent Sprinkler

UL Quick Response
FM Standard Response
½" (13mm) Cover plate Adjustment

Features

1. Flat cover plate with threaded attachment.
2. Solid or perforated cover plate available in chrome and white as Standard Finishes.
   Also available in a wide variety of Special Application Finishes.
3. Cover plates with gaskets are available to limit dust and air movement through the ceiling.
4. Available in Ordinary or Intermediate temperature rating.
5. Sprinkler available in lengths from 4¼ inches (108mm) to 48 inches (1219mm) in ¼-inch (6.35mm) increments (see Fig. 1).

Approvals & Listings

1. Listed by Underwriters Laboratories and Certified for Canada (cULus) as a Quick-response sprinkler for Light and Ordinary Hazard occupancies. UL Guide Number VNIV, Sprinklers, Automatic and Open.
2. FM Approved as a Standard-response sprinkler.

Patents

The Model G5-56 Dry is covered by the following patents:
U.S. 5,775,431
U.S. 5,967,240

Application

The Model G5-56 Dry is a cULus Listed Quick Response Concealed Dry Pendent sprinkler intended for use in accordance with NFPA 13. The Model G5-56 Dry sprinkler is cULus Listed for use in Light and Ordinary Hazard occupancies.

The Model G5-56 Dry is FM Approved as a Standard Response Concealed Dry Pendent sprinkler intended for use in accordance with FM Loss Prevention Data Sheet 2.0.

Product Description

The Reliable Model G5-56 Dry sprinkler is a Dry Pendent sprinkler, where the sealing washer is located at the inlet end of the sprinkler assembly. The position of the sealing washer is controlled by a fusible element at the opposite end of the sprinkler assembly. The sprinkler is installed with the fusible element at the ceiling of a protected space that may be subject to freezing temperatures and the inlet orifice located in a heated area above the ceiling. Operation of the fusible element allows the sealing washer to move out of the inlet orifice admitting water from the supply piping. The sprinkler uses a fast-response fusible element with an Ordinary, 165°F (74°C), or Intermediate, 212°F (100°C), temperature classification.

Model G5-56 Dry Sprinkler

The Model G5-56 Dry sprinkler has a dropdown deflector design that allows the sprinkler to be recessed into the ceiling and concealed by a flat cover plate. The cover plate assembly threads into the sprinkler's cup and provides ½-inch (13mm) of cover adjustment. The cover plate assembly consists of a flat cover plate that is attached to the skirt using either 135°F (57°C) or 165°F (74°C) temperature rated solder. The 135°F (57°C) cover plates are for use with Ordinary temperature classification sprinklers and the 165° (74°C) cover plates are for use with Intermediate temperature classification sprinklers.

The Model G5-56 Dry sprinkler is available in lengths ranging from 4¼ inches (108mm) to 48 inches (1219mm) in ¼-inch (6.35mm) increments (see Fig. 1). The length of the sprinkler must be selected to provide the Exposed Minimum Barrel Length in a Heated Area required by Fig. 2.

The Model G5-56 Dry sprinkler is available with 1-inch NPT or ISO 7-1 R1 threaded inlet fittings. The standard inlet fitting includes a long inlet designed to minimize the potential for water, scale, and sediment to accumulate on the sprinkler inlet in wet- and dry-pipe sprinkler systems. For wet-pipe sprinkler system applications where the standard inlet interferes with installation into existing plastic pipe fittings, an inlet fitting is available with a short ("PL") inlet. See Fig. 3 for further information.

Technical Data:

Nominal Orifice Size: ½-inch (15mm)
Thread Size: 1-inch NPT per ANSI B2.1 or ISO 7-1 R1
Nominal K Factor: 5.6 (80 metric)
Maximum Working Pressure: 175 psi (12 bar) – 100% factory hydrostatically tested to 500 psi (34.5 bar)
Sprinkler Installation Wrench: Model FC wrench
Sprinkler Identification Number (SIN): RA5114
Materials: See Fig. 4

Temperature Rating

Classification	Sprinkler	Cover Plate	Max. Ambient Temp.
Ordinary	165°F (74°C)	135°F (57°C)	100°F (38°C)
Intermediate	212°F (100°C)	165°F (74°C)	150°F (66°C)

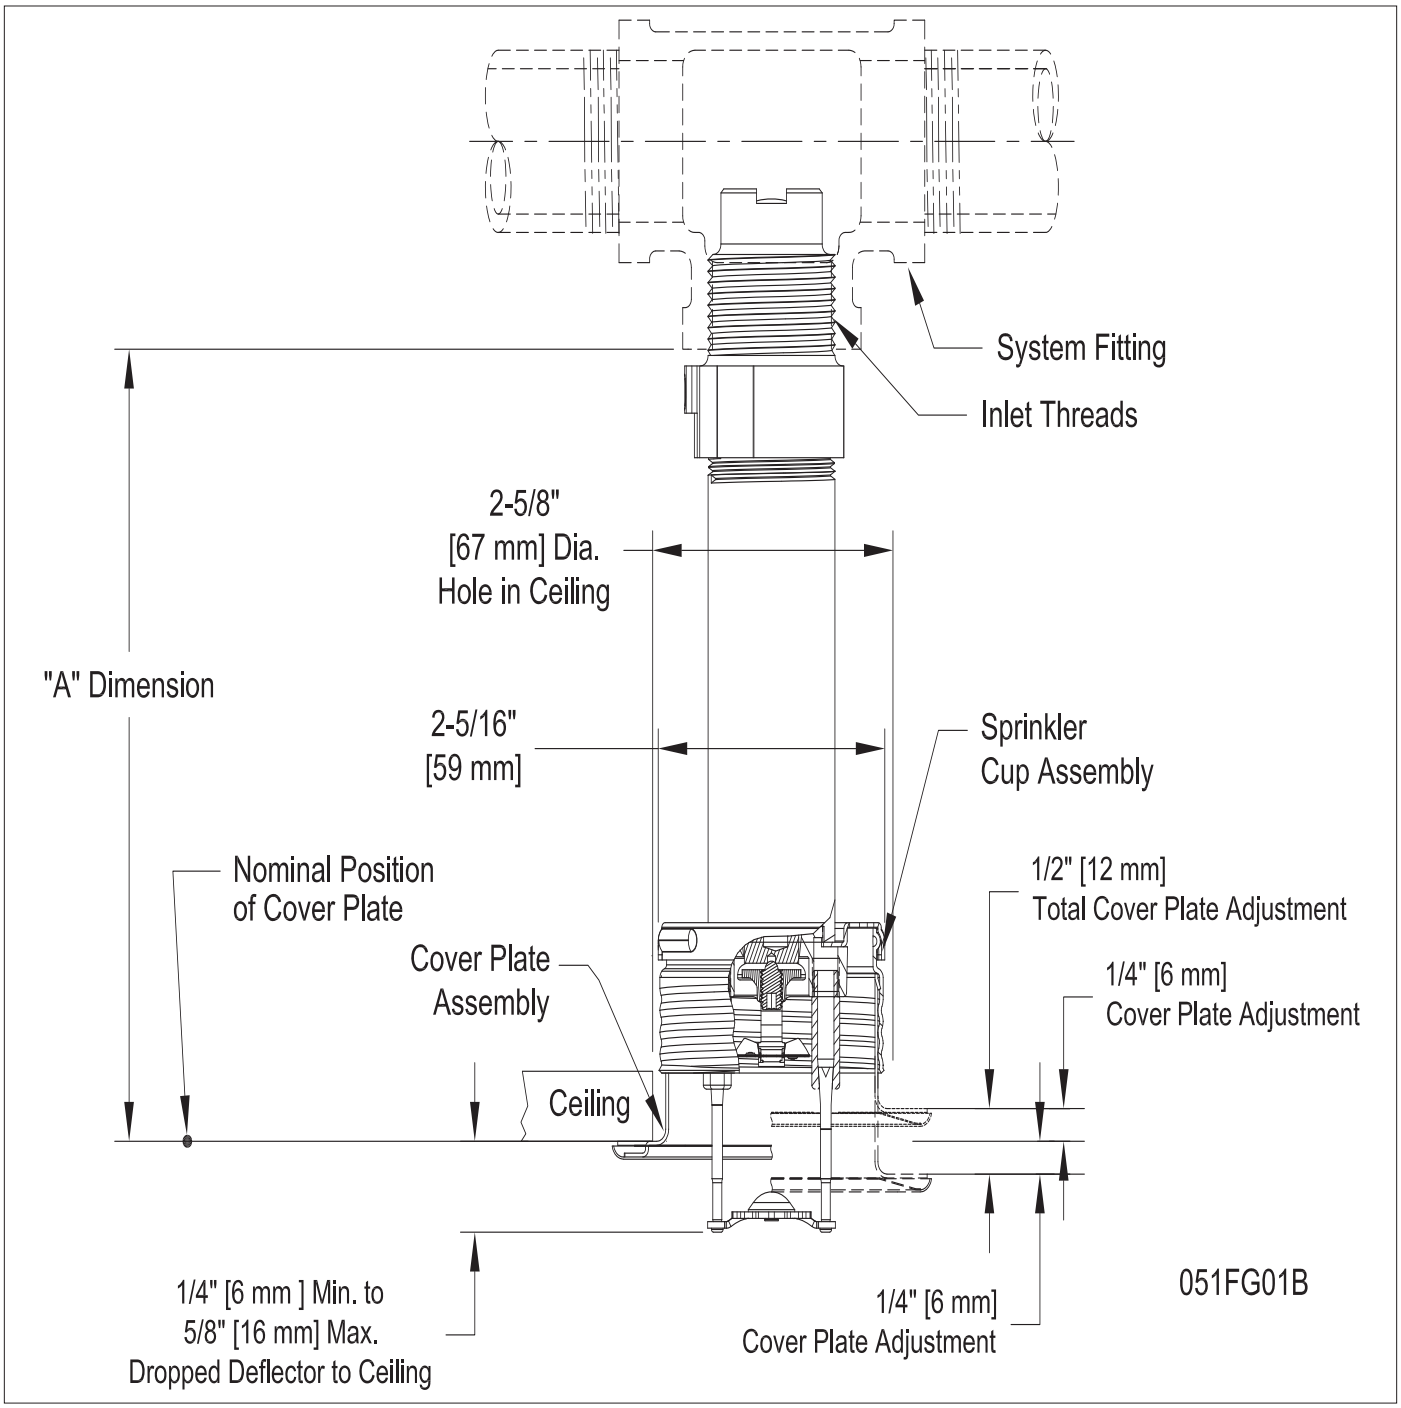

Figure. 1

Note: The "A" dimension is based on a nominally gauged pipe thread "make-up" of 0.600" (15mm) per ANSI B2.1 [7½ threads approximately].

"A" Dim.	4¼" to 48" (108mm to 1219mm) in ¼" (6.35mm) increments

Cover Plate Finishes

Standard Finishes

[1] Custom color paint is semi-gloss, unless specified otherwise.

[2] Stainless steel clad cover plates are Type 316 Stainless Steel on the finished side and C102 Copper Alloy on the back side. Cover plates are not listed or approved as corrosion resistant. Stainless steel clad cover plates are not available perforated.

Optional Cover Plate with Gasket*

Model G4 QR Gasket
Cover Plate
(cULus Listed)

Model G4 SR Gasket
Cover Plate
(FM Approved)

* Model G4 QR Gasket and Model G4 SR Gasket cover plates are sold as assembled units including both the cover plate and gasket. Model G4 QR Gasket and Model G4 SR Gasket cover plates and gaskets are not interchangeable.

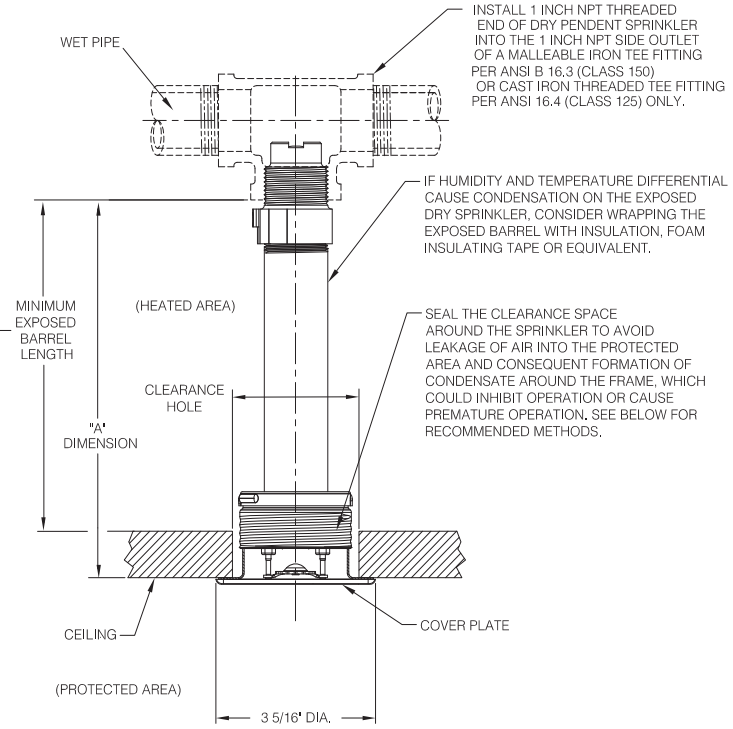
Installation Instructions

Model G5-56 Dry sprinklers must only be installed in standard (ANSI B 16.3 class 150 and ANSI B 16.4 class 125) pipe tees in the horizontal position, even at branch line ends. Model G5-56 Dry sprinklers shall not be installed into elbows or pipe couplings located on drop nipples to the sprinklers. In all installations, including into CPVC piping, the dry sprinkler shall be installed with protrusion into the fitting in accordance with the installation diagrams in this Bulletin.

Installation of the Model G5-56 Dry sprinkler is not recommended in copper pipe systems, as this may reduce the life expectancy of the sprinkler. Do not install Model G5-56 Dry sprinklers with the standard (long) inlet fitting into CPVC adapter fittings or tees that have an internal obstruction (see Fig. 3); this will damage the sprinkler, the fitting, or both. A short inlet ("PL") version of the Model G5-56 Dry sprinkler is available for use in existing installations with CPVC adapter fittings or tees having an internal obstruction; Model G5-56 sprinklers with the short inlet fitting shall not be used on dry-pipe sprinkler systems. The Model G5-56 Dry sprinkler and the cover plate assembly are not intended for installation in corrosive environments, including, but not limited to, those with salt aerosols or chlorine.

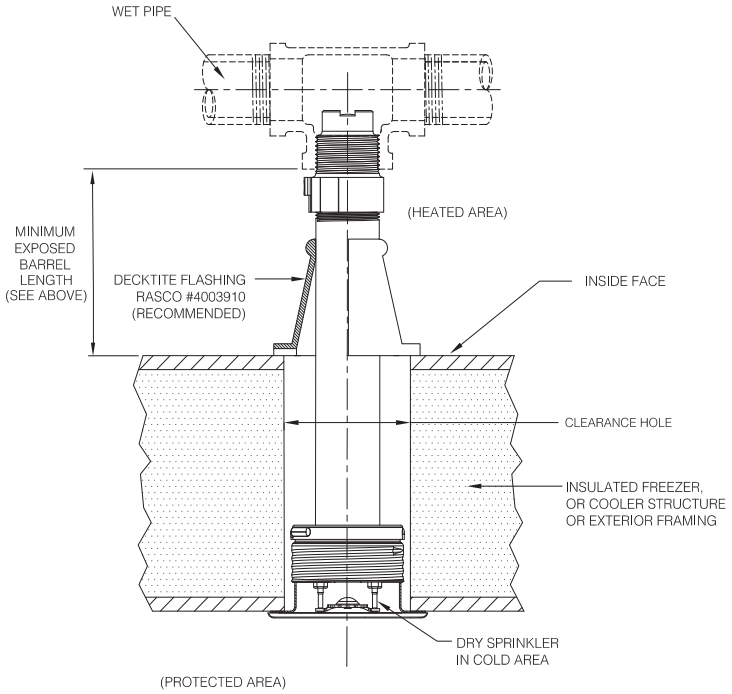
Model G5-56 Dry sprinklers must be installed with the Exposed Minimum Barrel Length required by Fig. 2 located in a Heated Area. Do NOT install the sprinkler in ceilings which have positive pressure in the space above.

The following steps must be followed for installation:



1. Cut a $2\frac{5}{8}$-inch (67mm) diameter hole in the ceiling directly in-line with the outlet of the tee.
2. Apply pipe joint compound or Polytetrafluoroethylene (PTFE) tape to the threads of the sprinkler's inlet fitting.
3. A protective cap is provided to protect the drop-down sprinkler deflector from damage which could occur during construction before the cover plate is installed. The cap is factory installed inside the sprinkler cup. Remove the cap to install sprinkler, Step 4, then reinstall cap until the cover plate is installed.
4. Install the sprinkler in the tee using the Model FC wrench. The Model FC wrench has a socket drive which is inserted into the sprinkler's cup and around the body of the sprinkler prior to installation of the sprinkler. Do NOT wrench any of the part of the sprinkler/cup assembly. The sprinkler is then tightened into the pipe fitting to achieve a leak free connection. The recommended minimum to maximum installation torque is 22-30 lb-ft (30 – 40 N-m). When inserting or removing the wrench from the sprinkler/cup assembly, care should be taken to prevent damage to the sprinkler. Reinstall the protective cap following installation of the sprinkler, until the cover plate is installed.
   a. Alternatively, where access to the outer tube of the sprinkler is available, the Model G5-56 Dry sprinkler may be installed using a pipe wrench. The protective cap should not be removed to install the sprinkler with a pipe wrench. The pipe wrench shall only be permitted to interface with the steel outer tube portion of the sprinkler (Item #8 in Fig. 4). Do NOT wrench any other portion of the sprinkler/cup assembly. A pipe wrench can install the sprinkler into the fitting with a large amount of torque; consideration should be given to the need for future removal of the sprinklers because the installation torque will have to be matched or exceeded to remove the sprinkler. The recommended minimum to maximum installation torque is 22-30 lb-ft (30 – 40 N-m).
5. To install the cover plate, remove the protective cap and install the cover plate by hand turning the cover in the clockwise direction until it is tight against the ceiling. For Model G4 QR Gasket and Model G4 SR Gasket cover plates, the gasket should be attached to the flange of the cover plate skirt only. Do not glue the gasket in place or allow the gasket to overlap both the cover plate and the flange of the skirt.

RECOMMENDED EXPOSED MINIMUM BARREL LENGTH BASED ON AMBIENT TEMPERATURE IN THE PROTECTED AREA



AMBIENT TEMPERATURE OF PROTECTED AREA* AT THE DISCHARGE END OF THE SPRINKLER	EXPOSED BARREL AMBIENT TEMPERATURE		
	40°F/4°C	50°F/10°C	60°F/16°C
	EXPOSED MINIMUM BARREL LENGTH** (FACE OF TEE TO TOP OF CEILING)		
	IN. (MM)	IN. (MM)	IN. (MM)
40°F (4°C)	0	0	0
30°F (-1°C)	0	0	0
20°F (-7°C)	4 (100)	0	0
10°F (-12°C)	8 (200)	1 (25)	0
0°F (-18°C)	12 (300)	3 (75)	0
-10°F (-23°C)	14 (350)	4 (100)	1 (25)
-20°F (-29°C)	14 (350)	6 (150)	3 (75)
-30°F (-34°C)	16 (400)	8 (200)	4 (100)
-40°F (-40°C)	18 (450)	8 (200)	4 (100)
-50°F (-46°C)	20 (500)	10 (250)	6 (150)
-60°F (-51°C)	20 (500)	10 (250)	6 (150)

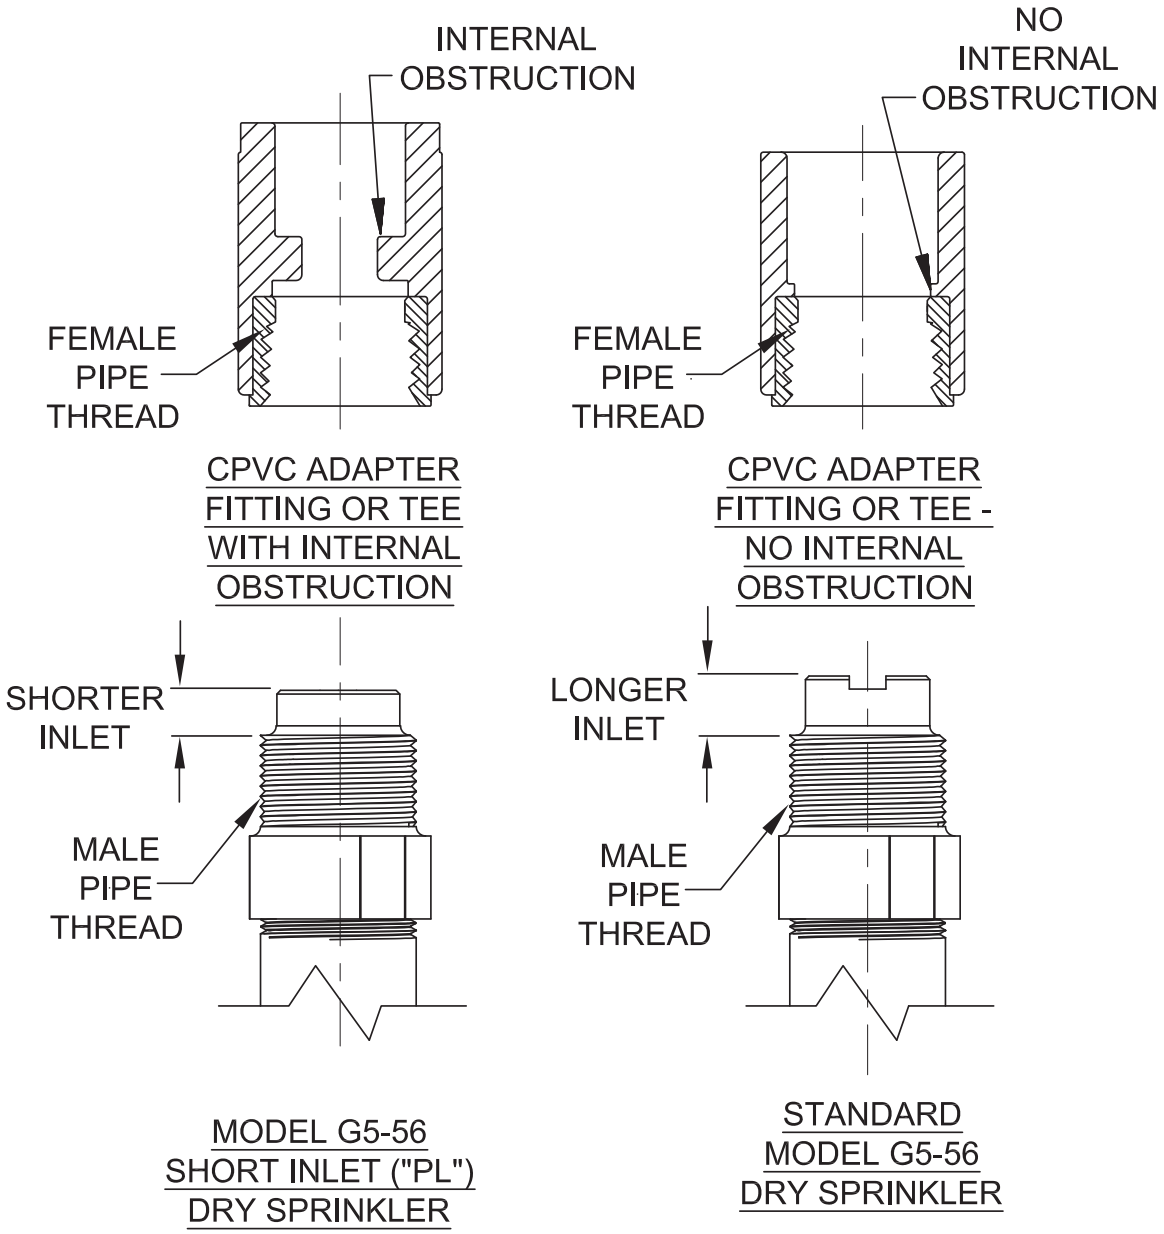
* FOR AMBIENT TEMPERATURES EXPOSED TO THE DISCHARGE END OF THE SPRINKLER THAT OCCUR BETWEEN THE VALUES LISTED, USE THE NEXT COOLER TEMPERATURE.

** THE MINIMUM EXPOSED BARREL LENGTH IS NOT THE SAME AS THE "A" DIMENSION. THE MINIMUM EXPOSED BARREL LENGTH IS BASED ON A PROPERLY SEALED PENETRATION WITH A MAXIMUM WIND VELOCITY PN THE EXPOSED SPRINKLER OF 30 MPH (48 KM/H). LONGER EXPOSED BARREL LENGTHS WILL HELP AVOID FREEXING OF THE WET PIPING WHERE HIGHER WIND VELOCITY IS EXPECTED.

RECOMMENDED DRY SPRINKLER SEAL ARRANGEMENT

051FG02

Figure 2



CAUTION

DO NOT INSTALL MODEL G5-56 DRY SPRINKLERS WITH STANDARD INLETS INTO CPVC ADAPTER FITTINGS OR TEES THAT HAVE AN INTERNAL OBSTRUCTION; THIS WILL DAMAGE THE SPRINKLER, THE FITTING, OR BOTH.

CPVC ADAPTER FITTINGS AND TEES WITH INTERNAL OBSTRUCTIONS ARE COMMONLY FOUND DURING THE RETROFITTING PROCESS OF RELIABLE'S OLDER MODEL G3 DRY SPRINKLERS.

A SHORT INLET ("PL") VERSION OF THE MODEL G5-56 DRY SPRINKLER IS AVAILABLE FOR USE IN EXISTING INSTALLATIONS WITH CPVC ADAPTER FITTINGS OR TEES HAVING AN INTERNAL OBSTRUCTION; THE SHORT INLET VERSION SHALL NOT BE USED ON DRY-PIPE SPRINKLER SYSTEMS.

VERIFY SPRINKLER AND FITTING DIMENSIONS PRIOR TO INSTALLATION TO AVOID INTERFERENCE.

BE SURE TO ORDER THE CORRECT SPRINKLERS FOR YOUR APPLICATION

051FG03

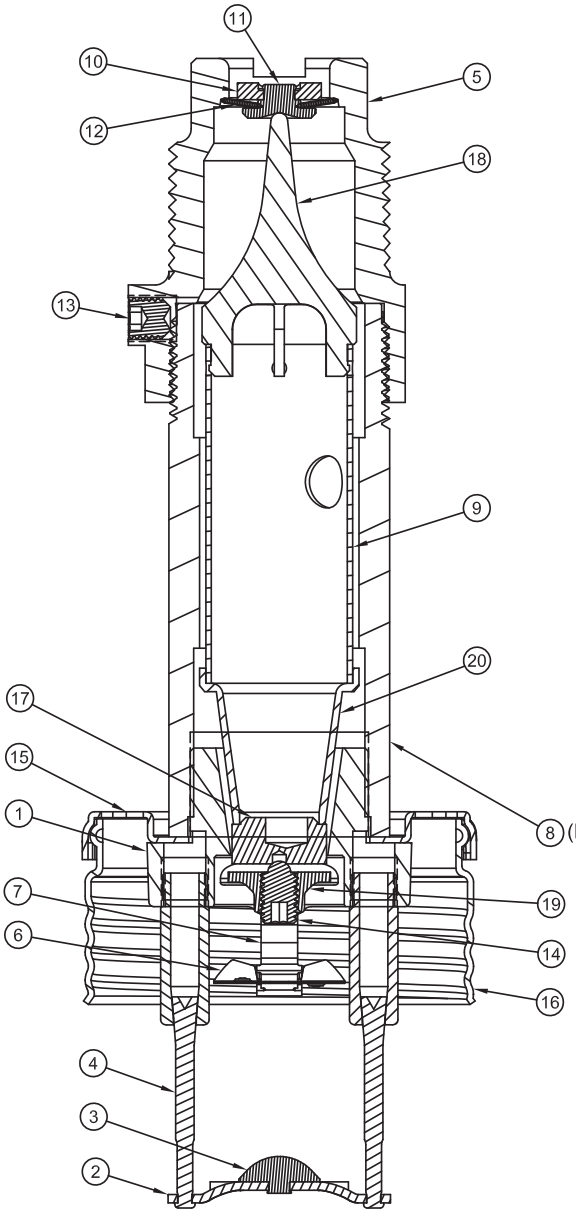
Figure 3

Maintenance

The Model G5-56 Dry should be inspected and the sprinkler system maintained in accordance with NFPA 25. Do not clean sprinklers with soap and water, ammonia or any other cleaning fluids. Replace any sprinkler that has been painted (other than factory applied) or damaged in any way. Concealed sprinklers cover plates can not be painted in the field, after installation or have any other coating applied other than the factory finish. A stock of spare sprinklers should be maintained to allow quick replacement of damaged or operated sprinklers. Prior to installation, sprinkler should be maintained in the original cartons and packaging to minimize the potential for damage to sprinklers that would cause improper operation or non-operation.

Engineering Specification

Model G5-56 Dry Pendent Concealed Sprinkler



Dry pendent sprinklers shall be dry pendent concealed sprinklers with a flat cover plate. Sprinklers shall be cULus Listed as Quick Response for Light and Ordinary Hazard applications as well as FM Approved as Standard Response. Sprinklers shall be available in lengths from 4¼ inches (108mm) to 48 inches (1219mm) in ¼-inch (6.35mm) increments based on face of fitting to finished ceiling distance. Sprinkler length shall be selected to provide the Exposed Minimum Barrel Length based on the minimum design temperature in the protected area and the minimum temperature in the conditioned space where the barrel is located in accordance with the Manufacturer's written installation instructions. Sprinklers shall have [1-inch NPT][ISO 7-1 R1] threaded inlet fittings with [standard length inlets designed for use with wet- or dry-pipe sprinkler systems][short length inlets designed for use with wet-pipe sprinkler systems having pipe fittings with internal obstructions that prevent the insertion of standard length inlets]. Sprinklers shall have a PTFE coated beryllium nickel Belleville spring washer inlet seal and brass alloy cap that prevent water entry from the sprinkler system piping into the sprinkler prior to actuation. Sprinklers shall have a fast-response fusible link that controls the movement of the inlet seal and cap through a mechanism consisting of link arms, a seat adapter, an orifice adapter, an inner tube, and a yoke. Sprinklers shall use a drop down deflector supported by tapered pins. Sprinklers shall have a galvanized steel cup for threaded attachment of the flat cover plate assembly. Cover plate attachment shall provide up to ½-inch (13mm) of adjustment. Sprinklers shall be [Ordinary temperature classification, 165°F (74°C), with 135°F temperature rated cover plates][Intermediate temperature classification, 212°F, with 165°F temperature rated cover plates]. Cover plates shall be [solid][perforated] with factory applied [White][Chrome][Special Application – Specify] finish. Dry pendent concealed sprinklers shall be Reliable Model G5-56 Dry (SIN RA5114).

Ordering Information

Specify:

1. Sprinkler: Model G5-56 Dry
2. Threads: [1-inch NPT - standard][ISO 7/1 R1 - optional]
3. Inlet Length: [Standard][Short ("PL")– for existing wet-pipe installations only]
4. Cover Plate Finish: [White][Chrome][Special Application – Specify]
5. Sprinkler/Cover Plate Temperature Rating: [Ordinary – 165°F sprinkler with 135°F cover plate][Intermediate – 212°F sprinkler with 165°F cover plate]
6. Nominal Sprinkler Length (face of fitting to face of ceiling - "A" Dimension from Fig. 1): [Specify length – Lengths available from 4¼ inches to 48 inches (108mm to 1219mm) in ¼-inch (6.35mm) increments]

Reliable...For Complete Protection

Reliable offers a wide selection of sprinkler components. Following are some of the many precision-made Reliable products that guard life and property from fire around the clock.

- Automatic sprinklers
- Flush automatic sprinklers
- Recessed automatic sprinklers
- Concealed automatic sprinklers
- Adjustable automatic sprinklers
- Dry automatic sprinklers
- Intermediate level sprinklers
- Open sprinklers
- Spray nozzles
- Alarm valves
- Retarding chambers
- Dry pipe valves
- Accelerators for dry pipe valves
- Mechanical sprinkler alarms
- Electrical sprinkler alarm switches
- Water flow detectors
- Deluge valves
- Detector check valves
- Check valves
- Electrical system
- Sprinkler emergency cabinets
- Sprinkler wrenches
- Sprinkler escutcheons and guards
- Inspectors test connections
- Sight drains
- Ball drips and drum drips
- Control valve seals
- Air maintenance devices
- Air compressors
- Pressure gauges
- Identification signs
- Fire department connection

The equipment presented in this bulletin is to be installed in accordance with the latest published Standards of the National Fire Protection Association, Factory Mutual Research Corporation, or other similar organizations and also with the provisions of governmental codes or ordinances whenever applicable.

Products manufactured and distributed by Reliable have been protecting life and property for almost 100.

Victaulic® Flexible Coupling Style 75

06.05

Exaggerated for clarity

WARNING

- **Victaulic RX roll sets must be used when grooving light-wall/thin-wall stainless steel pipe for use with Victaulic Couplings.**

Failure to use Victaulic RX roll sets when grooving light-wall/thin-wall stainless steel pipe may cause joint failure, resulting in serious personal injury and/or property damage.

Approvals/Listings

See Victaulic publication 10.01 for details

See Victaulic publication 02.06 for portable water approvals if applicable.

NOTICE

- **Victaulic RX grooving rolls must be ordered separately. They are identified by a silver color and the designation RX on the front of the roll sets.**

Product Description

Style 75 is available where moderate pressures are expected or weight considerations are a factor. Up to 50% lighter in weight than the Style 77, the Style 75 coupling is recommended for service up to 500 psi/3450 kPa depending on size. Housings are cast in two identical pieces in all sizes. Hot-dip galvanized and special coatings are available for all sizes.

The Victaulic standard flexible coupling offering for grade “EHP” or “T” gaskets is the Style 177 installation-ready flexible coupling. For all available sizes, the Style 177 is the standard flexible coupling Victaulic supplies in North America for piping systems using Grade “EHP” or “T” gaskets. Contact Victaulic for further details.

Performance data presented in this document is based on use with standard wall, carbon steel pipe. For use with stainless steel pipe, please reference publication 17.09 for pressure ratings and end loads. When used on light wall stainless steel pipe, the Victaulic RX roll set must be used to roll groove the pipe. For further information regarding roll grooving stainless steel, refer to publication 17.01.

Material Specifications

Housing:

Ductile iron conforming to ASTM A-536, grade 65-45-12. Ductile iron conforming to ASTM A-395, grade 65-45-15, is available upon special request.

Housing Coating: (specify choice)

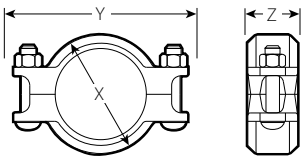
- ☐ Standard: Orange enamel.
- ☐ Optional: Hot dipped galvanized and others.

Gasket: (specify choice[1])

NOTE: Additional gasket styles are available. Contact Victaulic for details.

- ☐ **Grade "E" EPDM**
  EPDM (Green stripe color code). Temperature range –30°F to +230°F/–34°C to +110°C. May be specified for cold and hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. UL Classified in accordance with ANSI/NSF 61 for cold +73°F/+23°C and hot +180°F/+82°C potable water service and ANSI/NSF 372. NOT COMPATIBLE FOR PETROLEUM SERVICES.
- ☐ **Grade "T" Nitrile**
  Nitrile (Orange stripe color code). Temperature range 20°F to +180°F/29°C to +82°C. May be specified for petroleum products, air with oil vapors, vegetable and mineral oils within the specified temperature range. Not compatible for hot water services over +150°F/+66°C or for hot dry air over +140°F/+60°C.

1 Services listed are General Service Guidelines only. It should be noted that there are services for which these gaskets are not compatible. Reference should always be made to the latest Victaulic Gasket Selection Guide for specific gasket service guidelines and for a listing of services which are not compatible.



Bolts/Nuts:

Heat-treated plated carbon steel, trackhead meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183

2 Working Pressure and End Load are total, from all internal and external loads, based on standard weight (ANSI) steel pipe, standard **roll** or **cut** grooved in accordance with Victaulic specifications. Contact Victaulic for performance on other pipe.

3 Allowable Pipe End Separation and Deflection figures show the maximum nominal range of movement available at each joint for standard **roll** grooved pipe. Figures for standard **cut** grooved pipe may be doubled. These figures are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾ – 3 ½"/20 – 90 mm; 25% for 4"/100 mm and larger.

4 Number of bolts required equals number of housing segments.

General Notes

Metric thread size bolts are available (color coded gold) for all coupling sizes upon request. Contact Victaulic for details.

WARNING: FOR ONE TIME FIELD TEST ONLY, the Maximum Joint Working Pressure may be increased to 1½ times the figures shown.

STYLE 750

211313 - Wet-Pipe Sprinkler System

The Style 750 Reducing Coupling permits direct reduction on the piping run. Designed to replace two couplings and a reducing fitting, the Style 750 features a special reducing gasket for pressure responsive sealing. A steel washer which prevents telescoping of the smaller pipe inside the larger pipe during vertical systems assembly is available upon request.

Exaggerated for clarity

MATERIAL SPECIFICATIONS

Housing: Ductile iron conforming to ASTM A-536, grade 65-45-12. Ductile iron conforming to ASTM A-395, grade 65-45-15, is available upon special request.

Housing Coating: Orange enamel

- **Optional:** Hot dipped galvanized and others

Gasket: (Specify choice*):

- **Grade "E" EPDM (All other sizes)**
  EPDM (Green color code). Temperature range –30°F to +230°F/–34°C to +110°C. Recommended for cold and hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. UL classified in accordance with ANSI/NSF 61 for cold +86°F/+30°C and hot +180°F/+82°C potable water service. NOT RECOMMENDED FOR PETROLEUM SERVICES.

- **Grade "T" nitrile**
  Nitrile (Orange color code). Temperature range –20°F to +180°F/–29°C to +82°C. Recommended for petroleum products, air with oil vapors, vegetable and mineral oils within the specified temperature range. Not recommended for hot water services over +150°F/+66°C or for hot dry air over +140°F/+60°C.

* Services listed are General Service Recommendations only. It should be noted that there are services for which these gaskets are not recommended. Reference should always be made to the latest Victaulic Gasket Selection Guide for specific gasket service recommendations and for a listing of services which are not recommended.

- **Optional:** Assembly Washer: Galvanized, carbon steel

Bolts/Nuts: Heat-treated plated carbon steel, trackhead meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.

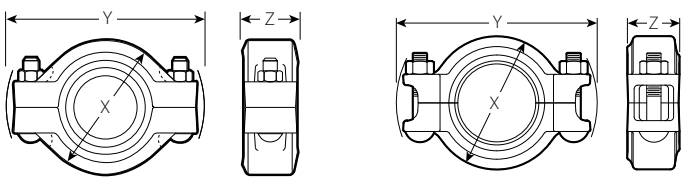
Style 750 Reducing couplings should not be used with end caps (#60) in systems where a vacuum may be developed. Contact Victaulic for details.



* Working Pressure and End Load are total, from all internal and external loads, based on standard weight (ANSI) steel pipe, standard **roll** or **cut** grooved in accordance with Victaulic specifications. Contact Victaulic for performance on other pipe. Maximum working pressure rating based on larger pipe size. Maximum End Load rating based on smaller pipe size. WARNING: FOR ONE TIME FIELD TEST ONLY, the Maximum Joint Working Pressure may be increased to 1½ times the figures shown.

† Allowable Pipe End Separation and Deflection figures show the maximum nominal range of movement available at each joint for standard **roll** grooved pipe. Figures for standard **cut** grooved pipe may be doubled. These figures are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾ – 3½"/20 – 90 mm; 25% for 4"/100 mm and larger.

@ Number of bolts required equals number of housing segments.

Metric thread size bolts are available (color coded gold) for all coupling sizes upon request. Contact Victaulic for details.

WARNING: Depressurize and drain the piping system before attempting to install, remove, or adjust any Victaulic piping products.

STYLE 750

FLOW DATA

HEAD LOSS

The head loss across Style 750 Reducing coupling is very small and is essentially the same as for standard short body reducing pipe fittings.

Equivalent lengths of standard weight steel pipe are shown in the tables. All data is based on water flowing at ambient temperature.

INSTALLATION

Reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

FireLock® Fittings

10.03

Material Specifications:

Fitting:

Ductile iron conforming to ASTM A-536, grade 65-45-12.

Fitting Coating:

- ☐ Orange enamel
- ☐ Red enamel in Europe, Middle East, Africa, and India
- ☐ Optional: Hot dipped galvanized

Approvals/Listings:

c UL us LISTED FM LPCB VdS

Product Description:

FireLock® products comprise a unique system specifically designed for fire protection services. FireLock full-flow elbows and tees feature CAD-developed, hydrodynamic design, affording a shorter center-to-end dimension than standard fittings. A noticeable bulge allows the water to make a smoother turn to maintain similar flow characteristics as standard full flow fittings.

FireLock fittings are designed for use exclusively with Victaulic couplings that have been Listed or Approved for Fire Protection Services. Use of other couplings or flange adapters may result in bolt pad interference.

Refer to the appropriate listing agency or approval body for pressure ratings. Pressure ratings vary by agency.

General Notes:

NOTE: When assembling FireLock EZ couplings onto end caps, take additional care to make certain the end cap is fully seated against the gasket end stop. For FireLock EZ Style 009N/009H couplings, use FireLock No. 006 end caps containing the “EZ” marking on the inside face or No. 60 end caps containing the “QV EZ” marking on the inside face. Non-Victaulic end cap products shall not be used with Style 009/009V/009H couplings.

Installation
Reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

Warranty
Refer to the Warranty section of the current Price List or contact Victaulic for details.

Note
This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

FireLock® Rigid Coupling
Style 005H
with Vic-Plus™ Gasket System

Victaulic
10.02

Patented

Exaggerated for clarity

VicPlus Gasket System

Approvals/Listings:

c UL us LISTED · FM · CTP · VdS · LPCB

104-1a/02

See Victaulic Publication 10.01 for more details.

LPC and VdS Approved, see notes on page 3

Product Description:

FireLock Style 005H rigid coupling has a unique, patented angle-pad design which allows the housings to offset while clamping the grooves. By permitting the housings to slide on the angled bolt pads, rigidity is obtained.

Support and hanging requirements correspond to NFPA 13 Sprinkler Systems. Angle-pad design permits assembly by removing one nut/bolt and swinging the housing over the gasket. This reduces components to handle during assembly.

Style 005H FireLock coupling are designed and recommended for use ONLY on fire protection systems.

Vic-Plus™ Gasket System:

Victaulic offers a gasket system which requires no field lubrication on wet pipe systems that are hydrostatically tested. The Vic-Plus System (patented) is dry, clean, and non-toxic. It reduces assembly time substantially and eliminates the mess and chance of over-lubrication. Please refer to the latest copy of the Victaulic Field Installation Handbook (I-100) for supplemental lubrication requirements and dry pipe fire protection system notes.

Material Specifications:

Housing: Ductile iron conforming to ASTM A-536, grade 65-45-12. Ductile iron conforming to ASTM A-395, grade 65-45-15, is available upon special request.

Housing Coating: (specify choice)

Standard: Orange enamel (North America); red enamel (Europe)

☐ Optional: Hot dipped galvanized

Coupling Gasket: (specify choice)

NOTE: Additional gasket styles are available. Contact Victaulic for details.

☐ Grade “E” EPDM Type A Vic-Plus™ Gasket System[1]

EPDM (Violet color code). FireLock products have been Listed by Underwriters Laboratories Inc. and Approved by Factory Mutual Research for wet and dry (oil free air) sprinkler services up to the rated working pressure using the Grade “E” Type A Vic-Plus™ Gasket System, requiring no field lubrication for most installation conditions.

☐ Grade “L” silicone

Recommended for dry heat, air without hydrocarbons to +350°F and certain chemical services.

For dry services, Victaulic continues to recommend the use of Grade “E” Type A FlushSeal® Gasket. Contact Victaulic for details.

Bolts/Nuts: Heat-treated plated carbon steel, trackhead meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.

[1] Standard gasket and FlushSeal gasket approved for dry pipe systems to –40°F/–40°C. Based on “typical” pipe surface conditions, supplemental lubricant is recommended for services installed below 0°F/–18°C and for all dry pipe systems or systems to be subjected to air tests prior to being filled with water. Supplemental lubrication may also be required on pipe with raised or undercut weld seams or pipe that has voids and/or cracks at the weld seams. Victaulic continues to recommend the use of FlushSeal gaskets for dry services.

1 Working Pressure and End Load are total, from all internal and external loads, based on standard weight (ANSI) steel pipe, standard roll or cut grooved in accordance with Victaulic specifications. Contact Victaulic for performance on other pipe. WARNING: FOR ONE TIME FIELD TEST ONLY, the Maximum Joint Working Pressure may be increased to 1½ times the figures shown.

2 The allowable pipe separation dimension shown is for system layout purposes only. Style 005H couplings are considered rigid connections and will not accommodate expansion or contraction of the piping system.

3 Number of bolts required equals number of housing segments. Metric thread size bolts are available (color coded gold) for all coupling sizes upon request. Contact Victaulic for details.

4 Style 005H couplings are VdS and LPC Approved to 16 Bar/235 psi.

5 FM approved for service in 1 1/2 – 4" pipe.

6 UL Listed for service up to 4" pipe only.

7 UL Listed for service up to 3" only.

Installation
Reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

Warranty
Refer to the Warranty section of the current Price List or contact Victaulic for details.

Note
This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

Style 744 FireLock® Flange Adapter

with Vic-Plus™ Gasket System

PRODUCT DESCRIPTION

2 - 8" Sizes

(Exaggerated for clarity)

Style 744 FireLock Flange adapter is designed for directly incorporating flanged components with ANSI CL. 125 or CL. 150 bolt hole patterns into a grooved pipe system. Sizes 2 - 8" (50 - 200 mm) are hinged for easy handling with integral end tabs which facilitate assembly.

The design incorporates small teeth inside the key shoulder I.D. to prevent rotation.

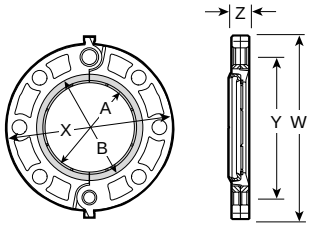
Because of the outside flange dimension, FireLock Flange adapters should not be used on FireLock fittings. When wafer or lug-type valves are used adjoining a Victaulic fitting, check disc dimensions to assure proper clearance.

FireLock Flange adapters should not be used as anchor points for tie-rods across nonrestrained joints. Mating rubber faced flanges, valves, etc., require the use of a FireLock Flange washer.

FireLock Flange adapters with Vic-Plus gaskets do not require lubrication. The gasket must always be assembled with the color coded lip on the pipe and the other lip facing the mating flange.

Style 744 FireLock Flange Adapters with the Vic-Plus™ Gasket System are designed and recommended for use ONLY on fire protection systems.

Vic-Plus Gasket System:
Victaulic® now offers a gasket system which requires no field lubrication on wet pipe systems. The Vic-Plus™ System (patented) is dry, clean, and non-toxic. It reduces assembly time substantially and eliminates the mess and chance of over-lubrication. Please refer to the latest copy of the Victaulic Field Installation Handbook (I-100) for supplemental lubrication requirements.



UL ULC FM

See Victaulic publication 10.01 for details.

DIMENSIONS

Style 744

Sizes 2 - 8" (50 - 200 mm)
ANSI Class 125 and 150 Flange

Note: Gray area of mating face must be free from gouges, undulations or deformities of any type for effective sealing.

*Refer to notes below.

†Total bolts required to be supplied by installer. Bolt sizes for conventional flange-to-flange connection. Larger bolts are required when Vic-Flange adapter is utilized with wafer-type valves.

Not available with Vic-Plus gasket system. Lubrication is required.

NOTES

* Working Pressure and End Load are total, from all internal and external loads, based on standard weight steel pipe, standard roll or cut grooved in accordance with Victaulic specifications. Contact Victaulic for performance on other pipe.

WARNING: FOR ONE TIME FIELD TEST ONLY, the Maximum Joint Working Pressure may be increased to 1½ times the figures shown.

Style 744 FireLock Flange adapters provide rigid joints when used on pipe with standard roll or cut groove dimensions and consequently allow no linear or angular movement at the joint.

WARNING: Depressurize and drain the piping system before attempting to install, remove, or adjust any Victaulic piping products.

VIC-FLANGE ADAPTER NOTES

1 The Style 744 (2 - 8"/50 - 200 mm) design incorporates small teeth inside the key shoulder I.D. to prevent rotation.

2 FireLock Flange adapter should not be used on FireLock fittings. When wafer or lug-type valves are used adjoining a Victaulic fitting, check disc dimensions to assure proper clearance.

3 FireLock Flange adapters should not be used as anchor points for tie-rods across nonrestrained joints. Mating rubber faced flanges, valves, etc. require the use of a FireLock Flange washer.

4 Area A-B noted in the above drawing must be free from gouges, undulations or deformities of any type for effective sealing.

5 FireLock Flange adapter gaskets must always be assembled with the color coded lip on the pipe and the other lip facing the mating flange.

6 Flange Washers: FireLock Flange adapters require a smooth hard surface at the mating flange face for effective sealing. Some applications for which the Vic-Flange adapter is otherwise well suited do not provide an adequate mating surface. In such cases, it is recommended that a metal Flange Washer be inserted between the FireLock Flange adapter and the mating flange to provide the necessary sealing surface.

Typical applications where a Flange Washer should be used are:

A When mating to a serrated flange: a standard flat flange gasket should be used adjacent to the serrated flange and then the Flange Washer is inserted between the FireLock Flange adapter and the flange gasket.

B When mating to a wafer valve: where typical valves are rubber lined and partially rubber faced (smooth or not), the Flange Washer is placed between the valve and the FireLock Flange adapter.

C When mating a rubber faced flange: the Flange Washer is placed between the FireLock Flange adapters and the rubber faced flange.

D When mating AWWA cast flanges to IPS flanges: the Flange Washer is placed between two FireLock Flanges. The hinge points must be oriented approximately 90° to each other. If one flange is not a FireLock Flange adapter (e.g. flanged valve), then a standard flat flange gasket must be placed adjacent to that flange and the Flange Washer inserted between the flange gasket and the FireLock Flange adapter.

E When mating to components (valves, strainers, etc.) where the component flange face has an insert: follow the same arrangement as in Application 1.

F When mating to a Series 705-W Butterfly valve, Style 744 may only be used on one side of the connection.

When ordering Flange Washers, always specify product style (Style 744) and size to assure proper Flange Washer is supplied.

MATERIAL SPECIFICATIONS

Flange Housing: Ductile iron conforming to ASTM A-536, grade 65-45-12. Ductile iron conforming to ASTM A-395, grade 65-45-15, is available upon special request.

Coating: Black enamel

- **Optional:** Hot dipped galvanized

Bolts/Nuts: Supplied by installer

Gasket:

- **Grade “E” EPDM - Type A Vic-Plus Gasket System Δ**
  (Violet color code). FireLock products have been Listed by Underwriters Laboratories Inc. and Approved by Factory Mutual Research for wet and dry (oil free air) sprinkler services up to the rated working pressure using the Grade “E” Type A Vic-Plus Gasket System, requiring no field lubrication for most installation conditions.

Δ Standard gasket approved for dry pipe systems to –40°F (–40°C). Based on “typical” pipe surface conditions, supplemental lubricant is recommended for services installed below 0°F (-18°C) and for all dry pipe systems or systems to be subjected to air tests prior to being filled with water. Supplemental lubrication may also be rquired on pipe with raised or undercut weld seams or pipe that has voids and/or cracks at the weld seams.

This product shall be manufactured by Victaulic Company. All products to be installed in accordance with current Victaulic installation/assembly instructions.
Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

Mechanical-T® Bolted Branch Outlets

SEE VICTAULIC PUBLICATION 10.01 FOR DETAILS

STYLES 920 AND 920N

211313 - Wet-Pipe Sprinkler System

Victaulic Mechanical-T® Outlet provides a direct branch connection at any location a hole can be cut in pipe. The hole is cut oversize to receive a "holefinder" locating collar which secures the outlet in position permanently. A pressure responsive gasket seals on the pipe O.D.

Cross-type connections can be achieved by utilizing two upper housings of the same style and size, with the same or differing branch size connections. NOTE: Style 920 and Style 920N housings cannot be mated to each other to achieve a cross connection.

Style 920 and Style 920N Mechanical-T outlets are available with grooved or female threaded outlet. Specify choice on order. Units are supplied painted with plated bolts. Galvanized housings are available, supplied with plated bolts.

All sizes of Style 920 and 920N are rated at 500 psi/3450 kPa working pressure on Schedule 10 and 40 carbon steel pipe. They may also be used on high density polyethylene or polybutylene (HDPE) pipe. Pressure ratings on HDPE are dependent on the pipe rating. Contact Victaulic for ratings on other pipe. **Style 920 and 920N are not recommended for use on PVC plastic pipe.**

Standard piping practices dictate that the Mechanical-T Styles 920 and 920N must be installed so that the main and branch connections are a true 90° angle when permanently attached to the pipeline surface.

Additionally, the Vic-Tap II® hole cutting tool, which allows for hole cutting capabilities on pressurized systems, utilizes the Style 920 Mechanical-T in conjunction with the Series 726 Vic-Ball Valve to create the Style 931 Vic-Tap II Mechanical-T unit. See page 8 for further information.

STYLES 920 AND 920N

STYLE 920 CROSS

PATENTED

MATERIAL SPECIFICATIONS

Housing/Coating: Ductile iron conforming to ASTM A-536, grade 65-45-12, with orange enamel coating. Ductile iron conforming to ASTM A-395, grade 65-45-15, is available upon special request.

- **Optional:** Hot dipped galvanized

Gasket: (Specify choice*)

- **Grade "E" EPDM**
  EPDM (Green color code). Temperature range –30°F to +230°F/–34°C to +110°C. Recommended for cold and hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. UL Classified in accordance with ANSI/NSF 61 for cold +86°F/+30°C and hot +180°F/+82°C. NOT RECOMMENDED FOR PETROLEUM SERVICES.

- **Grade "T" nitrile**
  Nitrile (Orange color code). Temperature range –20°F to +180°F/–29°C to +82°C. Recommended for petroleum products, air with oil vapors, vegetable and mineral oils within the specified temperature range. Not recommended for hot water services over +150°F/+66°C or for hot dry air over +140°F/+60°C.

*Services listed are General Service Recommendations only. It should be noted that there are services for which these gaskets are not recommended. Reference should always be made to the latest Victaulic Gasket Selection Guide for specific gasket service recommendations and for a listing of services which are not recommended.

Bolts/Nuts: Heat-treated plated carbon steel, trackhead meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.

IMPORTANT NOTES:

Style 920 and Style 920N housings cannot be mated to one another to achieve cross connections.

** Center of run to engaged pipe end, female threaded outlet only (dimensions approximate).

† Available with grooved or female threaded outlet. Specify choice on order.

‡ Center of run to end of fitting.

Female threaded outlets are available to NPT and BSPT specifications.

@ See page 7 for Fire Protection approvals and pressure ratings.

(a) British Standard female pipe threaded outlet is available as listed. Specify "BSPT" clearly on order.

(b) For 76.1 mm threaded outlet, specify 2½" BSPT clearly on order.

STYLES 920 AND 920N

DIMENSIONS

GROOVED OUTLET

FEMALE THREADED OUTLET

- Provides a direct branch connection at any location where a hole can be cut in the pipe
- A pressure responsive gasket provides the seal
- Request Publication 11.03 for Mechanical-T cross assemblies
- Pressure rated up to 500 psi/3450 kPa on steel pipe; also available for use with HDPE pipe
- Sizes from 2 × ½"/50 × 15 mm through 8 × 4"/200 × 100 mm

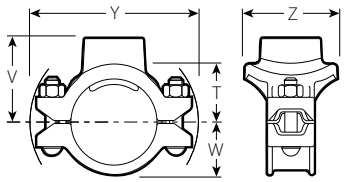
Mechanical-T® Bolted Branch Outlets



506

STYLES 920 AND 920N

FLOW DATA

Exaggerated for clarity

Flow test data has shown that the total head loss between point (1) and (2) for the Style 920, 920N and 929 Mechanical-T® fittings can best be expressed in terms of the pressure difference across the inlet and branch. The pressure difference can be obtained from the relationship below.

C_V and Kv Values

Values for flow of water at +60°F/+16°C are shown in the table below.

Formulas for C_V /K_v Values:

$$\Delta P = \frac{Q^2}{C_v^2}$$

$$Q = C_v \times \sqrt{\Delta P}$$

Where:
Q = Flow (GPM)
ΔP = Pressure Drop (psi)
C_v = Flow Coefficient

$$\Delta P = \frac{Q^2}{K_v}$$

$$Q = K_v \times \sqrt{\Delta P}$$

Where:
Q = Flow (m^3/h)
ΔP = Pressure Drop (bar)
K_v = Flow Coefficient

DF refers to Listed/Approved Dyna-Flow steel sprinkler pipe manufactured by American Tube Company.

SF refers to Listed/Approved Super-Flo steel sprinkler pipe manufactured by Allied Tube and Conduit Corporation.

VIC-TAP II HOLE CUTTING TOOL FOR 4 - 8"/100 - 200 MM CARBON STEEL PIPE

The Vic-Tap II hole cutting tool is designed for use with the Style 931 Vic-Tap II Mechanical-T unit, which is a combination of the Style 920 Mechanical-T and Series 726 Vic-Ball Valve. The Vic-Tap II is capable of tapping into carbon steel pipe systems under pressures up to 500 psi/3450 kPa.

The Style 931 Vic-Tap II Mechanical-T unit is a full port ball valve which can be mounted on 4"/100 mm, 5"/125 mm, 6"/150 mm and 8"/200 mm diameter pipe. The Style 931 comes with a 2½"/65 mm grooved outlet.

The drill motor is an electric motor with ground fault circuit interrupter (GFCI) in accordance with safety codes.

For more information, refer to publication 24.01.

STYLES 920 AND 920N

INSTALLATION

Reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

211313 - Wet-Pipe Sprinkler System

Victaulic® Firelock™ Rigid Coupling Style 009N

10.64

Patented

1.0 CERTIFICATION/LISTINGS

C104-1a/36

2.0 PRODUCT DESCRIPTION

- The FireLock EZ™ Style 009N Installation-ReadyTM Rigid Coupling is for use in the fire protection market.
- The coupling's unique design eliminates loose parts, promotes consistent installation and provides substantial gains in productivity.
- **IMPORTANT:** FireLock EZ™ Style 009N couplings are recommended for use ONLY on fire protection systems.

3.0 MATERIAL SPECIFICATIONS

Housing: Ductile iron conforming to ASTM A 536, Grade 65-45-12. Ductile iron conforming to ASTM A 395, Grade 65-45-15, is available upon special request.

Housing Coating: (specify choice)

☐ Orange enamel (North America, Asia Pacific)

☐ Red enamel (Europe)

☐ Hot dipped galvanized

Gasket: (specify choice[1])

☐ **Grade "E" EPDM (Type A)**
FireLock EZ products have been Listed by Underwriters Laboratories Inc., Underwriters Laboratories of Canada Limited, and Approved by Factory Mutual Research for wet and dry (oil free air) sprinkler services within the rated working pressure.

1 Services listed are General Service Guidelines only. It should be noted that there are services for which these gaskets are not compatible. Reference should always be made to the latest Victaulic Gasket Selection Guide for specific gasket service guidelines and for a listing of services which are not compatible.

Bolts/Nuts: Zinc electroplated carbon steel, trackhead meeting the physical and chemical requirements of ASTM A 449 and physical requirements of ASTM A 183.

7 Working Pressure and End Load are total, from all internal and external loads, based on standard weight (ANSI) steel pipe, standard roll or cut grooved in accordance with Victaulic specifications. See the Listings/Approvals section of this publication for ratings on other pipe.

8 The allowable pipe separation dimension shown is for system layout purposes only. FireLock EZ™ couplings are considered rigid connections and will not accommodate expansion or contraction of the piping system.

9 Number of bolts required equals number of housing segments.

NOTES

- When assembling FireLock EZ™ couplings onto end caps, take additional care to make certain the end cap is fully seated against the gasket end stop. For FireLock EZ™ Style 009N couplings, use FireLock No. 006 end caps containing the "EZ" marking on the inside face or No. 60 end caps containing the "QV EZ" marking on the inside face. Non-Victaulic end cap products shall not be used with Style 009N couplings. IMPORTANT: Gaskets intended for the Style 009 or Style 009V couplings cannot be used with the Style 009N coupling. There is no interchanging of gaskets or housings between coupling styles.
- **Use Of Flushseal Gaskets For Dry Pipe Systems** FireLock EZ™ couplings are supplied with FireLock EZ™ Grade "E" Type A gaskets. These gaskets include an integral pipe stop, that once installed provides the similar benefits as a FlushSeal gasket for dry pipe systems. It should be noted that standard Victaulic Flush-Seal™ gaskets are not compatible and cannot be used with the FireLock EZ™ couplings.

FIG. MT-30 Threaded Mechanical Branch Tee

SPF/ANVIL

510

The MT-30 mechanical tee serves the same function as the MT-1 and MT-8, but uses a steel electro-plated u-bolt to save space and for easier installation in tight places.The MT-30 is ideal for direct connections with sprinkler heads and drop nipples. The MT-90 is the BSPT equivalent.

For the latest UL/ULC listed, LPCB, VdS and FM Approved pressure ratings versus pipe schedule, see www.anvilintl.com or contact your local Anvil Representative.

c UL us LISTED FM APPROVED

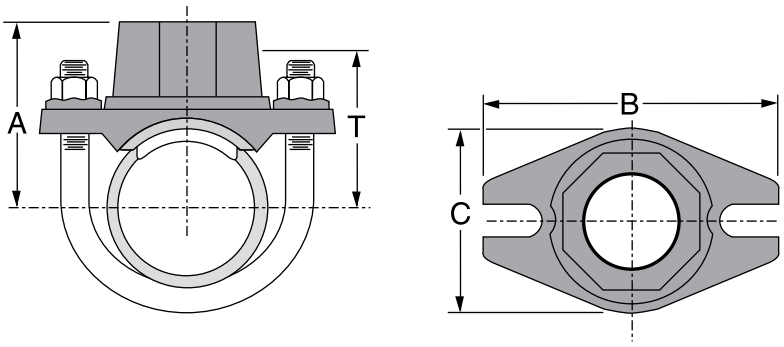
For Listings/Approval Details and Limitations, visit our website at www.anvilintl.com or contact an Anvil® Sales Representative.

MATERIAL SPECIFICATIONS

HOUSING:
Ductile Iron conforming to ASTM A-536, Grade 65-45-12

U-BOLT & NUTS:
U-bolt is carbon steel SAE J429 Gr. 2, zinc plated complete with hex flanged lock nuts conforming to ASTM A-563 Gr. A or B of SAE J995 Gr. 2.

THREADS:
NPT per ANSI/ASME B1.20.1.



COATINGS:
☐ Zinc Electroplated
☐ Other available options: Example: RAL3000 or RAL9000 Series

GASKETS: Materials
Properties as designated in accordance with ASTM D-2000.

☐ **Grade "E" EPDM** (Green color code)
-40°F to 230°F (Service Temperature Range)(-40°C to 110°C)
Recommended for water service, diluted acids, alkalies solutions, oil-free air and many chemical services not involving hydrocarbons, oils or gases.
NOT FOR USE WITH HYDROCARBONS.

BSP equivalent is available as a MT-90.

▲ – Working Pressure Ratings are for reference only and based on Sch. 40 pipe. For the latest UL/ULC, FM, VdS and LPCB pressure ratings versus pipe schedule, please visit anvilintl.com or contact your local Anvil Representative.

Note: Tighten nuts alternately to a recommended torque of 18-22 ft.-lbs. (25-30 Nm) on pipe wall less than schedule 10 (Din 2440) or 23-27 ft.-lbs. (31-37 Nm) on pipe walls schedule 10 (DIN 2440) and above.

⚠ WARNING

For dry pipe systems and freezer applications lubrication of the gasket is required, Gruvlok® Xtreme™ Lubricant is required.

MATERIAL SPECIFICATIONS

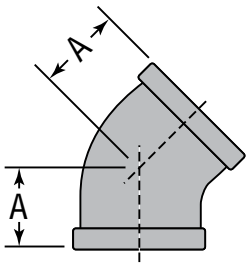
Dimensions: ASME B16.3

Material: ASTM A536 Grade 65-45-12

Finish: Black

Threads: NPT per ASME B1.20.1

Agency Approvals: All ductile iron threaded fittings are UL/ULC Listed and FM Approved.



NOTICE: Ductile iron fittings have higher tensile strength than that of steel pipe. Therefore, over tightening can cause damage to pipe threads which may cause leakage. Ductile iron fittings should be tightened approximately three turns beyond hand tight, but no more than four turns.

MATERIAL SPECIFICATIONS

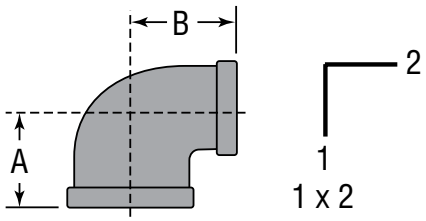
Dimensions: ASME B16.3

Material: ASTM A536 Grade 65-45-12

Finish: Black

Threads: NPT per ASME B1.20.1

Agency Approvals: All ductile iron threaded fittings are UL/ULC Listed and FM Approved.



NOTICE: Ductile iron fittings have higher tensile strength than that of steel pipe. Therefore, over tightening can cause damage to pipe threads which may cause leakage. Ductile iron fittings should be tightened approximately three turns beyond hand tight, but no more than four turns.

MATERIAL SPECIFICATIONS

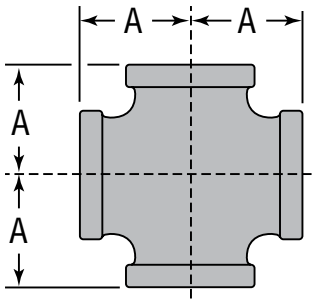
Ductile iron threaded fittings are UL & ULC Listed & Factory Mutual Approved for 500 psi service. Ductile iron per ASTM A536 Class 65-45-12.

Dimensions conform to ASME B16.3 Class 150. Threads are NPT per ANSI/ASME B1.20.1.

UL ULC FM
APPROVED



For Listing/Approval Details and Limitations visit our Web Site *www.anvilintl.com* or contact an Anvil®/AnvilStar™ Sales Representative.

NOTICE: Ductile iron fittings have higher tensile strength than that of steel pipe. Therefore, over tightening can cause damage to pipe threads which may cause leakage. Ductile iron fittings should be tightened three turns beyond hand tight, but no more than four turns.

NOTICE: Ductile iron fittings have higher tensile strength than that of steel pipe. Therefore, over tightening can cause damage to pipe threads which may cause leakage. Ductile iron fittings should be tightened approximately three turns beyond hand tight, but no more than four turns.

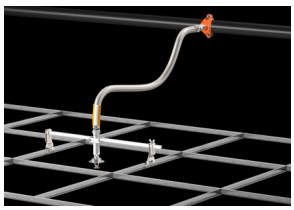
Malleable Iron Threaded Fittings



Class 150 and Class 300 Specifications

- SCI® branded Class 150 fittings are UL Listed and FM Approved at 300 psi
- SCI® branded Class 300 fittings are UL Listed
- Hot-dipped galvanized fittings are certified to; NSF/ANSI 61-4 and California AB1953 Lead Free
- Canadian Registration Numbers available at www.smithcooper.com
- Malleable castings conform to ASTM A197
- Hot-dipped galvanized fittings conform to ASTM A153
- Malleable fitting dimensions conform to ASME B16.3
- Malleable bushings, plugs and locknuts conform to ASME B16.14
- Malleable unions conform to ASME B16.39
- NPT threads on all fittings conform to ASME B1.20.1
- Independent lab verification that fittings meet applicable chemical & mechanical properties
- Manufacturing facilities are ISO 9001:2008 and ISO 14001
- SCI® branded fittings are 100% air tested
- ProPak™ Packaging

Victaulic® Vic-Flex™ Sprinkler Fittings
Series AH2 Braided Flexible Hose

10.85

1.0 PRODUCT DESCRIPTION

Available Sizes by Component

- **Series AH2 Braided Hose:** 31, 36, 48, 60, 72"/790, 914, 1220, 1525, 1830 mm. Note: length includes adapter nipple and 5.75"/140 mm straight reducer.
- **Sprinkler Reducers:** ½" and ¾"/15 and 20 mm sprinkler connections and 5.75"/140 mm, 9"/230 mm, 13"/330 mm straight lengths and short, long 90° elbows. Note: The short 90° elbow is typically used with concealed sprinklers while the long 90° elbow is typically used in the installation of recessed pendent sprinklers.
- **Adapter Nipples:** 1"/25 mm NPT or BSPT adapter nipples for attaching to pipe and fittings outlined in NFPA standards. ¾"/20 mm NPT or BSPT available for VdS. 1 ¼"/ 32mm BSPT available for LPCB.
- **Brackets:**
  - Style AB1 for suspended and hard-lid ceilings, allows installation before most ceiling tiles in place
  - Style AB2 for suspended and hard-lid ceilings, allows for vertical sprinkler adjustment, and installation before most ceiling tiles in place
  - Style AB3 for surface mount applications, wood, metal and block walls
  - Style AB4 for hard-lid ceilings with hat furring channel grid systems, allows for vertical sprinkler adjustment
  - Style AB7 for suspended and hard-lid ceilings
  - Style AB7 Adjustable for suspended and hard-lid ceilings
  - Style AB8 for hard-lid ceilings with CD 60/27 profile metal studs (regionally available)
  - Style AB9 for hard-lid ceilings with hat furring channel grid systems
  - Style AB10 for Armstrong® TechZone™ ceilings

Maximum Working Temperature

- 225°F/107°C

Maximum Working Pressure

- 200 psi/1375 kPa (FM Approval)
- 175 psi/1206 kPa (cULus Listed)
- 1600 kPa/232 psi (VdS/LPCB Approved)

ALWAYS REFER TO ANY NOTIFICATIONS AT THE END OF THIS DOCUMENT REGARDING PRODUCT INSTALLATION, MAINTENANCE OR SUPPORT.

1.0 PRODUCT DESCRIPTION (Continued)

Connections

- To adapter nipple (inlet) via 1"/25.4 mm NPT or BSPT male thread

OR

- To adapter nipple (inlet) via ¾"/20 mm BSPT male thread(VdS only)
- To sprinkler head (outlet) via ½" or ¾"/15 mm or 20 mm

Minimum Bend Radius

- 7"/178 mm (FM Approval)
- 2"/51 mm (cULus Listed)
- 3"/76.2 mm (VdS/LPCB Approved)

Maximum Allowable Sprinkler K-Factors

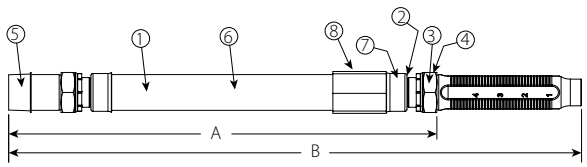
- FM (½"/15mm reducer) K5.6/8,1 (S.I.), (¾"/20mm reducer) K14.0/20,2 (S.I.)
- cULus (½"/15mm reducer) K8.0/11,5 (S.I.), (¾"/20mm reducer) K14.0/20,2 (S.I.)
- VdS/LPCB (½"/15mm reducer) K5.6/8,1 (S.I.), (¾"/20mm reducer) K8.0/11,5 (S.I.)

2.0 CERTIFICATION/LISTINGS

FM c UL us LISTED VdS LPCB

3.0 SPECIFICATIONS – MATERIAL

Series AH2



- **Flexible Hose:** 300-series Stainless Steel
- **Collar/Weld Fitting:** 300-series Stainless Steel
- **Gasket Seal:** Victaulic EPDM
- **Isolation Ring:** Nylon
- **Nut and Nipple:** Carbon Steel, Zinc Plated
- **Reducer (½ or ¾"):** Carbon Steel, Zinc-Plated

Brackets: Carbon Steel, Zinc-Plated

4.0 DIMENSIONS

Product Details - Series AH2 Braided Hose

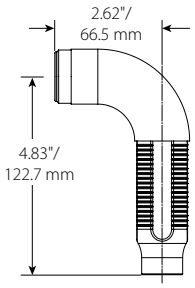
Item	Description
1	Flexible Hose
2	Isolation Ring
3	Gasket
4	Nut
5	Adapter Nipple
6	Braid
7	Collar/Weld Fitting
8	Sleeve

Hose Length Dimensions

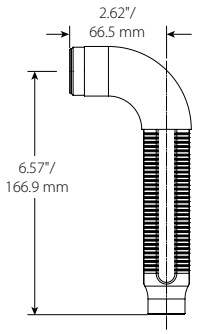
Hose Length inches mm	A inches mm	B inches mm
31/790	25.25/641	31/790
36/915	31.25/794	36/915
48/1220	42.25/1073	48/1220
60/1525	54.25/1378	60/1525
72/1830	66.25/1683	72/1830

Standard Reducer

5.75"/140 mm straight reducer



Optional Reducers



9.0"/229 mm straight reducer

13.0"/330 mm straight reducer

Short 90° elbow reducer

Long 90° elbow reducer

NOTE

- The Short 90° elbow reducer is typically used with concealed sprinklers while the longer 90 elbow is typically used in the installation of recessed pendent sprinklers.

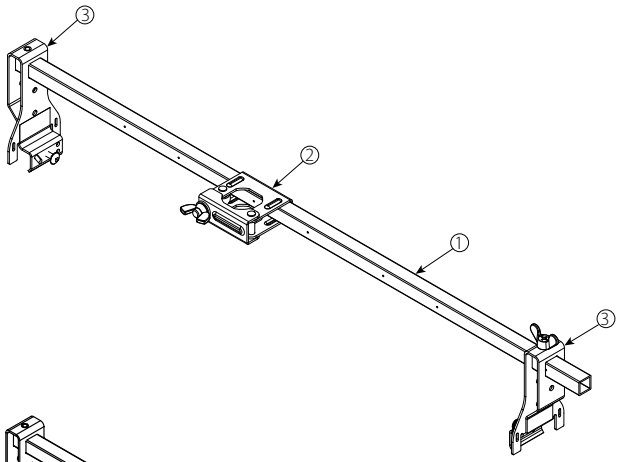
4.1 DIMENSIONS



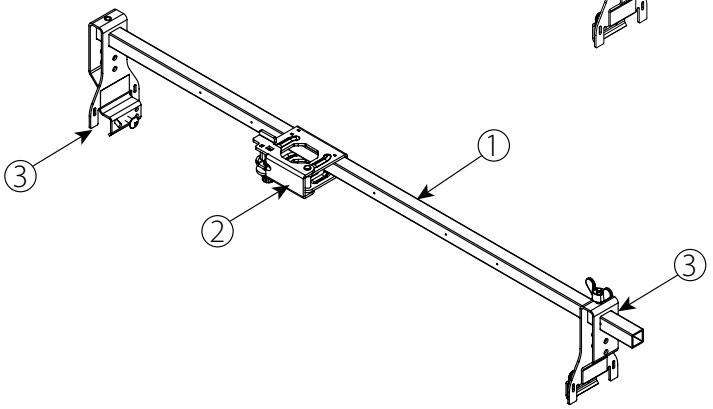
VicFlex Brackets

Style AB1

- Suspended Ceilings
- Hard-Lid Ceilings (FM Only)

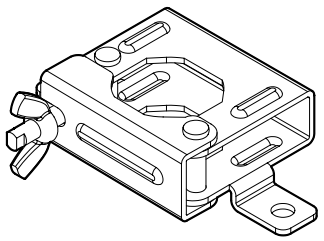
Item	Description
1	24"/610 mm or 48"/1220 mm Square Bar*
2	Patented Center Bracket
3	End Bracket

*Both sizes FM/VdS/LPCB approved, cULus listed



Style AB2

- Suspended Ceilings
- Hard-Lid Ceilings



Item	Description
1	24"/610 mm or 48"/1220 mm Square Bar*
2	Patent-Pending adjustable Center bracket
3	End Bracket

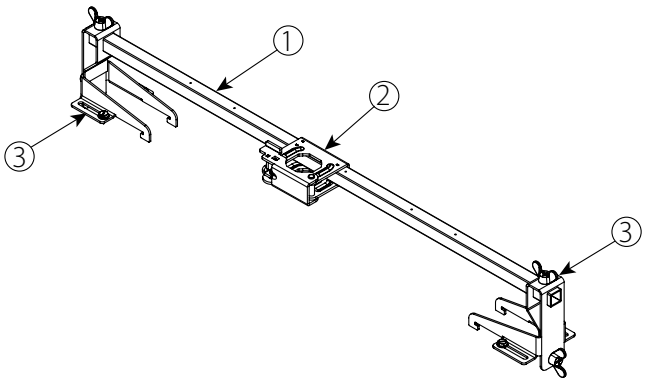
*Both sizes FM/VdS/LPCB approved, cULus listed

Style AB3

- Surface Mount Applications
- FM Approved

 © 2015 Victaulic Company. All rights reserved.

4.2 DIMENSIONS



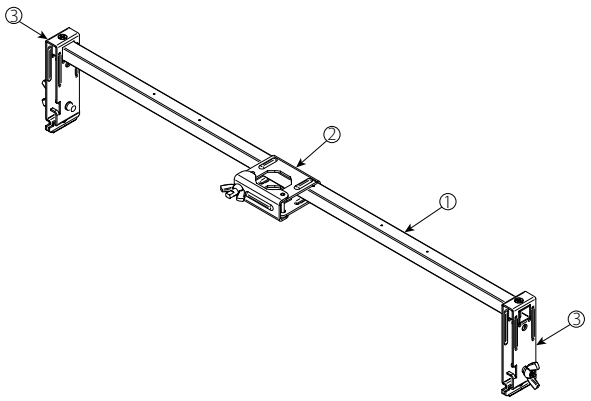
VicFlex Brackets

Style AB4

- Hard-Lid Ceilings with Hat furring channel grid system

Item	Description
1	24"/610 mm or 48"/1220 mm Square Bar*
2	Patent-Pending adjustable Center bracket
3	End Bracket for Hat Furring Channel

*Both sizes FM/VdS approved, cULus listed

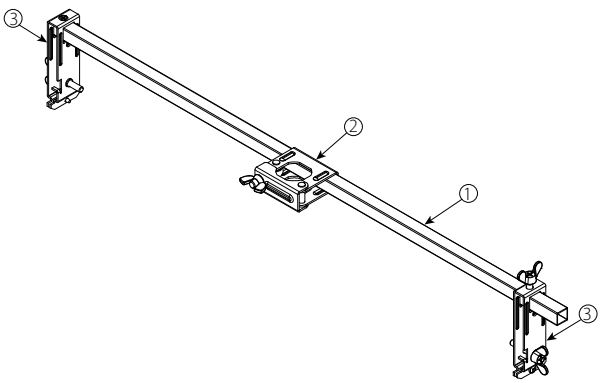


Style AB7

- Suspended Ceilings
- Hard-Lid Ceilings

Item	Description
1	24"/610 mm or 48"/1220 mm Square Bar*
2	Patented 1-Bee2® Center Bracket
3	End Bracket

*Both sizes FM/VdS approved.



Style AB7 Adjustable

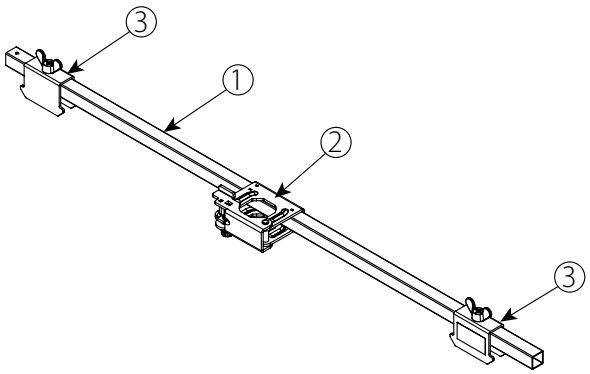
- Suspended Ceilings
- Hard-Lid Ceilings

Item	Description
1	700 mm or 1400 mm Square Bar*
2	Patented 1-Bee2® Center Bracket
3	End Bracket (adjustable)

*Both sizes FM/VdS approved.

 © 2015 Victaulic Company. All rights reserved.

4.3 DIMENSIONS



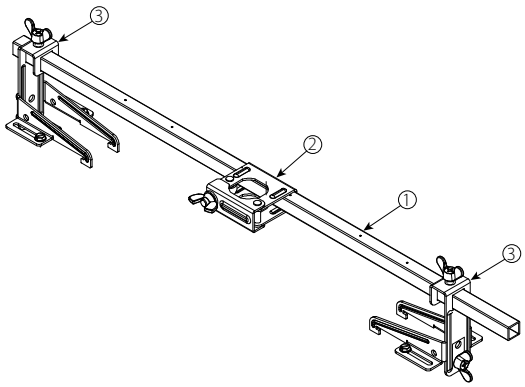
VicFlex Brackets

Style AB8

- Hard-Lid Ceilings

Item	Description
1	700 mm or 1400 mm Square Bar*
2	Patent-pending adjustable center bracket
3	*Both sizes FM/VdS

*Both sizes FM/VdS approved.

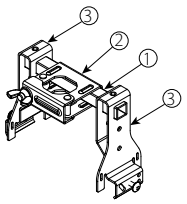


Style AB9

- Hard-Lid ceilings with Hat furring channel grid system

Item	Description
1	24"/610 mm or 48"/1220 mm Square Bar*
2	Patented 1-Bee2® Center Bracket
3	End Bracket for Hat Furring Channel

*Both sizes FM/VdS approved.



Style AB10

- Suspended ceilings
- Armstrong® TechZone™

Item	Description
1	6"/152 mm Square Bar*
2	Patented 1-Bee2® Center Bracket
3	End Bracket

*FM/VdS approved, cULus listed.

NOTES:

- Values for use with 5.75" straight reducers.

How to use this Design Guide:

- For some systems, it may be advantageous for the designer to calculate the system hydraulics using shorter equivalent lengths associated with fewer than the maximum allowable number of bends. In this case, the designer may select a design number of bends for the job and use the associated equivalent length from the design guide to determine the system hydraulics.
- It is possible that the actual installed condition of some of the flexible drops may have more bends than the designer selected. When this happens, the design guide may be used to find equivalent lengths based on the actual installed number of bends for particular sprinkler installations. The system hydraulics can be recalculated using actual equivalent lengths to verify the performance of the system.

		¾"/20/90° Elbow	38.6/11.7	

FM NOTES:

- Series AH2 has been tested and Approved by FM Global for use in wet, dry and preaction systems per NFPA 13, 13R, and 13D and FM data sheets 2-0, 2-5, and 2-8. FM 1637 and Vds standards for safety include, but are not limited to, pressure cycling, corrosion resistance, flow characterisitics, vibration resistance, leakage, mechanical and hydrostatic strength.
- Differences in equivalent lengths are due to varying test methods, per FM 1637 and VdS standards. Refer to these standards for additional information regarding friction loss test methods.
- EXAMPLE: A 48-inch hose installed with two 30° bends and two 90° bends at a 7-inch bend radius is permitted and considered equivalent to the data in the table shown above. In this example, the total number of degrees is 240°, which is less than the allowable 270°.

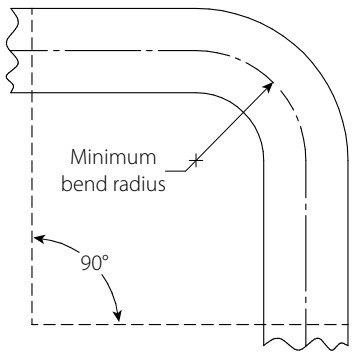
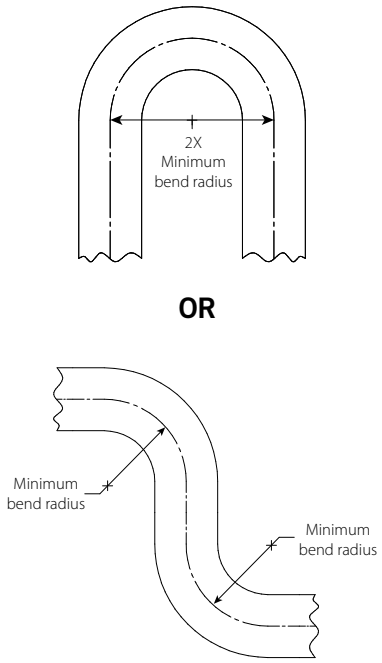
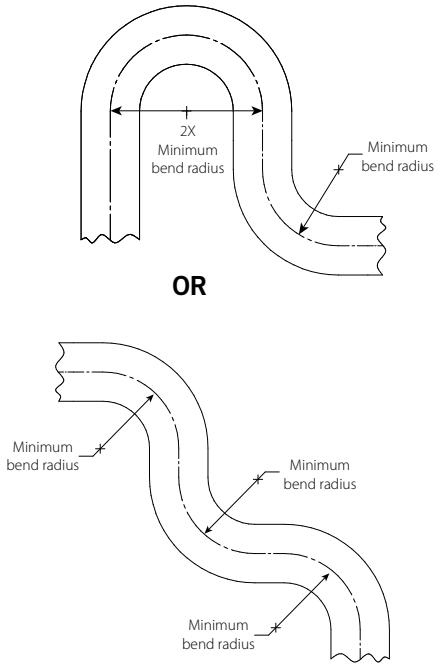
6.0 NOTIFICATIONS







WARNING

- **It is the responsibility of the system designer to verify suitability of 300-series stainless steel flexible hose for use with the intended fluid media within the piping system and external environments.**
- **The effect of chemical composition, pH level, operating temperature, chloride level, oxygen level, and flow rate on 300-series stainless steel flexible hose must be evaluated by the material specifier to confirm system life will be acceptable for the intended service.**

Failure to follow these instructions could cause product failure, resulting in serious personal injury and/or property damage.

7.0 REFERENCE MATERIALS – CHARACTERISTICS

Flexible Hose In-Plane Bend Characteristics

One Bend	Two Bends	Three Bends
		

NOTE

- For out-of-plane (three-dimensional) bends, care must be taken to avoid imparting torque on the hose.

User Responsibility for Product Selection and Suitability
Each user bears final responsibility for making a determination as to the suitability of Victaulic products for a particular end-use application, in accordance with industry standards and project specifications, as well as Victaulic performance, maintenance, safety, and warning instructions. Nothing in this or any other document, nor any verbal recommendation, advice, or opinion from any Victaulic employee, shall be deemed to alter, vary, supersede, or waive any provision of Victaulic Company's standard conditions of sale, installation guide, or this disclaimer.

Intellectual Property Rights
No statement contained herein concerning a possible or suggested use of any material, product, service, or design is intended, or should be constructed, to grant any license under any patent or other intellectual property right of Victaulic or any of its subsidiaries or affiliates covering such use or design, or as a recommendation for the use of such material, product, service, or design in the infringement of any patent or other intellectual property right. The terms "Patented" or "Patent Pending" refer to design or utility patents or patent applications for articles and/or methods of use in the United States and/or other countries.

Note
This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

Installation
Reference should always be made to I-VICFLEX-AB1-AB2-AB10, I-VICFLEX-AB4-AB9, I-VICFLEX-AB7, or I-VICFLEX-AB8 for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

Warranty
Refer to the Warranty section of the current Price List or contact Victaulic for details.

Trademarks
Victaulic and all other Victaulic marks are the trademarks or registered trademarks of Victaulic Company, and/or its affiliated entities, in the U.S. and/or other countries.

SYSTEM SENSOR®

WFD Series Waterflow Detector

The System Sensor WFD series is compatible with schedule 10 through 40 steel pipe, sizes 2˝ through 8˝, and can be mounted in a vertical or horizontal position.

Features

- Two-inch mounting hole provided in new WFD30-2 models
- UL-listed models are NEMA 4 rated
- Sealed retard mechanism immune to dust and other contaminants
- Visual switch activation
- Field-replaceable retard mechanism and SPDT switches
- Rugged, dual SPDT switches enclosed in a durable terminal block
- Accommodates up to 12 AWG wire
- Designed for both indoor and outdoor use
- 100 percent synchronization activates both alarm panel and local bell
- Tamper-resistant cover screws

Robust Construction. The WFD series consists of a rugged, NEMA 4-rated enclosure. Designed for both indoor and outdoor use, the WFD series operates across a wide temperature range, from 32°F to 120°F.

Reliable Performance. UL-listed models are equipped with tamper-resistant cover screws to prevent unauthorized entry. Inside, two sets of SPDT (Form C) synchronized switches are enclosed in a durable terminal block to assure reliable performance.

False Alarm Immunity. The WFD series incorporates a mechanical retard feature, which minimizes the risk of false alarm due to pressure surges or air trapped in the sprinkler system. In addition, the mechanical retard's unique sealed design is immune to dust and other contaminants.

Simplified Operation. The WFD series is designed to simplify installation. Two conduit openings permit easy attachment to the local alarm system. The retard mechanism and dual SPDT switches are field-replaceable.

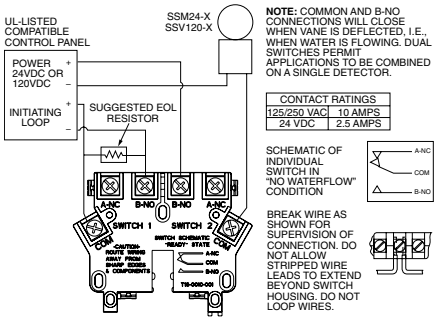
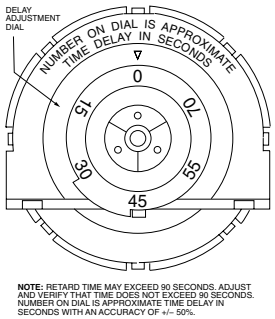
Waterflow Detector Specifications



Engineering Specifications

Vane-type waterflow detectors shall be installed on system piping as designated on the drawing and/or as specified herein. Detectors shall mount on any clear pipe span of the appropriate nominal size, either a vertical upflow or horizontal run, at least 6″ from any fittings that may change water direction, flow rate, or pipe diameter or no closer than 24″ from a valve or drain. Detectors shall have a sensitivity in the range of 4 to 10 gallons per minute and a static pressure rating of 450 psi* for 2″ – 8″ pipes. The detector shall respond to waterflow in the specified direction after a preset time delay that is field adjustable. The delay mechanism shall be a sealed mechanical pneumatic unit with visual indication of actuation. The actuation mechanism shall include a polyethylene vane inserted through a hole in the pipe and connected by a mechanical linkage to the delay mechanism. Outputs shall consist of dual SPDT switches (Form C contacts). Two conduit entrances for standard fittings of commonly used electrical conduit shall be provided on the detectors. A grounding provision is provided. Unless noted, enclosures shall be NEMA 4 listed by Underwriters Laboratories Inc. All detectors shall be listed by Underwriters Laboratories Inc. for indoor or outdoor use.



Standard Specifications

Static Pressure Rating	450 PSI*	**Operating Temperature Range**	32°F to 120°F (0°C to 49°C)
Maximum Surge	18 Feet Per Second (FPS)	**Enclosure Rating***	NEMA 4 – suitable for indoor/outdoor use
Triggering Threshold Bandwidth (Flow Rate)	4–10 GPM	**Cover Tamper Switch**	Standard with ULC models, optional for UL models, part no. 546-7000
Conduit Entrances	Two openings for ½″ conduit. One open, one knock-out type	**Service Use**	Automatic Sprinkler: NFPA-13 One or Two Family Dwelling: NFPA 13D Residential Occupancies up to 4 Stories: NFPA 13R National Fire Alarm Code: NFPA-72
Contact Ratings	Two sets of SPDT (Form C) 10.0 A, ½ HP @ 125/250 VAC 2.5 A @ 6/12/24 VDC	**U.S. Patent Numbers**	5,213,205
Compatible Pipe	Steel water pipe, schedule 10 through 40	**Warranty**	3 Years

POTTER
The Symbol of Protection

PCVS Series

Control Valve Supervisory Switch

602

Features

- NEMA 4X* (IP 65) and 6P (IP 67)

  **Enclosure is 4X. For additional corrosion protection of mounting hardware, use model PCVS-2 CRH*
- -40º to 140º (-40ºC to 60ºC) operating temperature range
- Visual Switch Indicators
- Two conduit entrances
- Adjustable length trip rod
- Accomodates up to 12AWG wire
- Switch detects tampering and valve closure
- RoHS compliant
- Two SPDT contacts

NOTICE

Before any work is done on the fire sprinkler or fire alarm system, the building owner or their authorized representative shall be notified. Before opening any closed valve, ensure that opening the valve will not cause any damage from water flow due to open or missing sprinklers, piping, etc.

Important: This document contains important information on the installation and operation of PCVS valve supervisory switches. Please read all instructions carefully before beginning installation. A copy of this document is required by NFPA 72 to be maintained on site.

Description

The Model PCVS is a weather proof and tamper resistant switch for monitoring the open position of fire sprinkler control valves of the wall and yard post indicator and butterfly types. Two SPDT (Form C) contacts are provided which will operate when the valve position is altered from an open state.

The unit mounts in a 1/2" NPT tapped hole in the post indicator or butterfly valve housing. The device is engaged by the indicating assembly of the post indicator or the operating mechanism of the butterfly valve, actuating switches when the valve is fully open. The unit should be installed where it is accessible for service.

The cover is held in place by two tamper resistant screws that require a special tool to remove. The tool is furnished with each device.

Testing

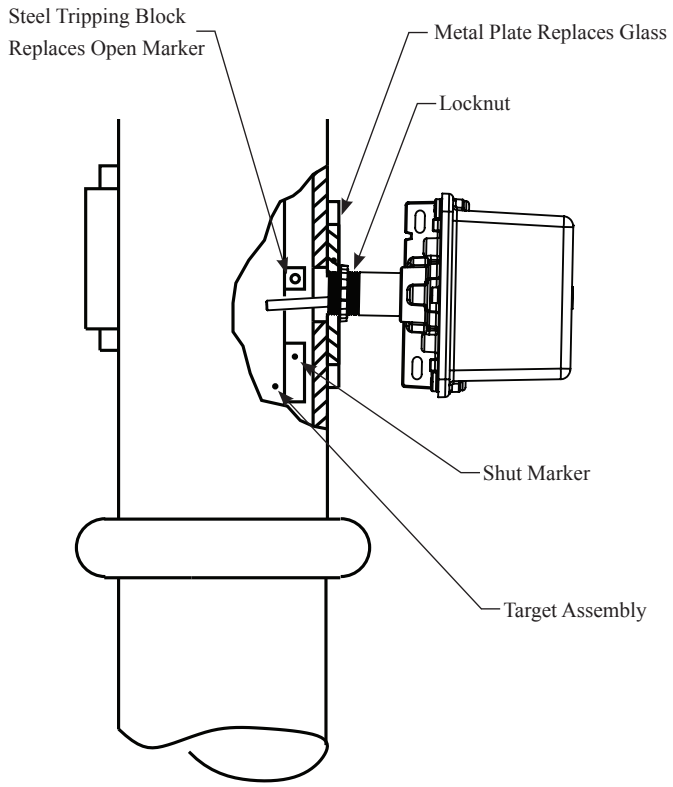
The operation of the PCVS and its associated protective monitoring system shall be tested upon completion of the installation and inspected, tested and maintained in accordance with all applicable local and national codes and standards and/or the Authority Having Jurisdiction, (manufacturer recommends quarterly or more frequently). A minimum test shall consist of turning the valve operating mechanism towards the closed position. The PCVS shall operate within the first two revolutions of the operating mechanism. Fully close the valve and ensure the PCVS does not restore. Fully open the valve and ensure that the PCVS restores to normal.

Technical Specifications

Dimensions	See Fig 10
Weight	1.0 lbs (0,45 kg)
Enclosure	Cover: Die Cast Finish: Red Powder Coat Base: Die Cast Finish: Black Powder Coat All parts have corrosion resistant finishes
Cover Tamper	Tamper Resistant Screws Optional Cover Tamper Switch Available
Contact Ratings	PCVS-2: Two Sets of SPDT (Form C) 10.0 Amps at 125/250 VAC 2.0 Amps at 30VDC Resistive 10 mAmps minimum at 24 VDC
Environmental Limitations	-40º F to 140ºF (-40ºC to 60ºC) NEMA 4X (IP 65) and NEMA 6P Enclosure (IP67) (Use suitably rated conduit and connector) Indoor or Outdoor Use (See PIVSU-EX Bulletin 5400694 for Hazardous locations)
Conduit Entrances	Two Knockouts for 1/2" conduit provided (See Notice on Page 7 and Fig. 11 on Page 6)
Service Use	NFPA 13, 13D, 13R, 72

Specifications subject to change without notice

Theory Of Operation

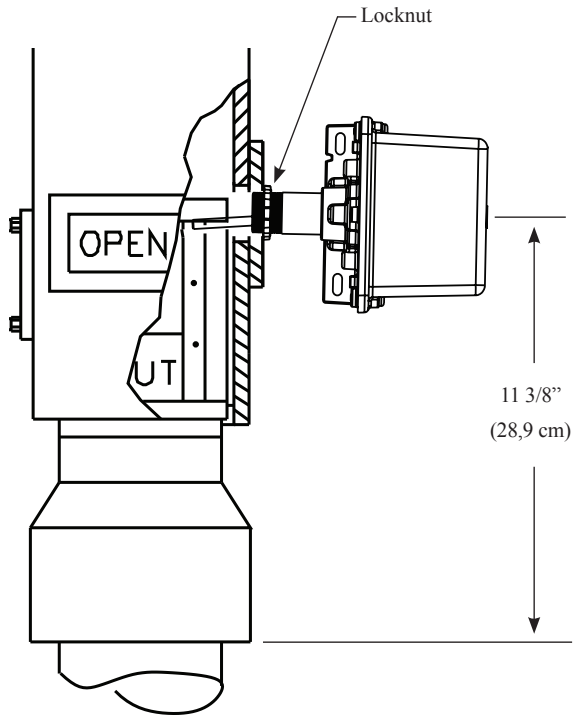


The PCVS is a spring loaded switch. It is in normal position when the trip rod is pulling against the spring force. Normal is when the switch is installed on the valve and the valve is fully open. As the valve closes, the valve actuator moves away from the trip rod of the PCVS and the spring on the PCVS pulls the trip rod over and trips the switch.

Alternate Window Installation and Moving Hood Installation

Target Moves Up as Valve is Shut

Fig 1



Subject to the approval of the "authority having jurisdiction" the alternate method of installation shown in Fig. 1 may be used. In this method, one of the glass windows of the housing is replaced with a 1/4" thick metal plate that is cut to fit in place of the glass and drilled and tapped to recieve 1/2" NPT pipe nipple. In some cases it may be necessary to attach an angle bracket to the target assembly to engage the PCVS trip rod.

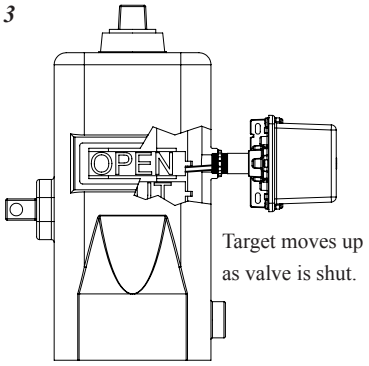
Hood Moves Down as Valve is Shut

Fig 2

If the target is stationary and a hood arrangement is used, such as is shown in Fig. 2, the hood must be drilled with a 23/32" drill and tapped with a 1/2" NPT. The center line of this hole should be 1/8" below the portion of target assembly that strikes the PCVS trip rod. The 11 3/8" dimension shown is for a Clow Valve. Flexible conduit must be used for this type of installation. (More on pg. 3).

Typical Installations On Post Indicator Valve Housings

Fig 3



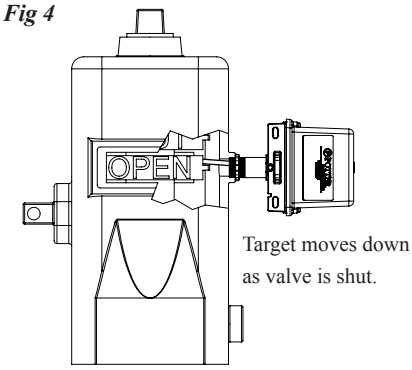


Fig 4

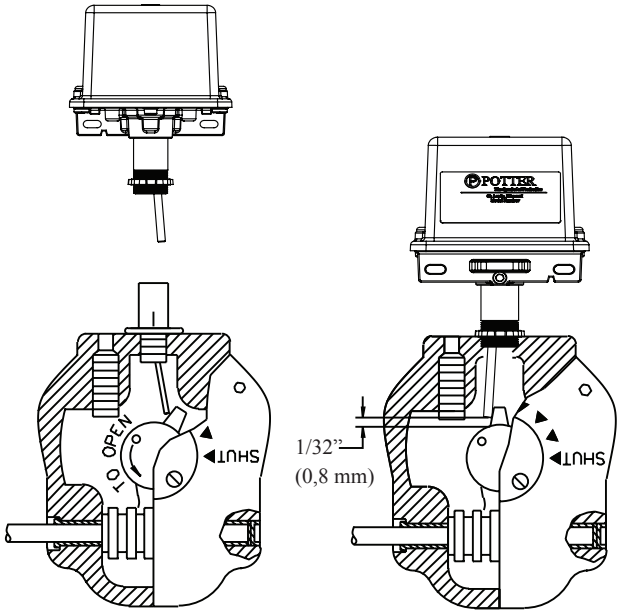
NOTE: Before any work is done on the fire sprinkler or fire alarm system, the building owner or their authorized representative shall be notified. Before opening any closed valve, ensure that opening the valve will not cause any damage from water flow due to open or missing sprinklers, piping, etc.

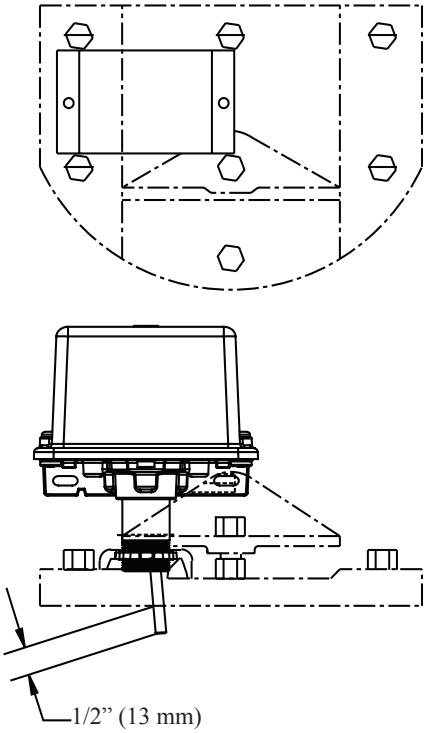
1. Position the valve to fully open ("OPEN" should appear in the window of the housing). Partially close the valve while observing the direction that the target assembly moves. Reopen the valve. If the valve housing is predrilled with a 1/2" NPT for installation of a monitoring switch, remove the 1/2" plug and fully open the valve. Make sure that "OPEN" appears in the window of the housing. GO TO STEP NO. 6.
2. If the valve is not pre-drilled for 1/2" NPT, remove the head and target assembly (consultation with valve manufacturer is recommended).
3. If the target assembly moved up as the valve was closed, measure the distance from the bottom of the head to the lower part of the target assembly that will contact the trip rod of the PCVS (see Fig. 3). This is usually a plate or bar on the target assembly, on a side adjacent to the "OPEN/SHUT" plates. Subtract 1/8" from the measurement. If the target moved down as the valve was closed, measure the distance from the bottom of the head to the upper portion of the target assembly that will contact the trip rod of the PCVS (see Fig. 4). Add 1/8" (3,2mm) to this measurement.
4. Mark the housing at the proper location. Using a 23/32" (18,2mm) drill bit, drill and then tap a 1/2" NPT in the housing on the side that coincides with the portion of the target assembly that will engage the trip rod of the PCVS.
5. Replace the head and target assembly.
6. Loosen the socket head screw that holds the nipple in the PCVS and remove the nipple.
7. Screw the locknut that is provided onto the nipple.
8. Screw the nipple into the 1/2" NPT hole in the valve housing hand tighten. Tighten the locknut against the valve housing to secure the nipple firmly in place.
9. Insert a scale or probe thru the nipple to measure the distance from the open end of the nipple to the target assembly. Subtract 1/2" (12,5mm) from this measurement.



NOTE: In some cases, it may be necessary to attach an angle bracket to the target assembly to engage the PCVS trip rod.

10. Using the special tool provided, loosen the two cover screws and remove the cover from the PCVS.
11. Loosen the locking screw that holds the trip rod in place and adjust the rod length, from the end of the collar to the end of the rod, using the dimension determined in Step 9. Tighten the locking screw to 5 in-lbs minimum to hold the rod in place and properly seal the enclosure.
12. Partially close the valve to move the target assembly away (3 to 4 revolutions of the handle/hand wheel).
13. With the PCVS positioned so the spring will pull the trip rod to follow the target as the valve is closing, slide the PCVS over the nipple. Tighten the socket head screw in the collar.
14. Carefully open the valve to the fully open position. As the target moves to the open position it should engage the trip rod and actuate the switch(es). There should be a minimum overtravel of 1/2 revolution of the handle/hand wheel after the switch(es) actuate (a continuity meter connected to each set of contacts is one method that could be used to determine this).
15. Slowly close the valve. The switch must operate during the first two revolutions of the handle/hand wheel or during 1/5 of the travel distance of the valve control apparatus from its normal condition.

    NOTE: Small adjustments of the target position may be necessary (consultation with valve manufacturer is recommended).
16. Complete the required electrical wiring, connections and tests. The valve should be operated through the entire cycle of fully closed and fully open to determine the integrity of the PCVS installation and the signaling system. Check that all electrical and mechanical connections are secure.
17. Reinstall the cover and tighten the cover screws to 15 in-lbs minimum to properly seal the enclosure.
18. When the installation and testing are complete, return valve to its proper position.
19. Alternative installation for other post indicator valve housing shown in Fig. 1 and 2.



Typical Installation on a Butterfly Valve

Fig 5 Typical Indicating Butterfly Valve

Valve Partially Closed Valve Open

Fig 6 Dresser Indicating Butterfly Valve

1. Remove the 1/2" NPT plug from the gear operator case.
2. Loosen the set screw that holds the nipple in the PCVS and remove the nipple.
3. Screw the locknut that is provided onto the nipple.
4. Screw the nipple into the 1/2" NPT hole in the gear operator-hand tighten. Tighten the locknut against the case, to secure the nipple firmly in place
5. Partially close the valve to move the boss on the gear hub out of the way (3 or 4 revolutions of the hand wheel or crank).
6. Using the special tool provided, loosen the two cover screws and remove the cover from the PCVS.
7. Orient the PCVS so the spring will pull up the trip rod to follow the actuating cam inside the valve.

   NOTE: If trip rod length is excessive, loosen the locking screw and remove the trip rod from the trip lever. Using pliers, break off the one (1) inch long notched section (see Fig. 12). Reinstall the trip rod, tightening the screw to 5 in-lbs minimum, and repeat Step 7 procedure.
8. Remove device from nipple and shorten the trip rod 1/32" (0,80mm) (this is to prevent the trip rod from dragging on the gear hub inside the valve). Tighten the locking screw to hold the rod in place. Re-install the device on the nipple. Tighten the screw in the collar against the nipple.

   NOTE: In some cases it may be necessary to remove the gear box cover to ensure correct operation (consultation with the valve manufacturer is recommended).
9. Carefully open the valve to its full open position, as the boss on the gear hub moves to the open position it must engage the PCVS trip rod and actuate the switch(es). There should be a minimum overtravel or revolution of the crank or hand wheel after the switch(es) actuate (a continuity meter connected to each set of contacts is one method that could be used to determine this).

   NOTE: Slight adjustment of gear stops may be necessary to prevent overtravel of the trip rod (consultation with valve manufacture is recommended).
10. Carefully close the valve. The switch(es) must operate during the first two revolutions of the crank or hand wheel or during 1/5 of the travel distance of the valve control apparatus from its normal condition.
11. Complete the required electrical wiring, connections and tests. The valve should be operated through the entire cycle of fully closed and fully open to determine the integrity of the PCVS installation and signaling system.
12. Reinstall the cover and tighten the screws to 15 in-lbs minimum to properly seal the enclosure.
13. When the installation and testing are complete, return valve to its proper position.

Typical Pressure Reducer Type Valve Installation

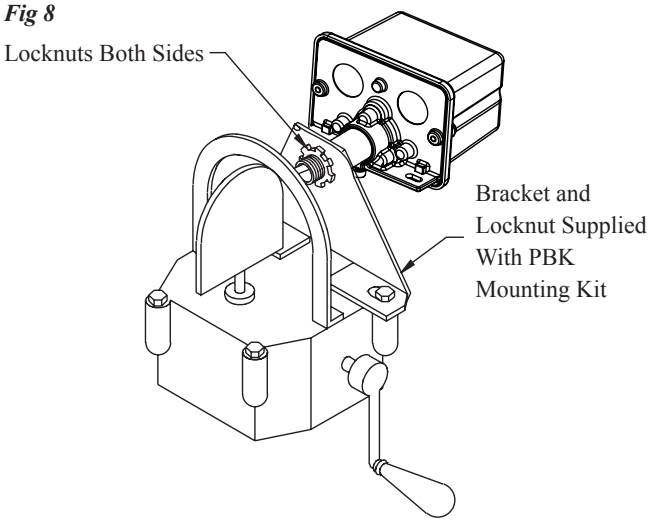


Fig 7

This figure shows the Model PCVS mounted on the valve yoke, with a bracket supplied by the valve manufacturer, to supervise a pressure reducer type valve.
NOTE: This application is subject to the approval of the authority having jurisdiction.

PBK - Butterfly Valve Kit for Valves with Internal Supervisory Switches

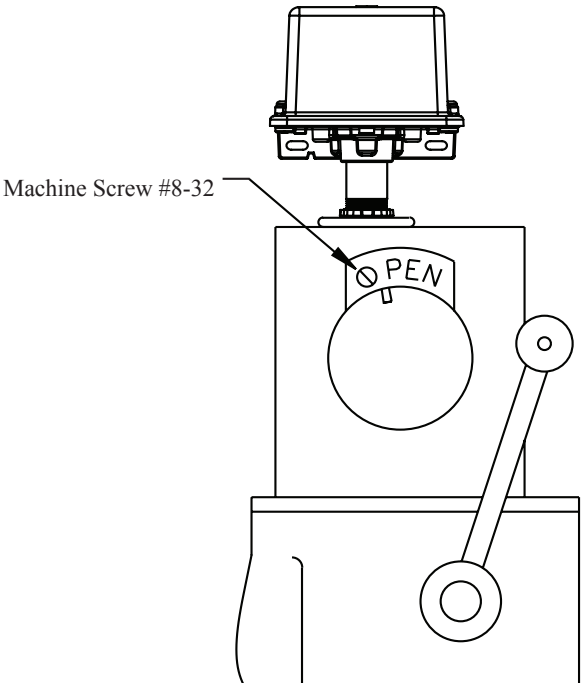

Fig 8

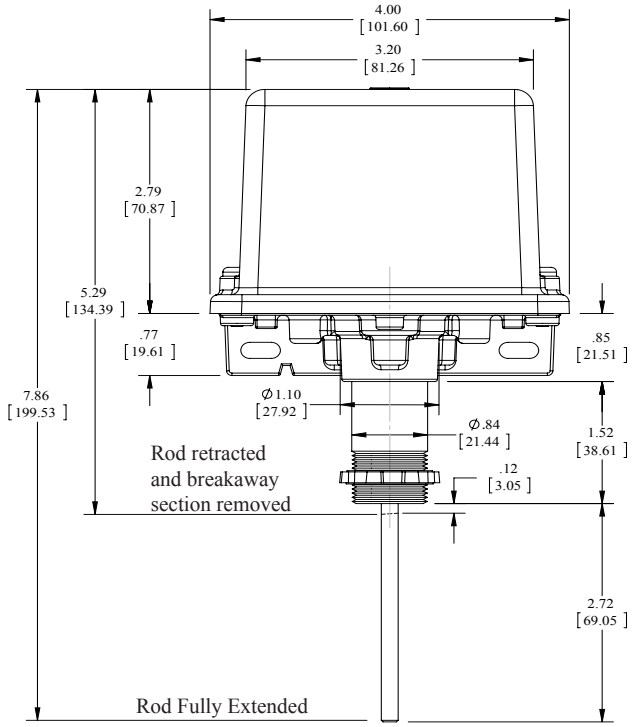
Pratt Butterfly Valve Kit as used to mount a PCVS on a Pratt Model IBV Valve.
Kits contain: Bracket, nuts and instructions
NOTE: Due to changes in valves, brackets may need to be modified by installer. This application is subject to the approval of the authority having jurisdiction.



PVK - Pratt PIVA Post Indicator Valve Kit

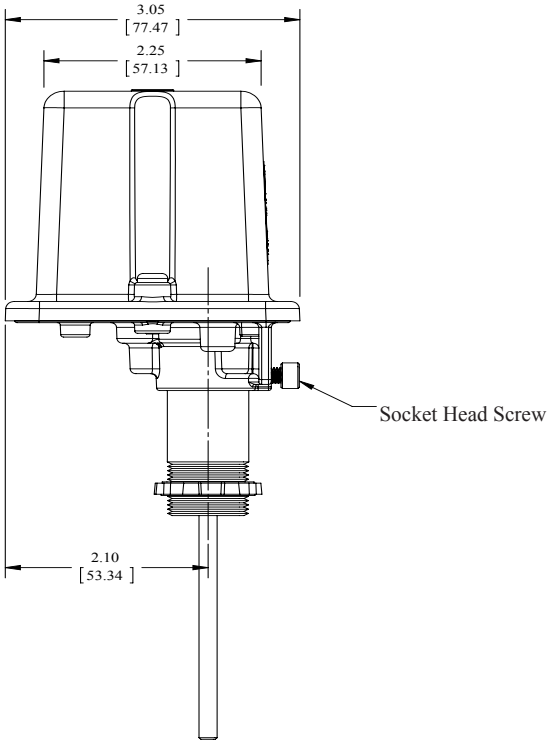


Fig 9

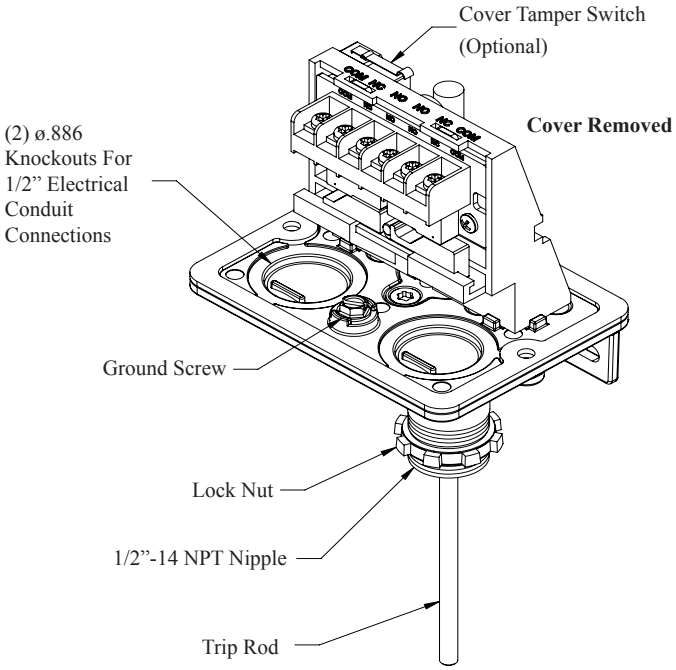
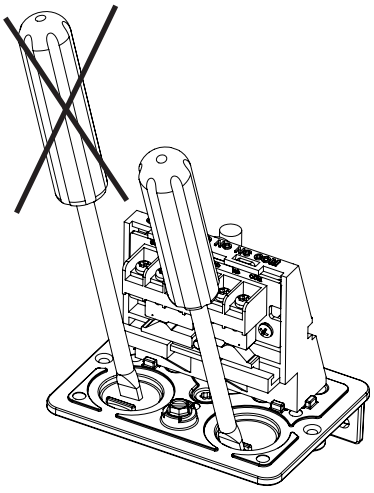
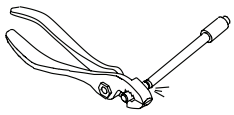


Pratt Valve Kit as used to mount a PCVS on a Pratt Model PIVA Valve.
Kit contains: Instructions, template, screw and nut.
NOTE: This application is subject to the approval of the authority having jurisdiction.

Dimensions
Fig 10

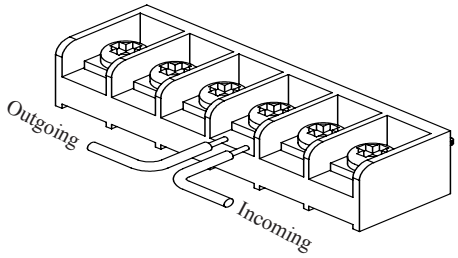


Knockout Removal
Fig 11



To remove knockouts: Place screwdriver at inside edge of knockouts, not in the center.

NOTE: Do not drill into the base as this creates metal shavings which can create electrical hazards and damage the device. Drilling voids the warranty.



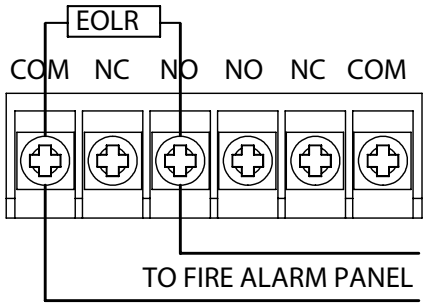
Breaking Excessive Rod Length

Fig 12

Switch Terminal Connections Clamping Plate Terminal

Fig 13

⚠ WARNING



An uninsulated section of a single conductor should not be looped around the terminal and serve as two separate connections. The wire must be severed, thereby providing supervision of the connection in the event that the wire become dislodged from under the terminal. Failure to sever the wire may render the device inoperable risking severe property damage and loss of life. Do not strip wire beyond 3/8" of length or expose an uninsulated conductor beyond the edge of the terminal block. When using stranded wire, capture all strands under the clamping plate.

NOTICE

All conduit and connectors selected for the installation of this product shall be suitable for the environment for which it is to be used and shall be installed to the manufacturer's installation instructions. For NEMA 4, 4X, 6, 6P installations, the cover screws are recommended to be tightened to 15 in-lbs minimum and the trip rod locking screw tightened to 5 in-lbs minimum to properly seal the enclosure.

Engineering Specifications: Post Indicator & Butterfly Valves

UL, CUL Listed / FM Approved and CE Marked valve supervisory switches shall be furnished and installed on all post Indicator and Butterfly valves that can be used to shut off the flow of water to any portion of the fire sprinkler system, where indicated on the drawings and plans and as required by applicable local and national codes and standards. The supervisory switch shall be NEMA 4X and 6P rated and capable of being mounted in any position indoors or out and be completely submerged without allowing water to enter the enclosure. The enclosure shall be held captive by tamper resistant screws. The device shall contain two conduit entrances and two Single Pole Double Throw (SPDT) switches. The device shall contain a removable 1/2" NPT nipple and adjustable trip rod, the trip rod shall be held captive by a set screw accessible upon removal of the cover. The switch contacts shall be rated at 10A, 125/250VAC and 2A, 30VDC. Post Indicator and Butterfly Valve supervisory switch shall be model PCVS-2 manufactured by Potter Electric Signal Company LLC

NOTICE

Supervisory switches have a normal service life of 10-15 years. However, the service life may be significantly reduced by local environmental conditions.

BELLS

PBA-AC & MBA-DC

UL, ULC, and FM Approved
Sizes Available: 6" (150mm), 8" (200mm) and 10" (250mm)
Voltages Available: 24VAC
120VAC
12VDC (10.2 to 15.6) Polarized
24VDC (20.4 to 31.2) Polarized
Service Use: Fire Alarm
General Signaling
Burglar Alarm
Environment: Indoor or outdoor use (See Note 1)
-40° to 150°F (-40° to 66°C)
(Outdoor use requires weatherproof backbox.)
Termination: AC Bells - 4 No. 18 AWG stranded wires
DC Bells - Terminal strip
Finish: Red powder coating
Optional: Model BBK-1 weatherproof backbox
Model BBX-1 deep weatherproof backbox

These vibrating type bells are designed for use as fire, burglar or general signaling devices. They have low power consumption and high decibel ratings. The unit mounts on a standard 4" (101mm) square electrical box for indoor use or on a model BBK-1 weatherproof backbox or BBX-1 deep weatherproof backbox for outdoor applications. Weatherproof backbox model BBK-1, Stock No. 1500001.

Notes:
1. Minimum dB ratings are calculated from integrated sound pressure measurements made at Underwriters Laboratories as specified in UL Standard 464. UL temperature range is -30° to 150°F (-34° to 66°C).
2. Typical dB ratings are calculated from measurements made with a conventional sound level meter and are indicative of output levels in an actual installation.
3. ULC only applies to MBA DC bells.

All DC bells are polarized and have built-in transient protection.
* Does not have ULC listing.

⚠ WARNING

In outdoor or wet installations, bell must be mounted with weatherproof backbox, BBK-1 or BBX-1. Standard electrical boxes will not provide a weatherproof enclosure. If the bell and/or assembly is exposed to moisture, it may fail or create an electrical hazard.

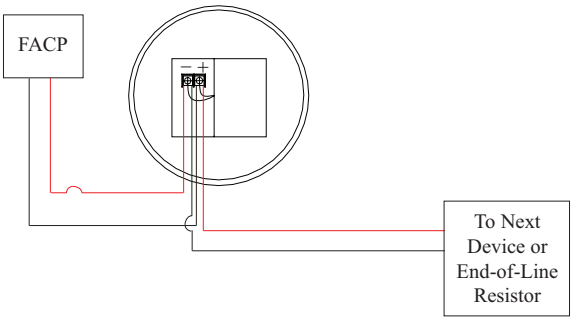
Fig. 3



CAUTION:
WHEN ELECTRICAL SUPERVISION IS REQUIRED USE IN AND OUT LEADS AS SHOWN.

NOTES:

1. WHEN USING AC BELLS, TERMINATE EACH EXTRA WIRE SEPARATELY AFTER LAST BELL.
2. END-OF-LINE RESISTOR IS NOT REQUIRED ON AC BELLS.

DWG# 776-3

Installation
1. The bell shall be installed in accordance with NFPA 13, 72, or local AHJ. The top of the device shall be no less than 90" AFF and not less than 6" below the ceiling.
2. Remove the gong.
3. Connect wiring (see Fig. 3).
4. Mount bell mechanism to backbox (bell mechanism must be mounted with the striker pointing down).
5. Reinstall the gong (be sure that the gong positioning pin, in the mechanism housing, is in the hole in the gong).
6. Test all bells for proper operation and observe that they can be heard where required (bells must be heard in all areas as designated by the authority having jurisdiction).

⚠ WARNING

Failure to install striker down will prevent bell from operating.

ASHCROFT®

Fire Protection, Sprinkler Service Gauge Type 1005P, XUL ASME B 40.1 Grade B (±3-2-3% of span)

- ***Underwriters Laboratory listed and Factory Mutual approved***
- ***Corrosion-resistant ABS case***
- ***Heat-resistant polycarbonate push-in window***
- ***Patented PowerFlex™ movement with polyester segment***
- ***True Zero™ indication, a unique safety feature***

Ashcroft® fire protection sprinkler gauges are Underwriters Laboratory listed and Factory Mutual approved for fire protection sprinkler service. The case material on Type 1005P, XUL gauges is ABS. The 0-300 psi pressure range is used on "wet" systems where water is available to the sprinkler heads. The 0-80 retard to 250 psi pressure range is used on dry systems where the lines are filled with air pressure until system activation.

The patented Power*Flex* movement with polyester segment is designed to provide unequalled shock and vibration resistance resulting in superior performance and extended gauge life.

True Zero indication, a standard feature on these gauges, reduces the potential risk of installing a damaged gauge on your equipment.

GAUGE SPECIFICATIONS

Type no.: 1005P, XUL

Accuracy: ASME B 40.1 Grade B (±3-2-3% of span)

Size: 3½″

Case: ABS (Polycarbonate blend)

Ring: None

Window: Polycarbonate, push-in

Dial: Black figures on white background

Pointer: Black, aluminum

Bourdon tube: "C" shaped bronze

Movement: Patented Power*Flex* with polyester segment

Socket: Brass

Restrictor: None

Operating temperature: –40°F to 150°F

Connection: ¼ NPT lower

Ranges: 0-300 psi (water)
0-80 retard to 250 psi (air)
UL 393 Listed, UL of Canada Listed and FM approved.
Equivalent (single or dual scale) metric scales are available

SERIES LCI INTUMESCENT SEALANT

906

APPLICATIONS

SpecSeal® LCI Sealant has a broad application base designed to seal a wide variety of common penetrations and construction joints. Penetrant types include insulated and non-insulated metallic pipes and tubes, non-metallic pipes and tubes, and common electrical service and power distribution, telephone, data, and TV cabling. This product is also used in conjunction with other SpecSeal® Products such as SpecSeal® Firestop Collars and Wrap Strips to protect larger plastic pipes. See Table A for a summary application list.

PHYSICAL PROPERTIES

Properties	Series LCI
Color	Red
Odor	Mild Latex
Density	9.0 lb/gal (1.08 kg/L)
pH	9.0
Solids Content By Weight	80%
Solids Content By Volume	66.9%
In Service Temperature	≤ 185°F (85°C)
Flame Spread	0*
Smoke Developed	0*
STC Rating (ASTM E90/ASTM C919)	62
VOC Content (EPA Method 24/ASTM D3960)	32.7 g/L
Shelf Life	2 yrs
Volume Expansion	10X Free Expansion
Storage Temp.	40°F (4°C) - 95°F (35°C)

* Tested to ASTM E84 (UL723) at 14% surface coverage (modified test for sealants and caulks)

PRODUCT DESCRIPTION

211313 - Wet-Pipe Sprinkler System

SpecSeal® LCI Sealant is a versatile and economical intumescent sealant that has excellent caulking properties as well as high build properties on vertical or overhead surfaces. This single grade may be caulked (standard cartridge or bulk loaded), knifed or troweled. In addition, SpecSeal® LCI Sealant does not contain PCB's or asbestos.

SpecSeal® LCI Sealant is storage stable (when stored according to the manufacturer's recommendations), and will not separate or shrink when dried. SpecSeal® Series LCI Sealant will adhere to all common construction and penetrant materials and contains no solvents that might adversely effect plastic pipes or cable jackets.

FEATURES

- **Economical**: High performance without the high price!
- **Highly Intumescent**: Expands up to 8 times.
- **Excellent Smoke Seal**
- **Water Resistant** : Will not re-emulsify when dry.
- **Water-Based** for easy installation, cleanup, and disposal.
- **Acoustically Tested**: Reduces noise transmission
- **Safe...**Low VOC's, No Solvents, Non-Halogenated
- **Paintable**

PERFORMANCE

SpecSeal® LCI Sealant is the basis for systems that meet the exacting criteria of ASTM E814 (UL1479) and ASTM E1966 (UL2079) as well as to the time-temperature requirements of ASTM E119 (UL263). LCI provides up to a 4-hour fire rating for typical service penetrations through concrete or wood floors, concrete or masonry walls, as well as gypsum board walls. SpecSeal® LCI Sealant meets Class A finish requirements for Flame Spread and Smoke Development when tested in accordance with ASTM E84 (UL723). Meets or exceeds the requirements of ASTM C834, Type C, Grade 0. SpecSeal® LCI Sealant is also acoustically tested, demonstrating excellent sound attenuation properties.

FBC SYSTEM COMPATIBLE

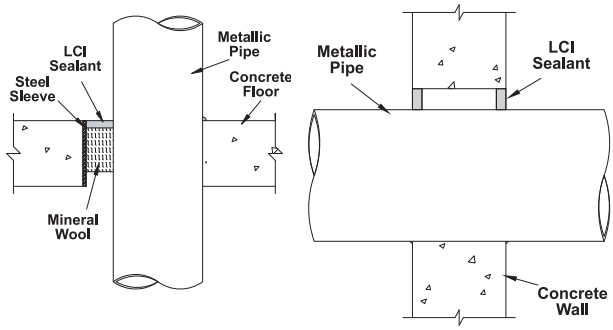
FBC™ System Compatible indicates that this product has been tested, and is monitored on an ongoing basis, to assure its chemical compatibility with FlowGuard Gold®, BlazeMaster® and Corzan® pipe and fittings. FBC, FlowGuard Gold, BlazeMaster and Corzan are licensed trademarks of The Lubrizol Corporation.

CLASSIFIED C UL US

FILL, VOID OR CAVITY MATERIALS FOR USE IN JOINT SYSTEMS AND THROUGH-PENETRATION FIRESTOP SYSTEMS. SEE UL FIRE RESISTANCE DIRECTORY. 3L73

FM APPROVED

SPEARS



SPECIFICATIONS

The firestopping sealant shall be a water-resistant, intumescent latex sealant. The sealant when exposed to high heat or flame shall exhibit a free expansion of up to 10 times its original volume. The firestopping sealant shall contain no water soluble nor hygroscopic ingredients and shall be acoustically tested. The sealant shall be UL Classified and/or FM approved and tested to the requirements of ASTM E814 (UL1479), CAN/ULC S115 and shall meet Class A finish requirements when tested in accordance with ASTM E84 (UL723).

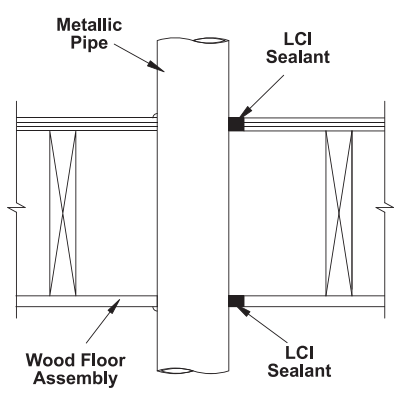
- **Electrical & Electronic Cabling** including service entrance, power distribution, computer, telephone, and television.
- **Metal Ductwork** including HVAC, bath and dryer vents.
- **Insulated Pipes** including heating, cooling, and condensation applications.
- **Complete Wood Floor firestopping package** for electrical, plumbing, HVAC, telephone, and television.

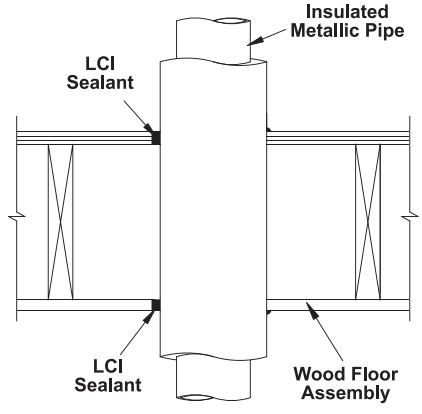
INSTALLATION INSTRUCTIONS

906



GENERAL: Areas to be protected must be clean and free of oil, loose dirt, rust or scale. Installation temperatures must be between 35°F (2°C) and 100°F (38°C). Allow product to dry a minimum of 24 hours before exposure to moisture.

SYSTEM SELECTION: Selection of an appropriate firestop system design is critical to the fire protection process. Space limitations preclude highly detailed information pertaining to individual application systems. Please consult the Product & Application Guide as well as the UL® Fire Resistance Directory for additional information.

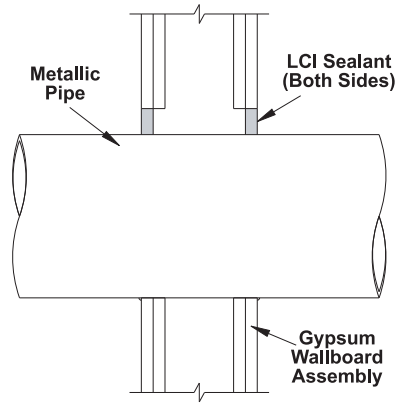


FORMING: Some installations may require forming as either an integral part of the system or as an option to facilitate installation. In systems where forming is required, mineral wool batts with a minimum nominal density of 4 PCF (64 kg/m^3) are generally required. Cut forming material oversize to allow for tight packing. Position forming material to allow for the proper depth of fill material.

FILL MATERIAL: SpecSeal® LCI Sealant may be installed by caulking using a standard caulking gun or from bulk containers using a bulk loading caulk gun, or by manually troweling using a mason's trowel or putty knife. If the sealant tends to pull back from a surface, clean the surface with a damp rag or sponge and reapply. Work sealant into all areas exercising care to eliminate voids or seams. The surface of the sealant can be smoothed using a putty knife dipped in water. Adding water to the sealant itself is not recommended. Sealant (when dry) may be painted using most non-solvent based paints.

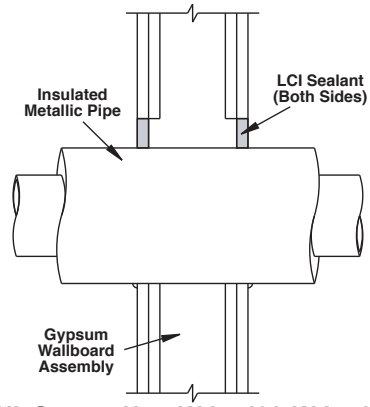
Fig. 4: BARE & INSULATED METALLIC PIPES - Wood Floor Assemblies

UL System No. F-C-1074
F Rating: 1 & 2 Hr • T Rating: 1/4, 1/2 and 1 Hr
Steel, Iron or Copper: 4″ • Chase wall optional.
Annulus: 0″ to 1″ • Sealant: 5/8″ bottom, 3/4″ top



UL System No. F-C-5043
F Rating: 1 & 2 Hr • T Rating: 3/4 and 1 Hr
Steel, Iron or Copper: 4″
Pipe covering: 1″ Fiber Glass, Mineral fiber or AB/PVC • Chase wall optional.
Annulus: 0″ to 1″ • Sealant: 5/8″ bottom, 3/4″ top.

In gypsum wallboard penetrations, apply a minimum cove bead of 1/4" (6 mm) at the interface of the penetrant with both exterior wall surfaces.



SMOKE SEALING: In some applications including firestop collars, SpecSeal® LCI Sealant is recommended as a smoke seal. It is suggested in these applications that the sealant be applied to both sides of walls. In floor applications, a sealing bead is suggested top and bottom.

LIMITATIONS: SpecSeal® LCI Sealant is water-based and cures through the evaporation of water. Low temperatures as well as high humidity may retard drying. Non-porous or impermeable backing materials, plates, or coatings may retard the drying process. Do not paint or seal in any way that prevents contact with air until sealant has dried through completely. This product has been designed to be safe with plastics and has been used extensively and successfully with a variety of different types of plastic pipes, tubes, and plastic cable insulations. Variations in these materials however, make it impossible to guarantee compatibility. STI strongly recommends that the user consult with the manufacturer of the pipe, tubing, or cable in question regarding any known sensitivities or potential restrictions before applying this product.

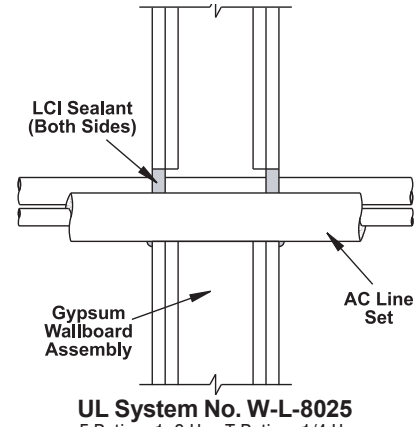


Fig. 5: BARE & INSULATED METALLIC PIPES - Gypsum Walls

UL System No. W-L-1222
F Rating: 1, 2 Hr • T Rating: 1/4, 3/4, 1 Hr
Steel or Iron pipe: 8″, Copper pipe: 4″
Annulus: 0″ to 2″ • Sealant: 5/8″

UL System Nos. W-L-5121, W-L-5122
F Rating: 1, 2 Hr • T Rating: 1 Hr & 1/4 Hr
Steel or Iron pipe: 6″, Copper pipe: 4″
Pipe covering: Max. 2″ fiber glass, 3/4″ AB/PVC or 2″ mineral fiber
Annulus: 0″ to 1-1/2″ • Sealant: 5/8″

UL System No. W-L-8025
F Rating: 1, 2 Hr • T Rating: 1/4 Hr
AC Line Set: Two copper tubes, one with 3/4″ AB/PVC and thermostat wire
Annulus: 0″ to 1″ • Sealant 5/8″

MAINTENANCE

No maintenance is normally required, however a periodic inspection of rated barriers is recommended to make sure that any new openings, modifications of previously installed firestops, or areas exhibiting physical damage, have been properly sealed or repaired. Subsequent sealing or repairs should be accomplished using SpecSeal® products per the original approved design.

RETROFIT: When adding or removing penetrants, care should be taken to minimize damage to the seal. Reseal using SpecSeal® products per the approved design. NOTE: New penetrants of a different nature than the original design may require a totally new firestop design or extensive modifications to the existing design. Reseal all openings as per the requirements of the modified design.

TECHNICAL SERVICE

Specified Technologies Inc. provides toll free technical support to assist in product selection and appropriate installation design. UL Systems, Material Safety Data Sheets and other technical information is available through the Technical Library at www.stifirestop.com.

PRECAUTIONARY INFORMATION

Consult Material Safety Data Sheet for additional information on the safe handling and disposal of this material.

AVAILABILITY

SpecSeal® Series LCI Sealant is available from authorized STI distributors. Consult factory or website for the names and locations of the nearest sales representatives or distributors.

ORDERING INFORMATION

CAT. NO.	DESCRIPTION	
LCI300	Sealant 10.1 oz Tube	18.2 Cu In (300 ml)
LCI305	Sealant 5 Gal Pail	1,155 Cu In (19.0 L)
LCI320	Sealant 20 oz Sausage	36 Cu in. (592 ml)
LCI329	Sealant 29 oz Quart Tube	52 Cu in. (858 ml)

Additional SpecSeal Products...

Series SSS Sealant
The industry's most versatile sealant provides the firestopping solutions for a wide range of combustible and noncombustible applications. Water-based intumescent sealant expands up to 8X!

Intumescent Wrap Strips
Three grades of intumescent wrap strips provide an unmatched combination of flexibility, economy, and expansion (up to 30X). Systems for plastic pipes including FR Polypropylene up to 8" trade size!

SSC & LCC Firestop Collars
Easy to install, economical protection for ABS and PVC pipes (both solid and foam core) as well as CPVC, PVDF, and FRPP. LCC Collars are available up to 4" and SSC Collars are available up to 6" trade size.

Firestop Mortar
Lightweight, versatile and economical! The best choice for large or complex installations.

SSP Firestop Putty
Available both in bar form and in pads, putty provides easy retrofit for through-penetrations and economical protection for electrical boxes.

SIL Silicones
Sealants and foam for through-penetrations and construction joints. Unexcelled aging characteristics and flexibility.

Elastomeric Joint Seals
Economical products for sealing construction joints. Choose caulk or spray applied products tested to UL2079.

IMPORTANT NOTICE: All statements, technical information, and recommendations contained herein are based upon testing believed to be reliable, but the accuracy and completeness thereof is not guaranteed.

LIMITED WARRANTY: STI warrants that its products will be free of defects for one year from the date of purchase. In the event a product does not conform to this warranty, the sole and exclusive remedy is, at STI's option, replacement of the product or refund of the purchase price. The warranty provided herein shall be void and of no effect in the event that the product is not installed in accordance with STI's published instructions, listed systems and applicable building and safety codes. THIS WARRANTY IS IN LIEU OF ALL OTHER REPRESENTATIONS AND EXPRESSED OR IMPLIED WARRANTIES (including the implied warranties of merchantability or fitness for a particular use) AND UNDER NO CIRCUMSTANCES SHALL STI BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LOSSES, INCLUDING, WITHOUT LIMITATION, ANY LOSS OF REVENUE, PROFIT OR USE. Prior to use, the user shall determine the suitability of the product for its intended use, and the user assumes all risks and liability for subsequent use. No person other than an officer of STI is authorized to bind STI to any other warranty for any product for which this warranty is issued.

MS-900 Self-Adhesive Pipe Markers

For indoor or outdoor line service identification and system color coding.

- Complies with the ASME A13.1 "Scheme for the Identification of Piping Systems" regarding color, label size and letter size
- Printed on premium-quality, fade-resistant, outdoor-grade vinyl with durable, indoor/outdoor adhesive
- Adheres well to pipe and insulation with only limited surface preparation
- Legend markers can be used with arrow tape or separate arrow markers to indicate flow direction
- Fast turnaround with off-the-shelf delivery on stock legends

See page 11 for MS-900 Arrow Tape and Color Banding Tape.

TOTALPAC® 3

Datasheet

Self contained - Double interlock Preaction system
Electric / Pneumatic release

211316 - Dry-Pipe Pre-Action Sprinkler Systems

DESCRIPTION

This **TOTALPAC®3** integrated fire protection system by FireFlex Systems Inc. consists of a preaction system trim totally pre-assembled, pre-wired and factory tested. All electrical and mechanical components of the system are contained in one single unit

TOTALPAC®3 preaction systems are built around the Viking trim using deluge valves model F-1.

Electric/pneumatic controlled, double interlock preaction systems requires a pneumatic actuator, normally held closed by supervisory pressure maintained in the sprinkler system AND a normally closed electric solenoid valve controlled by an approved system releasing control panel with compatible detection system. Both the electric detection system AND supervisory pressure must be relieved from the sprinkler system before the deluge valve will open and fill the sprinkler system with water.
Activation of a releasing device alone or operation of a sprinkler alone will sound an alarm but will NOT cause the system to fill with water.

All the valves are rated up to a maximum of 250 psi WWP (1724 kPa) max. and are available in the following diameters:

- ☐ 1½" (40 mm)
- ☐ 2" (50 mm)
- ☐ 3" (80 mm)
- ☐ 4" (100 mm)
- ☐ 6" (150 mm)
- ☐ 8" (200 mm)

Standard features

- cULus Listed & FM Approved as an assembled unit
- Factory assembled and tested under ISO-9001 standards
- Prewired to the Viking VFR-400 releasing control panel.
- Easy and compact installation
- OSHPD certification pre-approval: OSP-0341-10
- Viking conventional trim rated at 250 psi (1724 kPa)
- Galvanized trim piping
- Serial number for easy reference
- Corrosion resistant cabinet with flush type handle and lock
- No open drain cup inside the unit
- Remote controlled unit pre-wired to a terminals strip.
- numerous modular options to meet the most demanding jobsite requirements
- Four styles of modular air supply options
- Inlet & outlet hydrostatic test ports
- User-friendly standardized operation & installation manual
- Free interactive simulator

TOTALPAC® 3

Self contained - Double interlock Preaction system
Electric / Pneumatic release

Cabinet

The **TOTALPAC®3** cabinets are made of sturdy 14 gauge steel, they are available in four (4) sizes;

23" x 25" x 77" (58.4 x 63.5 x 195.6 cm) for 1½", and 2" systems,

36" x 25" x 77" (91.4 x 63.5 x 195.6 cm) for 3" and 4" system,

46" x 25" x 77" (116.8 x 63.5 x 195.6 cm) for 6" system

54" x 31" x 81" (137.2 x 78.7 x 205.7 cm) for 8" system

All surfaces are rust proof coated, inside and outside, with fire red, oven baked polyester powder on phosphate base. Cabinet is provided with one or two doors, all provided with a neoprene gasket to absorb vibrations.

A field wiring electrical junction boxes is integrated with the cabinet for connection of detection system, auxiliary contacts and signaling devices. All inputs & outputs are factory wired to a terminal strip (TBA) for contractor's field wiring.

Gauges to indicate air, water supply pressure and priming water pressure are all visible through clear Lexan windows.

IMPORTANT: TOTALPAC®3 units are NOT designed to be installed where they will be subjected to outdoors and/or freezing conditions. Refer to environmental data for additional details. Subjecting the unit to conditions outside these limitations might tamper the normal operation of the system.

Cabinet doors are provided with hinges that can easily be disassembled on site to remove the door assemblies for servicing. The cabinet assembly is pre-assembled, pre-wired, and factory tested under ISO-9001 conditions.

Multiple unit installations are easily achieved by manifolding units together at their water inlets but drains shall remain separate and open.

Sequence of operation (see trim diagram)

In a fire condition, when the detection system operates, system releasing control panel energizes solenoid valve *(F1)* open. Alarms activate, but the deluge valve will NOT open until a sprinkler opens relieving supervisory pressure from the sprinkler system. When a sprinkler opens, supervisory pressure in the sprinkler piping is reduced causing the pneumatic actuator *(F3)* to open.

Pressure is released from the priming chamber of the deluge valve *(A1)* to the open drain manifold faster than it is supplied through the restricted orifice *(B3)*. The deluge valve clapper opens to allow water to flow into the system piping and alarm devices, causing the alarm pressure switch *(C1)* and optional water motor alarm *(C2)* to activate. Water will flow from any open sprinklers and/or other opening in the sprinkler piping.

When the deluge valve operates, the sensing end of the PORV *(B9)* is pressurized, causing the PORV to open. When the PORV opens, it drains the priming water pressure to the priming chamber, preventing the deluge valve *(A1)* from resetting, even if the open releasing devices close. The deluge valve can only be reset after the system is taken out of service, and the outlet chamber of the deluge valve and associated trim piping is depressurized and drained.

Systems hydraulic limitations

WARNING The information contained herewith is for estimation and evaluation purposes only. Its use remains the responsibility of the designer.
Designers should refer to the appropriate NFPA Standards and any other applicable codes for their final design. Also refer to FireFlex Systems Inc. appropriate user manuals and to manufacturer's data sheets for additional details.
Systems limitations indicated below are nominal flow limitations.

System size (in.)	Usage Range (gpm)	Piping Equivalent Lengths w/o shut off valve		Piping Equivalent Lengths c/w shut off valve		Drain flow @ 250 PSIG w.p.
		(m.)	(ft.)	(m.)	(ft.)	GPM
1½	0 – 210	8.3	27.2	8.5	27.9	272
2	0 – 360	11.65	38.2	11.85	38.9	272
3	100 - 700	16.8	55.1	20.33	66.7	762
4	200 – 1400	21.89	71.8	25.33	83.1	1597
6	400 - 3500	33.28	109.15	37.28	122.3	1597
8	750 - 5250	41.15	135	44.71	146.7	1597

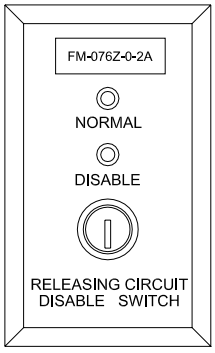
TOTALPAC® 3

Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release

Standard equipments

Releasing control panel

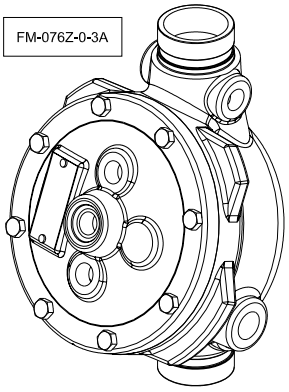
- ❑ 120 VAC / 60 Hz, 165VA.
- ❑ 220 VAC / 50 Hz, 185VA.
- ❑ 12VDC / 7Ah batteries. (factory installed)
- ❑ 12VDC / 12Ah batteries. (optional)
- ❑ Single Zone detection
  (Activated by Zone 1 **or** Zone 2)
- ❑ Crossed-Zone detection
  (Activated by Zone 1 **and** Zone 2)



The releasing control panel integrated into the **TOTALPAC®3** cabinet is Viking's Model **VFR-400**. This panel includes four Class B, programmable detection zones (optional Class A); two Class B supervisory zones and four Class B, programmable output circuits (optional Class A). It is also provided with menu driven programming, including a specific program assigned at the factory.
The panel is compatible with many types of fire alarm & supervisory devices such as linear heat detectors, spot-type heat and smoke detectors, water flow and release indicators, low and high air pressure switches, manual pull stations.

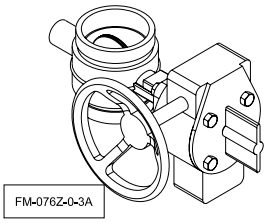
The releasing control panel also includes an alphanumeric display with 2 lines of 16 characters describing all the system conditions, as well as a set of red and yellow LED lamps individually indicating each of the alarm and trouble conditions of the system

Easy to operate control buttons are also provided to activate and operate the system's various functions.



Releasing circuit disable switch

The releasing circuit disable switch is used to disable the releasing solenoid. When the key is set to “Disable”, the releasing solenoid will be disconnected from the control panel’s releasing circuit, causing a trouble signal and preventing accidental discharge during maintenance or inspection.



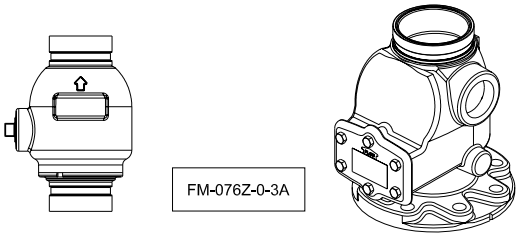
Deluge valve

The Viking Model deluge valve is a quick-opening, differential diaphragm, flood valve with one moving mechanism. The deluge valve is used to control water flow in deluge and preaction sprinkler systems. The valve is held closed by system water pressure trapped in the priming chamber, keeping the outlet chamber and system piping dry. In fire conditions, when the releasing system operates, pressure is released from the priming chamber. The deluge valve clapper opens to allow water to flow into the system piping.

Water supply control valve

The water inlet control valve is a supervised, indicating butterfly valve. Purpose of this vale is to manually shutoff the preaction system.

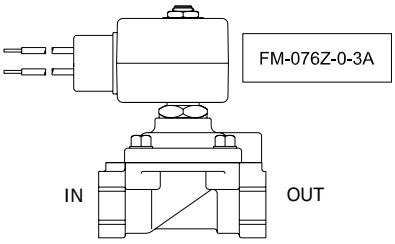
TOTALPAC® 3



Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release

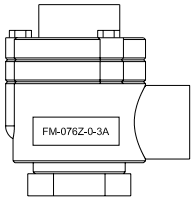
Standard equipments (continued)

Preaction riser check valve



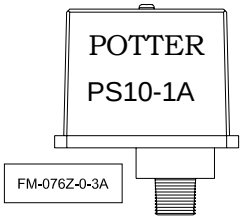
The Viking spring loaded In-Line check valve is a general purpose rubber-faced check valve approved for use in fire-service systems. The Spring Loaded In-Line check valve is manufactured with a brass body, brass seat, and a rubber-faced clapper assembly.

The Viking Easy Riser® Swing check valve is a general purpose rubber-faced check valve approved for use in fire service systems. The valve is for use in preaction system risers.



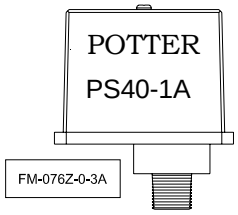
Solenoid valve

The high pressure solenoid valve is a two-way type with one inlet and one outlet. It is a packless, internal pilot operated valve, suitable for use in releasing water pressure from the priming chamber of Viking deluge valves. The solenoid valve has floating diaphragm construction, which requires a minimum pressure drop across the valve to operate properly.



Pneumatic actuator

Used in conjunction with the solenoid valve, the Viking Pneumatic Actuator is a spring loaded, rolling diaphragm and piston operated valve. It is used wherever a combination is required between the detection and system's loss of air.



Alarm pressure switch

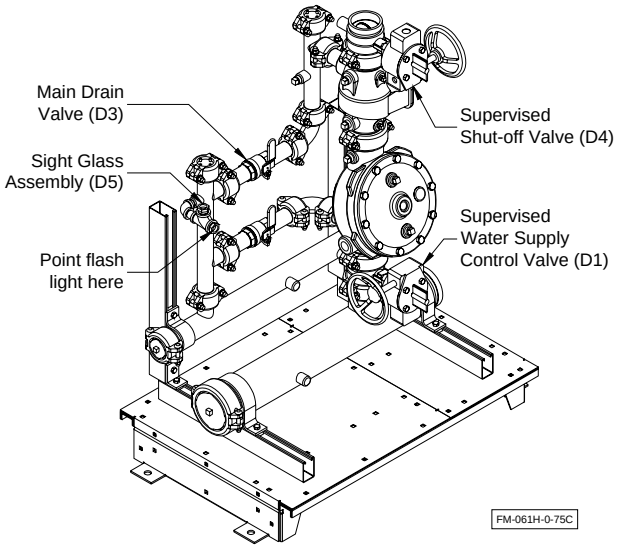
The alarm pressure switch monitors the water flow within the sprinkler piping. Should the Deluge Valve clapper opens to allow water to flow into the sprinkler piping. The alarm pressure switch will activate, indicating a water flow signal.

Low air supervisory switch

The low pressure switches monitors the pressure within the sprinkler piping should a loss pressure of the air below 25PSI occurs. The pressure switch contacts transfer indicating supervisory signal.

TOTALPAC® 3

Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release



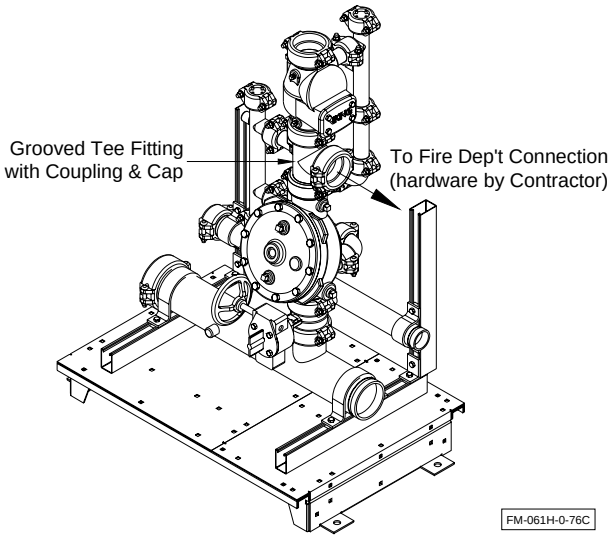
Optional mechanical equipments

❑ **Shut-off valve & sight glass option**

The Shut-off valve & sight glass option is intended to be used for applications where testing of the system operation without filling the sprinkler piping network is desirable and where it is critical that all functions of the preaction system be tested under actual discharge conditions. Examples of such applications are freezers, ovens, museums, data processing and other hazards where the possibility of water leaking from the piping system is to be avoided at all costs.

Warning: Shut-off valve & sight glass option is **not available** on 8" systems.

Warning: Shut-off valve is **not available** combined with Fire department connection on 6" systems.



❑ **Fire department connection**

The fire department connection option consists of a grooved tee fitting installed at the outlet of the deluge valve *(A1)*. An access hole of the proper diameter is factory pre-drilled on the side of the **TOTALPAC®3** enclosures for connection of the piping going to the fire department connection.

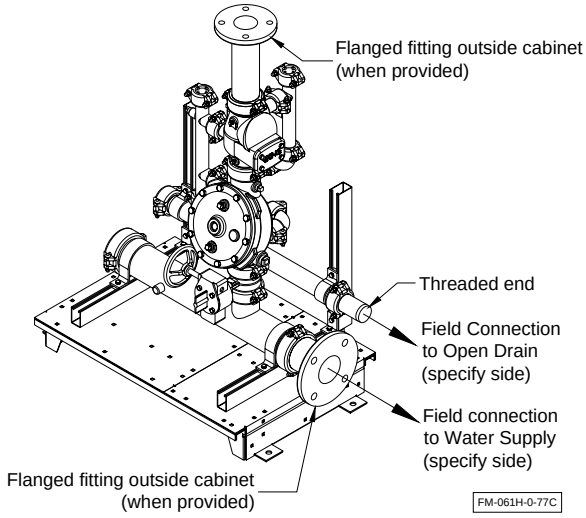
Note: The fire department connection hardware itself (drain, Siamese, etc.) is NOT provided with this option and shall be provided by the installing contractor. Refer to NFPA-13 Standard for additional information about the equipment layout and installation.

Warning: Fire department connection is **not available** on 8" systems.

TOTALPAC® 3

Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release

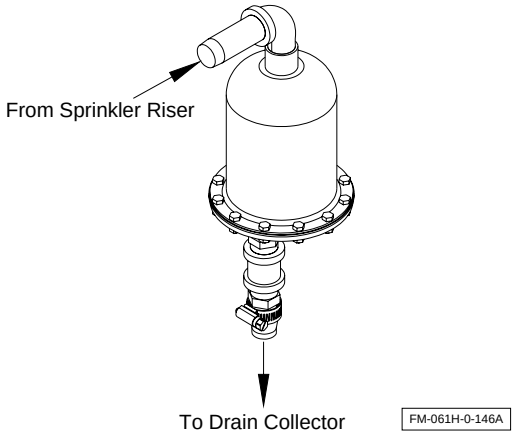
Optional mechanical equipments (continued)



❑ **Semi and full flanged option**

When required by the user, **TOTALPAC®3** units can be provided in either a semi-flanged of full flanged configuration.

The semi flanged option provides flanged fittings only on the water inlet pipe (side needs to be specified at the time of order) and on the system riser outlet. The drain manifold is then provided with a threaded end that also needs to have its side specified (left or right). The rest of the fittings are the same as usual with the main components being provided in the standard grooved -grooved configuration.



The full flanged option is the same as above but goes a step further with the main components being also provided with a flanged-flanged configuration.

When provided, the face of the flanges will always be situated 6 inches from the outside face of the mounting base or cabinet surface.

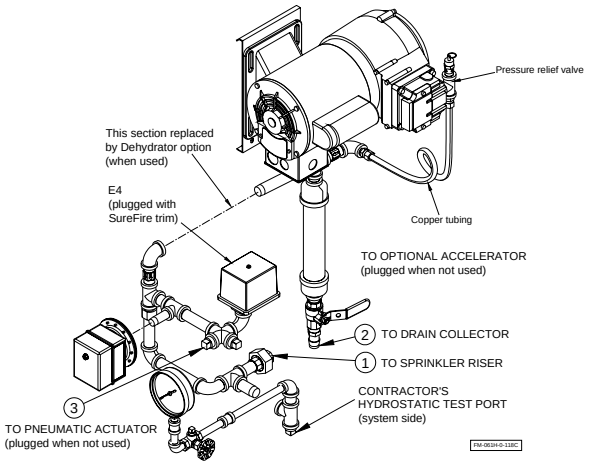
❑ **Anti-column device option**

The model LD-1 anti-column device is an optional trim component designed for use with preaction sprinkler systems. The anti-column device automatically prevents an unwanted water column from establishing within the system riser. On preaction sprinkler systems the anti-column device prevents water from columning downstream of the easy riser check valve.

TOTALPAC® 3

Datasheet

Self contained - Double interlock Preaction system
Electric / Pneumatic release



Air supply

❑ **Direct air compressor (Style "A")**

Used only for the sprinkler piping network of the preaction system. Air supply style "A" includes the air compressor mounted inside the **TOTALPAC®3** cabinets with its supervisory trim and options. Compressors are of the tankless, oiless piston type and are factory piped to the sprinkler system riser, all within the **TOTALPAC®3** cabinets.

Compressors are available in six (6) sizes:

☐ 1/6HP ☐ 1/2HP ☐ 1-1/2HP
☐ 1/3HP ☐ 1HP ☐ 2HP

Compressor Service Factor Amp (S.F.A) rating

Compressor Size (HP)	115Vac / 60Hz	230Vac / 60Hz	220Vac / 50Hz
1/6	5.0 Amp.	2.5 Amp.	1.3 Amp.
1/3	7.4 Amp.	3.7 Amp.	2.5 Amp.
1/2	10.0 Amp.	5.0 Amp.	4.0 Amp.
1	18.0 Amp.	9.0 Amp.	6.0 Amp.
1-1/2	16.6 Amp.	8.3 Amp.	6.3 Amp.
2	N/A	11.0 Amp.	N/A.

115 / 230 Vac – 60Hz air compressor selection Table:

H.P	CFM @ 40 PSI	System capacity to fill system to 35 PSI in 30 minutes *	System capacity to fill system to 55 PSI in 30 minutes **
1/6	1.33	142 gal.	90 gal.
1/3	2.61	285 gal.	181 gal.
1/2	4.06	417 gal.	265 gal.
1	7.40	702 gal.	447 gal.
1-1/2	7.40	1045 gal.	665 gal.
2	7.40	1400 gal.	890 gal.

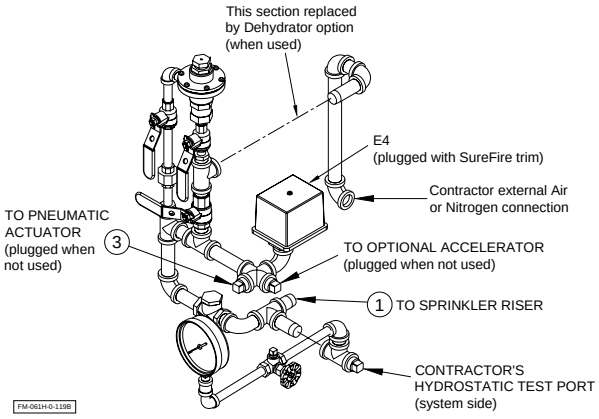
220 / 240 Vac – 50Hz air compressor selection Table:

H.P	LPM @ 40 PSI	System capacity to fill system to 35 PSI in 30 minutes *	System capacity to fill system to 55 PSI in 30 minutes **
1/6	35.4	442 L	268 L
1/3	68	855 L	545 L
1/2	4.06	1302 L	825 L
1	7.40	2244 L	1427 L
1-1/2	7.40	3278 L	2085 L

* For systems with maximum water supply pressure of 175 PSI (1206 kPa)

** For systems with water supply pressure between 175 PSI (1207 kPa) and 250 PSI (1724 kPa)

WARNING The information contained herewith is for estimation and evaluation purposes only. Its use remains the responsibility of the designer.

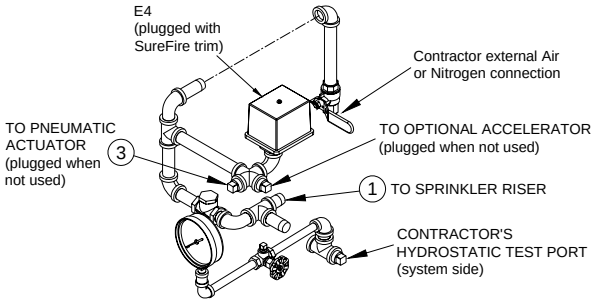


TOTALPAC® 3

Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release

Air supply (continued)

❑ **Air Pressure Maintenance Device (Style "B")**

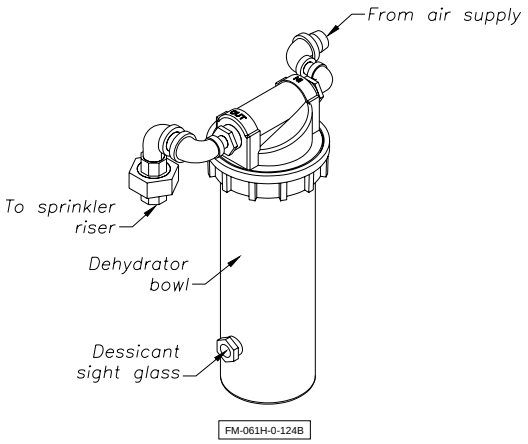


Used only for the sprinkler piping network of the preaction system, when an external air supply is provided by others (tank mounted compressor, plant air or dry nitrogen cylinders) and piped to the air inlet port of the unit. Air supply style "B" provides an Air Pressure Maintenance Device (APMD) trim, factory mounted in the **TOTALPAC®3** cabinets.

❑ **Direct air, external compressor (Style "D")**

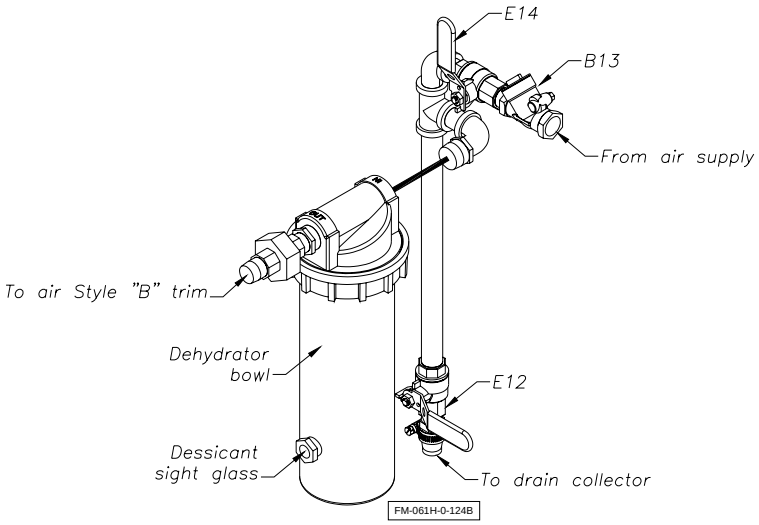
Mainly used with Preaction systems protecting refrigerated spaces and freezers, where a special dry external air supply unit is piped directly to the system riser inside the freezer itself, as shown in NFPA-13. Air supply Style "D" provides only an air supervisory and shut-off trim.

Warning: When air supplies style "B" or "D" is selected, the air supply should be provided and installed by the sprinkler contractor OUTSIDE of the **TOTALPAC®3** cabinet. It is NOT provided with the unit.



TOTALPAC® 3

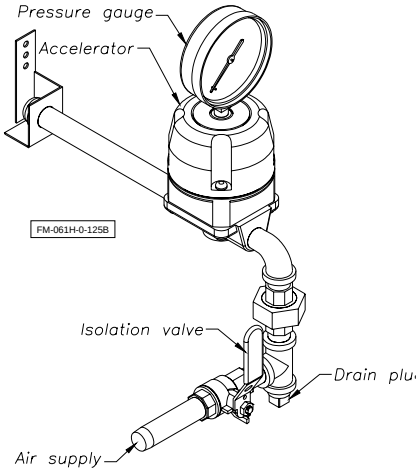
Datasheet
Self contained - Double interlock Preaction system
Electric / Pneumatic release



Optional air supply equipments

❑ Dehydrator option

The Viking Dehydrator is a manually regenerated desiccant-type air dryer. The desiccant acts as a moisture indicator by changing color, and is visible through the sight gauge.
The Dehydrator directs the incoming air down through the silica gel desiccant. The silica gel absorbs the moisture without physically changing. As the relative humidity increases, the silica gel begins to change color from dark blue to light pink, indicating the desiccant must be replaced.

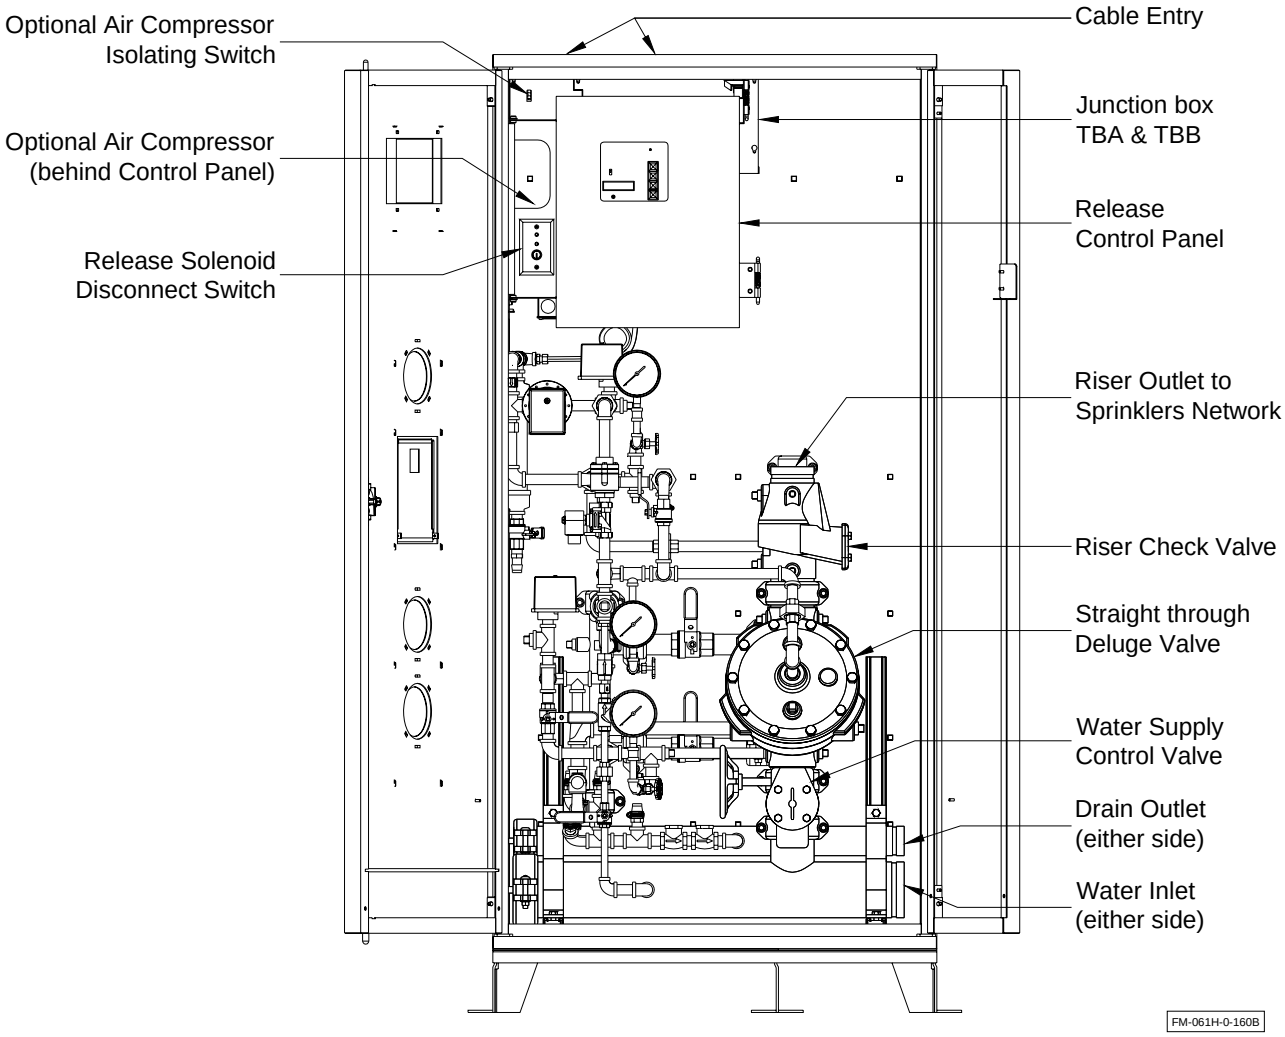


Style "A" layout

Style "B" layout

❑ Accelerator option

The Viking Model E-1 Accelerator is a quick-opening device. The Viking Model E-1 Accelerator may be used without the Anti-flood device to speed the action of a pneumatic release system on a preaction system.



TOTALPAC® 3

Datasheet

Self contained - Double interlock Preaction system
Electric / Pneumatic release

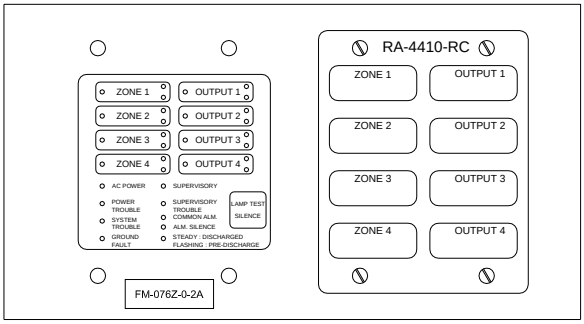
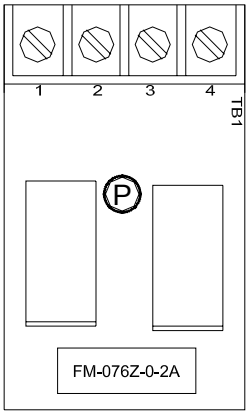
Optional electrical equipments



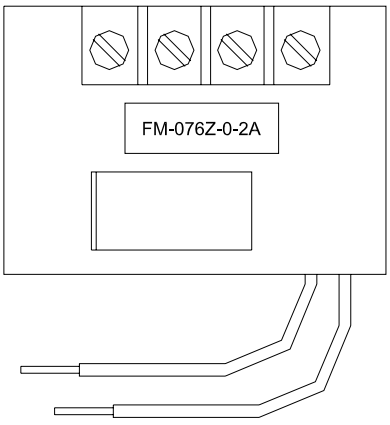
❑ Relay module ARM-44

The ARM-44 is an auxiliary relay module designed to operate with the Viking **VFR-400** releasing control panel to provide 4 independent form C relay outputs. The 4 output circuits each have a dedicated relay. Each relay is rated for 3 amps at 24 volts DC resistive load. The relay module mounts directly to the back of the cabinet and is connected to the main board. All of the relay terminals are wired back to the field wiring junction box. A disable switch is available for disabling the relays when the system is being tested or serviced.



❑ Remote Annunciator RA-4410-RC

The RA-44410-RC remote annunciator is designed to operate with the Viking **VFR-400** releasing control panel. There are 34 LED's to indicate a change in panel status. There is a buzzer on the annunciator that sounds for any trouble or supervisory condition. The release releasing control panel supervises and communicates with the annunciator via separate connections for the RS-485 communication and the 24VDC power requirement of the RA-4410-RC. Separate cables should be used for power and communication. Shielded cable MUST be used for the RS-485 communication line.



❑ Class A initiating device module CA2Z

The Model CA2Z Class A Module is designed to be used with the Viking **VFR-400** releasing control panel to convert from two (Class B) initiating device circuits to two (Class A) circuits.
The module is to be mounted in the upper right hand corner of the panel. All the connections are wired back to the field wiring junction box.

❑ CLASS A INDICATING APPLIANCE CIRCUIT MODULE

The Model CAM Class A Module is designed to be used with the Viking **VFR-400** releasing control panel to convert a single (Class B) indicating appliance circuit to a (Class A) circuit (one module is required for each indicating appliance circuit). After installing the CAM, the indicating circuit should be activated to ensure proper operation and connections. The module is provided with double-sided foam tape and should be mounted in the field wiring junction box so that the terminals are accessible.

N. Y. C. APPROVED

LMR Plus Electric Fire Pump Controllers

Typical Specifications

1. **Approvals**
   A. The Fire Pump Controller shall meet the requirements of the latest edition of NFPA 20 and shall be listed by [Underwriters Laboratories (UL)]and approved by [Factory Mutual Research (FM)] [Canadian Standards Association (CSA)] [New York Department of Buildings (NYSB)] and carry the CE marking for fire pump service.
2. **Starting Type**
   A. The controller shall be of the combined manual and automatic type designed for [~~Full Voltage Starting~~] [~~Part Winding Starting~~] [~~Primary Resistor Starting~~] [~~Autotransformer Starting~~] [Wye-Delta (Star-Delta) Open Transition Starting] [~~Wye-Delta (Star-Delta) Closed Transition Starting~~] [~~Solid State Soft Start Starting~~]
3. **Ratings**
   A. The Controller shall have a withstand rating of 100,000 RMS symmetrical amperes @ [~~208V~~] [~~240V~~] [~~380V~~] [~~400V~~] [~~415V~~] [480V] [~~25,000 @ 600VAC~~].
4. **Construction**
   A. The controller shall include a motor rated combination isolating switch and circuit breaker, mechanically interlocked and operated with a single externally mounted handle.
   B. The isolating switch shall be rated to disconnect the motor load.
   C. The isolating switch/circuit breaker combination shall be mechanically interlocked such that the enclosure door cannot be opened when the handle is in the on position except by a tool operated defeater mechanism.
   D. The controller manufacturer shall manufacture the contactor, isolating switch, circuit breaker, pushbuttons, and enclosures. Brand-labeled components will not be accepted.
5. **Enclosure**
   A. The controller shall be housed in a NEMA Type 2 (IEC IP11) drip-proof, powder baked finish, freestanding enclosure.
   B. Optional Enclosures:
      1. NEMA 3R (IEC IP14) rain-tight enclosure.
      2. NEMA 4 (IEC IP66) watertight enclosure.
      3. NEMA 4X (IEC IP66) watertight 304 stainless steel enclosure.
      4. NEMA 4X (IEC IP66) watertight 316 stainless steel enclosure.
      5. NEMA 4X (IEC IP66) watertight corrosion resistant enclosure.
      6. NEMA 12 (IEC IP52) dust-tight enclosure.
6. **Microprocessor Control**
   A. The controller shall come complete with a 4 line by 40 character LCD display mounted on a panel opening in the front door. The LCD display shall indicate the following:
      1. Main screen displaying system pressure, three-phase voltage and amperage readings, system frequency, date, and time.
      2. Set point review screen displaying the programmed pressure start and stop points, and weekly test time.
      3. Controller statistics screen, including:
         a. Powered Time
         b. Motor Run Time
         c. Number of Calls to Start
         d. Number of Starts
         e. Last Motor Start Time
         f. Last Motor Run Time
         g. Last Low Pressure Start
         h. Minimum System Voltage
         i. Maximum System Voltage
         j. Minimum System Frequency
         k. Maximum System Frequency
         l. Minimum System Pressure
         m. Maximum System Pressure
         n. Last System Startup
         o. Last Phase Failure
         p. Last Phase Reversal
         q. Last Locked Rotor Trip
         r. Maximum Run Current
         s. Last Locked Rotor Current
      4. Controller diagnostics screen, including:
         a. Date & Time
         b. Firmware Version
         c. Shop Order Number
         d. Customer Order Number
         e. Transformer Output Voltage
         f. Current Transformer Outputs
         g. Pressure Transducer Calibrated Settings
         h. Input Status
         i. Output Status
      5. Display last messages screen that will display up to 10,000 alarms/messages stored in the controllers' memory.
      6. Display up to ten (10) custom messages of up to 100 characters each, which will continually scroll across the fourth line of the display.
      7. Remaining time left on active timers.
   B. The controller shall be supplied with ten (10) green status LED's for the following:
      1. Power On
      2. Pump Running
      3. Local Start
      4. Remote Start
      5. Deluge Valve
      6. Emergency Start

LMR Plus Electric Fire Pump Controllers

7. Interlock On
8. Low Pressure
9. Auto Shutdown Enabled
10. Programmable LED #1

C. The controller shall be supplied with ten (10) red alarm LED's to indicate the following:
1. Phase Reversal
2. Phase Failure
3. Fail to Start
4. Undervoltage
5. Overvoltage
6. Low Room Temperature
7. Locked Rotor Trip
8. Low Suction Pressure
9. Source 2 Disconnected
10. Programmable LED #2

D. The microprocessor logic board shall be available with:
1. A USB port for transference of message history, controller status, diagnostics, and statistics and the ability to update firmware.
2. An optional Ethernet port for direct connection to a computer for data transfer.
3. An optional RS485 Serial port for communication to various external software programs.

E. The controller shall be available with an embedded web page to allow viewing of the controllers' current status, data values, programmed set points, and history.

F. A Fail-to-Start alarm shall occur if the motor controller sees less than 20% of the motor full load amps after an adjustable time delay of 1-90 seconds.

G. Locked rotor protection shall be provided. After a trip condition and restoration of power, the LCD display shall indicate "LOCKED ROTOR TRIP".

H. A sequential start timer and weekly test timer shall be provided as standard.

I. A restart time delay of two (2) seconds shall be provided to allow the residual voltage of the motor to decay prior to re-starting the motor. In the event that the pump motor continues to run after a request to stop, then the controller must display a fail to stop message to indicate this condition.

J. Overvoltage (5-20%) and undervoltage (5-30%) sensing and alarming shall be provided as standard.

K. The controller shall be supplied with interlock and shutdown circuits as standard. A flashing green LED shall indicate an interlock on condition.

L. Where shutdown of the pump(s) due to low suction pressure is required, it shall be accomplished without the addition of a separate panel or enclosure. The LCD display shall indicate low suction shutdown. Resetting of the condition shall be automatic or manual as selected by the user.

M. Means shall be provided to test the operation of all LED's to ensure their functionality.

7. Programming Menu

A. The programming menu shall have the ability to enable an entry password.

B. The programming menu shall be limited to two (2) levels of password protection.

C. The controller shall have three (3) languages as a standard, English, French, and Spanish, with the ability to add a fourth language.

D. The programming menu shall be grouped into 6 main menu headings as follows:
1. Regional Settings
2. Pressure Settings
3. Timer Values
4. Alarm Set points
5. Input/Output Menu
6. System Configuration (password protected)

8. Pressure Sensor

A. A solid-state 4-20mA pressure sensor shall be provided. The pressure Start and Stop points shall be adjustable in increments of one (1) PSI. A low pressure pre-alarm, indicated with a flashing green LED, shall denote a potential pump starting condition and will remain lit once the pump has started to indicate the starting cause.

9. Custom Inputs/Outputs

A. The controller shall come standard with nine (9) future inputs, two (2) future LED indicators, and one (1) future output, with the ability to add up to another 8 outputs via optional relay boards.

B. The user shall be able to program the future inputs/outputs through the main programming menu.

C. The inputs shall be selectable based on the following criteria:
1. User selected message or thirteen (13) predetermined messages.
2. Energize the common alarm relay when the input is received.
3. Link to a future relay and/or LED indicator.
4. Alarm latched until reset.
5. Normally open or closed input.
6. On-delay timer.

D. The LED indicators shall be selectable based on the following criteria:
1. Indication based on a minimum of twelve (12) predetermined alarms or a custom input.

E. The future relays shall be selectable based on the following criteria:
1. Output based on a minimum of twenty-seven (27) predetermined alarms, controller status or a custom input.
2. Latched until reset.
3. Energized under normal conditions.
4. On or off delay timer on the output.

LMR Plus Electric Fire Pump Controllers

10. Alarm Relays

A. All relays shall be of the plug-in type. An LED on the relay panel shall indicate the energized state of the relay. All relay contacts shall be rated @ 8A, 277VAC/30VDC. Two (2) sets of Form-C contacts shall be provided for each of the following:
   1. Phase Reversal
   2. Phase Failure
   3. Common Alarm
   4. Future #1
   5. Pump Run.

B. The Common Alarm and Phase Failure relays shall be energized under normal conditions.

11. Audible Alarm Buzzer

An audible alarm buzzer, capable of being heard while the motor is operating, shall operate if Fail to Start, Hardware Malfunction or any Common Alarm condition exists.

12. Manufacturer

A. The controller shall be of the LMR Plus type as manufactured by Eaton Corporation.

Powering Business Worldwide

Fire Pump Controllers Features

FT Series Transfer Switches

June 2010

Typical Specifications

1. Approvals

A. The Fire Pump Controller and Transfer Switch combination shall meet the requirements of the latest edition of NFPA 20 and shall be listed by [Underwriters Laboratories (UL)] and approved by [Factory Mutual] (FM) **, [Canadian Standards Association (CSA)] and [New York Department of Buildings (NYSB)] for fire pump service.

B. The transfer switch shall meet UL 1008 and shall be regularly subjected to Endurance, Interrupting Capacity, and Dielectric Voltage-Withstand test as outlined by UL 489 standards.

2. Ratings

A. The transfer switch shall be suitable for the available short circuit current at the line terminals of the controller.

B. The transfer switch shall have an ampere rating not less than 115% of the motor full-load current.

3. Construction

A. The transfer switch shall be installed in a barriered compartment of the fire pump controller. The complete assembly, controller and transfer switch, shall be shipped as a single unit.

B. A single uni-gear motor shall electrically operate the transfer mechanism. It shall also be capable of being operated manually and shall have suitable provisions for readily disengaging the gear motor when necessary.

C. The transfer switch shall be mechanically and electrically interlocked so that it shall not be possible for the load circuits to be connected to normal and emergency sources simultaneously, regardless of whether the switch is electrically or mechanically operated. The switch shall have a manual neutral.

D. The alternate side shall be provided with an isolation switch sized to a minimum of 115% of the motor full-load current and a circuit breaker having a continuous current rating not less than 115% of the motor full load amps, have overcurrent sensing elements of the non-thermal type, and instantaneous short-circuit overcurrent protection.
The isolating switch and circuit breaker shall be mechanically interlocked and operated by a single handle. The isolating switch shall be supervised to indicate when it is open by audible and visual alarms.

E. An auxiliary contact shall be provided to prevent sending of the signal for starting of the alternate source generator when the transfer switch commands it, if the isolation switch on the alternate source side of the transfer switch is open.

F. The transfer switch shall be provided with locked rotor overcurrent protection. The locked rotor protector shall be calibrated and set to a minimum of 300% of the motor full-load current and have a tripping time between 8 and 20 seconds.

4. Enclosure

A. The controller shall be housed in a NEMA Type 2 (IEC IP11) drip-proof, powder baked finish, freestanding enclosure.

5. Microprocessor Control

A. A solid state sensing and control logic panel shall be separately mounted from the power-switching portion of the transfer switch. The two sections shall be connected together by control cables and plug-in connectors. The control section shall be capable of being isolated from the power section for maintenance.

B. The normal power source shall be set to pickup at 95% and drop out at 85% of nominal supply. The voltage sensing on the alternate supply shall be set to pickup at 90% of nominal voltage.

C. All voltage sensing, frequency sensing, and timer set points shall be field adjustable.

D. The transfer switch shall automatically transfer its load circuit to an emergency or alternate power supply upon failure of the normal or original supply. In order to override momentary fluctuations in the system, a time delay transfer from normal to alternate power supply shall be adjustable up to 1800 seconds. Upon restoration of the normal supply, the transfer switch shall automatically retransfer its load circuits to the normal supply. Mechanically held transfer mechanisms shall be energized only momentarily during transfer or retransfer.

E. If the emergency / standby power should fail while carrying the load, transfer to the normal supply shall be made instantaneously upon restoration of the normal source to satisfactory conditions.

F. The transfer switch shall come complete with five LED's to provide visual indication of the unit status, source 1 available, source 1 connected, source 2 available, and source 2 connected.

G. An engine test button shall be provided that will initiate an engine test.

H. A silence alarm button shall be provided that will silence the alarm buzzer.

6. Alarm Relays

A. 2 Form-C contacts shall be provided for remote indication for source 1 connected or source 2 connected.

B. 2 Form-A contacts shall be provided for remote indication for the alternate source-isolating switch open.

7. Manufacturer

A. The manufacturer of the assembly shall be the manufacturer of major components and control modules installed within the assembly.

B. The Transfer Switch Fire Pump Controller shall be of the LMR Plus type as manufactured by Eaton Corporation.

C. Models:

~~FT20 Limited Service~~
~~FT30 Across the Line~~
~~FT40 Part Winding~~
~~FT50 Primary Resistor~~
~~FT60 Autotransformer~~
→ FT70 Wye-Delta (Star Delta) Open Transition
~~FT80 Wye-Delta (Star Delta) Closed Transition~~
~~FT90 Soft Start~~

** NOTE: As of January 1, 2009 – FT20 Limited Service Transfer Switch controllers, do not carry FM Approval.

Product Description

The Automatic Transfer Switch Option may be added to any FD type Fire Pump Controller whenever automatic transfer from normal to alternate power is required.
The automatic Transfer Switch and Fire Pump Controller are mounted in the same enclosure or in separate enclosures to form one unit and interwired - depending on the horsepower and voltage required.

Engine Test Button

An engine test button is provided on the ATC-300 controller that can be used to test the Source 2 (generator) engine. The operator can select the engine run test time (0-600 minutes). As well, a silence pushbutton is provided which de-energizes the alarm bell.

Electrically and Mechanically Interlocked

The FT Series transfer switch operating mechanisms are mechanically interlocked to prevent the normal and alternate source from connecting at the same time.
The switch operates upon signals received from the ATC-300 Plus controller.

ATC-300 Plus

The panel mounted, multi-function, microprocessor based ATC-300 Plus controller accurately monitors two power sources and provides the necessary intelligence to reliably operate the transfer switch through a series of programmed sensing and timing functions.

Keypad Programming

The ATC-300 Plus controller membrane is equipped with seven keypad input buttons which are used to program the controller as well as set operating parameters.

LED Status Indication

Five LED's indicate the status of the power sources.

Source 1 Available	Source 1 Connected
Source 2 Available	Source 2 Connected
Unit Status	

Automatic Transfer

The FT Series Transfer Switches will perform an automatic transfer from Normal to Alternate source when the Voltage drops to 85% of normal, or there is a loss of any phase and/or Phase Reversal.

Voltage and Frequency Sensing

The ATC-300 Plus continuously monitors the normal source for out of range setpoint values. When the source is outside the dropout setpoints, the source will become unavailable. This prompts a transfer to the alternate source. Retransfer occurs when the normal source's frequency and/or voltage return within pickup setpoints.

Alarm Relay

The alarm relay is de-energized to indicate an absence of an alarm state and energized to indicate the presence of an alarm condition.
Alarm conditions include:
Improper Circuit Breaker Operation
Motor Operator Failure
Lockout
Failsafe Condition
Aborted Engine Test
Aborted Plant Exerciser
Unsuccessful in-phase Transition

Product Features

The FT70 Transfer Switch Controllers use a method of connecting the pump motor windings into wye configuration to start, then switching to a delta configuration to run.
This reduces the starting current of the motor significantly.
Wye-Delta starting is the only method that has a starting torque efficiency of 100%. The FT70 can be programmed for either fully automatic or semi-automatic operations.

Logic Controller Board

Communication

The controller can be ordered with the option to display and output current values and status, on command, from various software protocols through the appropriate port(s).

Embedded Web Page

The web page is a multifunction tool that allows the user to view the controller's current status, data values, programmed set points and history. It is accessed using the optional ethernet port.

USB Port / USB Drive

The logic controller board is equipped with a USB port that can be used to transfer data to and from a portable USB Drive device (memory stick).

Ethernet Port

An optional ethernet port is used for direct connection to a computer for data transfer.

RS485 Serial Port

An optional RS485 serial port can be provided for communication to various external software programs.

Buzzer

A buzzer is mounted on the logic board which will operate if Fail to Start, Hardware Malfunction or any Common Alarm condition exists.

Power I/O Board

Transformers

Incoming line voltage is run directly to the I/O board from the incoming lines. The three transformers mounted on the I/O board will accept voltage inputs between 100 and 600V.

Customer Connection Terminals

Connection terminals for external customer connections, are located on the top of the Power I/O board.

Output Relays

Seven socket mount, 8 Amp, 2 Form - C (DPDT) output relays are provided standard on each power I/O board. They are designated for:
Common Alarm,
Phase Failure,
Phase Reversal,
Pump Run,
Startup,
Acceleration
and Future # 1.
Each socket has an LED mounted on the I/O board which indicates each relay's coil status.

Optional Output Relay Boards

There is provision to add up to eight additional relay outputs, via optional relay output boards. Each board contains a maximum of 2 additional relays. The Power I/O Board will accept a maximum of 4 optional boards which mount in a snap-on configuration.
Each board provides an area for the user to label the terminal number and relay name.

Door Mount
The membrane keypad is accessible from the front door of the controller.

NEMA Rating
The standard membrane keypad is rated for NEMA 2, 3R, 4, 4X and 12.

LCD Display
The Logic Control Board contains a 4 Line by 40 Characters wide, backlit, LCD display which is capable of generating multiple languages.

Alarm & Status LED's
A total of 20, (10 Status - 10 Alarm) LED's provide indication on the membrane keypad.

Status LED's	Alarm LED's
Power On	Phase Reversal
Pump Running	Phase Failure
Local Start	Fail To Start
Remote Start	Undervoltage
Deluge Valve	Overvoltage
Emergency Start	Low Room Temperature
Interlock On	Locked Rotor Trip
Low Pressure	Low Suction Pressure
Auto Shutdown Enabled	Source 2 Disconnected
Programmable LED # 1	Programmable LED # 2

Silence Button
A silence pushbutton on the membrane can be used to silence the buzzer. When an alarm condition exists, the alarm buzzer will sound. If the Silence Alarm button is pressed, the alarm buzzer will turn off. If a subsequent alarm condition occurs after the silence button is pressed, the buzzer will re-sound. Pressing the Silence Alarm button again, will silence the buzzer.

Motor Test Button
The motor test button on the membrane can be used to simulate an automatic start.

Automatic Shutdown Enabled
When the Automatic Shutdown function is enabled, a Green LED will indicate on the controller membrane.

MAIN DISPLAY
General
The main display will show the current system pressure, time and date, voltage and amps reading for all three phases, the system frequency and any custom messages, alarms or timers.

Programmed Set-Point
The set-point display will show programmed pressure start point, pressure stop point and weekly test timer setting.

Statistics
The statistics display will allow the user to scroll through all of the measured statistics stored in memory. Refer to LMR Plus operation manual IM05805020K for specific details.

Diagnostics
The diagnostics display will allow the user to scroll thorough eleven diagnostic points to assist with troubleshooting the system.

Message History
The user will be able to scroll through all of the messages stored in the memory of the controller with the most recent message being displayed first.

PRINT Menu
Description
All fault and alarm information is sent to the USB and Printer ports on demand, as well as the status of each output. The LMR Plus will store up to 10K events which are time and date stamped. All information can also be retrieved and displayed on the LCD display.

Saving to USB Drive
The controller will save four separate text files, one CSV file and the embedded webpage to the USB external drive. The files, at maximum size, can be saved multiple times on one 128MB USB drive.
Files to be saved are: Status Report, Diagnostics Report, Statistics Report, Configuration File and Last 10K Messages.

Print Menu
The printer menu is accessed in order to select the desired print function.
Functions include: Print Messages, Last XX Messages, Date & Time, Status Report, Diagnostics Report and Statistics Report.

Custom Messages
When this item is selected, custom messages can be cleared from memory or downloaded from the USB external drive.

Firmware Update
Firmware revisions are updated from an external USB drive. All previously programmed settings will remain intact when updating is completed. Should there be an update failure, the controller will automatically revert back to the previous version of firmware.

Embedded Webpage

General
The embedded webpage is a multifunction tool that will allow the user to view the current status of the controller as well as display all current readings, set points, and history. An external computer can be connected via the optional Ethernet port to access the page. When connected, the controller set points can be programmed via the webpage.

Multiple Pages
There are 5 viewable pages that show the Main Display, Statistics, Diagnostics, History and Programmed Set Points.

Pressure Points
The pressure reports recorded in memory can be graphed and/or sorted based on date and time.

Programmed Set Points
All of the programmed set points and their current status can be viewed via the webpage.

Custom Messages
Users can create custom messages on a computer and upload to the controller using a USB Drive (memory stick). Up to 10 custom messages of up to 100 characters each, will continuously scroll across the fourth line of the LCD display once uploaded.

Trigger Points
The message can be programmed to appear at specific trigger points such as specific date and time, specific number of operations, specific number of hours run or at any individual alarm point.
All of the trigger points can be selected as And/Or values.

Product Features

Programming Menu
General
The LMR Plus programming menu is divided into 8 different sub-menus. Each sub-menu contains information relative to it's particular function. A brief description of each sub-menu is listed below.

Language
The language sub-menu allows the user to select English, French or Spanish or Other languages to be viewed on the LCD Display. Several other languages can be uploaded into the controller. Contact the factory for details.

Regional
Regional settings include the ability to program the date by adjusting the Month, Day, Year and Day of Week. As well, the Current Time can be adjusted on the 24 hour clock.

Pressure
A variety of pressure settings can be programmed in the pressure sub-menu. These settings include disabling the pressure transducer; setting of the start point, stop point, low pressure alarm, high pressure alarm, stop mode, proof pressure switch (for foam units), low suction shutdown (low foam shutdown), pressure deviation and hourly pressure recording. Refer to the LMR Plus operation manual IM05805020K for details.

Timers
Timers in the LMR Plus that can be programmed include: Run Period Timer (RPT), RPT Start Mode, Acceleration Timer (AT), Weekly Test Timer, Fail to Start Timer (FST) and Sequential Start Timer (SST). Refer to the LMR Plus operation manual IM05805020K for details.

Alarm Set Points
There are five settable alarm points that can be programmed by the user. They include: Phase Rotation, Over Voltage (OV), Under Voltage (UV), Over Frequency (OF) and Under Frequency (UF). Refer to the LMR Plus operation manual IM05805020K for details.

Custom Inputs / Outputs
There is provision on the Power I/O Board to accept up to 9 additional inputs and 9 additional outputs. The inputs can be labeled using one of 11 pre-set input descriptions or assigned a custom description that is programmed by the user. The optional outputs can be programmed to indicate up to 25 output conditions. As well, two optional alarm LED's can be programmed for up to 12 alarm conditions. All optional inputs, outputs and LED's can be linked, as required.
Inputs can be programmed to energize the common alarm output, link to relays and optional LED's and latch until reset by the user. Outputs can be programmed for fail safe and latch until reset by the user. Optional inputs and outputs can be programmed with time delay functions.

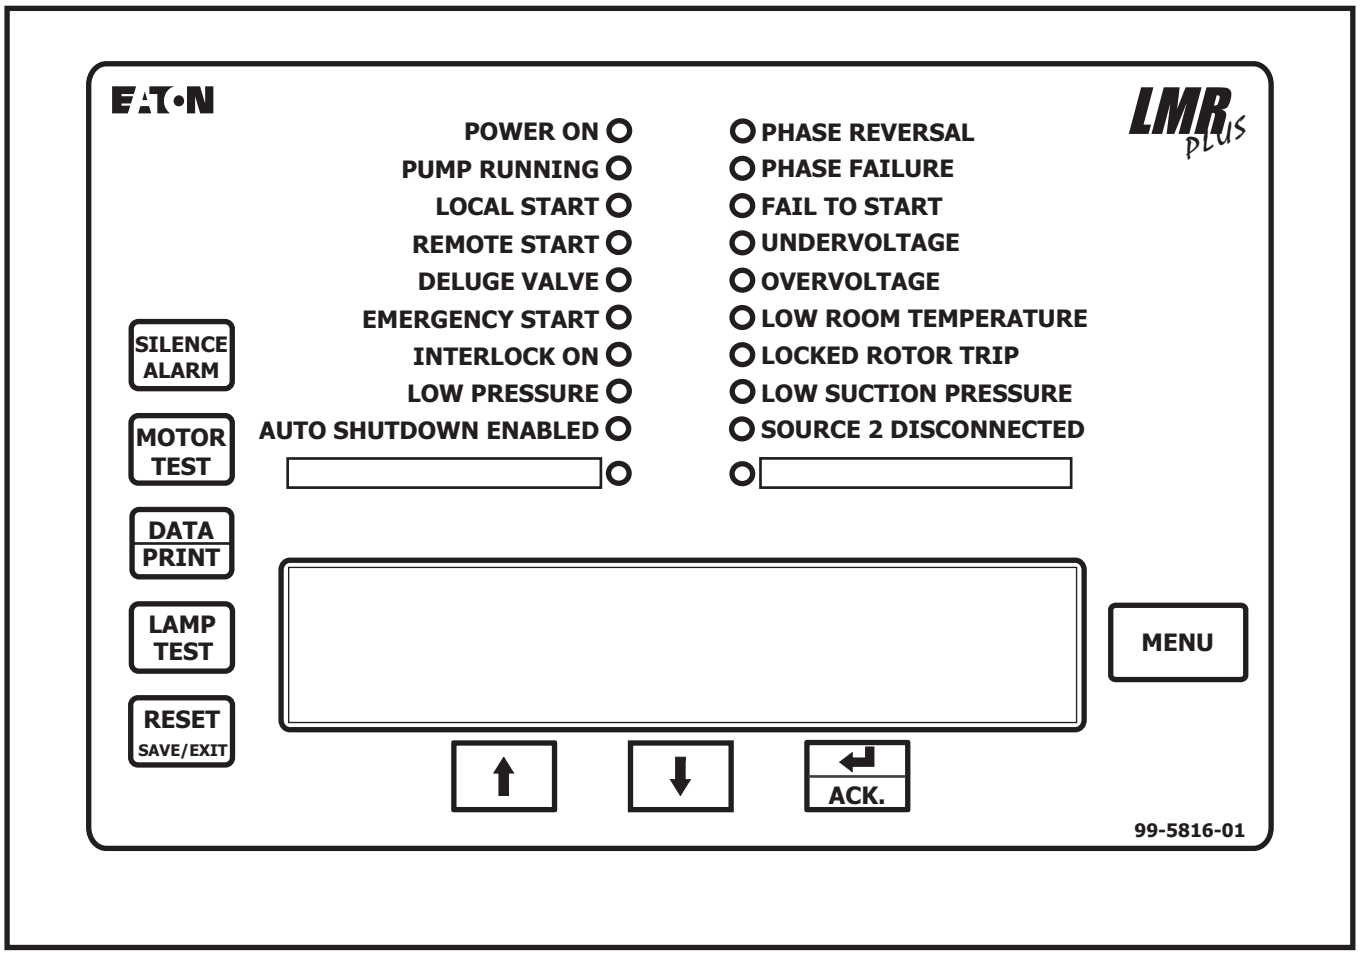
USB External Drive
General
When using an external USB Drive, the drive should conform to the following minimum specifications:

Min: 128mb
Max: 2 Gig
FAT16 protocol
USB 1.0 or 2.0

Drain Valve Solenoid
All LMR Plus electric controllers are equipped with a drain valve solenoid used for weekly test purposes.

NEMA 2 Enclosures
All LMR Plus controllers come standard with NEMA 2 enclosures unless otherwise ordered. Available options include: NEMA 3R, 4, 4X, 12.

Emergency Start Operator
A mechanically operated emergency start handle activates the motor contactor independent of any electrical control circuits or pressure switch input.

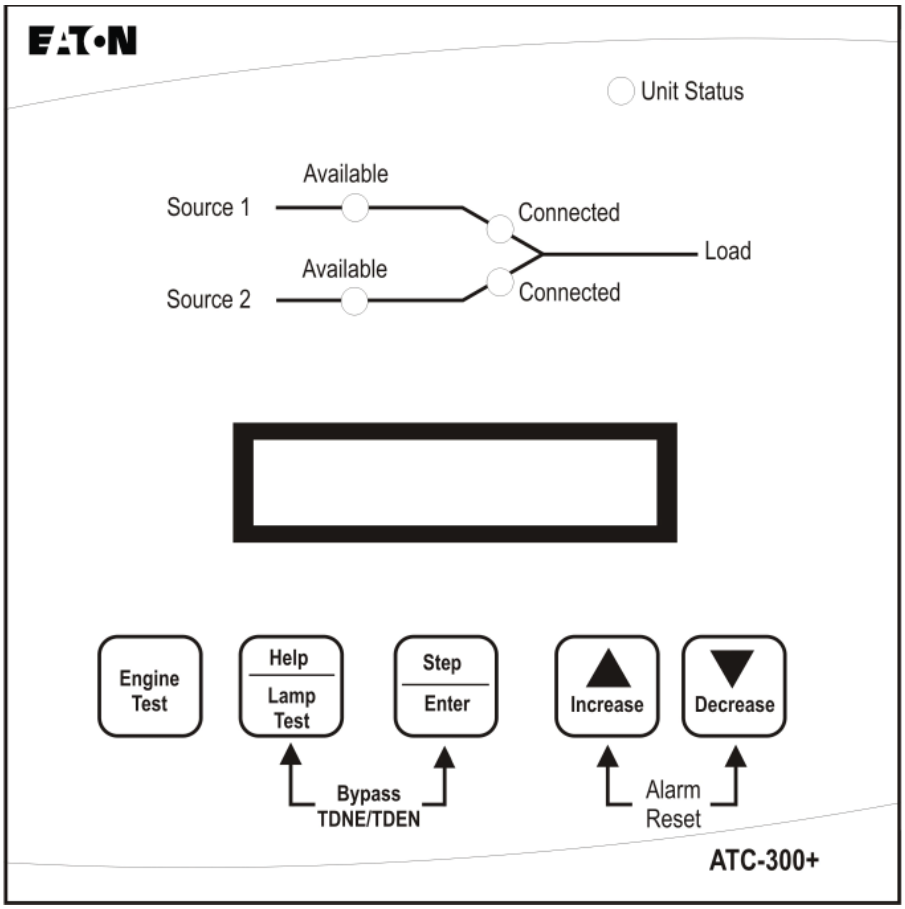


Standards & Certification

The LMR Plus Electric Fire Pump Controllers meet or exceed the requirements of Underwriters Laboratories, Underwriters Laboratories Canada, Factory Mutual, the Canadian Standards Association, New York City building code, CE mark and U.B.C / C.B.C. Seismic requirements, and are built to NFPA 20 standards.

c UL us FM APPROVED CSA N. Y. C. APPROVED CE SEISMIC QUALIFIED U.B.C. and C.B.C.

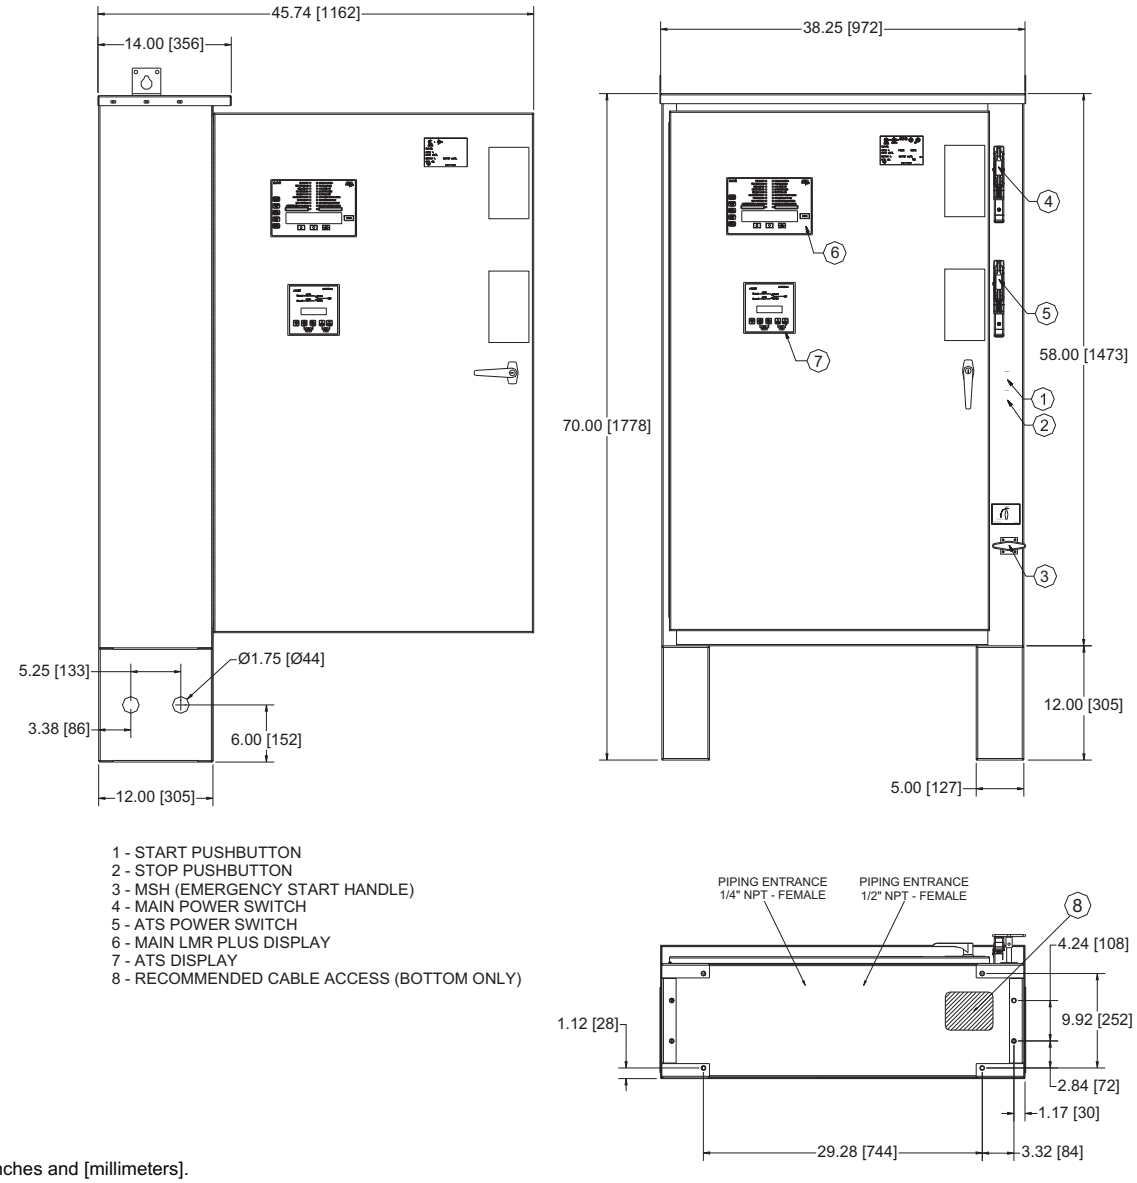
Main Display



NOTES:
1. Refer to the LMR Plus technical manual for detail and setup information, as well as programming and custom labelling for Programmable LED # 1 and Programmable LED # 2.

N. Y. C. APPROVED

NOTE: As of January 1, 2009 - All Limited Service Controllers will not carry FM Approval.



Main Display

Note: For setup and programming information, refer to the Operation Manual for the EATON ATC-300 Plus Automatic Transfer Switch Controller - IM05805022K

XTJP / XTJY Jockey Pump Controllers

JOCKEY Touch™

Typical Jockey Pump Controller Specifications

Approvals
The Jockey Pump Controller shall meet the requirements of the latest edition of NFPA 20 as well as meeting CE mark requirements. It shall meet or exceed the requirements of UL 508 [Underwriters Laboratories (UL)] standards and be approved by [Canadian Standards Association (CSA)].

Starting Type
The controller shall be Across-the-Line ~~or Wye-Delta (Star Delta~~) type designed for full voltage starting.

Ratings
The Controller shall have a minimum withstand rating of 10,000 symmetrical amperes @ ~~[208V] [240V] [380V] [400V] [415V]~~ [480V] ~~[600V] [120V Single Phase] [240V Single Phase].~~

The horsepower rating of the controller shall not exceed 50Hp for three (3) phase units or 10Hp on single phase units.

Construction
The controller shall include a combination Circuit Breaker / Overload Motor Protector.

The motor circuit protector shall be mechanically interlocked such that the enclosure door cannot be opened when the handle is in the on position except by a tool operated defeater mechanism.

The controller manufacturer shall manufacture the contactor, motor circuit protector, touchscreen display, and enclosure. Brand-labeled components will not be accepted.

Supply Voltage
The jockey pump controller shall auto-detect three phase voltage supply from 200VAC to 600VAC, 50/60Hz and single phase from 110VAC to 240VAC, 50/60Hz, without the use of a control transformer.

Coil Voltages
The jockey pump controller shall have the following available coil voltages
120VAC 50/60 Hz or 24VDC

Enclosure
The controller shall be housed in a NEMA Type 2 (IEC IP11) drip-proof, powder baked finish, freestanding enclosure.

Optional Enclosures
1. NEMA 3R (IEC IP14) rain-tight enclosure.
2. NEMA 4 (IEC IP66) watertight enclosure.
3. NEMA 4X (IEC IP66) watertight 304 stainless steel enclosure.
4. NEMA 4X (IEC IP66) watertight 316 stainless steel enclosure.
5. NEMA 4X (IEC IP66) watertight corrosion resistant enclosure.
6. NEMA 12 (IEC IP52) dust-tight enclosure.

Languages
The controller shall be available in a variety of languages including, but not limited to:
English, French, Spanish, Portuguese, Turkish.

Touchscreen Display
The controller shall be supplied with a color touchscreen display that shall indicate the following: Supply Voltage on all phases, Current Pressure, Start Pressure and Stop Pressure.

The touchscreen display shall be supplied with a solid-state 4-20mA pressure sensor. The pressure Start and Stop points shall be adjustable in increments of one (1) PSI or 0.1 BAR.

The touchscreen display shall be a door-mount type that permits exterior programming with the controller door secured.

Options
The jockey pump controller shall have provision to be supplied with the following options:

C1 Extra Contacts " Pump Run"
C2 Extra Contacts "AC Power Failure"
CX Extra Contacts (One Form-C; Specify Function)
E1 NEMA 3R – Raintight Enclosure
E2 NEMA 4 – Watertight Enclosure
E3 NEMA 12 – Industrial Dust Tight Enclosure
E5 NEMA 4X – 304 Stainless Steel Enclosure
E8 Tropicalization
E9 NEMA 4X - Painted Steel
E10 NEMA 4X - 316 Stainless Steel Enclosure
EX Export Crating
FTS Extra Contacts "Fail to Start"
LX Virtual LED (Specify Description)
POL "Power On" Virtual LED
PRL "Pump Run" Virtual LED
P7 Low Suction Pressure Switch and Alarm Virtual LED
P8 Low Suction Shutdown (Requires P7)
P10 Pressure Transducer – Sea Water
R1 Space Heater (120 / 220V)
R2 Space Heater c/w Thermostat
R3 Space Heater c/w Humidistat

Manufacturer
The controller shall be of the XTJP Across-the-Line or XTJY Wye Delta (Star-Delta) type as manufactured by EATON.

Jockey Pump Controllers

JOCKEY Touch™

Microprocessor Based with Color Touchscreen

Product Description

ACROSS THE LINE

JOCKEY PUMP CONTROLLERS

The JOCKEY Touch - Jockey Pump Controllers operate across-the-line. Full voltage is applied to the motor for starting by the use of a single motor starter. Starting inrush current is approximately 600% of rated full load amperes.

WYE-DELTA (Star-Delta)

JOCKEY PUMP CONTROLLERS

When six or twelve-lead delta connected jockey pump motors are started wye (star) connected, approximately 58% of line voltage is applied to each winding. The motor develops 33% of full-voltage starting torque and draws 33% of normal locked-rotor current from the line. After an adjustable time delay (during which the motor accelerates), it is reconnected for normal operation.

Product Features

Combination Motor Controllers

All JOCKEY Touch controllers are supplied with EATON combination motor controllers, which combine the circuit breaker and overload in one device.

Sealed Rotary Handle Mechanism

The rotary handle mechanism can be padlocked in the OFF position.

XT Power Controls

The JOCKEY Touch - Jockey Pump Controllers incorporate Eaton's XT Power Controls which are designed for the global marketplace. The XT controls carry global ratings, are small in size and are available in a wide variety of operating voltages. They are easy to install and maintain, due to their modular, plug-in design.

Universal Supply Voltage

The controllers will auto-detect three phase voltage supply from 200VAC to 600VAC, 50/60Hz and single phase from 110VAC to 240VAC, 50/60Hz, without the use of a control transformer.

NEMA 2 Enclosures

Enclosures have an oven baked powder paint finish and are supplied with NEMA 2 rating, unless otherwise ordered. Available options include: NEMA 3R, 4, 4X, 12.

Programmable Functions

Inputs, Outputs, Timers and Virtual LED's are programmable via the touchscreen display.

Starting Methods

There are four methods of starting the controller: Auto, Hand, Remote Start and Pump Start.

Diagnostics / Statistics

Eight diagnostics and seven statistics parameters can be monitored.

Alarm Setpoints

Four alarm setpoints can be programmed from the Alarm Setpoints sub-menu.

Color Touchscreen Display

The JOCKEY Touch - Jockey Pump Controllers are supplied with a microprocessor based, color touchscreen. The touchscreen display allows the user to monitor and program functions and values.
Pressure input is provided by a 4-20mA pressure sensor.

Standards & Certification

The JOCKEY Touch - Jockey Pump Controllers meet the requirements of the latest edition of NFPA 20 as well as meeting CE mark requirements. They meet or exceed the requirements of UL 508 [Underwriters Laboratories (UL)] and are approved by [Canadian Standards Association (CSA)].

JOCKEY Touch™

Microprocessor - Color Touchscreen Display

Supply Voltage
3 phase – 200VAC to 600VAC, 50/60Hz
1 phase – 110VAC to 240VAC, 50/60Hz
True RMS measurement of 3 phase voltage inputs

Power Supply Output
Two 24VDC outputs

1	Power the pressure sensor
2	Energize the contactor coil

Ratings
NEMA 4 / 4X

Memory
Programmed settings saved in Non Volatile memory

Battery Backup
Real Time Clock kept intact during power failures

Ambient Temperature Rating
0C to 55C

Programmable Inputs (2)
Each input can be programmed for one of seven different functions.

1	Interlock
2	Motor Overload
3	Fail to Start
4	Remote Start
5	Pump Start
6	Input = Output
7	Disabled

Programmable Outputs (2)
Each output can be programmed for one of twenty three different functions.

1	Power On	13	Overvoltage
2	Pump Run	14	Transducer Failure
3	Hand Mode	15	Motor Overload
4	Off Mode	16	Common Alarm
5	Auto Mode	17	Acceleration Timer
6	Low Pressure Alarm	18	Remote Start
7	High Pressure Alarm	19	Pump Start
8	Below Start Point	20	Interlock On
9	Phase Reversal	21	Input #1
10	Phase Failure	22	Input # 2
11	Fail to Start	23	Disabled
12	Undervoltage		

Timers (5)
Programmable Types

55L-60 — MODEL —

Pressure Relief Valve/ Pump Casing Relief Valve

Available in a wide range of materials including nickel aluminum bronze and stainless steel. Certified to meet low lead requirements

- **UL Listed**
- **Factory Mutual Approved**
- **UL Listed/FM Approved for use as a fire pump casing relief valve**
- **Direct Acting - Precise Pressure Control**
- **Positive Dependable Opening**
- **Drip Tight Closure**
- **No Packing Glands or Stuffing Boxes**
- **Sensitive to Small Pressure Variations**

The Cla-Val Model 55L-60 **(UL Listed, FM approved)** Pressure Relief Valve is a direct-acting, spring loaded, diaphragm type relief valve. The valve may be installed in any position and will open and close within very close pressure limits. The bottom plug may be removed and installed in the inlet to convert it to an angle pattern flow path.

The Model 55L-60 is normally held closed by the force of the compression spring above the diaphragm. When the controlling pressure applied under the diaphragm exceeds the spring setting, the disc is lifted off its seat, permitting flow through the control. When control pressure drops below the spring setting, the spring forces the control back to its normally closed position. The controlling pressure is applied to the chamber beneath the diaphragm through an internal passage. Gauge Port is provided for accurate pressure setting.

Pressure adjustment is done by turning the adjusting screw to vary the spring load on the diaphragm. The 55L-60 is available in pressure ranges suited to agency approval tests. To prevent tampering, the adjustment cap can be wire sealed by using the lock wire holes provided in the cap and cover.

UL LISTED

FM APPROVED

Fire Protection System Service
The **Model 55L-60** is typically used in a fire protection system to trim water pressure, thus preventing pressure build-up whenever line pressure exceeds the setting of the spring.

The 55L-60 will relieve excess pressure to atmosphere to prevent damage to the distribution network.

NOTE: Model 55L-60 is not suitable for discharging the full-rated pump capacity of a fire pump. See Model 50B-4KG1 Fire Pump Relief Valve for such applications.

Typical Application for Fresh Water or Seawater Service

Fire Pump Casing Relief Valve

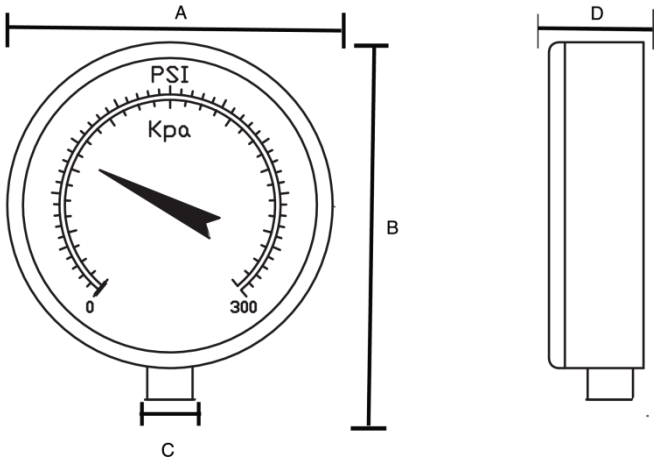
VAL-MATIC VALVE AND MANUFACTURING CORP.

Allenco Series AG-1000L

Liquid Filled Fire Pump Suction and Discharge Gauges

Our Allenco Series AG-1000L-FP liquid filled gauges were specifically designed for use with fire pumps. These high quality gauges are 1% accurate over the entire gauge range and are manufactured to conform to both ANSI B40.1 Grade 1A standards and NFPA 20-2013(14.2.6.1.2.2) as it relates to gauge accuracy requirements for field acceptance testing.



The standard glycerin filling helps dampen the effects of pump vibration while also lubricating the gauge movement which helps to extend the gauge life. Gauges are labeled on the dial face as "Fire Pump Suction" for the 30”/0/150 PSI range and "Fire Pump Discharge" for other available ranges.

G E N E R A L N O T E S :

BLACK SCHEDULE #10

BLACK SCH. #10 SYS MAINS – 3" AND LARGER TO BE SCHEDULE 10 BLACK STEEL "SHOP CUT" TO THE LENGTHS INDICATED ON THE PLAN, SHOP ROLL GROOVED AT BOTH ENDS, SHOP WELDED OUTLETS IF APPLICABLE, FIELD JOINED WITH GROOVED FITTINGS AND COUPLINGS UNLESS OTHERWISE NOTED.

BLACK SCHEDULE #40

BLACK SCH. #40 BR. LINES – 2-1/2" AND SMALLER TO BE SCHEDULE 40 BLACK STEEL PIPE "SHOP CUT" TO THE LENGTHS INDICATED ON THE PLAN, SHOP THREADED AT BOTH ENDS, FIELD JOINED WITH BLACK IRON DUCTILE THREADED FITTINGS, UNLESS OTHERWISE NOTED.

GALVANIZED SCHEDULE #10 – PREACTION SYSTEM

GALV SCH. #10 SYS MAINS – 3" AND LARGER TO BE SCHEDULE 10 GALVANIZED STEEL "SHOP CUT" TO THE LENGTHS INDICATED ON THE PLAN, SHOP ROLL GROOVED AT BOTH ENDS, SHOP WELDED OUTLETS IF APPLICABLE, FIELD JOINED WITH GROOVED FITTINGS AND COUPLINGS UNLESS OTHERWISE NOTED.

GALVANIZED SCHEDULE #40 – PREACTION SYSTEM

GALV SCH. #40 BR. LINES – 2-1/2" AND SMALLER TO BE SCHEDULE 40 GALVANIZED STEEL PIPE "SHOP CUT" TO THE LENGTHS INDICATED ON THE PLAN, SHOP THREADED AT BOTH ENDS, FIELD JOINED WITH GALVANIZED IRON DUCTILE THREADED FITTINGS, UNLESS OTHERWISE NOTED.

FIRE ALARM SYSTEM NOTE – TAMPER SWITCHES HAVE BEEN PROVIDED ON ALL PRIMARY CONTROL VALVES. THESE SWITCHES MUST BE CONNECTED TO THE FIRE ALARM SYSTEM PER NFPA 72. ALSO, THE WATER FLOW DETECTING SWITCH SHALL ACTIVATE THE FIRE ALARM SYSTEM.
ALL WIRING AND FIRE ALARM SYSTEMS TO BE SUPPLIED AND INSTALLED BY "OTHERS".

STD SYSTEM HANGER NOTES – PIPE HANGERS SHALL BE SIZED, SPACED, AND INSTALLED AS REQUIRED BY THE NFPA #13 STANDARDS. NO OTHER PIPING AND/OR DEVICES ARE TO BE ATTACHED TO THE SPRINKLER HANGING SYSTEM UNLESS THE HANGER HAS BEEN SPECIFICALLY DESIGNED FOR THE ADDITIONAL LOADING. THIS CONTRACTOR DOES NOT INCLUDE THE MATERIAL OR DEVICES TO IMPROVE THE STRUCTURAL STRENGTH OF THE BUILDING TO IT TO CARRY THE LOAD OF THE FIRE PROTECTION SYSTEM. SEE THE CAD DETAILS ON THIS SHEET FOR SPECIFIC HANGER ASSEMBLIES USED FOR THIS INSTALLATION PROJECT.

HANGER SPACING PER NFPA 13, 2010 EDITION
TABLE 9.2.2.1(A) MAXIMUM DISTANCE BETWEEN HANGERS (FT. – IN.)

PIPE TYPE	NOMINAL PIPE SIZE (IN.)											
	3/4	1	1-1/4	1-1/2	2	2-1/2	3	3-1/2	4	5	6	8
STEEL PIPE EXCEPT THREADED LIGHTWALL	N/A	12-0	12-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0

F.D.C. NOTE FOR FITTERS – 4-OUTLET FREESTANDING FIRE DEPARTMENT CONNECTION SHALL BE ON THE WEST SIDE OF BUILDING AND SHALL BE LOCATED AND ARRANGED SO THAT HOSE CAN BE READILY AND CONVENIENTLY ATTACHED TO THE INLET WITHOUT INTERFERENCE FROM ANY NEARBY OBJECTS. WHEN THE FDC SERVICES ONLY A PORTION OF A BUILDING, A SIGN SHALL BE ATTACHED INDICATING THE PORTIONS OF THE BUILDING SERVED. NFPA RECOMMENDS THAT THE FDC BE LOCATED NOT LESS THAN 18" AND NOT MORE THAN 48" ABOVE FINISHED EXTR. GRADE.

SYSTEM HYDROSTATIC TEST – (NFPA 13 –2010, SECTION 24.2.1) UNLESS PERMITTED BY 24.2.1.2 THROUGH 24.2.1.8, ALL PIPING AND ATTACHED APPURTENANCES SUBJECTED TO SYSTEM WORKING PRESSURE SHALL BE HYDROSTATICALLY TESTED AT 200 PSI (13.8 BAR) AND SHALL MAINTAIN THAT PRESSURE WITHOUT LOSS FOR 2 HOURS.

24.2.1.3 WHERE COLD WEATHER WILL NOT PERMIT TESTING WITH WATER, AN INTERIM AIR TEST SHALL BE PERMITTED TO BE CONDUCTED AS DESCRIBED IN 24.2.2. THIS PROVISION SHALL NOT REMOVE OR REPLACE THE REQUIREMENT FOR CONDUCTING THE HYDROSTATIC TEST AS DESCRIBED IN 24.2.1.1.
24.2.1.7 LOSS SHALL BE DETERMINED BY A DROP IN GAUGE PRESSURE OR VISUAL LEAKAGE.
24.2.1.8 THE TEST PRESSURE SHALL BE READ FROM A GAUGE LOCATED AT THE LOW ELEVATION POINT OF THE SYSTEM OR PORTION BEING TESTED THE PRESSURES IN PIPING AT HIGHER ELEVATIONS SHALL BE PERMITTED TO BE LESS THAN 200 PSI WHEN ACCOUNTING FOR ELEVATION LOSSES. SYSTEMS OR PORTIONS OF SYSTEMS THAT CAN BE ISOLATED SHALL BE PERMITTED TO BE TESTED SEPARATELY.
24.2.1.9 ADDITIVES, CORROSIVE CHEMICALS SUCH AS SODIUM SILICATE, OR DERIVATIVES OF SODIUM SILICATE BRINE, OR SIMILAR ACTING CHEMICALS SHALL NOT BE USED WHILE HYDROSTATICALLY TESTING SYSTEMS OR FOR STOPPING LEAKS.
24.2.1.10 PIPING BETWEEN THE EXTERIOR FIRE DEPARTMENT CONNECTION AND THE CHECK VALVE IN THE FIRE DEPARTMENT INLET PIPE SHALL BE HYDROSTATICALLY TESTED IN THE SAME MANNER AS THE BALANCE OF THE SYSTEM. AFTER REPAIR OR REPLACEMENT WORK AFFECTING THE FIRE DEPARTMENT CONNECTION, THE PIPING BETWEEN THE EXTERIOR AND THE CHECK VALVE IN THE FIRE DEPARTMENT INLET PIPE SHALL BE ISOLATED AND HYDROSTATICALLY TESTED AT 150 PSI (10.3 BAR)
24.2.1.11 WHEN SYSTEMS ARE BEING HYDROSTATICALLY TESTED, IT SHALL BE PERMITTED TO CONDUCT TEST WITH PENDENT SPRINKLERS OR PLUGS INSTALLED IN FITTINGS. ANY PLUGS SHALL BE REPLACED WITH PENDENT SPRINKLERS AFTER THE TEST IS COMPLETED.
24.2.1.12 PROVISIONS SHALL BE MADE FOR THE PROPER DISPOSAL OF WATER USED FOR FLUSHING AND TESTING.

(NFPA 20 –2010, SECTION 14.1.2.1) SUCTION AND DISCHARGE PIPING SHALL BE HYDROSTATICALLY TESTED AT NOT LESS THAN 200 PSI (13.8 BAR) PRESSURE, OR AT 50 PSI (3.4 BAR) IN EXCESS OF THE MAXIMUM PRESSURE TO BE MAINTAINED IN THE SYSTEM, WHICHEVER IS GREATER. 14.1.2.2 THE PRESSURE SHALL BE MAINTAINED FOR TWO HOURS.

WET PIPE SYSTEM DESCRIPTION A SPRINKLER SYSTEM EMPLOYING AUTOMATIC SPRINKLERS ATTACHED TO A PIPING SYSTEM CONTAINING WATER AND CONNECTED TO A WATER SUPPLY SO THAT WATER DISCHARGES IMMEDIATELY FROM SPRINKLERS OPENED BY HEAT FROM A FIRE. UPON OPERATION, THE SPRINKLERS DISTRIBUTE WATER OVER A SPECIFIC AREA TO CONTROL OR EXTINGUISH THE FIRE. AS THE WATER FLOWS THROUGH THE SYSTEM PIPING, AN ALARM IS ACTIVATED TO INDICATE THAT THE SYSTEM IS OPERATING. SPRINKLERS IMMEDIATELY OVER OR ADJACENT TO THE FIRE OPERATE – MINIMIZING WATER DAMAGE.

WET PIPE SYSTEM NOTES – THE SYSTEM IS DESIGNED AND INSTALLED IN ACCORDANCE WITH NFPA 13 – 2010 STANDARDS AND ALL LOCAL CODES.

ALL MATERIALS AND DEVICES ESSENTIAL TO THE SYSTEM OPERATION ARE TO BE UL LISTED AND/OR FM APPROVED.

A TOTAL OF 12 SPARE SPRINKLERS (IN CABINET WITH HEAD WRENCH) WILL BE PROVIDED IN ACCORDANCE WITH NFPA 13, SECTION 6.2.9

ALL CONTROL, DRAIN, AND TEST CONNECTION VALVES TO BE PROVIDED WITH THE PROPER IDENTIFICATION PER NFPA 13, SECTION 6.7.4

FIRE DEPARTMENT CONNECTION TO BE PROVIDED WITH THREADS MATCHING LOCAL REQUIREMENTS (NST UNLESS NOTED OTHERWISE).

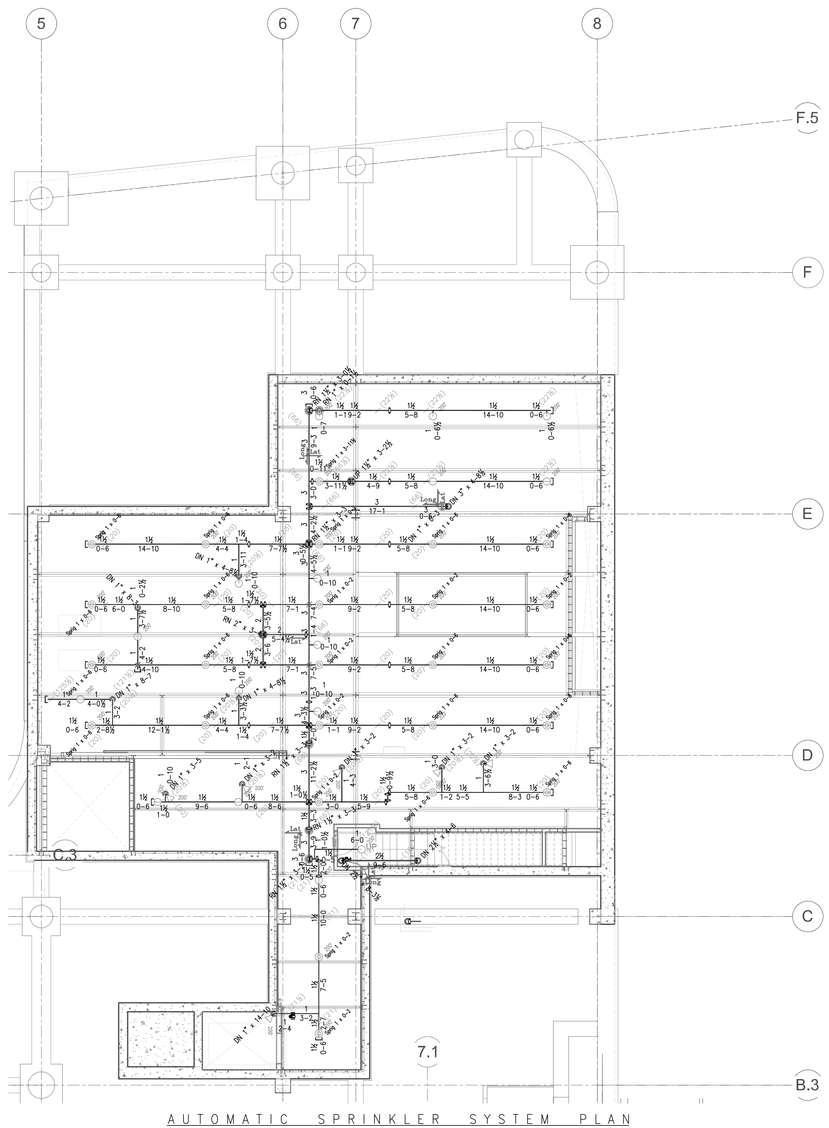
WATERFLOW DETECTING AND ALARM APPARATUS FOR WET PIPE SYSTEMS WILL BE PROVIDED AND INSTALLED. ANY NECESSARY WIRING OF THE ELECTRICAL DEVICES PROVIDED BY AHERN FIRE PROTECTION WILL BE PERFORMED BY OTHERS. REMOTE CENTRAL ALARM STATIONS (IF REQUIRED) ARE THE RESPONSIBILITY OF THE OWNER.

EACH WET PIPE SYSTEM WILL BE PROVIDED WITH RELIEF VALVE NOT LESS THAN 1/2" IN SIZE SET TO OPERATE AT 175 PSI OR 10 POUNDS IN EXCESS OF THE MAXIMUM SYSTEM PRESSURE WHICHEVER IS GREATER. THE RELIEF VALVE WILL BE INSTALLED AT THE REMOTE INSPECTION TEST VALVE OR AT THE SYSTEM RISER.

AUXILIARY DRAIN VALVES ARE TO BE SIZED & LOCATED AT THE LOW POINTS OF ALL TRAPPED SECTIONS OF PIPE PER SECTION 8.16.2

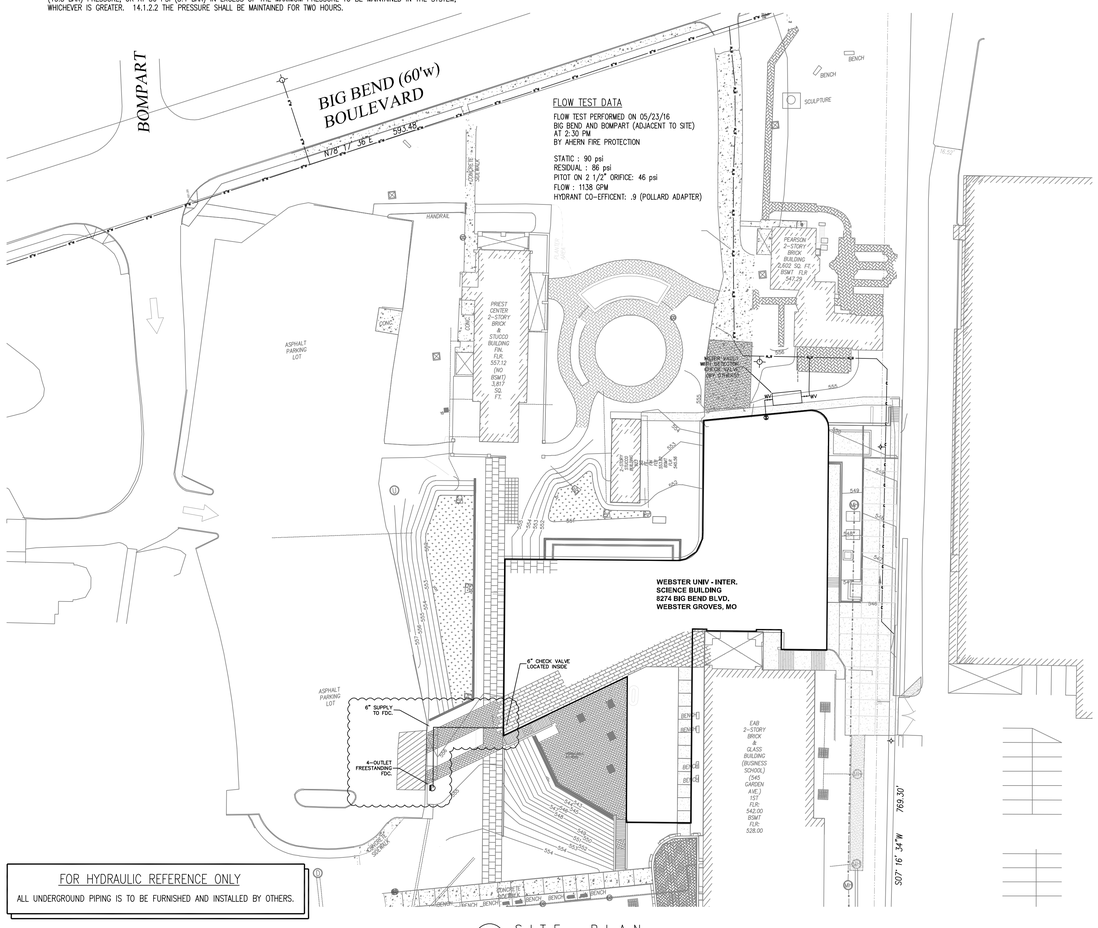
THE OWNER IS RESPONSIBLE FOR PROVIDING ADEQUATE HEAT (MAINTAINED AT OR ABOVE 40° F) THROUGHOUT THE ENTIRE AREA PROTECTED BY A WET PIPE SYSTEM.

HYDRAULIC DESIGN INFORMATION SIGNS WILL BE PROVIDED FOR EACH REMOTE AREA AND THEY WILL BE ATTACHED TO THE APPROPRIATE RISERS.



ALL DIMENSIONS AND ELEVATIONS SHOWN ARE TO THE CENTERLINE OF PIPE (UNLESS NOTED OTHERWISE).

SPRINKLER HEADS SHOWN ARE NOT NECESSARILY LOCATED IN THE CENTERLINE OF CEILING TILES.



PAINTING OF PIPE AND FITTINGS (IF REQUIRED) IS TO BE PERFORMED BY OTHERS UNLESS SPECIFIED IN THE CONTRACT.

PREACTION SYSTEM DESCRIPTION A SPRINKLER SYSTEM EMPLOYING AUTOMATIC SPRINKLERS ATTACHED TO A PIPING SYSTEM THAT CONTAINS AIR THAT MIGHT OR MIGHT NOT BE UNDER PRESSURE WITH A SUPPLEMENT DETECTION SYSTEM INSTALLED IN THE SAME AREAS AS THE SPRINKLERS.

DOUBLE-INTERLOCKED = THE SYSTEM UTILIZES BOTH A DETECTOR SYSTEM AND PRESSURIZED AIR OR GAS WITHIN THE SPRINKLER PIPING. THE PREACTION VALVE (DELUGE TYPE) IS ARRANGED SO THAT THE VALVE WILL OPEN ONLY IF BOTH THE PRESSURE WITHIN THE SPRINKLER PIPING IS REDUCED AND THE DETECTION SYSTEM IS OPERATED/TRIPPED. IF "ONLY" THE DETECTION SYSTEM OPERATES DUE TO DAMAGE, FIRE, OR A MALFUNCTION, THE VALVE WILL NOT OPEN. IF "ONLY" THE SPRINKLER PIPING OR A SPRINKLER IS DAMAGED OR BROKEN, THE VALVE WILL NOT OPEN. THE PRESSURIZED AIR OR GAS WITHIN THE PIPING SYSTEM IS USUALLY SUPERVISED. THE WATER FLOWS ONLY FROM SPRINKLERS OPENED BY THE HEAT FROM A FIRE AFTER THE VALVE IS TRIPPED BY BOTH THE DETECTORS AND

Hydraulic Design Information Sheet

Name - 46125900 Webster ISB - Basement Lvl - RA3 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS1
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-100.A
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 9-6
Occupancy - HC-2

SYSTEM

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC-2
Specific Ruling Made By Date

DESIGN

Area of Sprinkler Operation - 2506	System Type	Sprinkler/Nozzle
Density - .20	(X) Wet	Make Viking
Area Per Sprinkler - 130	( ) Dry	Model VK350
Elevation at Highest Outlet - 84.458	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 50	( ) Preaction	K-Factor 8.0
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.200
Hose Allowance - Outside - 200		

Note

Calculation Summary: Flow Required - 643.33 Press Required - 106.307 SYS1
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-
Static Press - 90	@ Press - 55	
Residual Press - 86	Elev. - 87.375	Well
Flow - 1140		Proof Flow
Elevation - 104		

Location - 8274 Big Bend Blvd

Source of Information - Ahern Fire Protection

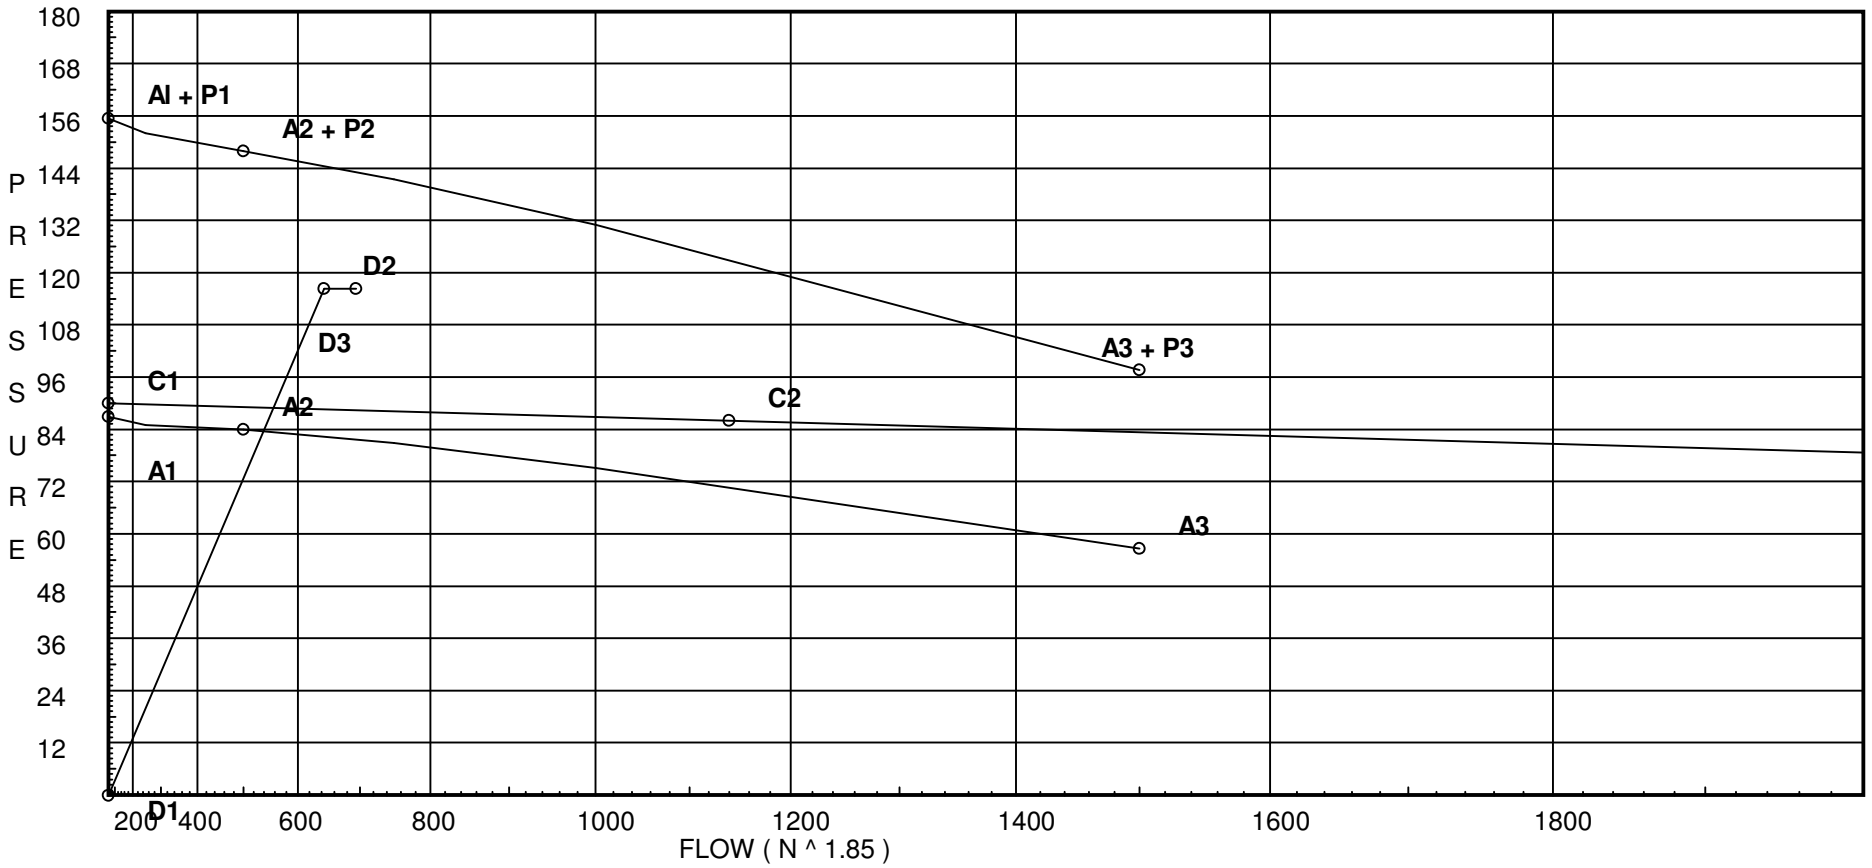
COMMODITY

Commodity Class Location
Storage Ht. Area Aisle W.
Storage Method: Solid Piled % Palletized % Rack

( ) Single Row ( ) Conven. Pallet ( ) Auto. Storage ( ) Encap.
( ) Double Row ( ) Slave Pallet ( ) Solid Shelf ( ) Non
( ) Mult. Row ( ) Open Shelf

STORAGE RACK

Flue Spacing Clearance:Storage to Ceiling
Longitudinal Transverse



Horizontal Barriers Provided:

City Water Supply:
- C1 - Static Pressure : 90
- C2 - Residual Pressure: 86
- C2 - Residual Flow : 1140

City Water Adjusted to Pump Inlet for Pf - Elev - Hose Flow
- A1 - Adjusted Static: 86.869
- A2 - Adj Resid : 83.879 @ 500
- A3 - Adj Resid : 56.554 @ 1500

Pump Data:
- P1 - Pump Churn Pressure : 68.5
- P2 - Pump Rated Pressure : 64
- P2 - Pump Rated Flow : 500
- P3 - Pump Pressure @ Max Flow : 41
- P3 - Pump Max Flow : 1500
- City Residual Flow @ 0 = 6135.00
- City Residual Flow @ 20 = 5355.71
- City Water @ 150% of Pump = 83.35

Demand:
- D1 - Elevation : -8.463
- D2 - System Flow : 643.329
- D2 - System Pressure : 116.240
- Hose (Demand) : 50
- D3 - System Demand : 693.329
- Hose (Adj City) : 200
- Safety Margin : 26.839

Hydraulic Design Information Sheet

Name - 46125901 Webster ISB - 1st Lvl - RA2 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS1
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-101.A
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 13-5 1/2
Occupancy - HC-2

SYSTEM

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC-2
Specific Ruling Made By Date

DESIGN

Area of Sprinkler Operation - 2506	System Type	Sprinkler/Nozzle
Density - .20	(X) Wet	Make Viking
Area Per Sprinkler - 130	( ) Dry	Model VK350
Elevation at Highest Outlet - 98.458	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 50	( ) Preaction	K-Factor 8.0
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.200
Hose Allowance - Outside - 200		

Note

Calculation Summary: Flow Required - 742.16 Press Required - 111.267 SYS1
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-
Static Press - 90	@ Press - 55	
Residual Press - 86	Elev. - 87.375	Well
Flow - 1140		Proof Flow
Elevation - 104		

Location - 8274 Big Bend Blvd

Source of Information - Ahern Fire Protection

STORAGE

Hydraulic Design Information Sheet

Name - 46125901 Webster ISB - 1st Lvl - RA4 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS1
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-101.B
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 10-2
Occupancy - HC-1,HC-2

SYSTEM

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC-1,HC-2
Specific Ruling Made By Date

DESIGN

Area of Sprinkler Operation - 1527	System Type	Sprinkler/Nozzle
Density - .10\.20	(X) Wet	Make Viking
Area Per Sprinkler - 400	( ) Dry	Model VK632
Elevation at Highest Outlet - 96.125	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 50	( ) Preaction	K-Factor 8.0
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.155
Hose Allowance - Outside - 200		

Note

Calculation Summary: Flow Required - 374.92 Press Required - 93.937 SYS1
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-
Static Press - 90	@ Press - 55	
Residual Press - 86	Elev. - 87.375	Well
Flow - 1140		Proof Flow
Elevation - 104		

Location - 8274 Big Bend Blvd

Source of Information - Ahern Fire Protection

COMMODITY STORAGE METHOD

Hydraulic Design Information Sheet

Name - 46125902 Webster ISB - 2nd Lvl - RA1 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS2
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-102.B
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 9-6
Occupancy - HC-1

SYSTEM

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC1
Specific Ruling Made By Date

DESIGN

Area of Sprinkler Operation - 1552	System Type	Sprinkler/Nozzle
Density - .10	(X) Wet	Make Viking
Area Per Sprinkler - 400	( ) Dry	Model VK634
Elevation at Highest Outlet - 109.5	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 50	( ) Preaction	K-Factor 8.0
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.155
Hose Allowance - Outside - 200		

Note

Calculation Summary: Flow Required - 426.86 Press Required - 118.909 SYS2
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-

Hydraulic Design Information Sheet

Name - 46125903 Webster ISB - 3rd Lvl - RA1 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS3
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-103.A
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 9-6
Occupancy - HC-1,HC-2,HC-3

SYSTEM DESIGN

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC-1,HC-2,HC-3
Specific Ruling Made By Date

Area of Sprinkler Operation - 1536	System Type	Sprinkler/Nozzle
Density - .1/.2/.3	(X) Wet	Make Viking
Area Per Sprinkler - 100	( ) Dry	Model VK534
Elevation at Highest Outlet - 124.833	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 100	( ) Preaction	K-Factor 11.2
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.200
Hose Allowance - Outside - 400		

Note

Calculation Summary: Flow Required - 600.28 Press Required - 85.557 SYS3
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-
Static Press - 90	@ Press - 55	
Residual Press - 86	Elev. - 87.375	Well
Flow - 1140		Proof Flow
Elevation - 104		

Location - 8274 Big Bend Blvd

Source of Information - Ahern Fire Protection

System	:	SYS3
Contract	:	461259
Data File	:	46125903 Webster ISB - 3rd Lvl - RA2.WXF

Hydraulic Design Information Sheet

Name - 46125903 Webster ISB - 3rd Lvl - RA2 Date - 10/17/16
Location - 8274 Big Bend Blvd
Building - Webster ISB System No. - SYS3
Contractor - Ahern Fire Protection Contract No. - 461259
Calculated By - Dana Mitchell Drawing No. - FP-103.B
Construction: ( ) Combustible (X) Non-Combustible Ceiling Height - 17-7
Occupancy - HC-1

SYSTEM DESIGN

( ) NFPA 13 ( ) Lt. Haz. Ord.Haz.Gp. ( ) 1 ( ) 2 ( ) 3 ( ) Ex.Haz.
( ) NFPA 231 ( ) NFPA 231C ( ) Figure Curve
Other Factory Mutual - HC-1
Specific Ruling Made By Date

Area of Sprinkler Operation - 1555	System Type	Sprinkler/Nozzle
Density - .10	(X) Wet	Make Viking
Area Per Sprinkler - 400	( ) Dry	Model VK634
Elevation at Highest Outlet - 132.916	( ) Deluge	Size 3/4"
Hose Allowance - Inside - 50	( ) Preaction	K-Factor 8.0
Rack Sprinkler Allowance - n/a	( ) Other	Temp.Rat.155
Hose Allowance - Outside - 200		

Note

Calculation Summary: Flow Required - 354.10 Press Required - 106.269 SYS3
C-Factor Used: 120 Overhead 140 Underground

WATER SUPPLY

Water Flow Test:	Pump Data:	Tank or Reservoir:
Date of Test - 05/23/16		Cap. -
Time of Test - 2:30 PM	Rated Cap.- 1000	Elev.-
Static Press - 90	@ Press - 55	
Residual Press - 86	Elev. - 87.375	Well
Flow - 1140		Proof Flow
Elevation - 104		

Location - 8274 Big Bend Blvd

Source of Information - Ahern Fire Protection

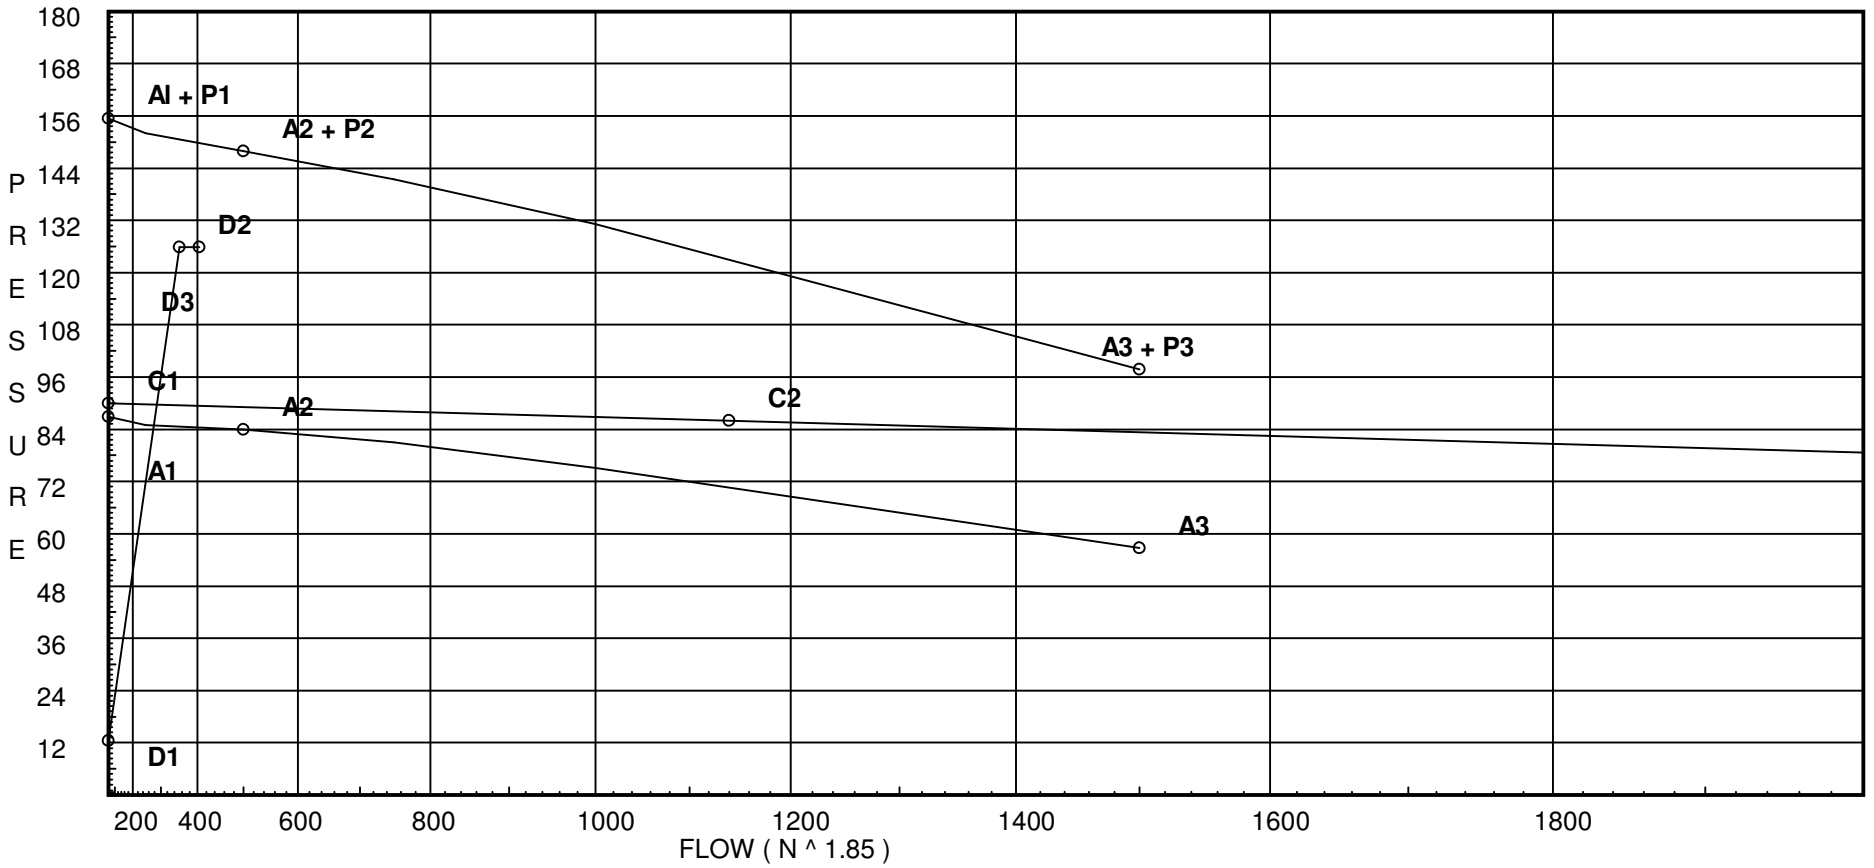
COMMODITY STORAGE

Commodity Class Location
Storage Ht. Area Aisle W.
Storage Method: Solid Piled % Palletized % Rack

( ) Single Row ( ) Conven. Pallet ( ) Auto. Storage ( ) Encap.
( ) Double Row ( ) Slave Pallet ( ) Solid Shelf ( ) Non
( ) Mult. Row ( ) Open Shelf

RACK STORAGE

Flue Spacing Clearance:Storage to Ceiling
Longitudinal Transverse



Horizontal Barriers Provided:

City Water Supply:
- C1 - Static Pressure : 90
- C2 - Residual Pressure: 86
- C2 - Residual Flow : 1140

City Water Adjusted to Pump Inlet for Pf - Elev - Hose Flow
- A1 - Adjusted Static: 86.869
- A2 - Adj Resid : 83.909 @ 500
- A3 - Adj Resid : 56.783 @ 1500

Pump Data:
- P1 - Pump Churn Pressure : 68.5
- P2 - Pump Rated Pressure : 64
- P2 - Pump Rated Flow : 500
- P3 - Pump Pressure @ Max Flow : 41
- P3 - Pump Max Flow : 1500
- City Residual Flow @ 0 = 6135.00
- City Residual Flow @ 20 = 5355.71
- City Water @ 150% of Pump = 83.35

Demand:
- D1 - Elevation : 12.525
- D2 - System Flow : 354.097
- D2 - System Pressure : 125.908
- Hose (Demand) : 50
- D3 - System Demand : 404.097
- Hose (Adj City) : 200
- Safety Margin : 24.165

RE: PREACTION DETECTION ADDED TO PROVIDED TOTALPAC WITH BUILT-IN PANEL
WEBSTER UNIVERSITY ISB
8274 BIG BEND BLVD
WEBSTER GROVES, MO 63119
AHERN FIRE PROTECTION CONTRACT NO. 391073

Dear Mr. Mayhew:

Please be hereby advised that our above-referenced Preaction Detection added to Provided TotalPac with built-in panel was placed in service on June 29, 2017.

Beginning with the above installation date, the system's materials and workmanship will be under warranty for one (1) year. However, we do not guarantee the operation of the installation due to factors beyond our control such as disabled devices or depleted municipal water supply.

Thank you once again for this opportunity to be of service.

Respectfully Submitted,

AHERN FIRE PROTECTION
A division of J. F. Ahern Co.

William Cavill

CONFIRMATION OF ARMING

AFP CONTRACT / WO #: 391073

JOB NAME: Webster University ISB

ADDRESS: 8274 Big Bend Blvd
Webster Groves, MO 63119

SYSTEM TYPE: Preaction

OF SYSTEMS:

LOCATION OF SYSTEM(S):

EQUIPMENT MANUFACTURER:

Ahern Fire Protection has completed the installation and testing of the Clean Agent, Preaction, Deluge or Foam Fire Suppression Systems~~. At your request, the automatic release mechanism of the system(s) was left disabled~~. Ahern Fire Protection was on site today to arm the system(s) and place your system(s) into full service. By signing and dating this correspondence, you are confirming your system(s) are now complete and in-service.

EQUIPMENT/MANUFACTURER DATA LIST

ITEM	PART NUMBER	DESCRIPTION	MANUFACTURER
1	5601P	135 Degree Heat Detector	System sensor
2	S-1275	12V 7.5 AH Batteries	Sbs

5600 Series Mechanical Heat Detectors

System Sensor's 5600 series mechanical heat detectors offer a low-cost means for property protection against fire, and for non-life-safety installations where smoke detectors are inappropriate.

5621

Features

- Multiple configurations for installations:
  – Single- and dual-circuit models
  – Fixed temp and combination fixed- temp/rate-of-rise 135°F or 194°F ratings.
- Plain housing for residential installations (Model 5601P)
- Easy-to-use terminal screws
- A broad range of back box mounting options:
  – Single gang
  – 3.5″ and 4″ Octagonal
  – 4″ square with square to round plaster ring
- Reversible mounting bracket

Multiple configurations. The 5600 series offers a full-line of configurations to accommodate a broad range of applications. Both single- and dual-circuit models are available for low- and high-temperature ratings with either fixed temperature or combination fixed temperature/rate-of-rise (ROR) activation. The ROR element of the fixed/ROR models is restorable to accommodate field-testing.

Installation flexibility. To satisfy a variety of installation needs, the 5600 series easily mounts to single-gang and octagonal back boxes. And these models accommodate four-square back boxes, when used with a square to round plaster ring. The reversible mounting bracket permits both flush- and surface-mount back box installations.

Visual identification. The 5600 series provides clear markings on the exterior of the unit to ensure that the proper detector is being used. Alphanumeric characters identify the activation method, as well as the temperature rating, in Fahrenheit and Celsius degrees. Fixed temperature models are identified FX, while combination fixed/rate-of-rise units are marked FX/ROR. The 5600 series also provides a post-activation indicator in the form of a collector. When the detector is activated, the collector drops from the unit, making it easy to identify the unit in alarm.

Specifications

Architectural/Engineering Specifications
Mechanical heat detector shall be a System Sensor 5600 series model number _____, listed to Underwriters Laboratories UL 521 for Heat Detectors for Fire Protective Signaling Systems. The detector shall be either a single-circuit or a dual-circuit type, normally open. The detector shall be rated for activation at either 135°F (57°C) or 194°F (90°C), and shall activate by means of a fixed temperature thermal sensor, or a combination fixed temperature/rate-of-rise thermal sensor. The rate-of-rise element shall be activated by a rapid rise in temperature, approximately 15°F (8.3°C) per minute. The detector shall include a reversible mounting bracket for mounting to 3½-inch and 4-inch octagonal, single gang, and 4-inch square back boxes with a square to round plaster ring. Wiring connections shall be made by means of SEMS screws that shall accommodate 14–22AWG wire. The detector shall contain alphanumeric markings on the exterior of the housing to identify its temperature rating and activation method. The rate-of-rise element of combination fixed temperature/rate-of-rise models shall be restorable, to allow for field-testing. The detectors shall include an external collector that shall drop upon activation to identify the unit in alarm.

Physical/Operating Specifications	
Maximum Installation Temperature	5601P, 5603, 5621, and 5623: 100°F (38°C) 5602, 5604, 5622, and 5624: 150°F (65.6°C)
Operating Humidity Range	5 to 95% RH non-condensing
Dimensions with mounting bracket	Diameter: 4.57 inches (11.6cm) Height: 1.69 inches (4.3cm)
Alarm Temperature	5601P, 5603, 5621, and 5623: 135°F (57°C) 5602, 5604, 5622, and 5624: 194°F (90°C)
Weight	6 oz. (170 grams)
Rate-of-Rise Threshold	15°F (8.3°C) rise per minute (models 5601P, 5602, 5621, and 5622 only)
Mounting	3½-inch octagonal back box 4-inch octagonal back box Single gang back box 4-inch square back box with a square to round plaster ring

STORAGE BATTERY SYSTEMS, INC.

SBS S Series Batteries

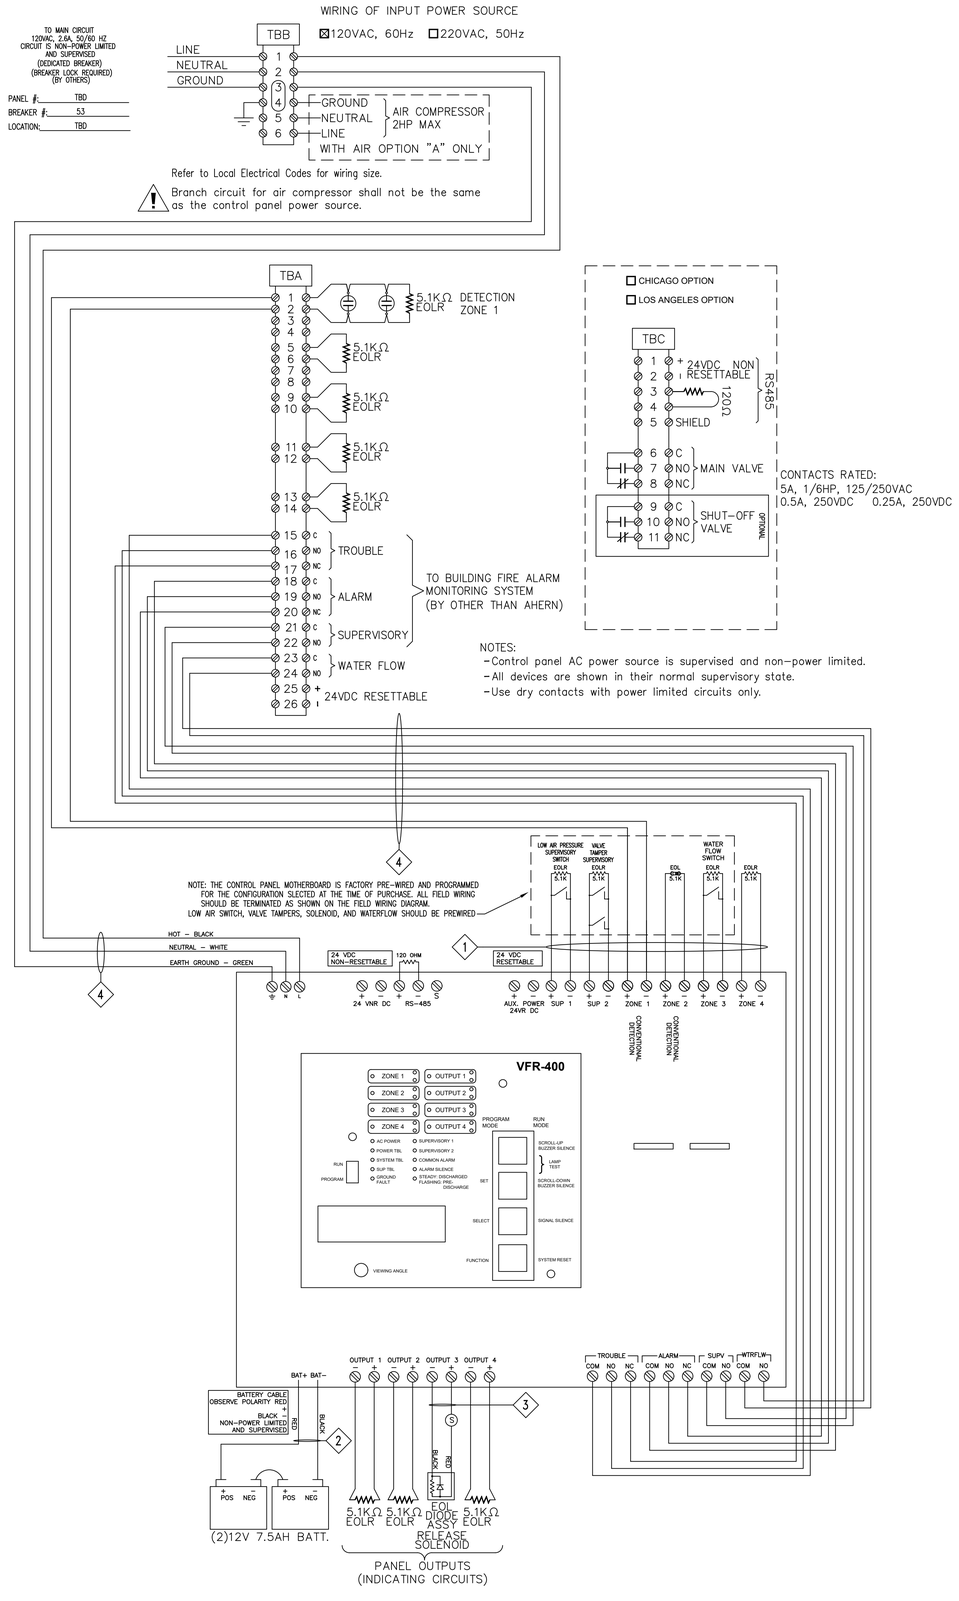
1.2AH - 200AH AGM (6V and 12V)

The sealed construction of the SBS "VRLA" series battery allows trouble-free, safe operation in any position. There is no need to add electrolyte since gases generated during charging are recombined in a unique "Oxygen Cycle."

Applications:

- UPS systems
- Switchgear/controls
- Telecommunications
- Emergency lighting
- Alarm systems
- Machine tools

Features:



- Maintenance-free operation
- Economical
- Low self-discharge (long shelf life)
- Spill-proof construction
- Compact
- Wide operating temperature
- Deep discharge recovery
- 100% memory-free
- Non-restricted for air transportation
- UL recognized #MH19767
- Design life of 4-8 years in float service
- 1 year warranty

Construction	
Plates	Lead-tin-calcium alloy
Separator	Microporous glass fiber (AGM)
Casing Material	ABS
Float Voltage	2.25-2.30V/cell
Equalize Voltage	2.35-2.48V/cell
Temperature Range	5°F to +122°F (-15°C to +50°C)
Service Life	4-8 years

Terminals	
F1:	.187" Spade
F2:	250" Spade
F3:	5.5mm Lug
F4:	6.5mm Lug
F5:	8.0mm Lug
F8:	10.0mm Lug
F10:	9.0mm Lug
F11:	10.5mm Lug

ELECTRICAL NOTES

A. INSTALLATION SHALL BE IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE NATIONAL FIRE PROTECTION ASSOCIATION (NFPA 72, CURRENT EDITION), NATIONAL ELECTRICAL CODE (NEC, CURRENT EDITION), THE EQUIPMENT MANUFACTURER, INSURANCE REPRESENTATIVE, AND LOCAL AUTHORITY HAVING JURISDICTION.
B. USE #10 OR 1/4" FASTENERS TO MOUNT THE CONTROL ENCLOSURE IN THE READILY ACCESSIBLE AND EASILY VISIBLE LOCATION INDICATED ON THE SYSTEM DRAWINGS AT 6'-0" AFF FROM THE TOP OF ENCLOSURE, MAXIMUM.
C. LOCATE SENSORS, SIGNAL DEVICES, MANUAL PULL STATIONS, ETC. FROM THE DRAWINGS SPECIFICALLY PREPARED FOR THE INSTALLATION.
D. INSTALL CONDUIT AND COMPLETE FIELD WIRING, LEAVING SUFFICIENT WIRE INSIDE THE CONTROL ENCLOSURE FOR FINAL CONNECTIONS.
E. WIRING MUST BE IN CONDUIT OR LISTED RACEWAY. RACEWAY TO MEET NEC REQUIREMENTS FOR RATED AREAS AND END USER'S SITE REQUIREMENTS, AS IT APPLIES TO THE INSTALLATION.
F. FIELD WIRE TERMINATIONS/CONDUCTOR PULLS SHALL BE CONTINUOUS FROM DEVICE TO DEVICE.
G. THE 120VAC CIRCUIT MUST BE IN A SEPARATE CONDUIT AND CONNECTED TO THE BUILDING POWER THROUGH A SEPARATE DEDICATED 15 AMP CIRCUIT. PROVIDE CIRCUIT BREAKER LOCK-ON CLIP. DO NOT COMBINE 120VAC CIRCUITS AND 24VDC FIRE SYSTEM CIRCUITS IN THE SAME RACEWAY.
H. CAUTION: PROPER CARE MUST BE EXERCISED WHEN HANDLING THE ELECTRIC CIRCUIT BOARDS. STATIC ELECTRICITY MAY DAMAGE CIRCUITRY IF HANDLED IMPROPERLY. HANDLE CIRCUIT BOARDS BY THE EDGES ONLY AND AVOID TOUCHING THE CONNECTION PINS. THESE CONNECTORS NEED TO BE KEPT CLEAN AND STATIC FREE TO INSURE RELIABLE OPERATION OF THE ELECTRONICS. WHEN HANDLING THE CIRCUIT BOARDS, IT IS ADVISABLE TO WEAR A WRIST STRAP WHICH IS PROPERLY GROUNDED TO DRAIN ANY STATIC CHARGES. KEEP THE CIRCUIT BOARDS IN THEIR PROTECTIVE STATIC BAGS UNTIL THEY ARE TO BE INSTALLED IN THE PANEL. THEN HANDLE THEM CAREFULLY (KEEPING YOURSELF GROUNDED) WHILE INSTALLING THEM. DISCHARGE STATIC ELECTRICITY BY TOUCHING GROUNDED SURFACE BEFORE HANDLING ANY ELECTRONIC COMPONENTS.
I. CONNECT ALL FIELD WIRING TERMINATION'S ACCORDING TO THE SYSTEM WIRING DIAGRAMS FOR THIS INSTALLATION.
J. SMOKE DETECTORS (IF APPLICABLE) SHALL NOT BE LOCATED WITHIN 3'-0" OF SUPPLY AIR DIFFUSERS.
K. DETECTORS SHALL BE LOCATED WITHIN PLUS OR MINUS 0'-6" OF LOCATIONS INDICATED ON SYSTEM PLANS. NOTIFY AHERN FIRE PROTECTION PROJECT MANAGER (PM) PRIOR TO EXCEEDING THE SPECIFIED TOLERANCES.
L. SYSTEM START-UP SHALL BE PERFORMED JOINTLY BY THE ELECTRICAL CONTRACTOR AND AHERN FIRE PROTECTION. START-UP SHALL BE CONDUCTED ONLY WHEN ALL SYSTEM COMPONENTS AND WIRING ARE INSTALLED AND TERMINATED.
M. THE 120VAC POWER INPUT AND/OR BATTERIES SHALL NOT BE ENERGIZED TO CONTROL UNIT UNTIL SYSTEM START-UP HAS BEEN PERFORMED BY AHERN FIRE PROTECTION.
N. THE INSTALLING CONTRACTOR SHALL CORRECT AND/OR TROUBLESHOOT ANY AND ALL FIELD INSTALLATION WIRING DISCREPANCIES.
O. DETECTOR AND INITIATOR WIRING (IF APPLICABLE) SHALL BE TESTED FOR GROUND FAULTS, SHORTS, AND TESTED POINT-TO POINT BY AHERN FIRE PROTECTION BEFORE ELECTRICAL COMPONENTS ARE INSTALLED ON CIRCUITS.
P. CLEAN AGENT SUPPRESSION SYSTEMS – ALL SUPPLY, RETURN, OR EXHAUST DUCTWORK ENTERING OR EXITING THE CLEAN AGENT PROTECTED SPACE SHALL BE SUPPLIED WITH A RATED LOW LEAKAGE SMOKE/FIRE DAMPER, ANY CLOSEABLE OPENINGS ON THE PERIMETER WALLS, FLOORS, OR CEILING OF THE CLEAN AGENT PROTECTED SPACE SHALL BE PROPERLY SEALED WITH FIRE RATED MATERIALS. DAMPERS SHALL BE INTERFACED AND CONTROLLED BY THE CLEAN AGENT CONTROL PANEL. DAMPERS, UNLESS NOTED OTHERWISE, ARE SUPPLIED, INSTALLED, AND WIRED BY OTHERS.
Q. ALL VARIATIONS FROM DRAWINGS MUST BE COORDINATED WITH AHERN FIRE PROTECTION BEFORE PROCEEDING WITH CHANGES.
R. INSTALLING CONTRACTOR IS RESPONSIBLE FOR VERIFYING CORRECT INSTALLATION OF DEVICES PER INSTALLATION DOCUMENTS PROVIDED WITH DEVICES.
S. ANY VARIATIONS FROM DRAWINGS SHALL BE CLEARLY INDICATED ON THE FIELD MARK-UP BY THE ELECTRICAL CONTRACTOR AND AHERN FIRE PROTECTION.

SEQUENCE OF OPERATIONS:

DOUBLE INTERLOCK – ELECTRIC/PNEUMATIC

NORMAL CONDITION
GREEN POWER ON LED LIT, ALL OTHER LEDS & SOUNDER OFF.

ALARM CONDITION
UPON RECEPT OF AN ALARM FROM SMOKE/HEAT DETECTOR ON ZONE 1 OR 2:
1) ALARM LED FLASHES, REMAINS STEADY AFTER SILENCING.
2) SOUNDER ON.
3) ALARM RELAY ACTIVATES SENDING SIGNAL TO BLDG FIRE ALARM PANEL.
4) PREACTION SOLENOID IS ACTIVATED.

UPON LOSS OF SYSTEM AIR PRESSURE FROM A FUSED SPRINKLER HEAD AFTER ALARM FROM ANY SMOKE/HEAT DETECTOR ON ZONE 1 OR 2:
1) ALARM LED FLASHES, REMAINS STEADY AFTER SILENCED.
2) SOUNDER ON.
3) ALARM LOW AIR PRESSURE SWITCH ACTIVATED.
4) WATERFLOW PRESSURE SWITCH ACTIVATED.
5) PREACTION CONTROL VALVES OPEN, FILLING SPRINKLER PIPE WITH WATER AND DISCHARGES OUT OF ALL OPEN HEADS.

SUPERVISORY CONDITION
UPON RECEIPT OF A SUPERVISORY SIGNAL.
1) SUPERVISORY LED FLASHES, REMAINS STEADY AFTER SILENCING.
2) SOUNDER WARBLE UNTIL SILENCED.
3) SUPERVISORY RELAY ACTIVATES SENDING SIGNAL TO BLDG FIRE ALARM PANEL.

TROUBLE CONDITION
UPON RECEIPT OF A TROUBLE SIGNAL.

1) YELLOW TROUBLE LED FLASHES, REMAINS STEADY AFTER SILENCING.
2) SOUNDER STEADY UNTIL SILENCED.
3) TROUBLE RELAY ACTIVATES SENDING SIGNAL TO BLDG FIRE ALARM PANEL.
4) DIAGNOSTIC LED DISPLAYS CODE/S.

ALL ALARM OR TROUBLE CONDITIONS

OPERATION OF SILENCE SWITCH.

1) YELLOW PANEL SILENCE LED FLASHES.
2) SOUNDER OFF.
3) SIGNAL CIRCUIT DEVICES OFF.
4) A SUBSEQUENT ALARM WILL TURN SIGNAL CIRCUIT DEVICES ON.

Inspection Services

Ahern Fire Protection performs inspection services for all types of fire protection systems. Inspections are conducted in accordance with NFPA standards, including full testing of systems and devices to ensure that components are in prime working condition. We offer inspection services geared to provide automatic periodic inspections required by authorities having jurisdiction and insurance carriers. **Ahern Fire Protection** maintains your inspection schedule so you do not have to. Our full-range inspection packages are cost effective. We offer the following inspections and services:

- **Wet Fire Sprinkler System Inspection**
- **Dry Fire Sprinkler System Inspection**
- **Backflow Device Inspection and filing with the Proper Authorities**
- **Fire Pump Inspection**
- **Preaction Sprinkler System Inspection**
- **Deluge Fire Sprinkler System Inspection**
- **Anti-Freeze Loop Inspections**
- **Private Fire Hydrant Inspections**
- **Foam System Testing and Inspections**
- **MIC® (Microbiologically Influenced Corrosion) Testing and Inspections**

Regulations for inspections of fire safety systems are determined by the National Fire Protection Association. Cities and states use these regulations as a guideline, and then make appropriate amendments according to their needs.

Required Inspections

How often should your fire sprinkler suppression system be tested? The National Fire Protection Association publishes NFPA 25 Inspection, Testing and Maintenance of Water-Based Fire Protection Systems; this document will provide recommendations on proper testing of your system. You may call **Ahern Fire Protection**, check with NFPA 25 or the manufactures' literature for details.

At least once each year, a full sprinkler system inspection should be performed by a knowledgeable professional. **Ahern Fire Protection** offers economical long-term service agreements. We will provide you with inspection reports and test certificates which will comply with your insurance company and local fire department inspection requirements.

You can contact our Service Department for the proper requirements in your area.

Sprinklers- Standard Response (50 years and every 10 years thereafter)

Sprinklers- Standard Response (75 years and every 5 years thereafter)

Other Required Maintenance &Testing

Low Point Drains

Air Compressors

Water Storage Tanks, Water Spray Systems & Foam Systems (not included in list)

Inspection and Testing Requirements for Fire Sprinkler Systems

	Sprinkler Systems	Monthly	Quarterly	Semi-annual	Annual	Other	Code	NFPA 25-2011 Edition
	Inspection							
	Gauges - Dry, PreAction & Deluge						5.2.4.2	Gauges on dry, preaction, and deluge systems shall be inspected weekly to ensure that normal air and water pressures are being maintained.
	Gauges - Wet Pipe Systems						5.2.4.1	Gauges on wet pipe sprinkler systems shall be inspected monthly to ensure that they are in good condition and that normal water supply pressure is being maintained.
	Control Valves							(See "Valves" below)
	Alarm Devices						5.2.5	Alarm devices shall be inspected quarterly to verify that they are free of physical damage.
	Hydraulic Nameplate						5.2.6	The hydraulic nameplate, if provided, shall be inspected quarterly to verify that it is attached securely to the sprinkler riser and is legible.
	Buildings						5.1.1	Annually, prior to the onset of freezing weather, buildings with wet pipe systems shall be inspected to verify that windows, skylights, doors, ventilators, other openings and closures, blind spaces, unused attics, stair towers, roof houses, and low spaces
	Hangers/Bracing						5.2.3	Sprinkler pipe hangers and seismic braces shall be inspected annually from the floor level.
	Pipe & Fittings						5.2.2	Sprinkler pipe and fittings shall be inspected annually from the floor level.
	Sprinkler Heads						5.2.1.1	Sprinklers shall be inspected from the floor level annually.
	Spare Sprinkler Heads						5.2.1.4	The supply of spare sprinklers shall be inspected annually…
	Valves (All Types)							(See "Valves" below)
	Testing							
	Alarm Devices						5.3.3	Waterflow alarm devices including, but not limited to, mechanical water motor gongs, vane-type waterflow devices, and pressure switches that provide audible or visual signals shall be tested quarterly.
	Main Drain							(See "Valves" below)
	Antifreeze Solution						5.3.4	The freezing point of solutions in antifreeze shall be tested annually by measuring the specific gravity with a hydrometer or refractometer and adjusting the solutions if necessary.
	Gauges						5.3.2	Gauges shall be replaced every 5 years or tested every 5 years by comparison with a calibrated gauge. Gauges not accurate to within 3 percent of the full scale shall be recalibrated or replaced.
	Sprinkler Heads						5.3.1.1.1	Where sprinklers have been in service for 50 years, they shall be replaced or representative samples from one or more sample areas shall be submitted to a recognized testing laboratory acceptable to the authority having jurisdiction for field service test
	Sprinkler Heads - Extra High Temp						5.3.1.1.1.4	Exception No. 3*: Representative samples of solder-type sprinklers with a temperature classification of extra high [325°F (163°C)] or greater that are exposed to semicontinuous to continuous maximum allowable ambient temperature conditions shall be tested
	Sprinkler Heads - Fast Response						5.3.1.1.1.3	Exception No. 2: Sprinklers manufactured using fast response elements that have been in service for 20 years shall be tested. They shall be retested at 10-year intervals.
	Maintenance							
	Valves (All Types)							(See "Valves" below)

	Obstruction Investigation						14.2.1	Systems shall be examined internally for obstructions where conditions exist that could cause obstructed piping. If the condition has not been corrected or the condition is one that could result in obstruction of piping despite any previous flushing procedures.
	Valves	Monthly	Quarterly	Semi-annual	Annual	Other		
	Inspection							
	Control Valves						13.3.2.1	All valves shall be inspected weekly.
	Alarm Valves						13.4.1.1	Alarm valves shall be externally inspected monthly.
	Check Valves						13.4.2.1	Valves shall be inspected internally every 5 years to verify that all components operate properly, move freely, and are in good condition.
	Preaction/Deluge Valves						13.4.3.1.7	The interior of the preaction or deluge valve and the condition of detection devices shall be inspected annually when the trip test is conducted.
	Dry Pipe Valves/Quick						13.4.4.1.5	The interior of the dry pipe valve shall be inspected annually when the trip test is conducted.
	Backflow Prevention Assemblies						13.6.2	All backflow preventers installed in fire protection system piping shall be tested annually…
	Testing							
	Main Drain						13.2.5	A main drain test shall be conducted quarterly at each water-based fire protection system riser to determine whether there has been a change in the condition of the water supply piping and control valves.
	Waterflow Alarm						13.2.6	All waterflow alarms shall be tested quarterly in accordance with the manufacturer's instructions.
	Control Valves						13.3.1	Each control valve shall be operated annually through its full range and returned to its normal position.
	Preaction/Deluge Valves						13.4.3	Each deluge or preaction valve shall be trip tested annually at full flow in warm weather and in accordance with the manufacturer's instructions.
	Dry Pipe Valves/Quick						13.4.4	Each dry pipe valve shall be trip tested annually during warm weather.
	Backflow Prevention Assemblies						13.6.2	All backflow preventers installed in fire protection system piping shall be tested annually…
	Maintenance							
	Control Valves						13.3.4.1	The operating stems of outside screw and yoke valves shall be lubricated annually.
	Preaction/Deluge Valves						13.4.3.3.2	During the annual trip test, the interior of the preaction or deluge valve shall be cleaned thoroughly and the parts replaced or repaired as necessary.
	Dry Pipe Valves/Quick Opening Devices						13.4.4.3.1	During the annual trip test, the interior of the dry pipe valve shall be cleaned thoroughly and parts replaced or repaired as necessary.

Before It's Too Late.

Fire Sprinkler Facts

- Approximately 4,000 people die in buildings without fire sprinkler systems every year. In buildings equipped with sprinkler systems, the number drops to about 20.*
- Of those 20 deaths, 18% are due to the fact that the fire originated in an area of the building with no fire sprinklers.*
- Fire sprinkler systems must be installed, inspected, and serviced properly to ensure peak operation.
- Ahern Fire Protection offers complete fire protection solutions for your facility.

AHERN SINCE 1880
FIRE PROTECTION

*Source: National Fire Sprinkler Association

Our Customers

Ahern has the resources to tackle projects of all sizes, from $100 to over $50 million. No matter which Ahern trade you hire, our qualified experts give you the personalized service that has made us an industry leader for over 125 years.

We work in a variety of business sectors including:
Commercial | Industrial | Institutional | Municipal

We execute projects in both the private and public sectors, and are equally comfortable in the role of a prime contractor or subcontractor.

The majority of J. F. Ahern Co.'s contracting projects are concentrated in the upper Midwest. However, the Company has worked throughout the United States and will continue to do so for selected projects. In addition to general contractors and construction managers, the Company regularly performs work for commercial and industrial business owners and developers.

Some of our clients include:

- General Motors
- Agnesian Health Care
- John Deere
- Aurora Health Care
- Alliant Energy
- Charter Steel
- Target stores
- State of Wisconsin
- Quad/Graphics
- Mercury Marine
- ACE Ethanol
- Harley-Davidson
- Milwaukee Metropolitan Sewerage District (MMSD)

Our Experience

Beginning as a storefront steam heat and plumbing shop in 1880, J. F. Ahern Co. has since become one of the largest, most respected mechanical contractors in the nation. Over 125 years of commitment to excellence and continued growth set us apart from the competition.

We consistently rank among the largest mechanical contractors in the country, according to surveys compiled by *Engineering News Record* and *Contractor* magazine. J. F. Ahern Co. posted sales of $212 million for fiscal year 2008.

Safety

J. F. Ahern Co.'s excellent safety record has earned us numerous safety awards, including:

- Wisconsin Corporate Safety Award – Three time winner of this honor.
- Fond du Lac Area Safety Council — Achieved best safety record among specialty trade contractors; Safety Honor Roll since 1985.
- Milwaukee Construction Industry Safety Council — "Best of the Best" award for an accident rate less than one-half the industry average.
- Associated General Contractors (AGC) — 12 consecutive years of achieving one of the best safety records in the state for specialty contractors; five consecutive years of maintaining a loss ratio 50% below national average.

Our Mission

In striving for excellence, J. F. Ahern Co. must be a reliable, cost-effective and performance-oriented member of the construction team.

By working with and not just for our customers, and by utilizing our experienced management team of recognized industry leaders, J. F. Ahern Co. provides constructive solutions to our customers' mechanical and fire protection needs.

This commitment to excellence — a vision shared by all employees of the Company — assures the success of our customers' projects and continued success of the J. F. Ahern Co.

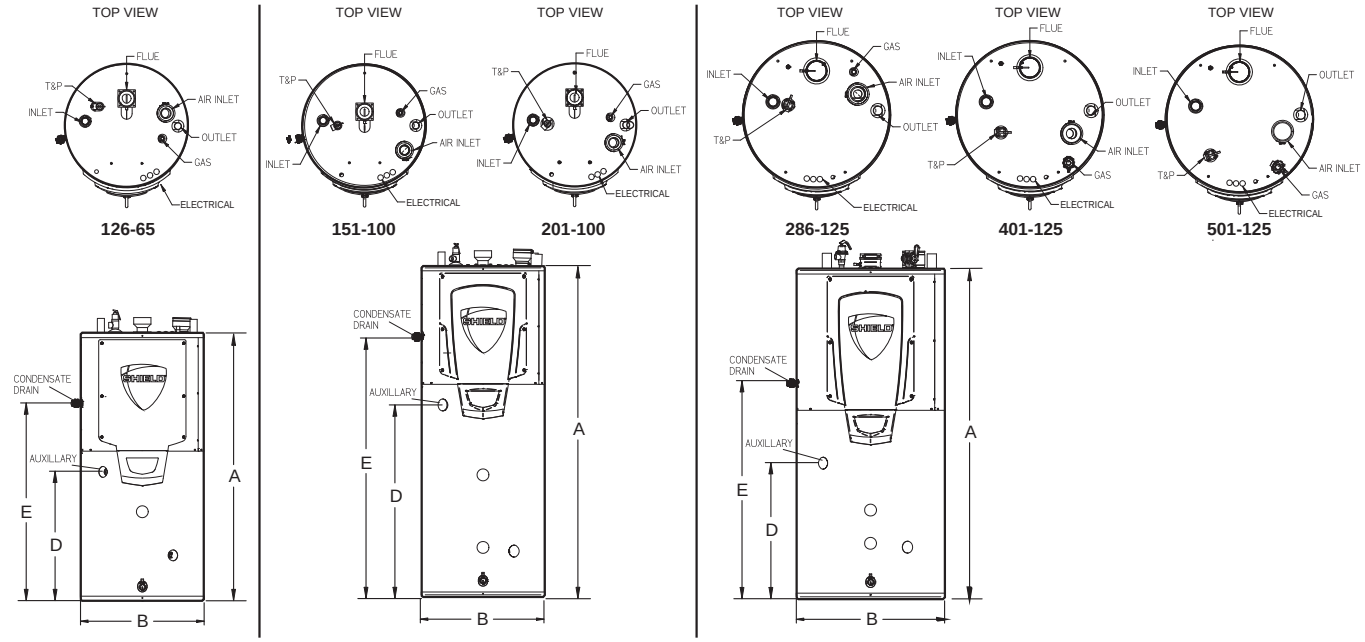
Standard Features



- 96% Thermal Efficiency
- Modulating Burner with 5:1 Turndown
- Operates at Temperatures up to 180˚F for Sanitizing Applications
- Stainless Steel Heat Exchanger
- Glass-Lined Steel Tank
- Magnesium Anode Rods
- 150 PSI Working Pressure
- ASME Construction (SNA151–501)
- ASME Temperature and Pressure Relief Valve
- Zero Clearances to Combustible Material
- PVC, CPVC, Polypropylene and Stainless Steel Venting up to 100 Equivalent Feet
- Direct-Vent Sealed Combustion
- Rooftop and Sidewall Venting
- Sidewall Vent Termination
- Advanced SMART Control, with:
  - LCD Display
  - Time Clock
  - Night Setback
  - Alarm Contacts
  - Runtime Contacts
  - Manual Reset High Limit
  - 3 Water Temperature Sensors
  - Flue Temperature Sensor
  - Contacts for Louvers
  - Adjustable Pump Delay
  - Security Protection
- Low-NOx Operation
- Low Gas Pressure Operation
- Direct-Spark Ignition
- Certified for Installation on Combustible Floors
- Full Port Brass Drain Valve
- 8-Foot Power Cord
- 3-Year Limited Warranty
- 1-Year Parts Warranty

Optional Equipment

Place an X in the box by all options that apply

☐ CON·X·US® Remote Connectivity
☐ Alarm Bell
☐ Concentric Vent Kit
☐ Condensate Neutralization Kit
☐ Low Water Cutoff
☐ Tank Side Tappings for Alternate Heat Source

Installation & Service Manual

Models: SNR126-065, SNR151-100, SNR201-100, SNA151-100, SNA201-100, SNA286-125, SNA401-125, AND SNA501-125

WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

-- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

-- WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a near by phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

-- Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

Hazard definitions

The following defined terms are used throughout this manual to bring attention to the presence of hazards of various risk levels or to important information concerning the life of the product.

⚠ DANGER DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

CAUTION CAUTION used without the safety alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage.

NOTICE NOTICE indicates special instructions on installation, operation, or maintenance that are important but not related to personal injury or property damage.

⚠ WARNING **Installer –** Read all instructions, in this manual before installing. Perform steps in the order given.

Have this water heater serviced/inspected by a qualified service technician, at least annually.

Failure to comply with the above could result in severe personal injury, death or substantial property damage.

NOTICE When calling or writing about the water heater – Please have the water heater model and serial number from the water heater rating plate.

Consider piping and installation when determining water heater location.

Any claims for damage or shortage in shipment must be filed immediately against the transportation company by the consignee.

Factory warranty (shipped with unit) does not apply to units improperly installed or improperly operated.

⚠ WARNING Failure to adhere to the guidelines on this page can result in severe personal injury, death, or substantial property damage.

⚠ WARNING DO NOT install units in rooms or environments that contain corrosive contaminants (see Table 1A on page 10). Failure to comply could result in severe personal injury, death, or substantial property damage.

When servicing the water heater –

- To avoid electric shock, disconnect electrical supply before performing maintenance.
- To avoid severe burns, allow the water heater to cool before performing maintenance.

⚠ WARNING If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death

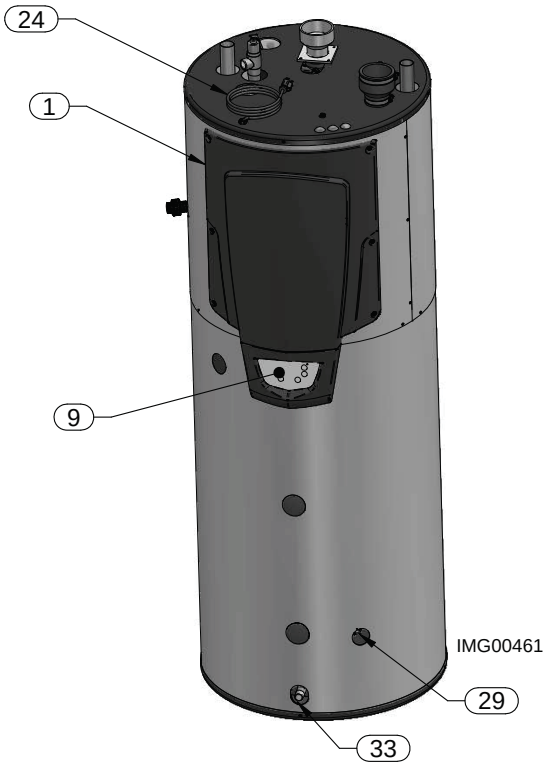
-- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

-- WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a near by phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

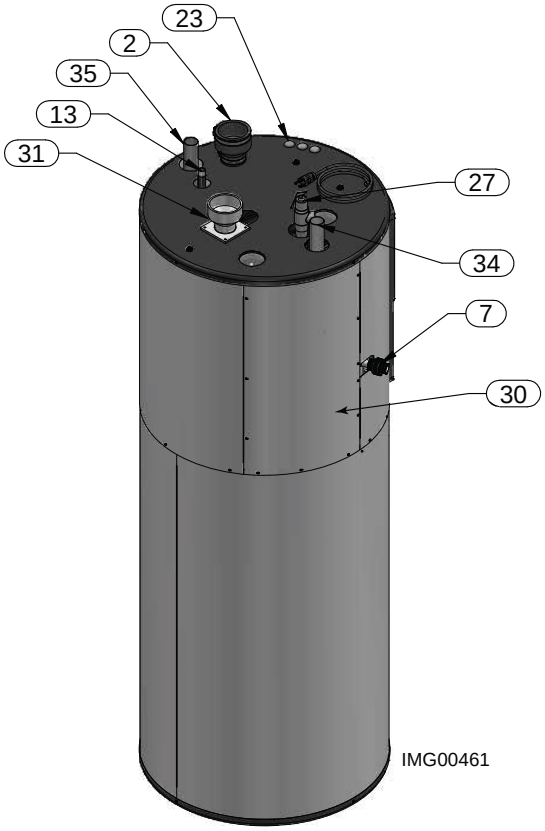
-- Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

Water heater operation –



- Do not block flow of combustion or ventilation air to the water heater.
- Should overheating occur or gas supply fail to shut off, do not turn off or disconnect electrical supply to circulator. Instead, shut off the gas supply at a location external to the appliance.
- Do not use this water heater if any part has been under water. The possible damage to a flooded appliance can be extensive and present numerous safety hazards. Any appliance that has been under water must be replaced.

The Shield - How it works...



1. **Access cover - front**
   Provides access to the gas train, heat exchanger and controls.
2. **Air intake adapter**
   Allows for the connection of the PVC air intake pipe to the water heater.
3. **Air pressure switch**
   The air pressure switch detects blocked inlet conditions.
4. **Air shroud (501-125 Model Only_Not Shown)**
   The air shroud directs air and gas flow into the blower.
5. **Blower**
   The blower pulls in air and gas through the venturi (item 32). Air and gas mix inside the blower and are pushed into the burner, where they burn inside the combustion chamber.
6. **Burner (not shown)**
   Made with metal fiber and stainless steel construction, the burner uses pre-mixed air and gas and provides a 5 to 1 firing rate.
7. **Condensate drain connection**
   Connects the condensate drain line to 1/2" PVC.
8. **Electronic Control Module**
   The electronic control responds to internal and external signals and controls the blower, gas valve, and pump to meet the demand.
9. **Electronic display**
   The electronic display consists of 4 buttons, and a liquid crystal display. The display is used to make adjustments and read water heater status.
10. **Flame inspection window (not shown)**
    The quartz glass window provides a view of the burner surface and flame.
11. **Flame sensor**
    Used by the control module to detect the presence of burner flame.
12. **Flue gas sensor (not shown)**
    This sensor monitors the flue gas exit temperature. The control module will modulate and shut down the water heater if the flue gas temperature gets too hot. This protects the flue pipe from overheating.
13. **Gas connection pipe**
    Threaded pipe connection, either 1/2", 3/4", or 1", depending on the model. This pipe should be connected to the incoming gas supply for the purpose of delivering gas to the water heater.
14. **Gas shutoff switch (151-100 - - 286-125 Models Only)**
    An electrical switch designed to cut power from the gas valve to prevent gas flow to the burner.
15. **Gas shutoff valve (401-125 -- 501-125 Models Only)**
    Manual valve used to isolate the gas valve from the gas supply.
16. **Gas valve**
    The gas valve senses the negative pressure created by the blower, allowing gas to flow only if the gas valve is powered and combustion air is flowing.
17. **Heat exchanger access cover**
    Allows access to the combustion side of the heat exchanger coils.
18. **Heat exchanger inlet temperature sensor**
    This sensor monitors the inlet water temperature to the heat exchanger.
19. **Heat exchanger outlet temperature sensor**
    This sensor monitors heat exchanger outlet water temperature.
20. **Ignition electrode**
    Provides direct spark for igniting the burner.
21. **Line voltage junction box**
    The junction box contains the connection points for the line voltage power.
22. **Low voltage connection board**
    The connection board is used to connect external low voltage devices.
23. **Low voltage wiring connections (knockouts)**
    Conduit entryway for the low voltage connection board.
24. **Power cord**
    The power cord allows for quick connection to 120V supply.
25. **Pump**
    Circulates water between the tank and the heat exchanger.
26. **Pump relay**
    Switches power to the pump.
27. **Relief valve**
    Protects the heat exchanger from over pressure and temperature conditions. The relief valve is set at 150 PSI.
28. **Stainless steel heat exchanger**
    Allows water to flow through specially designed coils for maximum heat transfer, while providing protection against flue gas corrosion. The coils are encased in a jacket that contains the combustion process.
29. **Tank sensor**
    Used by the control to monitor the temperature of the tank.
30. **Pump access panel**
    Panel used to gain access to the pump and condensate trap; also used to gain access to the outlet water sensor on Models 286-125 -- 501-125 only.
31. **Vent pipe connection**
    Allows for the connection of the vent pipe system to the water heater.
32. **Venturi**
    The venturi controls air and gas flow into the burner.
33. **Water heater drain valve**
    Location from which the water heater can be drained.
34. **Water inlet**
    Copper sweat connection for cold water supply that returns water from the system to the heat exchanger, either 1-1/2" or 2", depending on the model.
35. **Water outlet**
    Copper sweat connection that supplies hot water to the system, either 1-1/2" or 2", depending on the model.
36. **Over-temp switch (286-125 --501-125 Models Only)**
    An electrical switch designed to shut down water heater operation in the event the outer back of the heat exchanger, directly above the flue connection exceeds 604°F (318°C). This is a one time switch and could warrant a heat exchanger replacement. Check the integrity of the rear refractory at the back of the upper coil if the switch opens.
37. **Burner door temperature switch (Models 286-125 - 501-125 Only)**
    An electrical switch designed to shut down water heater operation in the event the combustion chamber access cover exceeds 500°F (260°C). This switch may only be reset by a qualified service technician AFTER the underlying cause has been identified and corrected. Check the integrity of the front refractory on the inside of the combustion chamber access cover if the switch opens.

	Min	Max				
SNR126-065	25,000 - 125,000		68	1-1/2"	1/2"	3"
SNR151-100	30,000 - 150,000		91	1-1/2"	1/2"	3"
SNA151-100	30,000 - 150,000		91	1-1/2"	1/2"	3"
SNR201-100	40,000 - 200,000		91	1-1/2"	1/2"	3"
SNA201-100	40,000 - 200,000		91	1-1/2"	1/2"	3"
SNA286-125	57,000 - 285,000		116	2"	3/4"	4"
SNA401-125	80,000 - 400,000		117	2"	1"	4"
SNA501-125	100,000 - 500,000		117	2"	1"	4"

NOTICE Maximum allowed working pressure is located on the rating plate.

Notes:

1. Shield water heaters require special gas venting. Use only the vent materials and methods specified in the Shield Installation and Service Manual.
2. Standard Shield water heaters are equipped to operate from sea level to 4,500 feet **only** with no adjustments. The water heater will de-rate by 4% for each 1,000 feet above sea level up to 4,500 feet.
3. High altitude Shield water heaters are equipped to operate from 3,000 to 12,000 feet **only**. The water heater will de-rate by 2% for each 1,000 feet above sea level. High altitude models are manufactured with a different control module for altitude operation, but the operation given in this manual remains the same as the standard models. A high altitude label (as shown in FIG. A) is also affixed to the unit.

   Derate values are based on proper combustion calibration and CO_2's adjusted to the recommended levels.
4. The Shield 286-125 model can be alternatively vented using a 3" vent/air size. If the 3" vent/air size is used, the maximum vent/air pipe lengths are limited to 60 equivalent feet each.

Figure A *High Altitude Label Location*

1 Determine water heater location

Installation must comply with:

- Local, state, provincial, and national codes, laws, regulations, and ordinances.
- National Fuel Gas Code, ANSI Z223.1 – latest edition.
- National Electrical Code.
- For Canada only: B149.1 Installation Code, CSA C22.1 Canadian Electrical Code Part 1 and any local codes.

NOTICE The Shield water heater gas manifold and controls met safe lighting and other performance under tests specified in ANSI Z21.10.3 – latest edition.

Before locating the water heater, check:

1. Check for nearby connection to:
   - Water piping
   - Venting connections
   - Gas supply piping
   - Electrical power
2. Locate the appliance so that if water connections should leak, water damage will not occur. When such locations cannot be avoided, it is recommended that a suitable drain pan, adequately drained, be installed under the appliance. Under no circumstances is the manufacturer to be held responsible for water damage in connection with this appliance, or any of its components.
3. Check area around the water heater. Remove any combustible materials, gasoline and other flammable liquids.

⚠ WARNING Failure to keep water heater area clear and free of combustible materials, gasoline, and other flammable liquids and vapors can result in severe personal injury, death, or substantial property damage.

4. The Shield water heater must be installed so that gas control system components are protected from dripping or spraying water or rain during operation or service.

⚠ WARNING This appliance is certified as an indoor appliance. Do not install the appliance outdoors or locate where the appliance will be exposed to freezing temperatures or to temperatures that exceed 100°F.

Do not install the appliance where the relative humidity may exceed 93%. Do not install the appliance where condensation may form on the inside or outside of the appliance, or where condensation may fall onto the appliance.

Failure to install the appliance indoors could result in severe personal injury, death, or substantial property damage.

⚠ WARNING This appliance requires a special venting system. The vent connection to the appliance must be made with the CPVC pipe section provided with the appliance. The field provided vent fittings must be cemented to the CPVC pipe section. Use only the vent materials, primer and cement specified in this manual to make the vent connections. Failure to follow this warning could result in fire, personal injury, or death.

Closet and alcove installations

A closet is any room the water heater is installed in which is less than 433 cubic feet for 126-065 and 201-100 models and 638 cubic feet for the 286-125 through 501-125 models.

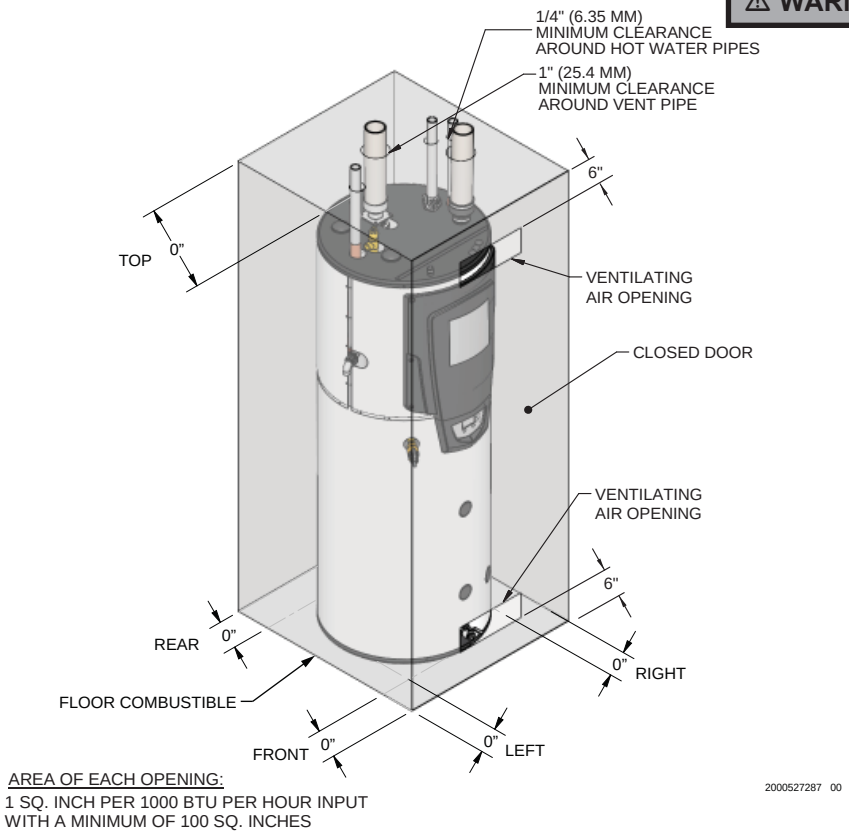
An alcove is any room which meets the criteria for a closet with the exception that it does not have a door.

Example: Room dimensions = 6 feet long, 6 feet wide, and 9 foot ceiling = 6 x 6 x 9 = 324 cubic feet. This would be considered a closet for a Shield Water Heater.

⚠ WARNING For closet and alcove installations as shown in FIG.'s 1-1 and 1-2, CPVC or stainless steel vent material must be used inside the structure. The ventilating air openings shown in FIG.'s 1-1 and 1-2 are required for this arrangement. Failure to follow this warning could result in fire, personal injury, or death.

Provide clearances:

Clearances from combustible materials



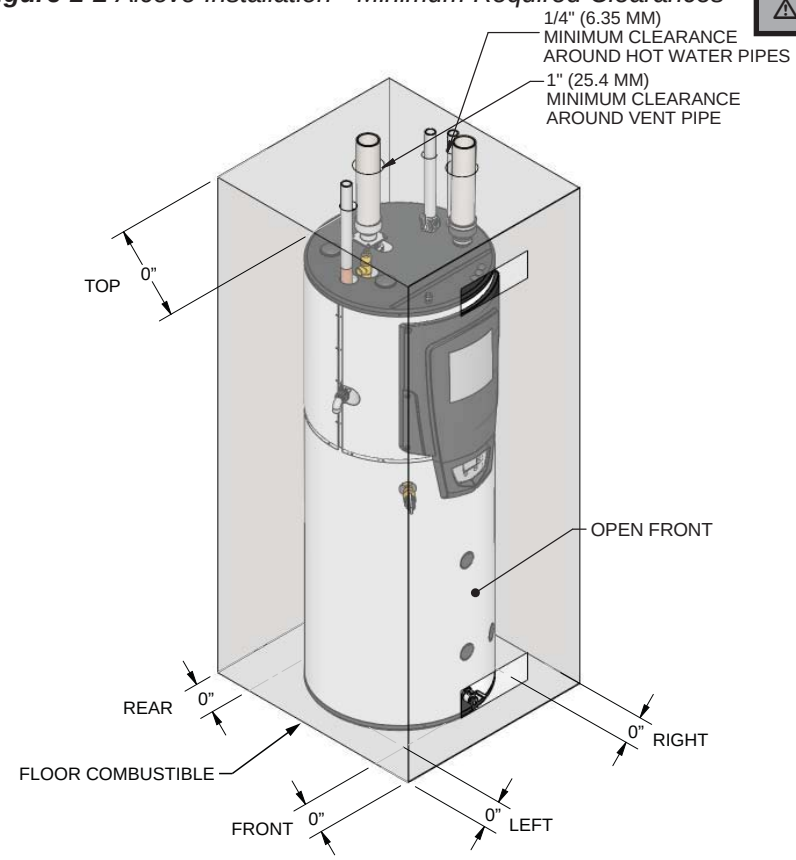
1. Hot water pipes—at least 1/4" from combustible materials.
2. Vent pipe – at least 1" from combustible materials.
3. See FIG.'s 1-1 and 1-2 on page 9 for other clearance minimums.

Clearances for service access

1. See FIG.'s 1-1 and 1-2 on page 9 for recommended service clearances. If you do not provide the minimum clearances shown, it may not be possible to service the water heater without removing it from the space.

1 Determine water heater location *(continued)*

Figure 1-1 *Closet Installation - Minimum Required Clearances*



⚠ WARNING

For closet installations, CPVC, polypropylene or stainless steel vent material MUST BE used in a closet structure due to elevated temperatures. Failure to follow this warning could result in fire, personal injury, or death.

RECOMMENDED SERVICE CLEARANCES:

Top -	18" (457 mm)
Left/Right Side -	24" (610 mm)
Front -	24" (610 mm)

Figure 1-2 *Alcove Installation - Minimum Required Clearances*

⚠ WARNING

For alcove installations, CPVC, polypropylene or stainless steel vent material MUST BE used in an alcove structure due to elevated temperatures. Failure to follow this warning could result in fire, personal injury, or death.

RECOMMENDED SERVICE CLEARANCES:

Top -	18" (457 mm)
Left/Right Side -	24" (610 mm)
Front -	24" (610 mm)

1 Determine water heater location

Table 1A *Corrosive Contaminants and Sources*

Products to avoid:
Spray cans containing chloro/fluorocarbons
Permanent wave solutions
Chlorinated waxes/cleaners
Chlorine-based swimming pool chemicals
Calcium chloride used for thawing
Sodium chloride used for water softening
Refrigerant leaks
Paint or varnish removers
Hydrochloric acid/muriatic acid
Cements and glues
Antistatic fabric softeners used in clothes dryers
Chlorine-type bleaches, detergents, and cleaning solvents found in household laundry rooms
Adhesives used to fasten building products and other similar products
Areas likely to have contaminants
Dry cleaning/laundry areas and establishments
Swimming pools
Metal fabrication plants
Beauty shops
Refrigeration repair shops
Photo processing plants
Auto body shops
Plastic manufacturing plants
Furniture refinishing areas and establishments
New building construction
Remodeling areas
Garages with workshops

Flooring and foundation

Flooring

The Shield water heater is approved for installation on combustible flooring, but must never be installed on carpeting.

⚠ WARNING Do not install the water heater on carpeting even if foundation is used. Fire can result, causing severe personal injury, death, or substantial property damage.

When local codes require compliance with NSF 5, the heater must be sealed to the floor with a food grade silicone to prevent debris and harborage of vermin under the heater.

If flooding is possible, elevate the water heater sufficiently to prevent water from reaching the water heater.

Remove water heater from wood pallet

1. Remove the sides and the top of the crate.
2. Remove the blocks on the base of the crate to allow for easier removal.
3. The water heater can then be slid off the base of the crate for installation.

NOTICE Do not drop the water heater or bump the jacket on the floor or pallet. Damage to the water heater can result.

Prevent combustion air contamination

Install air inlet piping for the Shield water heater as described in this manual. Do not terminate vent/air in locations that can allow contamination of combustion air. Refer to Table 1A, for products and areas which may cause contaminated combustion air.

⚠ WARNING Ensure that the combustion air will not contain any of the contaminants in Table 1A. Contaminated combustion air will damage the water heater, resulting in possible severe personal injury, death or substantial property damage. Do not pipe combustion air near a swimming pool, for example. Also, avoid areas subject to exhaust fumes from laundry facilities. These areas will always contain contaminants.

1 Determine water heater location *(continued)*

When using an existing vent system to install a new water heater:

⚠ WARNING Failure to follow all instructions can result in flue gas spillage and carbon monoxide emissions, causing severe personal injury or death.

Check the following venting components before installing:

- **Material** - For materials listed for use with this appliance, see Section 2 - General Venting. For polypropylene or stainless steel venting, an adapter of the same manufacturer must be used at the flue collar connection.
- **Size** - To ensure proper pipe size is in place, see Table 2A. Check to see that this size is used throughout the vent system.
- **Manufacturer** - For a stainless steel or polypropylene application, you must use only the listed manufacturers and their type product listed in Tables 2E and 2G for CAT IV positive pressure venting with flue producing condensate.
- **Supports** - Non-combustible supports must be in place allowing a minimum 1/4" rise per foot. The supports should adequately prevent sagging and vertical slippage, by distributing the vent system weight. For additional information, consult the vent manufacturer's instructions for installation.
- **Terminations** - Carefully review Sections 2 through 4 to ensure requirements for the location of the vent and air terminations are met and orientation of these fit the appropriate image from the Sidewall or Vertical options listed in the General Venting Section. For stainless steel vent, only use terminations listed in Table 2H for the manufacturer of the installed vent.
- **Seal** - With prior requirements met, the system should be tested to the procedure listed in parts (c) through (f) of the Removal of an Existing Water Heater Section, this page.

With polypropylene and stainless steel vent, seal and connect all pipe and components as specified by the vent manufacturer used; with PVC/CPVC vent, see the Installing Vent or Air Piping Section on page 20.

⚠ WARNING If any of these conditions are not met, the existing system must be updated or replaced for that concern. Failure to follow all instructions can result in flue gas spillage and carbon monoxide emissions, causing severe personal injury or death.

When removing a water heater from existing common vent system:

⚠ DANGER Do not install the Shield water heater into a common vent with any other appliance. This will cause flue gas spillage or appliance malfunction, resulting in possible severe personal injury, death, or substantial property damage.

⚠ WARNING Failure to follow all instructions can result in flue gas spillage and carbon monoxide emissions, causing severe personal injury or death.

At the time of removal of an existing water heater, the following steps shall be followed with each appliance remaining connected to the common venting system placed in operation, while the other appliances remaining connected to the common venting system are not in operation.

a. Seal any unused openings in the common venting system.

b. Visually inspect the venting system for proper size and horizontal pitch and determine there is no blockage or restriction, leakage, corrosion, or other deficiencies, which could cause an unsafe condition.

c. Test vent system – Insofar as is practical, close all building doors and windows and all doors between the space in which the appliances remaining connected to the common venting system are located and other spaces of the building. Turn on clothes dryers and any appliance not connected to the common venting system. Turn on any exhaust fans, such as range hoods and bathroom exhausts, so they will operate at maximum speed. Do not operate a summer exhaust fan. Close fireplace dampers.

d. Place in operation the appliance being inspected. Follow the lighting instructions. Adjust thermostat so appliance will operate continuously.

e. Test for spillage at the draft hood relief opening after 5 minutes of main burner operation. Use the flame of a match or candle, or smoke from a cigarette, cigar, or pipe.

f. After it has been determined that each appliance remaining connected to the common venting system properly vents when tested as outlined herein, return doors, windows, exhaust fans, fireplace dampers, and any other gas-burning appliance to their previous conditions of use.

g. Any improper operation of the common venting system should be corrected so the installation conforms with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 and/or CAN/CSA B149.1, Natural Gas and Propane Installation Code. When resizing any portion of the common venting system, the common venting system should be resized to approach the minimum size as determined using the appropriate tables in Part 11 of the National Fuel Gas Code, ANSI Z223.1/NFPA and/or CAN/CSA B149.1, Natural Gas and Propane Installation Code.

1 Determine water heater location

Maintain minimum specified clearances for adequate operation. All installations must allow sufficient space for servicing the vent connections, water pipe connections, piping and other auxiliary equipment, as well as the appliance.

Multiple appliances may be installed in a modular water heater installation. Multiple appliances may be installed side by side with no clearance between adjacent appliances because this appliance is approved for zero clearance from combustible surfaces.

Consult the *Venting* section of this manual for specific installation instructions for the appropriate type of venting system that you will be using.

Combustion and ventilation air requirements for appliances drawing air from the equipment room

Provisions for combustion and ventilation air must be in accordance with Air for Combustion and Ventilation, of the latest edition of the National Fuel Gas Code, ANSI Z223.1, in Canada, the latest edition of CGA Standard B149 Installation Code for Gas Burning Appliances and Equipment, or applicable provisions of the local building codes.

The equipment room MUST be provided with properly sized openings to assure adequate combustion air and proper ventilation.

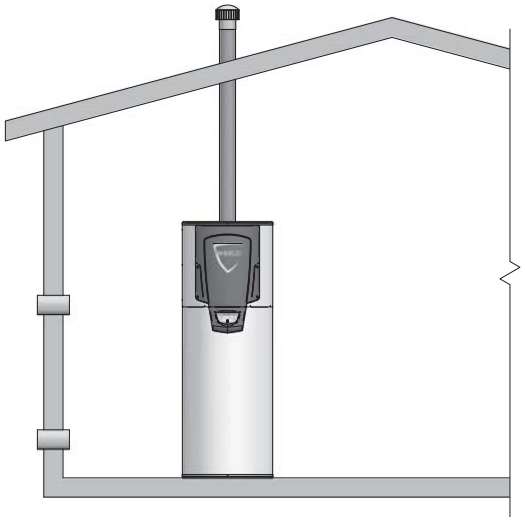


***Figure 1-3**_Combustion Air Direct from Outside*

1. If air is taken directly from outside the building with no duct, provide two permanent openings to the equipment room (see FIG. 1-3):

   (a) Combustion air opening, with a minimum free area of one square inch per 4000 Btu/hr input (5.5 cm^2 per KW). This opening must be located within 12" (30 cm) of the bottom of the enclosure.

   (b) Ventilation air opening, with a minimum free area of one square inch per 4000 Btu/hr input (5.5 cm^2 per kW). This opening must be located within 12" (30 cm) of the top of the enclosure.

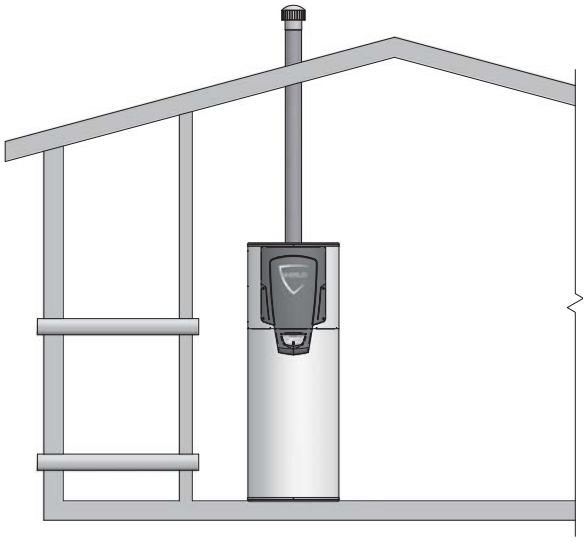

***Figure 1-4**_Combustion Air Through Ducts*

2. If combustion and ventilation air is taken from the outdoors using a duct to deliver the air to the equipment room, each of the two openings should be sized based on a minimum free area of one square inch per 2000 Btu/hr (11 cm^2 per kW) of input (see FIG. 1-4).

1 Determine water heater location *(continued)*

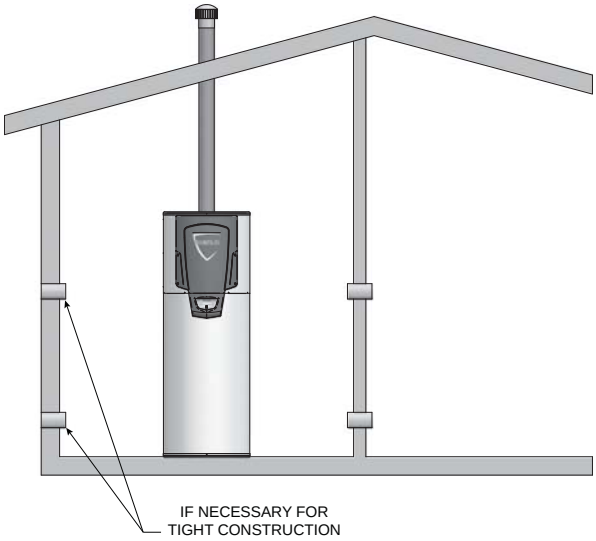

***Figure 1-5**_Combustion Air from Interior Space*

3. If air is taken from another interior space, each of the two openings specified above should have a net free area of one square inch for each 1000 Btu/hr (22 cm^2 per kW) of input, but not less than 100 square inches (645 cm^2) (see FIG. 1-5).

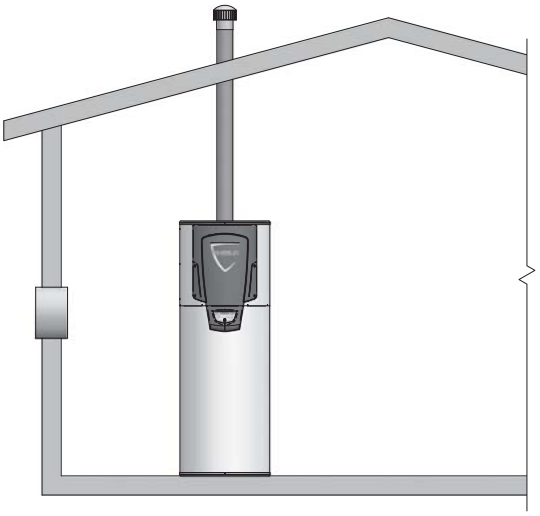

***Figure 1-6**_Combustion Air from Outside - Single Opening*

4. If a single combustion air opening is provided to bring combustion air in directly from the outdoors, the opening must be sized based on a minimum free area of one square inch per 3000 Btu/hr (7 cm^2 per kW). This opening must be located within 12" (30 cm) of the top of the enclosure (see FIG. 1-6).

TABLE - 1B
MINIMUM RECOMMENDED COMBUSTION AIR SUPPLY TO EQUIPMENT ROOM

Model Number	FIG. 1-3		FIG. 1-4		FIG. 1-5		FIG. 1-6
	*Outside Air from 2 Openings Directly from Outdoors		*Outside Air from 2 Ducts Delivered from Outdoors		**Inside Air from 2 Ducts Delivered from Interior Space		*Outside Air from 1 Opening Directly from Outdoors, in^2
	Top Opening, in^2	Bottom Opening, in^2	Top Opening, in^2	Bottom Opening, in^2	Top Opening, in^2	Bottom Opening, in^2	
126-065	32 (207 cm^2)	32 (207 cm^2)	63 (407 cm^2)	63 (407 cm^2)	125 (807 cm^2)	125 (807 cm^2)	42 (271 cm^2)
151-100	38 (246 cm^2)	38 (246 cm^2)	75 (484 cm^2)	75 (484 cm^2)	150 (968 cm^2)	150 (968 cm^2)	50 (323 cm^2)
201-100	50 (323 cm^2)	50 (323 cm^2)	100 (646 cm^2)	100 (646 cm^2)	200 (1,291 cm^2)	200 (1,291 cm^2)	67 (433 cm^2)
286-125	72 (465 cm^2)	72 (465 cm^2)	143 (923 cm^2)	143 (923 cm^2)	285 (1,839 cm^2)	285 (1,839 cm^2)	95 (613 cm^2)
401-125	100 (646 cm^2)	100 (646 cm^2)	200 (1,291 cm^2)	200 (1,291 cm^2)	400 (2,581 cm^2)	400 (2,581 cm^2)	134 (865 cm^2)
501-125	125 (807 cm^2)	125 (807 cm^2)	250 (1,613 cm^2)	250 (1,613 cm^2)	500 (3,226 cm^2)	500 (3,226 cm^2)	167 (1,078 cm^2)

*Outside air openings shall directly communicate with the outdoors. When combustion air is drawn from the outside through a duct, the net free area of each of the two openings must have twice (2 times) the free area required for Outside Air/2 Openings. The above requirements are for the water heater only; additional gas fired appliances in the equipment room will require an increase in the net free area to supply adequate combustion air for all appliances.

Combined interior space must be 50 cubic feet per 1,000 Btu/hr input. **Buildings MUST NOT be of *"Tight Construction". For buildings of ***"Tight Construction",** provide air openings into the building from outside.

*No combustion air openings are needed when the water heater is installed in a space with a volume NO LESS than 50 cubic feet per 1,000 Btu/hr of all installed gas fired appliances. **Buildings MUST NOT be of *"Tight Construction".**

***"Tight Construction"** is defined as a building with less than 0.40 ACH (air changes per hour).

1 Determine water heater location

Combustion air requirements are based on the latest edition of the National Fuel Gas Code, ANSI Z223.1; in Canada refer to the latest edition of CGA Standard CAN B149.1. Check all local code requirements for combustion air.

All dimensions based on net free area in square inches. Metal louvers or screens reduce the free area of a combustion air opening a minimum of approximately 25%. Check with louver manufacturers for exact net free area of louvers. Where two openings are provided, one must be within 12" (30cm) of the ceiling and one must be within 12" (30cm) of the floor of the equipment room. Each opening must have net free area as specified in the chart above (Table 1B). Single openings shall commence within 12" (30cm) of the ceiling.

⚠ CAUTION Under no circumstances should the equipment room ever be under negative pressure. Particular care should be taken where exhaust fans, attic fans, clothes dryers, compressors, air handling units, etc., may take away air from the unit.

The combustion air supply must be completely free of any flammable vapors that may ignite or chemical fumes which may be corrosive to the appliance. Common corrosive chemical fumes which must be avoided are fluorocarbons and other halogenated compounds, most commonly present as refrigerants or solvents, such as Freon, trichlorethylene, perchlorethylene, chlorine, etc. These chemicals, when burned, form acids which quickly attack the stainless steel heat exchanger, headers, flue collectors, and the vent system.

The result is improper combustion and a non-warrantable, premature appliance failure.

EXHAUST FANS: Any fan or equipment which exhausts air from the equipment room may deplete the combustion air supply and/or cause a downdraft in the venting system. Spillage of flue products from the venting system into an occupied living space can cause a very hazardous condition that must be immediately corrected. If a fan is used to supply combustion air to the equipment room, the installer must make sure that it does not cause drafts which could lead to nuisance operational problems with the appliance.

2 General venting

Direct venting options - Sidewall Vent

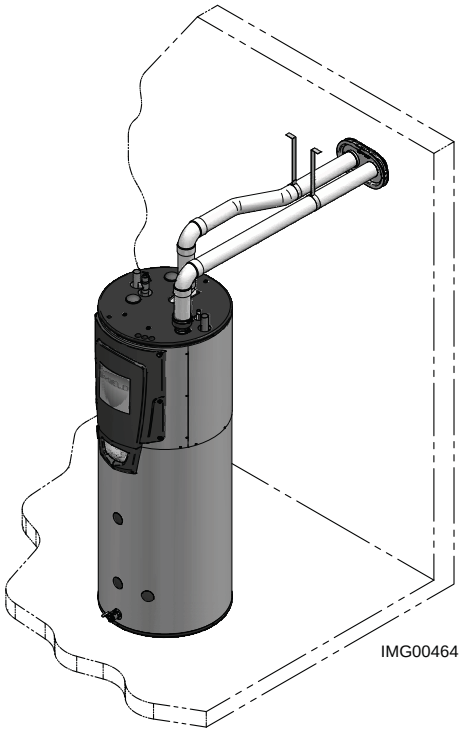

Figure 2-1 *Two-Pipe Sidewall Termination - See page 23 for more details*

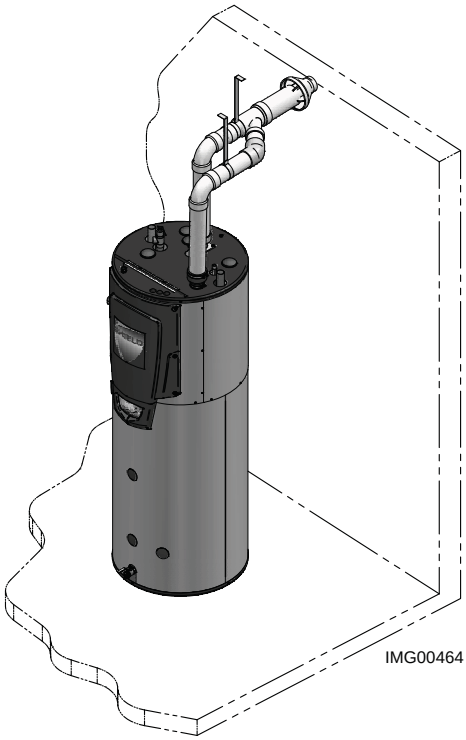

Figure 2-2 *PVC/CPVC Concentric Sidewall Termination - See page 30 for more details*

Direct venting options - Vertical Vent

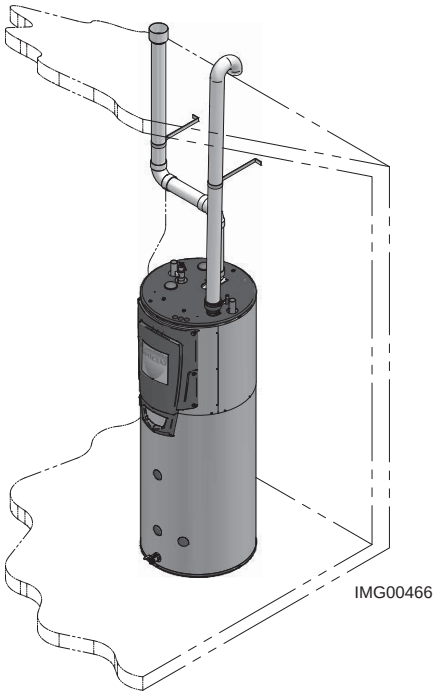

Figure 2-3 *Two-Pipe Vertical Termination - See page 33 for more details*

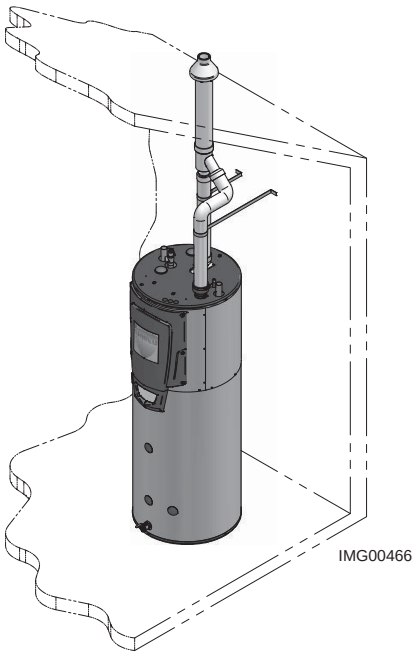

Figure 2-4 *PVC/CPVC Concentric Vertical Termination - See page 35 for more details*

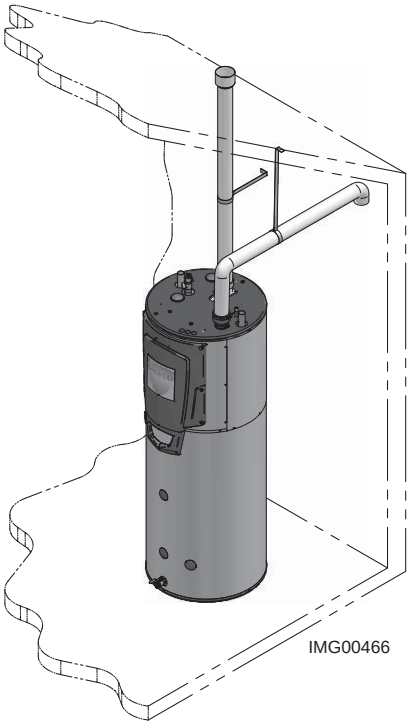

Figure 2-5 *Vertical Vent, Sidewall Air*

2 General venting

Install vent and combustion air piping

⚠ DANGER The Shield water heater must be vented and supplied with combustion and ventilation air as described in this section. Ensure the vent and air piping and the combustion air supply comply with these instructions regarding vent system, air system, and combustion air quality. See also Section 1 of this manual.

Inspect finished vent and air piping thoroughly to ensure all are airtight and comply with the instructions provided and with all requirements of applicable codes.

Failure to provide a properly installed vent and air system will cause severe personal injury or death.

⚠ WARNING This appliance requires a special venting system. Use only approved stainless steel, PVC, CPVC or polypropylene pipe and fittings listed in Tables 2D, 2E, and 2G for vent pipe, and fittings. Failure to comply could result in severe personal injury, death, or substantial property damage.

⚠ WARNING DO NOT mix components from different systems. The vent system could fail, causing leakage of flue products into the living space. Mixing of venting materials will void the warranty and certification of the appliance.

NOTICE Installation must comply with local requirements and with the National Fuel Gas Code, ANSI Z223.1 for U.S. installations or CSA B149.1 for Canadian installations.

⚠ WARNING For closet and alcove installations, CPVC, polypropylene or stainless steel material MUST BE used in a closet/alcove structure. Failure to follow this warning could result in fire, personal injury, or death.

⚠ CAUTION Improper installation of venting systems may result in injury or death.

NOTICE Follow the instructions in Section 1, page 11 of this manual when removing a water heater from an existing vent system.

⚠ WARNING Do not connect any other appliance to the vent pipe or multiple water heaters to a common vent pipe. Failure to comply could result in severe personal injury, death, or substantial property damage.

The Shield water heater vent and air piping can be installed through the roof or through a sidewall. Follow the procedures in this manual for the method chosen. Refer to the information in this manual to determine acceptable vent and air piping length.

You may use any of the vent/air piping methods covered in this manual. Do not attempt to install the Shield water heater using any other means.

You must also install air piping from outside to the water heater air intake adapter unless following the Optional Room Air instructions on page 19 of this manual. The resultant installation is direct vent (sealed combustion).

Air intake/vent connections

1. **Combustion Air Intake Connector** (FIG. 2-6) - Used to provide combustion air directly to the unit from outdoors. A fitting is provided on the unit for final connection. Combustion air piping must be supported per guidelines listed in the National Mechanical Code, Section 305, Table 305.4 or as local codes dictate.
2. **Vent Connector** (FIG.'s 2-7 thru 2-10) - Used to provide a passageway for conveying combustion gases to the outside. A transition fitting is provided on the unit for final connection. Vent piping must be supported per the National Building Code, Section 305, Table 305.4 or as local codes dictate.

Figure 2-6 *Near Water Heater Air Piping*

2 General venting *(continued)*

Requirements for installation in Canada

1. Installations must be made with a vent pipe system certified to ULC-S636.
2. The first three (3) feet of plastic vent pipe from the appliance flue outlet must be readily accessible for visual inspection.
3. The components of the certified vent system must not be interchanged with other vent systems or unlisted pipe/fittings. For concentric vent installations, the inner vent tube must be replaced with field supplied certified vent material to comply with this requirement.
4. The 3" Concentric Vent Kit available from Lochinvar (see Section 3 – *Sidewall Termination – Optional Concentric Vent*) and the 3" Concentric Vent Kit available from IPEX are both approved for use on the Shield water heater. Both kits are listed to the ULC-S636 standard for use in Canada.

Sizing

The Shield water heater uses model specific combustion air intake and vent piping sizes as detailed in Table 2A below.

Table 2A *Air Intake/Vent Piping Sizes*

Model	Air Intake	Vent
126-065 -- 201-100	3 inches	3 inches
286-125 -- 501-125	4 inches	4 inches

NOTICE Increasing or decreasing combustion air or vent piping sizes is not authorized.

Minimum / Maximum allowable combustion air and vent piping lengths are as follows:

Combustion Air = 12 equivalent feet minimum / 100 equivalent feet maximum

Vent = 12 equivalent feet minimum / 100 equivalent feet maximum

NOTICE When using the alternative 3" vent and combustion air piping with a Shield 286-125 model, the maximum allowable combustion air and vent piping lengths are limited to 60 equivalent feet each. The minimum allowable combustion air and vent pipe lengths remain 12 equivalent feet each.

When determining equivalent combustion air and vent length, add 5 feet for each 90° elbow and 3 feet for each 45° elbow.

EXAMPLE: 20 feet of PVC pipe + (4) 90° elbows + (2) 45° elbows + (1) concentric vent kit (100140480) = 49 equivalent feet of piping.

NOTICE The appliance output rating will reduce by up to 1.5% for each 25 feet of vent length, except when using the alternative 3" vent for the Shield 286-125 model which may de-rate by up to 4% for each 25 feet of vent length.

Table 2B *Concentric Vent Kit Equivalent Vent Lengths*

Model	Kit Number	Equivalent Vent Length
126-065 -- 201-100	100140480	3 feet
286-125	100140484	3 feet
401-125	100140484	5 feet
501-125	100140484	30 feet

2 General venting

Materials

Air inlet pipe materials:

The air inlet pipe(s) must be sealed. Choose acceptable combustion air inlet pipe materials from the following list:

PVC, CPVC, Polypropylene or ABS
Dryer Vent or Sealed Flexible Duct (not recommended for rooftop air inlet)
Galvanized steel vent pipe with joints and seams sealed as specified in this section.
Type "B" double-wall vent with joints and seams sealed as specified in this section.
AL29-4C, stainless steel material to be sealed to specification of its manufacturer.

*Plastic pipe may require an adapter (not provided) to transition between the air inlet connection on the appliance and the plastic air inlet pipe.

⚠ WARNING Using air intake materials other than those specified can result in personal injury, death or property damage.

NOTICE The use of double-wall vent or insulated material for the combustion air inlet pipe is recommended in cold climates to prevent the condensation of airborne moisture in the incoming combustion air.

Sealing of Type "B" double-wall vent material or galvanized vent pipe material used for air inlet piping on a sidewall or vertical rooftop Combustion Air Supply System:

a. Seal all joints and seams of the air inlet pipe using either Aluminum Foil Duct Tape meeting UL Standard 723 or 181A-P or a high quality UL Listed silicone sealant such as those manufactured by Dow Corning or General Electric.

b. Do not install seams of vent pipe on the bottom of horizontal runs.

c. Secure all joints with a minimum of three (3) sheet metal screws or pop rivets. Apply Aluminum Foil Duct Tape or silicone sealant to all screws or rivets installed in the vent pipe.

d. Ensure that the air inlet pipes are properly supported.

The PVC, CPVC, or ABS air inlet pipe should be cleaned and sealed with the pipe manufacturer's recommended solvents and standard commercial pipe cement for the material used. The PVC, CPVC, ABS, Dryer Vent or Flex Duct air inlet pipe should use a silicone sealant to ensure a proper seal at the appliance connection and the air inlet cap connection. Dryer vent or flex duct should use a screw type clamp to seal the vent to the appliance air inlet and the air inlet cap. Proper sealing of the air inlet pipe ensures that combustion air will be free of contaminants and supplied in proper volume.

Follow the polypropylene manufacturer's instructions when using polypropylene material as an inlet pipe.

When a sidewall or vertical rooftop combustion air supply system is disconnected for any reason, the air inlet pipe must be resealed to ensure that combustion air will be free of contaminants and supplied in proper volume.

⚠ DANGER Failure to properly seal all joints and seams as required in the air inlet piping may result in flue gas recirculation, spillage of flue products and carbon monoxide emissions causing severe personal injury or death.

2 General venting *(continued)*

Optional room air

NOTICE

Optional room air is intended for commercial applications. Combustion air piping to the outside is recommended for residential applications.

Commercial applications utilizing the Shield water heater may be installed with a single pipe carrying the flue products to the outside while using combustion air from the equipment room. In order to use the room air venting option the following conditions and considerations must be followed.

- The unit MUST be installed with the appropriate room air provisions.
- The equipment room MUST be provided with properly sized openings to assure adequate combustion air. Please refer to instructions provided with the room air kit (100157615 - Models 126-065 -- 201-100 and 100157616 - Models 286-125 -- 501-125).
- There will be a noticeable increase in the noise level during normal operation from the inlet air opening.
- Using the room air configuration makes the unit vulnerable to combustion air contamination from within the building. Please review Section 1, Prevent Combustion Air Contamination, to ensure proper installation.
- Vent system and terminations must comply with the standard venting instructions set forth in this manual.

⚠ WARNING

When utilizing the single pipe method, provisions for combustion and ventilation air must be in accordance with Air for Combustion and Ventilation, of the latest edition of the National Fuel Gas Code, ANSI Z223.1, in Canada, the latest edition of CGA Standard B149 Installation Code for Gas Burning Appliances and Equipment, or applicable provisions of the local building codes.

Air contamination

Pool and laundry products and common household and hobby products often contain fluorine or chlorine compounds. When these chemicals pass through the water heater, they can form strong acids. The acid can eat through the water heater wall, causing serious damage and presenting a possible threat of flue gas spillage or water heater water leakage into the building.

Please read the information given in Table 1A, page 10, listing contaminants and areas likely to contain them. If contaminating chemicals will be present near the location of the water heater combustion air inlet, have your installer pipe the water heater combustion air and vent to another location, per this manual.

⚠ WARNING

If the water heater combustion air inlet is located in a laundry room or pool facility, for example, these areas will always contain hazardous contaminants.

⚠ WARNING

To prevent the potential of severe personal injury or death, check for areas and products listed in Table 1A, page 10 before installing the water heater or air inlet piping.

If contaminants are found, you MUST:

- Remove contaminants permanently.

—OR—

- Relocate air inlet and vent terminations to other areas.

2 General venting

PVC/CPVC

This product has been approved for use with the PVC/CPVC vent materials listed in Table 2D.

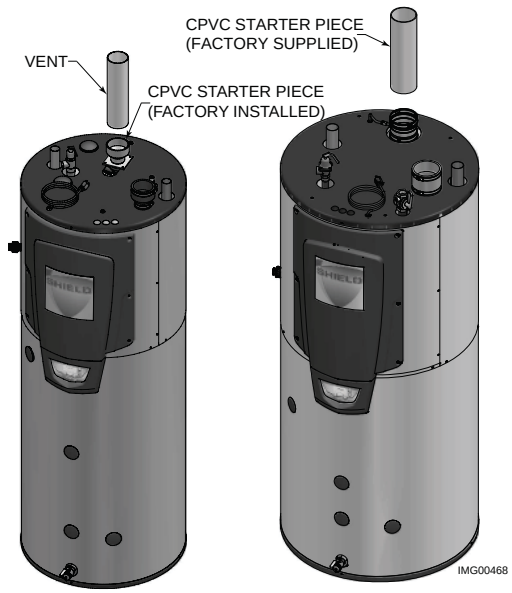
Installing vent and air piping

⚠ WARNING The vent connection to the appliance must be made with the starter CPVC pipe section provided with the 286-501 models (starter piece is factory installed on the 126-201 models) if PVC/CPVC vent is to be used. The field provided vent fittings must be cemented to the CPVC pipe section using an "All Purpose Cement" suitable for PVC and CPVC pipe. Use only the vent materials, primer, and cement specified in Table 2D to make the vent connections. Failure to follow this warning could result in fire, personal injury, or death.

NOTICE Use only cleaners, primers, and solvents that are approved for the materials which are joined together.

NOTICE All PVC vent pipes must be glued, properly supported, and the exhaust must be pitched a minimum of a 1/4 inch per foot back to the water heater (to allow drainage of condensate).

⚠ WARNING Insulation should not be used on PVC or CPVC venting materials. The use of insulation will cause increased vent wall temperatures, which could result in vent pipe failure.



1. Work from the water heater to vent or air termination. Do not exceed the lengths given in this manual for the air or vent piping.
2. Cut pipe to the required lengths and deburr the inside and outside of the pipe ends.
3. Chamfer outside of each pipe end to ensure even cement distribution when joining.
4. Clean all pipe ends and fittings using a clean dry rag. (Moisture will retard curing and dirt or grease will prevent adhesion.)
5. Dry fit vent or air piping to ensure proper fit up before assembling any joint. The pipe should go a third to two-thirds into the fitting to ensure proper sealing after cement is applied.
6. Priming and Cementing:
   a. Handle fittings and pipes carefully to prevent contamination of surfaces.
   b. Apply a liberal even coat of primer to the fitting socket and to the pipe end to approximately 1/2" beyond the socket depth.
   c. Apply a second primer coat to the fitting socket.
   d. While primer is still wet, apply an even coat of approved cement to the pipe equal to the depth of the fitting socket along with an even coat of approved cement to the fitting socket.
   e. Apply a second coat of cement to the pipe.
   f. While the cement is still wet, insert the pipe into the fitting, if possible twist the pipe a 1/4 turn as you insert it. **NOTE:** If voids are present, sufficient cement was not applied and joint could be defective.
   g. Wipe excess cement from the joint removing ring or beads as it will needlessly soften the pipe.

Table 2D *PVC/CPVC Vent Pipe, and Fittings*

Approved PVC/CPVC Vent Pipe and Fittings		
Item	**Material**	**Standard**
Vent pipe	PVC Schedule 40, 80	ANSI/ASTM D1785
	PVC - DWV	ANSI/ASTM D2665
	CPVC Schedule 40, 80	ANSI/ASTM F441
Vent fittings	PVC Schedule 40	ANSI/ASTM D2466
	PVC Schedule 80	ANSI/ASTM D2467
	CPVC Schedule 80	ANSI/ASTM F439
	PVC - DWV	ANSI/ASTM D2665
Pipe Cement / Primer	PVC	ANSI/ASTM D2564
	CPVC	ANSI/ASTM F493
NOTICE: DO NOT USE CELLULAR (FOAM) CORE PIPE		

NOTE: In Canada, CPVC and PVC vent pipe, ttings and cement/ primer must be ULC-S636 certi ed.

Figure 2-7 *Near Water Heater PVC/CPVC Venting*

MODELS: 126-065 - 201-100 MODELS: 286-125 - 501-125

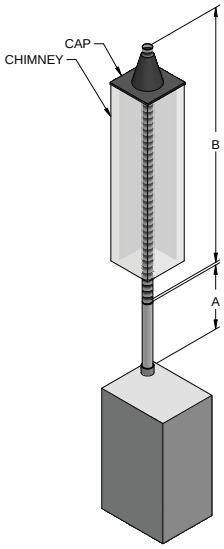
2 General venting *(continued)*

Polypropylene

This product has been approved for use with polypropylene vent with the manufacturers listed in Table 2E.

All terminations must comply with listed options in this manual and be a single-wall vent offering.

For support and special connections required, see the manufacturer's instructions. All vent is to conform to standard diameter and equivalent length requirements established.



When determining equivalent combustion air and vent length for polypropylene single-wall piping:

- 1 foot of Duravent 4 inch single-wall pipe is equivalent to 1.6 feet of piping

Flexible polypropylene

For use of flex pipe, it is recommended to have the vent material in 32°F or higher ambient space before bending at installation. No bends should be made to greater than 45° and ONLY installed in vertical or near vertical installations (FIG. 2-8).

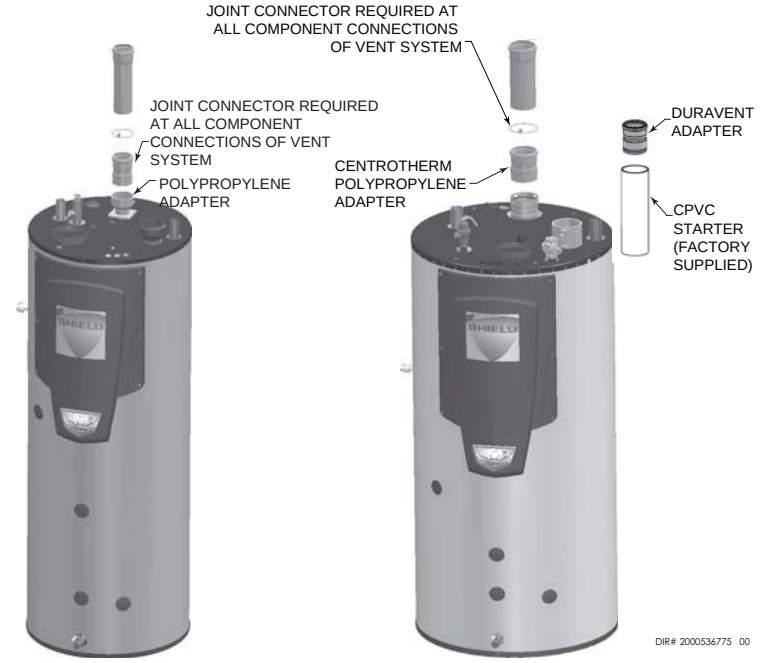
*NOTES: 1) FLEX PIPE MAY ONLY BE RUN IN A VERTICAL ORIENTATION
2) ALL VENT LENGTHS REPRESENTED IN ABOVE CHARTS ARE EQUIVALENT LENGTHS.
3) SECTION A IS EQUIVALENT FEET OF RIGID PIPE, WHICH MAY INCLUDE 45 AND 90° ELBOWS. PLEASE SEE SIZING SECTION FOR DETERMINING EQUIVALENT FEET.

IMG00840

NOTICE The installer must use a specific vent starter adapter at the flue collar connection. The adapter is supplied by the vent manufacturer to adapt to its vent system. See Table 2F for approved vent adapters. Discard CPVC starter piece.

NOTICE All vent connections MUST be secured by the vent manufacturer's joint connector (FIG. 2-9).



⚠ WARNING Insulation should not be used on polypropylene venting materials. The use of insulation will cause increased vent wall temperatures, which could result in vent pipe failure.

⚠ WARNING Use only the adapters and vent system listed in Tables 2E and 2F. DO NOT mix vent systems of different types or manufacturers. Failure to comply could result in severe personal injury, death, or substantial property damage.

NOTICE Installations must comply with applicable national, state, and local codes. For Canadian installation, polypropylene vent must be listed as a ULC-S636 approved system.

NOTICE Installation of a polypropylene vent system should adhere to the vent manufacturer's installation instructions supplied with the vent system.

2 General venting

Stainless steel vent

This product has been approved for use with stainless steel using the manufacturers listed in Table 2G. This unit requires Category IV venting.

⚠ WARNING Use only the materials, vent systems, and terminations listed in Tables 2G and 2H. DO NOT mix vent systems of different types or manufacturers. Failure to comply could result in severe personal injury, death, or substantial property damage.

NOTICE The installer must use a specific vent starter adapter at the flue collar connection, supplied by the vent manufacturer to adapt to its vent system. See Table 2H for approved vent adapters. Discard CPVC starter piece.

NOTICE Installations must comply with applicable national, state, and local codes. Stainless steel vent systems must be listed as a UL-1738 approved system for the United States and a ULC-S636 approved system for Canada.

NOTICE Installation of a stainless steel vent system should adhere to the stainless steel vent manufacturer's installation instructions supplied with the vent system.

3 Sidewall direct venting

Vent/air termination – sidewall

⚠ WARNING Follow instructions below when determining vent location to avoid possibility of severe personal injury, death, or substantial property damage.

⚠ WARNING A gas vent extending through an exterior wall shall not terminate adjacent to a wall or below building extensions such as eaves, parapets, balconies, or decks. Failure to comply could result in severe personal injury, death, or substantial property damage.

Determine location

Locate the vent/air terminations using the following guidelines:

1. The total length of piping for vent or air must not exceed the limits given in the General Venting Section on page 17 of this manual.
2. You must consider the surroundings when terminating the vent and air:
   a. Position the vent termination where vapors will not damage nearby shrubs, plants or air conditioning equipment or be objectionable.
   b. The flue products will form a noticeable plume as they condense in cold air. Avoid areas where the plume could obstruct window views.
   c. Prevailing winds could cause freezing of condensate and water/ice buildup where flue products impinge on building surfaces or plants.
   d. Avoid possibility of accidental contact of flue products with people or pets.
   e. Do not locate the terminations where wind eddies could affect performance or cause recirculation, such as inside building corners, near adjacent buildings or surfaces, window wells, stairwells, alcoves, courtyards, or other recessed areas.

⚠ WARNING Sidewall vent and air inlet terminations must terminate in the same pressure zone.

   f. Do not terminate above any door or window. Condensate can freeze, causing ice formations.
   g. Locate or guard vent to prevent condensate damage to exterior finishes.
   h. Do not locate the terminations over public walkways.
   i. Do not locate the terminations near soffit vents, crawl space vents, or other areas where condensate or vapor could create a nuisance, hazard, or cause property damage.
   j. Do not locate the terminations where condensate vapor could cause damage or could be detrimental to the operation of regulators, relief valves, or other equipment.

Figure 3-1A *PVC/CPVC/Polypropylene Sidewall Termination of Air and Vent*

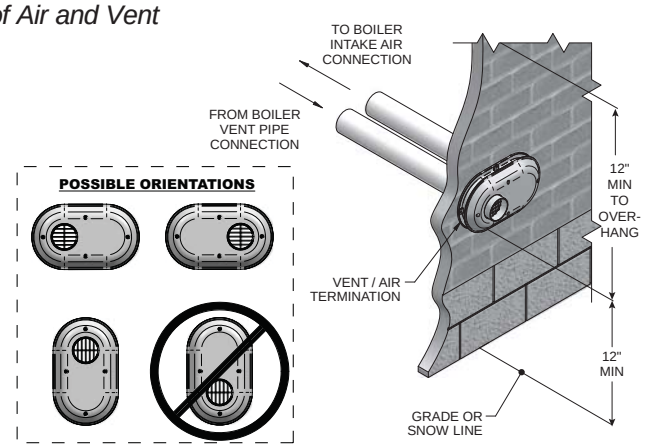

Table 3A *Sidewall Vent Kits*

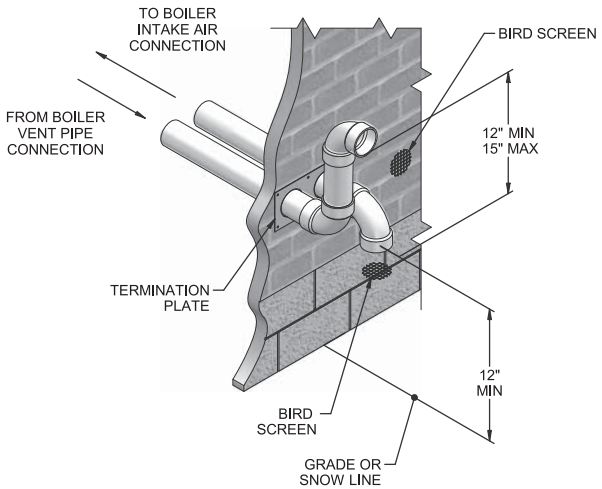

Model	Kit Number	Vent Size
126-065 -- 201-100	100157610	3 inch vent
286-125 -- 501-125	100157611	4 inch vent

If using the alternate sidewall termination:

3. The air piping must terminate in a down-turned elbow as shown in FIG. 3-1B. This arrangement avoids recirculation of flue products into the combustion air stream.
4. The vent piping must terminate in an elbow pointed outward or away from the air inlet, as shown in FIG. 3-1B.

⚠ WARNING Do not exceed the maximum lengths of the outside vent piping shown in FIG. 3-1B. Excessive length exposed to the outside could cause freezing of condensate in the vent pipe, resulting in potential water heater shutdown.

Figure 3-1B *Alternate PVC/CPVC/Polypropylene Sidewall Termination of Air and Vent w/Field Supplied Fittings*

3 Sidewall direct venting

Vent/air termination – sidewall

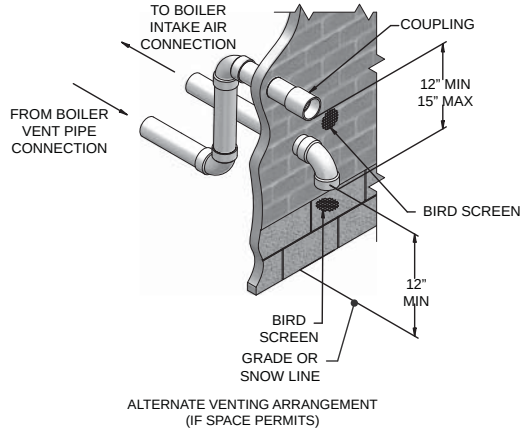

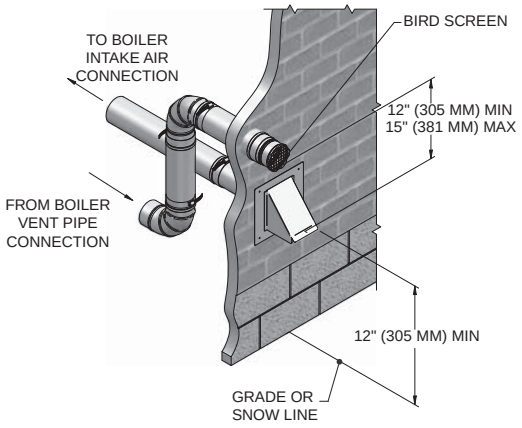

Figure 3-1D *Alternate SS Venting Arrangement - Typical Stainless Steel Sidewall Termination of Air and Vent w/Field Supplied Fittings, Utilizing a Hood Intake*

5. Maintain clearances as shown in FIG.'s 3-1A thru 3-3B, pages 23 - 27. Also maintain the following:
   a. Vent must terminate:
      • At least 6 feet from adjacent walls.
      • No closer than 12 inches below roof overhang.
   b. Air inlet must terminate at least 12 inches above grade or snow line; at least 12 inches below the vent termination; and the vent pipe must not extend more than 24 inches vertically outside the building as shown in FIG. 3-1B. Condensate could freeze and block vent pipe.
   c. Do not terminate closer than 4 feet horizontally from any electric meter, gas meter, regulator, relief valve, or other equipment. Never terminate above or below any of these within 4 feet horizontally.
6. Locate terminations so they are not likely to be damaged by foreign objects, such as stones or balls, or subject to buildup of leaves or sediment.

NOTES:

1) In accordance with the current CSA B149.1, Natural Gas and Propane Installation Code

2) In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code

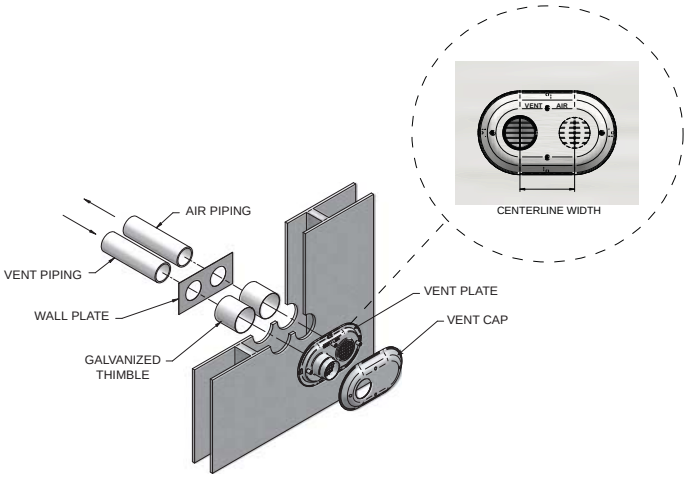
3 Sidewall direct venting

Prepare wall penetrations

1. Use the factory supplied wall plate as a template to locate the vent and air intake holes and mounting holes.
   Air pipe penetration:
   a. Cut a hole for the air pipe. Size the air pipe hole as close as desired to the air pipe outside diameter.
   Vent pipe penetration:
   a. Cut a hole for the vent pipe. For either combustible or noncombustible construction, size the vent pipe hole with at least a 1/2 inch clearance around the vent pipe outer diameter:
      • 4½ inch hole for 3 inch vent pipe
      • 5½ inch hole for 4 inch vent pipe
   Drill 3/16" diameter holes for inserting the plastic anchors into the wall.
2. For Polypropylene Only: Install the vent and air intake sidewall adapters from Table 2F on page 21 into the vent plate. Slide the sidewall retaining bracket down the sidewall adapters flush to the vent plate (FIG. 3-4B).
3. For PVC/CPVC Only: Install the vent and air intake piping through the wall into the vent plate openings. Use RTV silicone sealant to seal the air pipe. Use the cement/primer listed in Table 2D on page 20 to seal the vent pipe.
4. Mount and secure the vent plate to the wall, using stainless steel screws.
5. Seal all gaps between the pipes and wall. Seal around the plate to the wall assuring no air gaps.
6. Assemble the vent cap to the vent plate (see FIG.'s 3-4A and 3-4B). Insert the stainless steel screws into the vent cap screw hole openings and securely attach the vent cap to the vent plate.
7. Seal all wall cavities.
8. PVC/CPVC terminations are designed to accommodate any wall thickness of standard constructions per the directions found in this manual.
9. Stainless steel terminations are designed to penetrate walls with a thickness up to 9.25 inches of standard construction.

Figure 3-4A *PVC/CPVC Sidewall Termination Assembly*



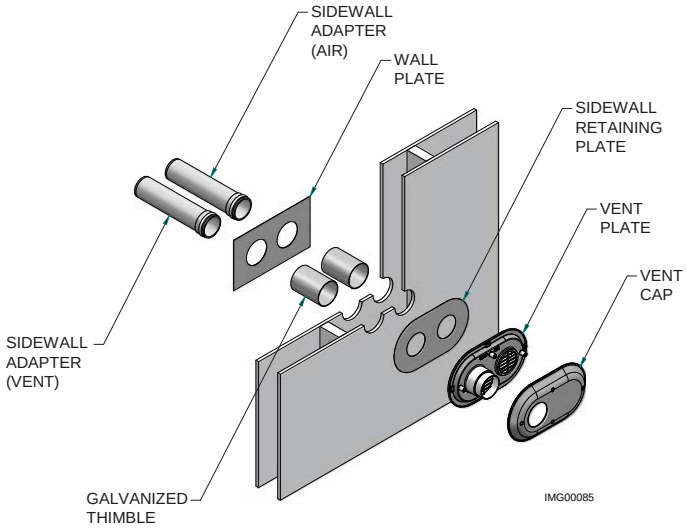


Table 3D *Sidewall Vent Centerline Dimensions*

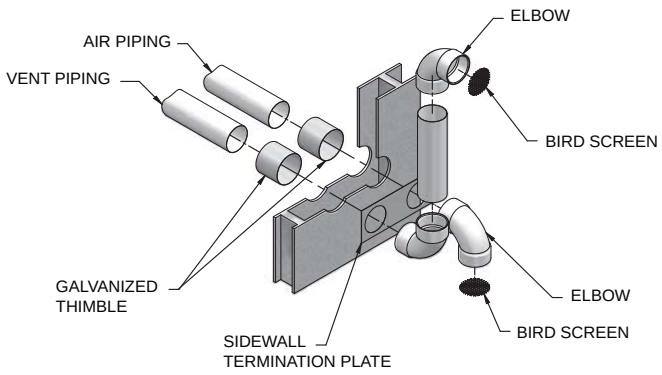
Model	Air	Vent	Centerline Width
126-065 -- 201-100	3"	3"	5 5/8"
286-125 -- 501-125	4"	4"	5 5/8"

Figure 3-4B *Polypropylene Sidewall Termination Assembly*



3 Sidewall direct venting *(continued)*

Prepare wall penetrations (Alternate - Field Supplied Option)

1. Air pipe penetration:
   a. Cut a hole for the air pipe. Size the air pipe hole as close as desired to the air pipe outside diameter.
2. Vent pipe penetration:
   a. Cut a hole for the vent pipe. For either combustible or noncombustible construction, size the vent pipe hole with at least a 1/2 inch clearance around the vent pipe outer diameter:
      • 4½ inch hole for 3 inch vent pipe
      • 5½ inch hole for 4 inch vent pipe
   b. Insert a galvanized metal thimble in the vent pipe hole as shown in FIG. 3-4C.
3. Use a sidewall termination plate as a template for correct location of hole centers.
4. Follow all local codes for isolation of vent pipe when passing through floors or walls.
5. Seal exterior openings thoroughly with exterior caulk.

***Figure 3-4C** Alternate Sidewall Termination Assembly w/Field Supplied Fittings*

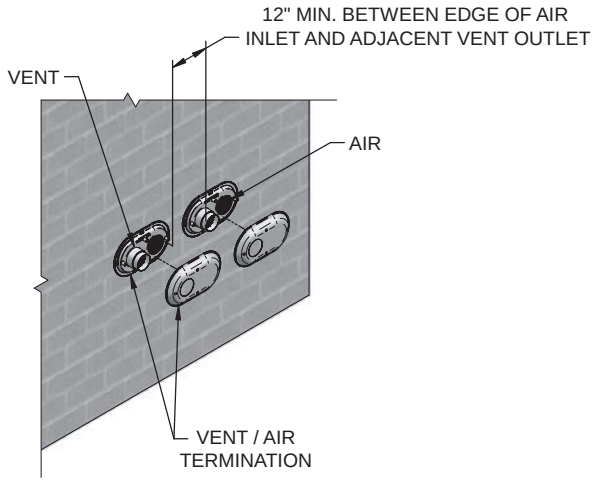
Multiple vent/air terminations

1. When terminating multiple Shield water heaters terminate each vent/air connection as described in this manual (FIG. 3-5A).

⚠ WARNING All vent pipes and air inlets must terminate at the same height to avoid possibility of severe personal injury, death, or substantial property damage.

2. Place wall penetrations to obtain minimum clearance of 12 inches between edge of air inlet and adjacent vent outlet, as shown in FIG. 3-5A for U.S. installations. For Canadian installations, provide clearances required by CSA B149.1 Installation Code.
3. The air inlet of a Shield water heater is part of a direct vent connection. It is not classified as a forced air intake with regard to spacing from adjacent water heater vents.

***Figure 3-5A** Multiple Vent Terminations (must also comply with **Figure 3-1A**)*



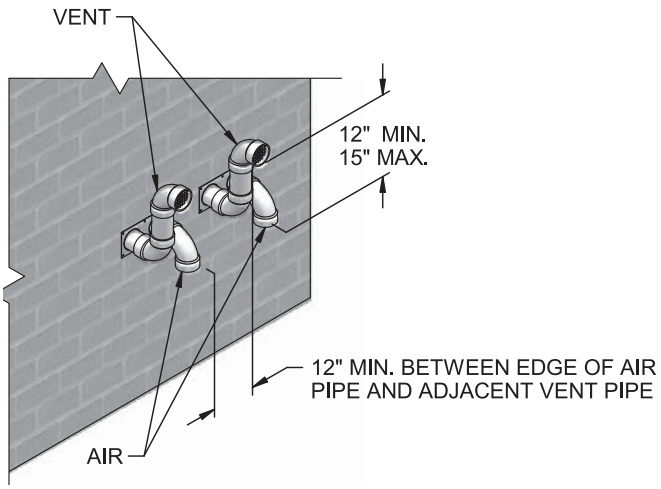


***Figure 3-5B** Alternate Multiple Vent Terminations w/Field Supplied Fittings (must also comply with **Figure 3-1B**)*

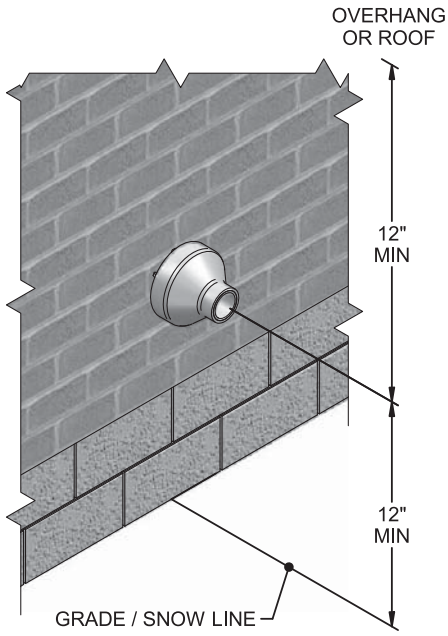
3 Sidewall direct venting



Sidewall termination – optional concentric vent

Description and usage

Lochinvar offers optional concentric combustion air and vent pipe termination kits (Factory Kit #100140480 for 3" diameter - Models 126-065 - 201-100 and #100140484 for 4" diameter - Models 286-125 - 501-125). Both combustion air and vent pipes must attach to the termination kit. The termination kits must terminate outside the structure and must be installed as shown in FIG. 3-6.

The required combustion vent pipe materials are listed in Table 2D, on page 20 of this manual.

Figure 3-6 *Concentric Sidewall Termination*

Sidewall termination installation

1. Determine the best location for the termination kit (see FIG. 4-6).

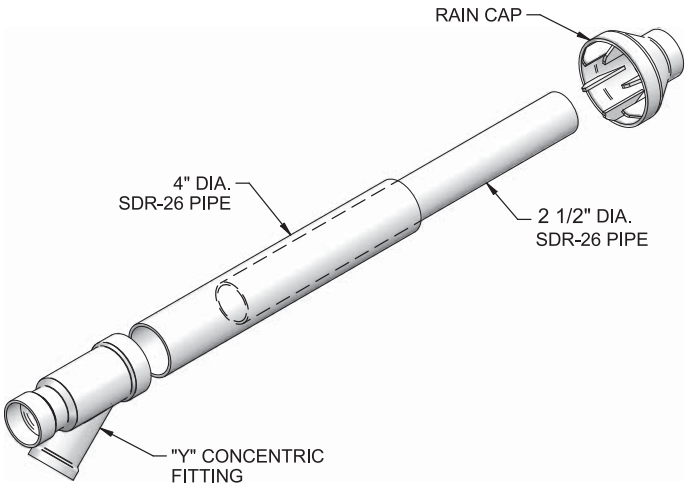
2. Reference the *Determine Location Section* on page 23 of this manual for general termination considerations.

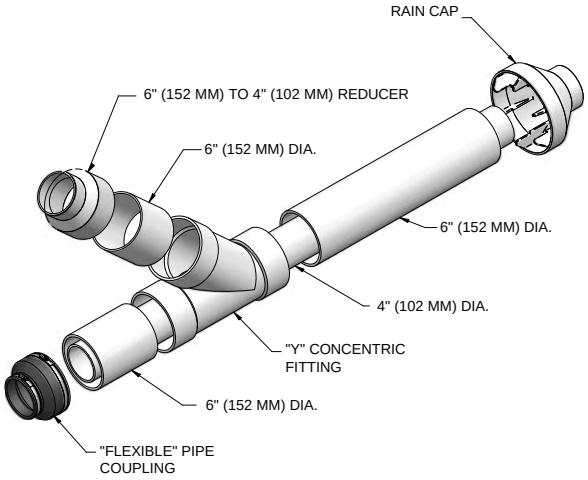
3. Cut one (1) hole (5 inch diameter for #100140480 installations or 7 inch diameter for #100140484 installations) into the structure to install the termination kit.

4. Partially assemble the concentric vent termination kit. Clean and cement using the procedures found in these instructions.

   a. Cement the Y concentric fitting to the larger kit pipe (FIG.'s 3-7 and 3-8).
   b. Cement the rain cap to the smaller diameter kit pipe (FIG.'s 3-7 and 3-8).

Figure 3-7 *Kit Contents_100140480 - 126-065 -- 201-100*





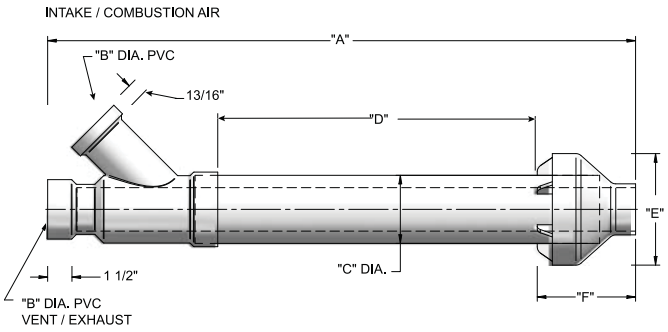


Figure 3-8 *Kit Contents_100140484 - 286-125 -- 501-125*

3 Sidewall direct venting *(continued)*

60"	4"	6"	21 1/8"	10"	7 5/8"	3"	6 5/8"

NOTICE Instead of cementing the smaller pipe to the rain cap, a field-supplied stainless steel screw may be used to secure the two (2) components together when field disassembly is desired for cleaning (see FIG. 3-11).

⚠ WARNING When using the alternate screw assembly method, drill a clearance hole in the rain cap and a pilot hole in the vent pipe for the screw size being used. Failure to drill adequate holes may cause cracking of PVC components, allowing combustion products to be recirculated. Failure to follow this warning could result in personal injury or death.

⚠ WARNING Do not operate the appliance with the rain cap removed or recirculation of combustion products may occur. Water may also collect inside the larger combustion air pipe and flow to the burner enclosure. Failure to follow this warning could result in product damage or improper operation, personal injury, or death.

Figure 3-11 *Rain Cap to Vent Pipe Alternate Assembly*

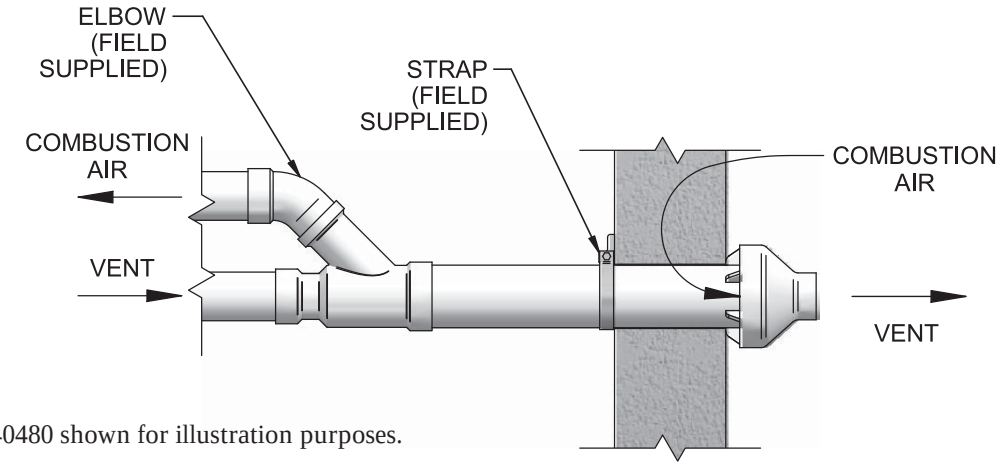
6. Install the Y concentric fitting and pipe assembly through the structure's hole.

NOTICE Do not allow insulation or other materials to accumulate inside the pipe assembly when installing through the hole.

7. Install the rain cap and small diameter pipe assembly into the Y concentric fitting and large pipe assembly. Ensure small diameter pipe is bottomed and cemented in the Y concentric fitting for #100140480 installations and fastened tightly into the rubber adapter for #100140484 installations.

8. Secure the assembly to the structure as shown in FIG. 3-12 using field-supplied metal strapping or equivalent support material.

NOTICE Ensure termination location clearance dimensions are as shown in FIG. 3-6.



NOTICE If assembly needs to be extended to allow sidewall thickness requirement, the two (2) pipes supplied in the kit may be replaced by using the same diameter, field-supplied SDR-26 PVC (D2241) pipe for 100140480 and standard schedule 40 PVC for 100140484. Do not extend dimension D* more than 60 inches (see FIG.'s 3-9 and 3-10).

NOTICE If assembly depth needs to be reduced, dimension D can be as short as possible.

3 Sidewall direct venting

Sidewall termination – optional concentric vent

Figure 3-12 *Concentric Vent Sidewall Attachment*

Note: 100140480 shown for illustration purposes.

CAUTION DO NOT use field-supplied couplings to extend pipes. Airflow restriction will occur and may cause intermittent operation.

9. Cement appliance combustion air and vent pipes to the concentric vent termination assembly. See FIG. 3-12 for proper pipe attachment.

10. Operate the appliance one (1) heat cycle to ensure combustion air and vent pipes are properly connected to the concentric vent termination connections.

Multiventing sidewall terminations

When two (2) or more direct vent appliances are vented near each other, each appliance must be individually vented (see FIG. 3-13). NEVER common vent or breach vent this appliance. When two (2) or more direct vent appliances are vented near each other, two (2) vent terminations may be installed as shown in FIG. 3-13. It is important that vent terminations be made as shown to avoid recirculation of flue gases.

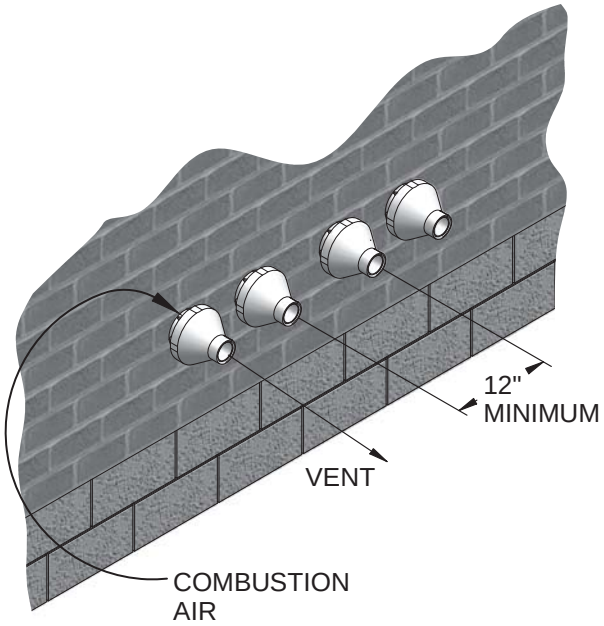


Figure 3-13 *Concentric Vent and Combustion Air Termination*

4 Vertical direct venting

Vent/air termination – vertical

⚠ WARNING Follow instructions below when determining vent location to avoid possibility of severe personal injury, death or substantial property damage.

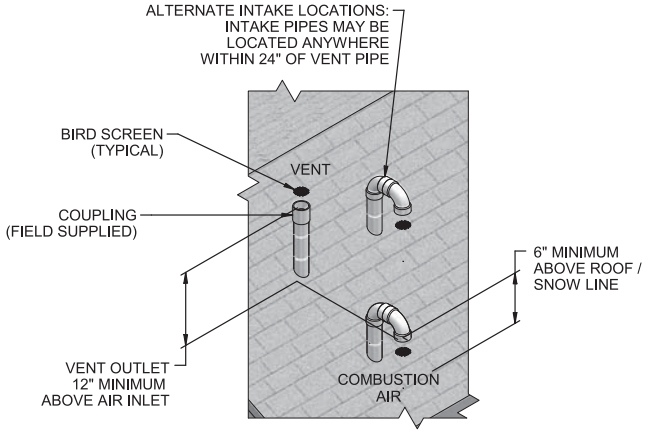
Determine location

Locate the vent/air terminations using the following guidelines:

1. The total length of piping for vent or air must not exceed the limits given in the General Venting Section on page 17 of this manual.
2. Prepare the vent termination and the air termination elbow (FIG. 4-1A) by inserting bird screens. Bird screens should be obtained locally.
3. The vent must terminate at least 3 feet above the highest place in which the vent penetrates the roof and at least 2 feet above any part of a building within 10 horizontal feet.
4. The air piping must terminate in a down-turned 180° return pipe no further than 2 feet from the center of the vent pipe. This placement avoids recirculation of flue products into the combustion air stream.
5. The vent piping must terminate in an up-turned coupling as shown in FIG. 4-1A. The top of the coupling must be at least 1 foot above the air intake. When the vent termination uses a rain cap as illustrated in FIG. 4-1B maintain at least 36" (914 mm) above the air inlet. The air inlet pipe and vent pipe can be located in any desired position on the roof, but must always be no further than 2 feet (.6 m) apart and with the vent termination at least 1 foot for PVC and 3 feet for stainless steel, above the air intake.
6. Maintain the required dimensions of the finished termination piping as shown in FIG. 4-1A.
7. Do not extend exposed vent pipe outside of building more than shown in this document. Condensate could freeze and block vent pipe.

⚠ WARNING Rooftop vent and air inlet terminations must terminate in the same pressure zone, unless vertical vent sidewall air is set up as shown in the General Venting - Vertical Vent, Sidewall Air Section.

Figure 4-1A *Vertical Termination of Air and Vent*



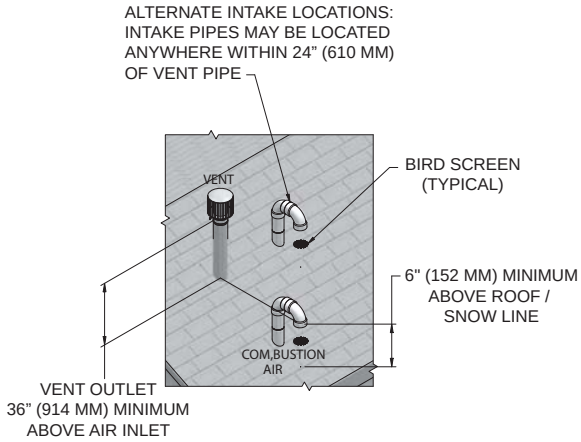


Figure 4-1B *Stainless Steel Vertical Termination of Air and Vent*

8. Locate terminations so they are not likely to be damaged by foreign objects, such as stones or balls, or subject to buildup of leaves or sediment.

4 Vertical direct venting

Vent/air termination – vertical

Prepare roof penetrations

1. Air pipe penetration:
   a. Cut a hole for the air pipe. Size the air pipe hole as close as desired to the air pipe outside diameter.
2. Vent pipe penetration:
   a. Cut a hole for the vent pipe. For either combustible or noncombustible construction, size the vent pipe hole with at least a 1/2 inch clearance around the vent pipe outer diameter:
      • 4½ inch hole for 3 inch vent pipe
      • 5½ inch hole for 4 inch vent pipe
   b. Insert a galvanized metal thimble in the vent pipe hole.
3. Space the air and vent holes to provide the minimum spacing shown in FIG. 4-1A, page 33.
4. Follow all local codes for isolation of vent pipe when passing through floors, ceilings, and roofs.
5. Provide flashing and sealing boots sized for the vent pipe and air pipe.

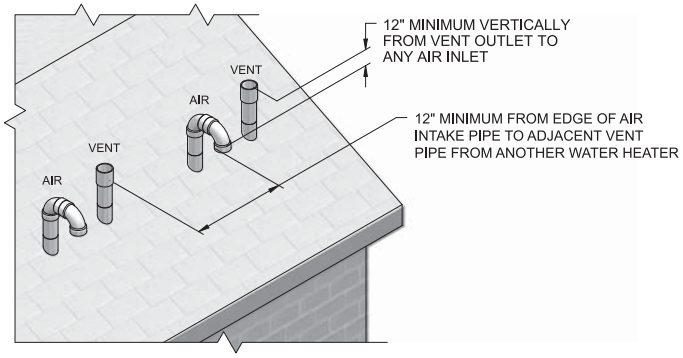
Multiple vent/air terminations

1. When terminating multiple Shield water heaters, terminate each vent/air connection as described in this manual (FIG. 4-2).

⚠ WARNING Terminate all vent pipes at the same height and all air pipes at the same height to avoid possibility of severe personal injury, death, or substantial property damage.

2. Place roof penetrations to obtain minimum clearance of 12 inches between edge of air intake elbow and adjacent vent pipe of another water heater for U.S. installations (see FIG. 4-2). For Canadian installations, provide clearances required by CSA B149.1 Installation Code.
3. The air inlet of a Shield water heater is part of a direct vent connection. It is not classified as a forced air intake with regard to spacing from adjacent water heater vents.

Figure 4-2 *Vertical Terminations with Multiple Water Heaters*



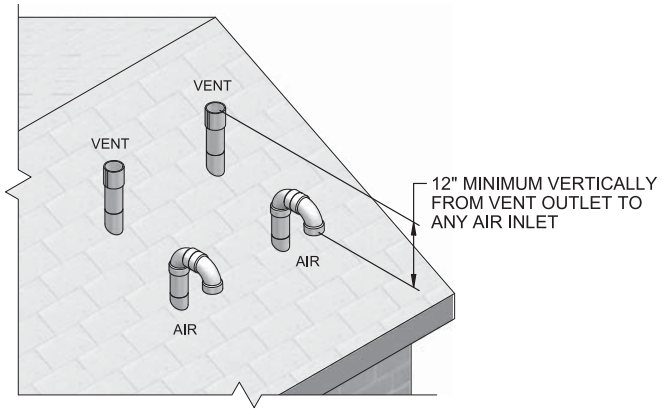


Figure 4-3 *Alternate Vertical Terminations with Multiple Water Heaters*

4 Vertical direct venting *(continued)*

Vertical termination – optional concentric vent

Description and usage

Lochinvar offers an optional concentric combustion air and vent pipe termination kit. Both combustion air and vent pipes must attach to the termination kit. The termination kit must terminate outside the structure and must be installed as shown in FIG. 4-4.

Field supplied pipe and fittings are required to complete the installation.

The required combustion air and vent pipe fittings are listed in Table 2D, on page 20 of this manual.

Vertical termination installation

1. See Section 4, Vertical Direct Venting - Determine Location (where applicable).
2. Cut one (1) hole (5 inch diameter for #100140480 installations or 7 inch diameter for #100140484 installations) into the structure to install the termination kit.
3. Partially assemble the concentric vent termination kit. Clean and cement following the cleaning procedures in these instructions.
   a. Cement the Y concentric fitting to the larger diameter kit pipe (see FIG.'s 3-7 and 3-8, page 30).
   b. Cement rain cap to the smaller diameter kit pipe (see FIG.'s 3-7 and 3-8, page 30).
   c. Do not attach a U-Bent to the rain cap. Doing so could cause recirculation (see FIG. 4-5).

Figure 4-4 *Concentric Vertical Termination*

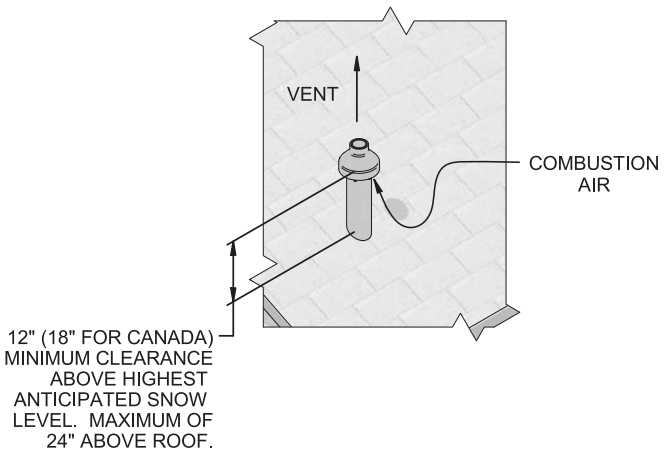

Figure 4-5 *Do Not Install U-Bent to Rain Cap*

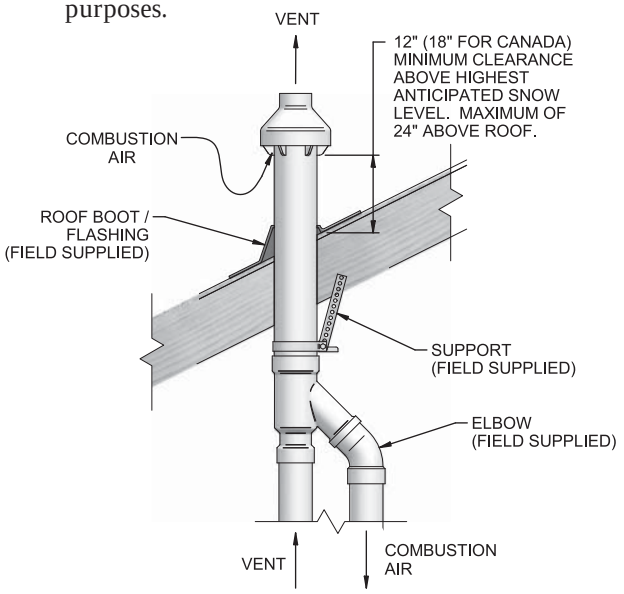
NOTICE Instead of cementing the smaller pipe to the rain cap, a field supplied stainless steel screw may be used to secure the two (2) components together when field disassembly is desired for cleaning (see FIG. 3-11, page 31).

⚠ WARNING When using the alternate screw assembly method, drill a clearance hole in the rain cap and a pilot hole in the vent pipe for the screw size being used. Failure to drill adequate holes may cause cracking of PVC components, allowing combustion products to be recirculated. Failure to follow this warning could result in personal injury or death.

4 Vertical direct venting

Vertical termination – optional concentric vent

⚠ WARNING Do not operate the appliance with the rain cap removed or recirculation of combustion products may occur. Water may also collect inside the larger combustion air pipe and flow to the burner enclosure. Failure to follow this warning could result in product damage or improper operation, personal injury, or death.



4. Install the Y concentric fitting pipe assembly up through the structure's hole and field supplied roof boot/flashing.

NOTICE Do not allow insulation or other materials to accumulate inside the pipe assembly when installing through the hole.

5. Secure the assembly to the roof structure as shown below in FIG. 4-6 using field supplied metal strapping or equivalent support material.

Figure 4-6 *Concentric Vent Roof Installation*

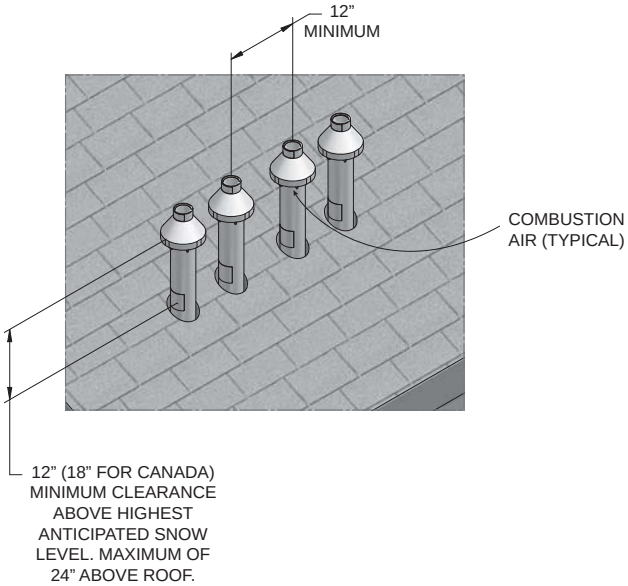
Note: 100140480 shown for illustration purposes.

NOTICE Ensure termination height is above the roof surface or anticipated snow level (12 inches in U.S.A. or 18 inches in Canada) as shown in FIG. 4-4, page 35.

NOTICE If assembly is too short to meet height requirement, the two (2) pipes supplied in the kit may be replaced by using the same diameter, field supplied SDR-26 PVC (D2241) pipe for #100140480 and standard schedule 40 PVC for #100140484. Do not extend dimension D* more than 60 inches (see FIG.'s 3-9 and 3-10, page 31).

CAUTION DO NOT use field-supplied couplings to extend pipes. Airflow restriction will occur.

6. Install the rain cap and the small diameter pipe assembly into the roof penetration assembly. Ensure the small diameter pipe is cemented and bottomed in the Y concentric fitting for #100140480 installations and fastened tightly into the rubber adapter for #100140484 installations.



7. Cement the appliance combustion air and vent pipes to the concentric vent termination assembly. See FIG. 4-6 for proper pipe attachment.

8. Operate the appliance through one (1) heat cycle to ensure combustion air and vent pipes are properly connected to the concentric vent termination connections.

Multiventing vertical terminations

When two (2) or more direct vent appliances are vented near each other, each appliance must be individually vented (see FIG. 4-7). NEVER common vent or breach vent this appliance. When two (2) or more direct vent appliances are vented near each other, two (2) vent terminations may be installed as shown in FIG. 4-7. It is important that vent terminations be made as shown to avoid recirculation of flue gases.

Figure 4-7 *Concentric Vent and Combustion Air Vertical Termination*

5 System piping

System water piping methods

Observe a minimum of one inch clearance around all un-insulated hot water pipes when openings around the pipes are not protected by non-combustible materials.

⚠ WARNING Failure to install and maintain a new, listed temperature and pressure relief valve will release the manufacturer from any claim, which might result from excessive temperature and pressures.

Keep clear of the combination temperature and pressure relief valve discharge line outlet. The discharge may be hot enough to cause scald injury. The water is under pressure and may splash.

Hydrogen gas can be produced in an operating water heater that has not had water drawn from the tank for a long period of time (generally two weeks or more). HYDROGEN GAS IS EXTREMELY FLAMMABLE. To prevent the possibility of injury under these conditions, we recommend the hot water faucet to be open for several minutes at the kitchen sink before you use any electrical appliance, which is connected to the hot water system. If hydrogen is present, there will be an unusual sound such as air escaping through the pipes as hot water begins to flow. Do not smoke or have an open flame near the faucet at the time it is open.

General piping information

Basic steps are listed below along with illustrations on the following pages (FIG.'s 5-2 thru 5-4), which will guide you through the installation of the Shield water heater.

1. BEFORE PROCEEDING WITH THE INSTALLATION, CLOSE THE MAIN WATER SUPPLY VALVE. After shutting off the main water supply, open a faucet to relieve the water line pressure to prevent any water from leaking out of the pipes while making the water connections to the water heater. The COLD water inlet and HOT water outlet are identified on the water heater. Make the proper plumbing connections between the water heater and the plumbing system to the building. Install a shutoff valve in the cold water supply line.
2. If this water heater is installed in a closed water supply system, such as the one having a backflow preventer in the cold water supply, provisions must be made to control thermal expansion. DO NOT operate this water heater in a closed system without provisions for controlling thermal expansion. Warranties do not cover damages from thermal expansion such as pressure bulges and/or deformities. Your water supplier or local plumbing inspector should be contacted on how to control this situation.
3. After installation of the water lines, open the main water supply valve and fill the water heater. While the water heater is filling, open several hot water faucets to allow air to escape from the water system. When a steady stream of water flows through the faucets, close them and check all water connections for possible leaks.
4. Never operate the water heater without first being certain it is filled with water.

Scalding

This water heater can deliver scalding temperature water at any faucet in the system. Be careful whenever using hot water to avoid scalding injury. Certain appliances such as dishwashers and automatic clothes washers may require increased temperature water. By setting the thermostat on this water heater to obtain the increased temperature water required by these appliances, you may create the potential for scald injury. To protect against injury, you should install an ASSE approved mixing valve in the water system. This valve will reduce point of discharge temperature by mixing cold and hot water in branch supply lines. Such valves are available from the local plumbing supplier.

Figure 5-1 *Scald Warning*

Water temperatures over 125°F (52°C) can cause severe burns instantly or death from scalds.
Children, disabled, and elderly are at highest risk of being scalded.

See instruction manual before setting the thermostat at the water heater.

Feel water before bathing or showering.

Temperature limiting valves are available, consult local plumbing supplier.

5 System piping

The following chart (Table 5A) details the relationship of water temperature and time with regard to scald injury and may be used as a guide in determining the safest water temperature for your applications.

***Table 5A** Approximate Time / Temperature Scald Chart*

APPROXIMATE TIME / TEMPERATURE RELATIONSHIPS IN SCALDS	
120°F	More than 5 minutes
125°F	1 1/2 to 2 minutes
130°F	About 30 seconds
135°F	About 10 seconds
140°F	Less than 5 seconds
145°F	Less than 3 seconds
150°F	About 1 1/2 seconds
155°F	About 1 second

Water chemistry

NOTICE The Shield water heater is designed for heating potable water with a hardness of 5 to 20 grains per gallon and a total dissolved solids not exceeding 350 ppm.

The water must be treated if it is not between 5 to 25 grains per gallon or above 350 ppm of total dissolved solids. Hardness exceeding 25 grains or 350 ppm can cause non-warrantable premature failure of the heat exchanger. Water with a hardness of less than 5 grains per gallon will usually have a pH which can be aggressive and corrosive causing non-warrantable damage to the pump and associated piping. Corrosion due to water chemistry generally shows up first in the hot water system because heated water increases the rate of corrosive chemical reactions.

Piping components

Check valves:

Field supplied. Check valves are recommended for installation as shown in FIG.'s 5-2 thru 5-4.

Water heater isolation valves:

Field supplied. Full port ball valves are required. Failure to use full port ball valves could result in a restricted flow rate through the water heater.

Anti-scald mixing valve:

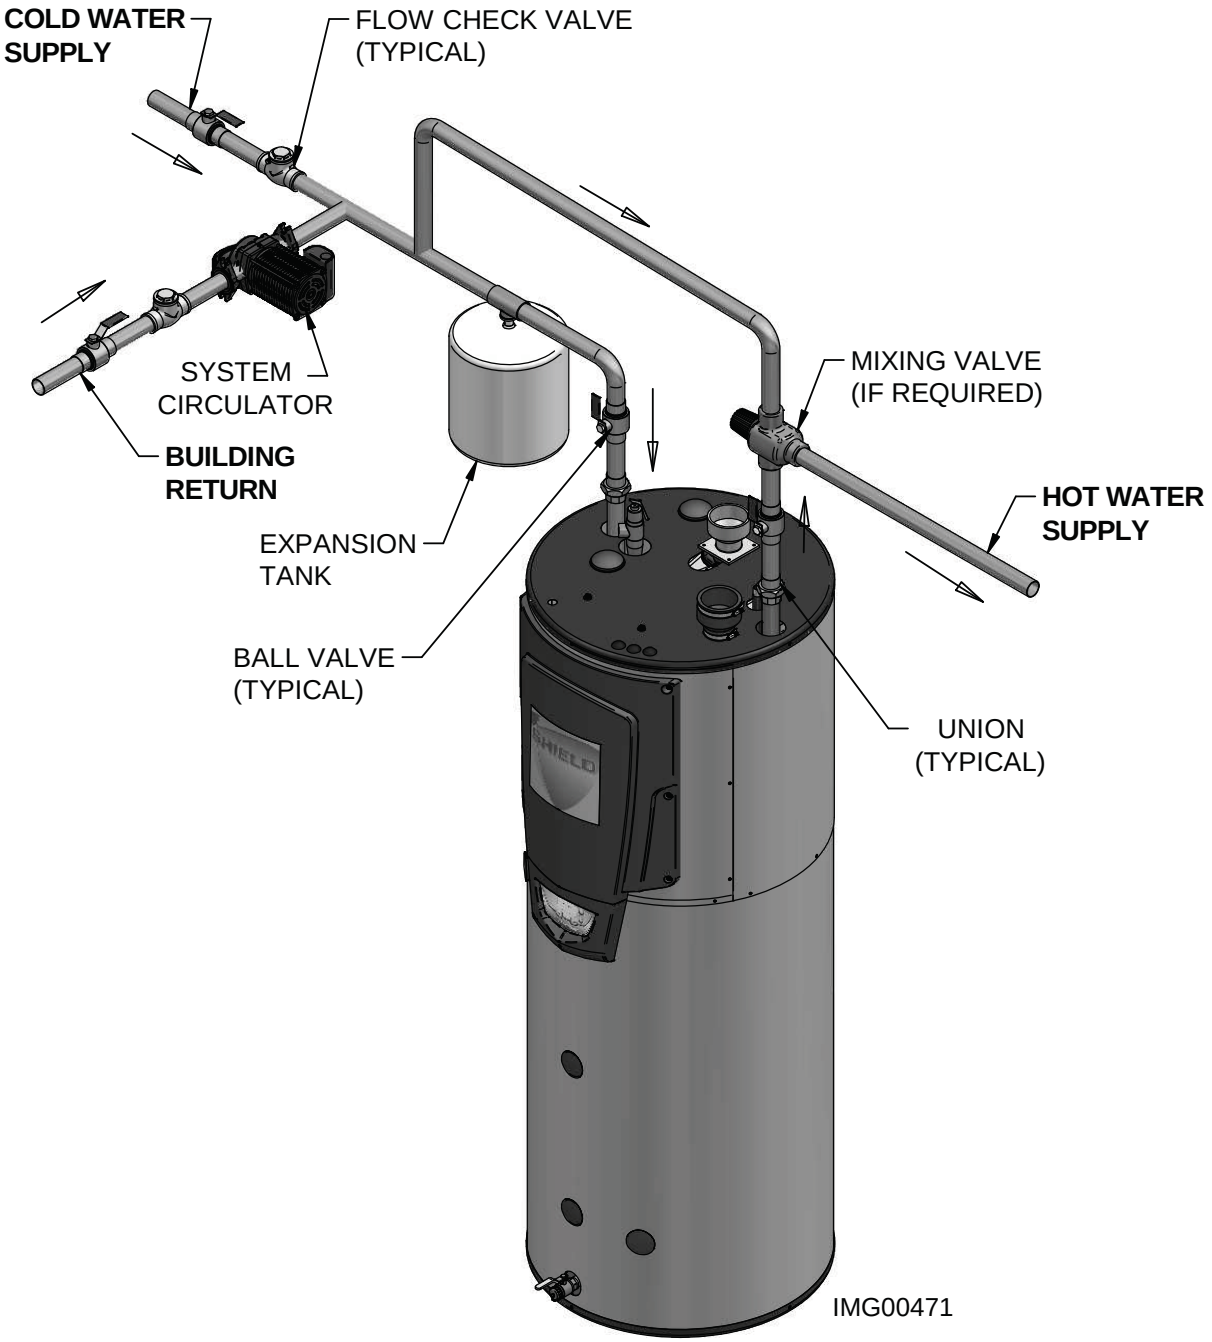
Field supplied. An anti-scald mixing valve is recommended when storing domestic hot water above 115°F.

Unions:

Field supplied. Recommended for unit serviceability.

Temperature and pressure relief valve:

Factory supplied on water heaters. The temperature and pressure relief valve is sized to ASME specifications.



⚠ CAUTION No valves shall be placed between the relief valve, heat exchanger, or tank. The relief valve shall be piped to a suitable drain as close as possible to the heater with no reducing couplings or other restrictions. The piping must be sloping away from the heater at all times.

See the * piping illustrations included in this section, FIG.'s 5-2 thru 5-4 for suggested guidelines in piping the Shield water heater.

NOTICE *Please note that these illustrations are meant to show system piping concept only, the installer is responsible for all equipment and detailing required by local codes.

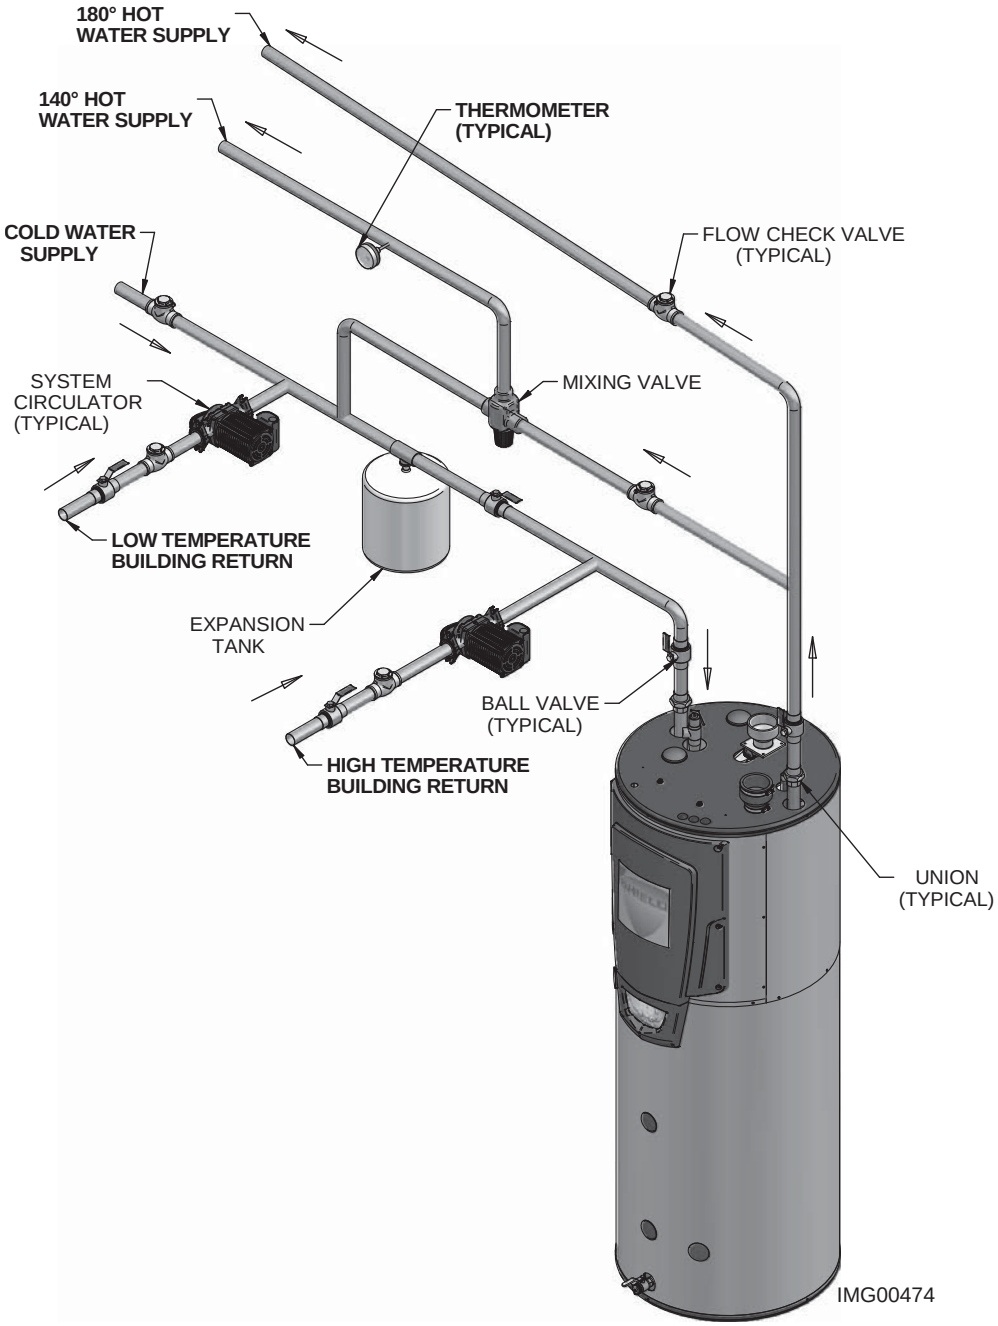

Figure 5-3 *Multiple Units*

NOTICE Please note that these illustrations are meant to show system piping concept only, the installer is responsible for all equipment and detailing required by local codes.

5 System piping *(continued)*

Figure 5-4 *Two Temperature - Single Unit*

NOTICE Please note that these illustrations are meant to show system piping concept only, the installer is responsible for all equipment and detailing required by local codes.

6 Gas connections

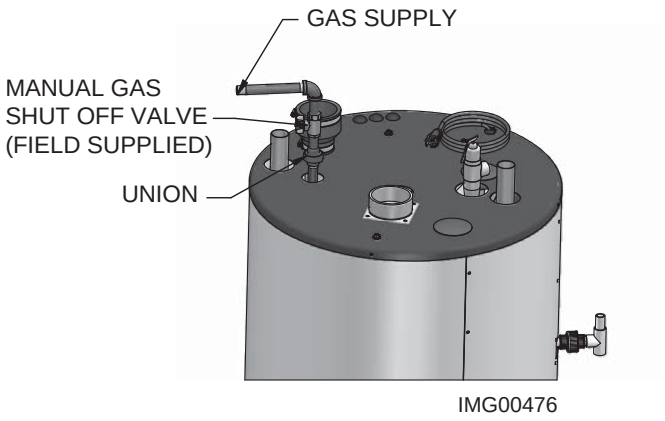
Connecting gas supply piping

1. Install ground joint union for servicing, when required.

2. On Models 126-065 -- 286-125 install a manual shutoff valve in the gas supply piping outside water heater jacket when required by local codes or utility requirements.

3. In Canada – When using manual main shutoff valves, it must be identified by the installer.

Figure 6-1 *Gas Supply Piping - Models 126-065 -- 286-125*



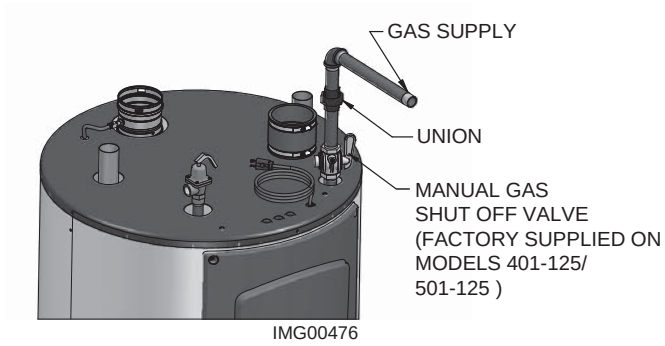


Figure 6-2 *Gas Supply Piping - Models 401-125 -- 501-125*

4. Support piping with hangers, not by the water heater or its accessories.

⚠ WARNING The gas valve and blower will not support the weight of the piping. Do not attempt to support the weight of the piping with the water heater or its accessories. Failure to comply could result in severe personal injury, death, or substantial property damage.

5. Purge all air from the gas supply piping.

6. Before placing the water heater in operation, check the water heater and its gas connection for leaks.

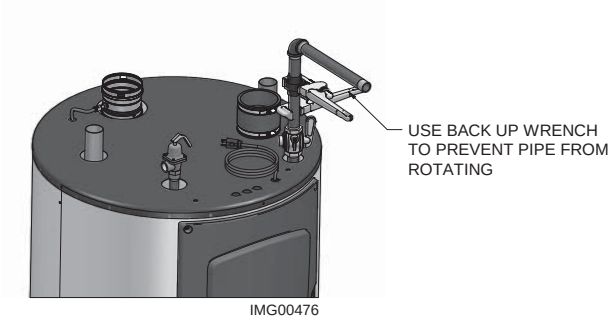
   a. The appliance must be disconnected from the gas supply piping system during any pressure testing of that system at a test pressure in excess of 1/2 PSIG (3.5 kPa).

   b. The appliance must be isolated from the gas supply piping system by closing a manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 PSIG (3.5 kPa).

   c. The appliance and its gas connection must be leak tested before placing it in operation.

⚠ WARNING Do not check for gas leaks with an open flame – use the bubble test. Failure to use the bubble test or check for gas leaks can cause severe personal injury, death, or substantial property damage.

7. Use pipe sealing compound compatible with propane gases. Apply sparingly only to male threads of the pipe joints so that pipe dope does not block gas flow.



6 Gas connections *(continued)*

⚠ WARNING Failure to apply pipe sealing compound as detailed in this manual can result in severe personal injury, death, or substantial property damage.

⚠ WARNING Shield water heaters are typically shipped ready to fire on natural gas. Check the water heater rating plate to determine which fuel the water heater is set for. In order to operate on LP gas contact the factory, an orifice MUST BE installed or a gas valve adjustment MUST BE made. Failure to comply could result in severe personal injury, death, or substantial property damage.

⚠ WARNING Use two wrenches when tightening gas piping at water heater (FIG. 6-3), using one wrench to prevent the water heater gas line connection from turning. Failure to support the water heater gas connection pipe to prevent it from turning could damage gas line components.

Figure 6-3 *Inlet Pipe with Backup Wrench*

NOTICE Maximum inlet gas pressure must not exceed the value specified. Minimum value listed is for the purposes of input adjustment.

⚠ WARNING Ensure that the high gas pressure regulator is at least 10 feet upstream of the appliance.

Natural gas:

Pipe sizing for natural gas

1. Refer to Table 6A for pipe length and diameter. Based on rated water heater input (divide by 1,000 to obtain cubic feet per hour).
   a. Table 6A is only for natural gas with specific gravity 0.60 inches, with a pressure drop through the gas piping of 0.30 inches w.c.
   b. For additional gas pipe sizing information, refer to ANSI Z223.1 (or B149.1 for Canadian installations).

Natural gas supply pressure requirements

1. Pressure required at the gas valve inlet pressure port:
   • Maximum 14 inches w.c. with no flow (lockup) or with water heater on.
   • Minimum 4 inches w.c. with gas flowing (verify during water heater startup).

2. Install 100% lockup gas pressure regulator in supply line if inlet pressure can exceed 14 inches w.c. at any time. Adjust lockup regulator for 14 inches w.c. maximum.

Propane gas:

⚠ WARNING Shield water heaters are typically shipped ready to fire on natural gas. Check water heater rating plate to determine which fuel the water heater is set for. In order to operate on LP gas contact the factory, an orifice MUST BE installed or a gas valve adjustment MUST BE made. Failure to comply could result in severe personal injury, death, or substantial property damage.

Pipe sizing for propane gas

1. Contact gas supplier to size pipes, tanks, and 100% lockup gas pressure regulator.

Propane Supply Pressure Requirements

1. Adjust propane supply regulator provided by the gas supplier for 14 inches w.c. maximum pressure.

2. Pressure required at gas valve inlet pressure port:
   • Maximum 14 inches w.c. with no flow (lockup) or with water heater on.
   • Minimum 8 inches w.c. with gas flowing (verify during water heater startup).

6 Gas connections

Table 6A *Natural Gas Pipe Size Chart*

Capacity of Schedule 40 Metallic Pipe in Cubic Feet of Natural Gas Per Hour (based on .60 specific gravity, 0.30" w.c. pressure drop)														
Pipe Size (Inches)	Length of Pipe in Straight Feet													
	10	20	30	40	50	60	70	80	90	100	125	150	175	200
1/2	131	90	72	62	55	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
3/4	273	188	151	129	114	104	95	89	83	79	70	63	58	N/A
1	514	353	284	243	215	195	179	167	157	148	131	119	109	102
1 1/4	1,060	726	583	499	442	400	368	343	322	304	269	244	224	209
1 1/2	1,580	1,090	873	747	662	600	552	514	482	455	403	366	336	313
2	3,050	2,090	1,680	1,440	1,280	1,160	1,060	989	928	877	777	704	648	602
2 1/2	4,860	3,340	2,680	2,290	2,030	1,840	1,690	1,580	1,480	1,400	1,240	1,120	1,030	960
3	8,580	5,900	4,740	4,050	3,590	3,260	3,000	2,790	2,610	2,470	2,190	1,980	1,820	1,700
4	17,500	12,000	9,660	8,270	7,330	6,640	6,110	5,680	5,330	5,040	4,460	4,050	3,720	3,460

⚠ WARNING Shield water heaters are typically shipped ready to fire on natural gas. Check the water heater rating plate to determine which fuel the water heater is set for. In order to operate on LP gas contact the factory, an orifice MUST BE installed or a gas valve adjustment MUST BE made. Failure to comply could result in severe personal injury, death, or substantial property damage.

Check inlet gas supply

NOTICE CSA or UL listed flexible gas connections are acceptable, but you must exercise caution to ensure that the line has adequate capacity to allow your water heater to fire at full rate. Consult with local codes for proper installation or service procedures.

⚠ WARNING DO NOT attempt to measure gas valve outlet pressure. The gas valve is factory-set for the correct outlet pressure. This setting is suitable for natural gas and propane (when configured for LP), requiring no field adjustment. Attempting to measure the gas valve outlet pressure could result in damage to the valve, causing potential severe personal injury, death, or substantial property damage.

The gas piping must be sized for the proper flow and length of pipe, to avoid excessive pressure drop. Both the gas meter and the gas regulator must be properly sized for the total gas load.

If you experience a pressure drop greater than 1 inch w.c., the meter, regulator, or gas line is undersized or in need of service. Perform the steps below when checking inlet gas supply:

1. Disconnect power from the appliance.
2. Shut off gas to the appliance.
3. Loosen the set screw one (1) full turn from inside the pressure tap on top of the gas valve. Place the tubing of the manometer over the tap once the set screw is loosened as shown in FIG.'s 6-4 thru 6-6.
4. Slowly turn on the gas supply at the field installed manual gas valve.
5. Reconnect power to the appliance.
6. Adjust the temperature set point on the control panel of the electronic control module to call for heat.
7. Observe the gas supply pressure as the burner fires at 100% of rated input. Percent of burner input will be displayed on the control panel.
8. Ensure inlet pressure is within specified range. Minimum and maximum gas supply pressures are specified in this section of the manual.
9. If gas supply pressure is within normal range and no adjustments are needed, proceed on to Step 11.
10. If the gas pressure is out of range, contact the gas utility, gas supplier, qualified installer or service agency to determine the necessary steps to provide proper gas pressure to the control.
11. Disconnect power from the appliance.
12. Shut off the gas to the appliance.
13. Remove the manometer from the pressure tap on top of the gas valve. Re-tighten the set screw inside the pressure tap.

⚠ WARNING When re-tightening the set screw, be sure to tighten securely to prevent gas leaks.

Do not check for gas leaks with an open flame -- use the bubble test. Failure to use the bubble test or check for gas leaks can cause severe personal injury, death, or substantial property damage.

14. Reconnect gas to the appliance.
15. Reconnect power to the appliance.
16. Adjust the temperature set point on the control panel of the electronic control module to the desired water temperature so the appliance will call for heat.

6 Gas connections *(continued)*

17. Check burner performance by cycling the system while you observe burner response. The burner should ignite promptly. Flame pattern should be stable. Turn system off and allow burner to cool, then cycle burner again to ensure proper ignition and flame characteristics.

Figure 6-4 *Inlet Gas Supply Check - Models 126-065 -- 286-125*

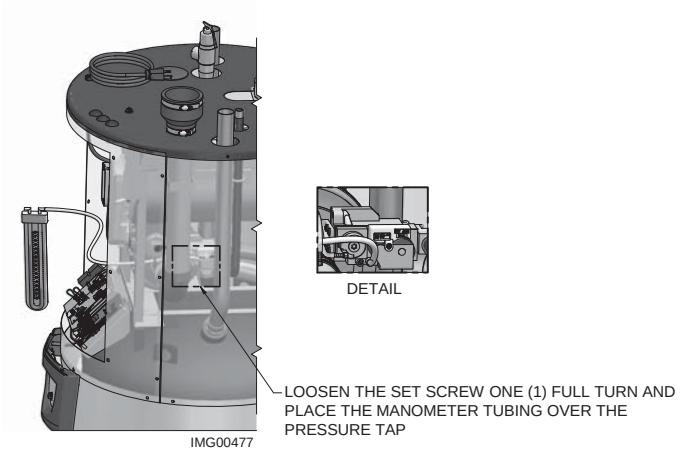


Figure 6-5 *Inlet Gas Supply Check - Model 401-125*

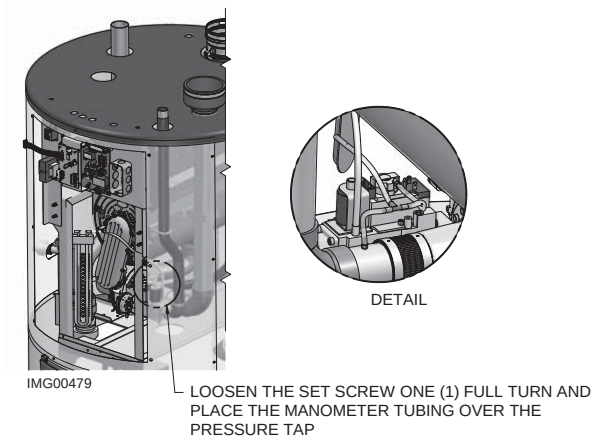

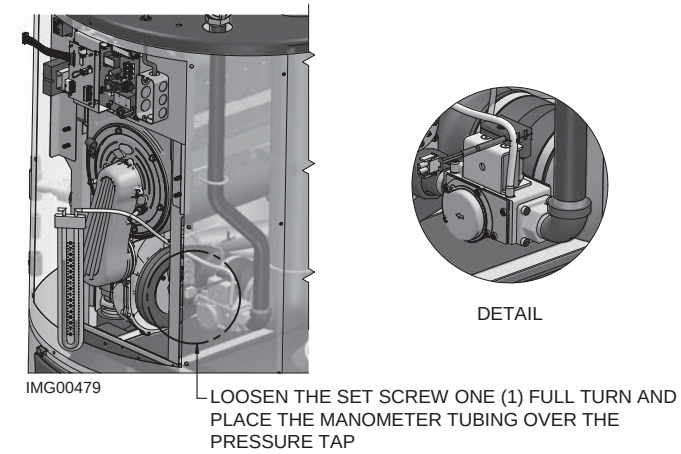

Figure 6-6 *Inlet Gas Supply Check - Model 501-125*

Gas pressure

The gas pressure must remain between 4 inches w.c. (natural), 8 inches w.c. (LP) minimum and 14 inches w.c. (natural and LP) maximum during stand-by (static) mode and while in operating (dynamic) mode. If an in-line regulator is used, it must be a minimum of 10 feet from the Shield water heater. It is very important that the gas line is properly purged by the gas supplier or utility company. Failure to properly purge the lines or improper line sizing, will result in ignition failure.

The problem is especially noticeable in NEW LP installations and also in empty tank situations. This can also occur when a utility company shuts off service to an area to provide maintenance to their lines.

Gas valve replacement

The gas valve MUST NOT be replaced with a conventional gas valve under any circumstances. As an additional safety feature, this gas valve has a flanged connection to the venturi and blower.

⚠ WARNING Failure to follow all precautions could result in fire, explosion, or death!

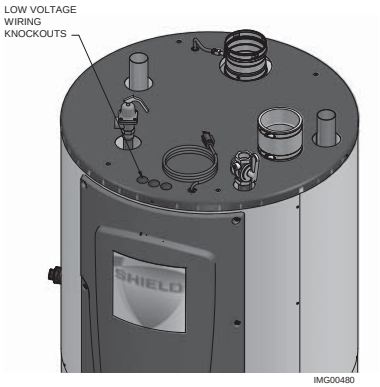
⚠ WARNING DO NOT attempt to measure gas valve outlet pressure. The gas valve is factory-set for the correct outlet pressure. This setting is suitable for natural gas and propane (when configured for LP), requiring no field adjustment. Attempting to measure the gas valve outlet pressure could result in damage to the valve, causing potential severe personal injury, death, or substantial property damage.

7 Field wiring

⚠ WARNING ELECTRICAL SHOCK HAZARD – For your safety, turn off electrical power supply before making any electrical connections to avoid possible electric shock hazard. Failure to do so can cause severe personal injury or death.

NOTICE Wiring must be N.E.C. Class 1.

If original wiring as supplied with the water heater must be replaced, use only type 105°C wire or equivalent.



The water heater must be electrically grounded as required by National Electrical Code ANSI/NFPA 70 – latest edition.

⚠ CAUTION Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

Low voltage connections

1. Route all low voltage wires through the knockouts in the top of the water heater, as shown in FIG. 7-1.
2. Connect low voltage wiring to low voltage connection board as shown in FIG. 7-3 on page 47 of this manual and the water heater wiring diagram.

Figure 7-1 *Routing Field Wiring*

Enable switch

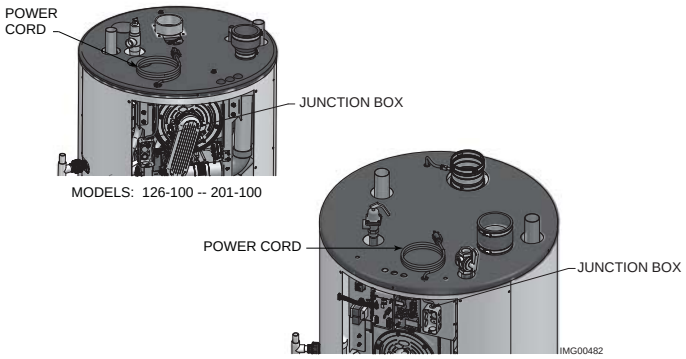
An external switch or contact may be used to enable/disable the water heater. To connect the enable switch, remove the jumper wire from across the ENABLE terminals on the low voltage connection board and connect the wires from the switch in its place. Note that the freeze protection feature will still fire the heater even though the enable input is open.

Louver relay output / louver proving switch input

When installed using the optional room air configuration, the heater is able to control powered louvers used to allow outside air into the room. Connect the 24VAC control relay coil to the LOUVER RELAY output on the low voltage connection board. Remove the jumper wire from the LOUVER PROVING SWITCH terminals on the low voltage connection board and connect the louver proving switch wires in its place.

Installation must comply with:

1. National Electrical Code and any other national, state, provincial, or local codes, or regulations.
2. In Canada, CSA C22.1 Canadian Electrical Code Part 1, and any local codes.



Power cord connection

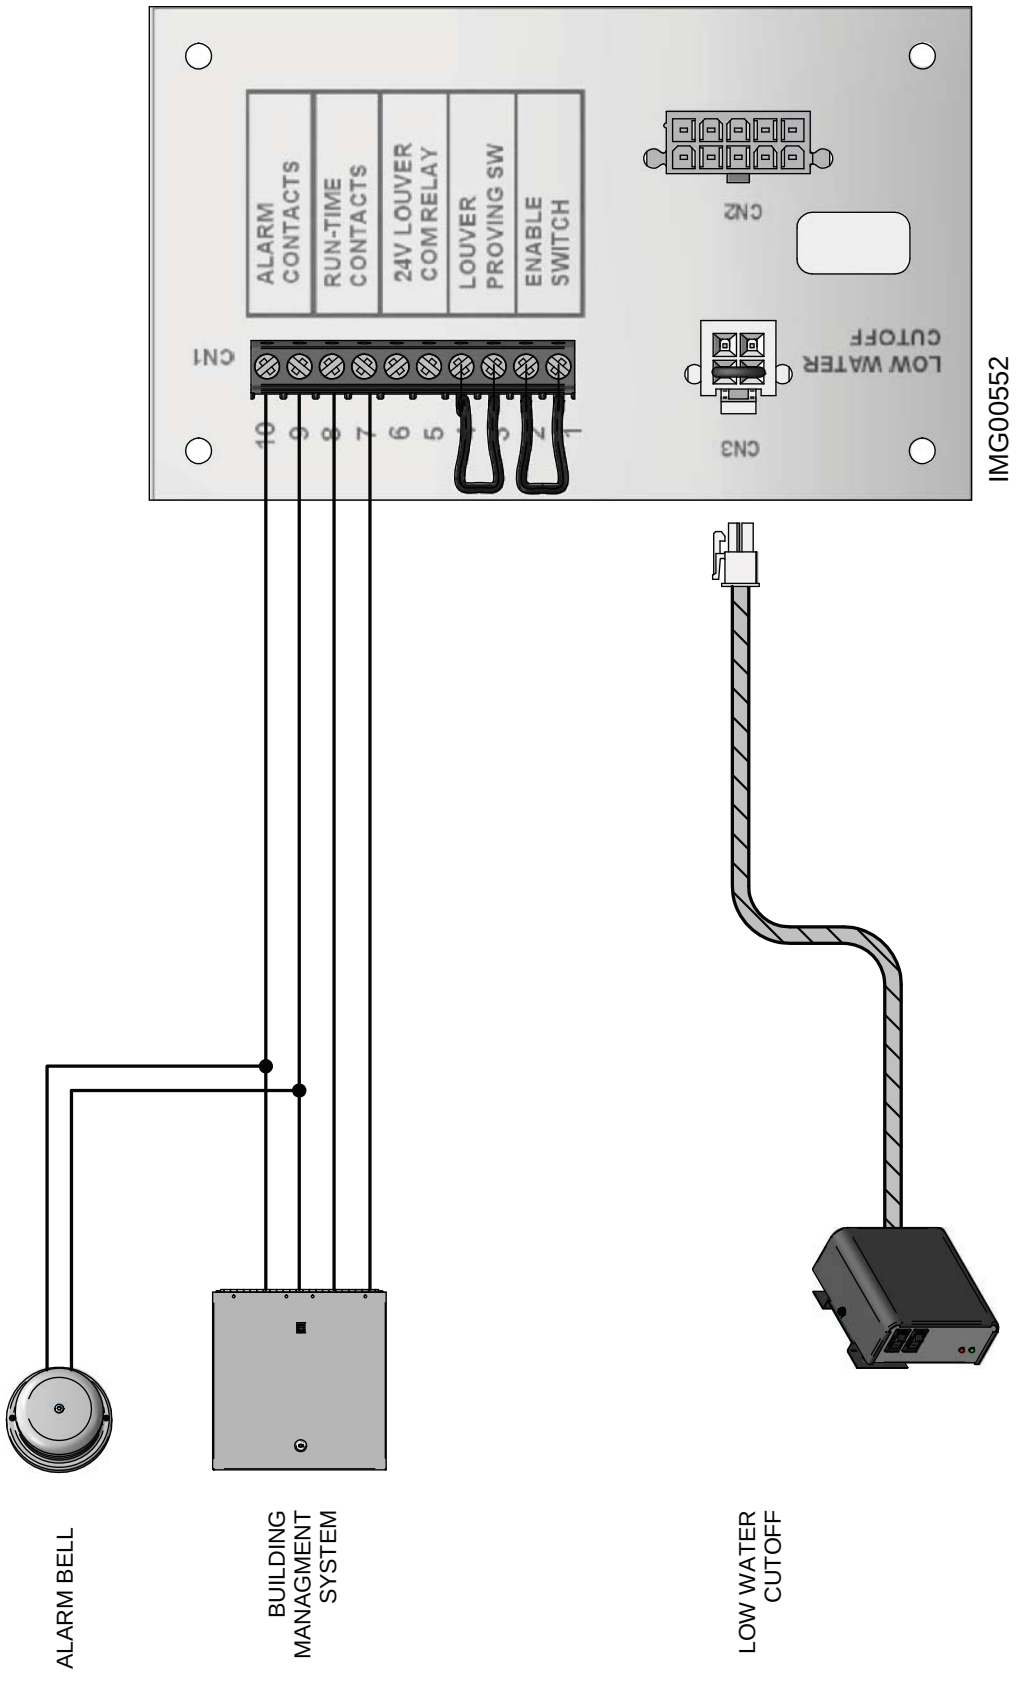
This water heater is designed to operate with 120 VAC and 60 Hz power supply. If allowed by local codes, connect the power cord provided with the heater to a GFI protected outlet on a separate circuit and breaker (15 amp recommended). Ensure the circuit cannot be interrupted by a switch used to control lights or other appliances.

If local codes do not allow for the use of the power cord, remove the cord from the junction box found on the side of the control support bracket (FIG. 7-2) and attach conduit to the junction box. Route the wires out of the appliance to a GFI protected outlet on a separate circuit and breaker (15 amp recommended).

⚠ WARNING Use of an extension cord is NOT allowed. If a suitable electrical outlet is not within reach of the supplied power cord, a new receptacle must be installed or the power cord must be replaced with hard conduit as described above.

Figure 7-2 *Remove Power Cord*

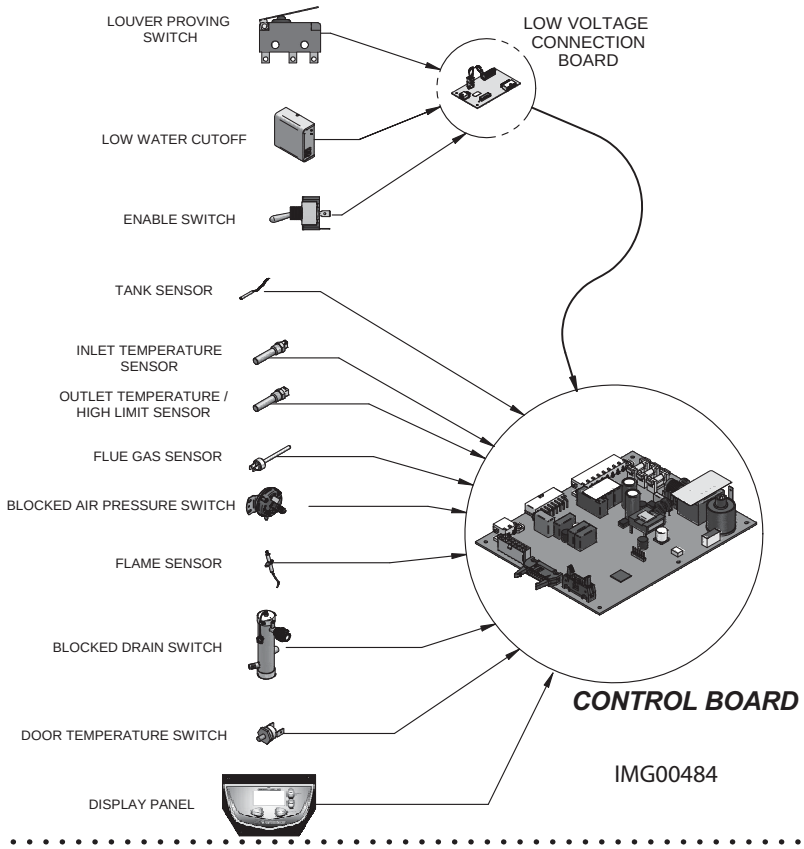
Runtime contacts



The electronic control closes a set of dry contacts whenever the burner is running. This is typically used by Building Management Systems to verify that the water heater is responding to a call for heat.

Alarm contacts

The electronic control closes another set of contacts whenever the water heater is locked out or the power is turned off. This can be used to turn on an alarm, or signal a Building Management System that the water heater is down. Note that the alarm contacts will close momentarily after each call for heat.



7 Field wiring *(continued)*

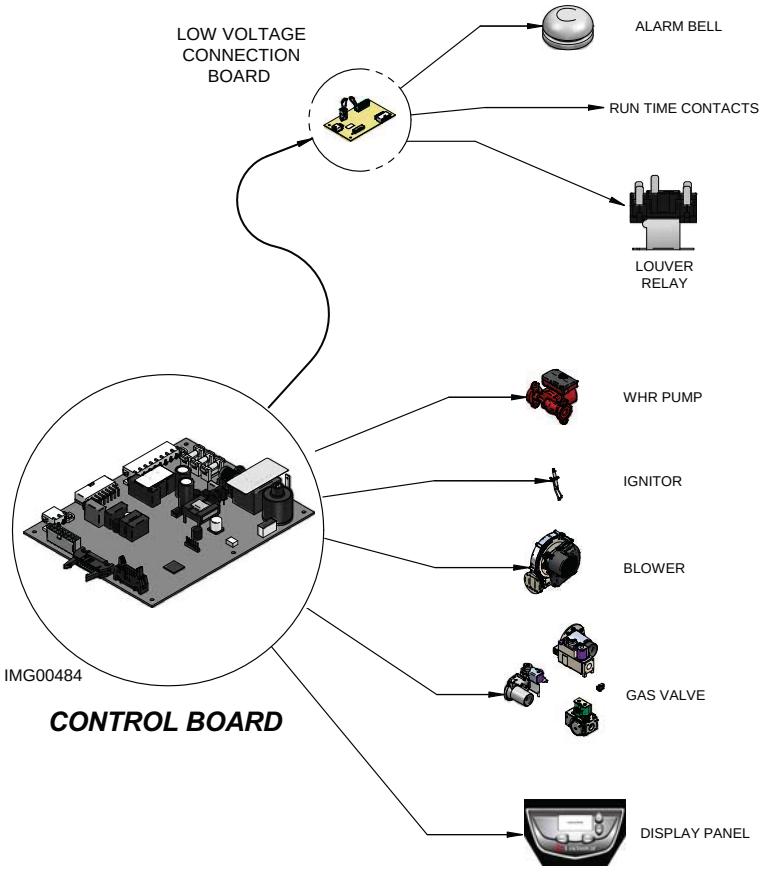


Figure 7-3 *Low Voltage Field Wiring Connections*

7 Field wiring

Figure 7-4 *Control Inputs/Outputs*

8 Condensate disposal

Condensate drain

1. This water heater is a high efficiency appliance that produces condensate.
2. Slope condensate tubing down and away from the water heater into a drain or condensate neutralizing filter. Condensate from the Shield water heater will be slightly acidic (typically with a pH from 3 to 5). Install a neutralizing filter if required by local codes.

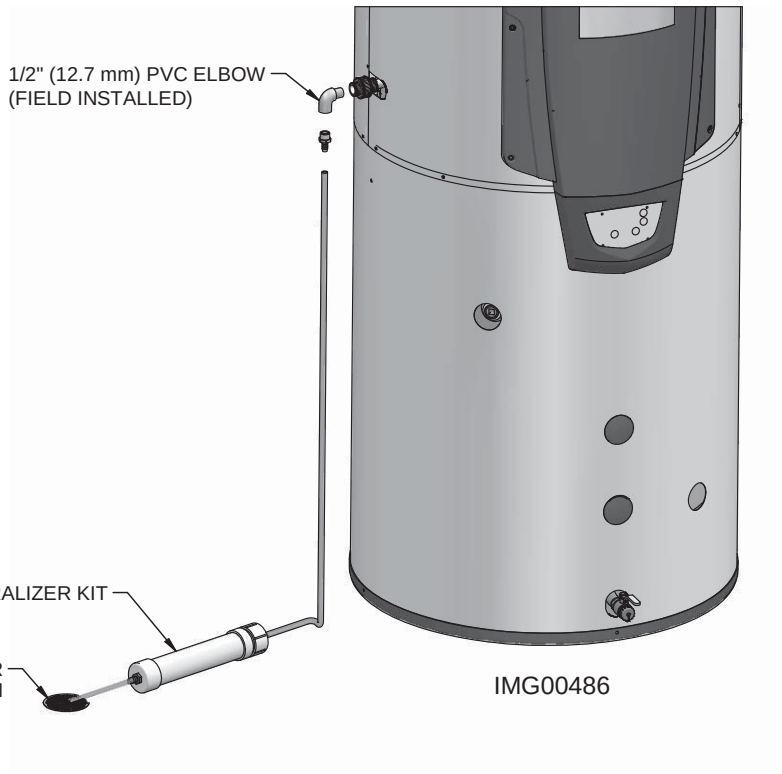
   A Neutralizer Kit is available from the factory (100157721).

Note: The Neutralizer Kit MUST BE installed horizontally.

3. Do not expose condensate line to freezing temperatures.

NOTICE

Use materials approved by the authority having jurisdiction. In the absence of other authority, PVC and CPVC pipe must comply with ASTM D1785 or D2845. Cement and primer must comply with ASME D2564 or F493. For Canada use CSA or ULC certified PVC or CPVC pipe, fittings, and cement.



NOTICE

To allow for proper drainage on large horizontal runs, a second line vent may be required and tubing size may need to increase to 1 inch.

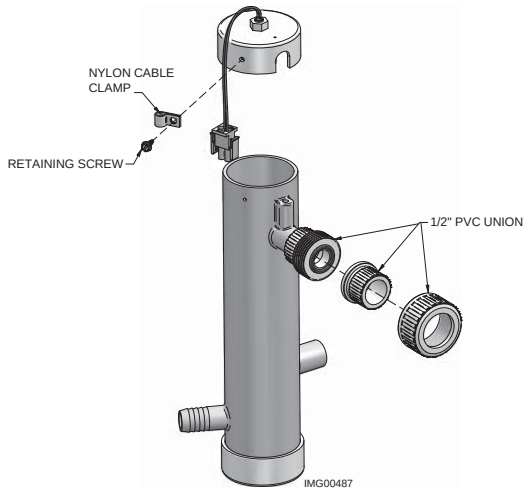
The condensate line must remain unobstructed, allowing free flow of condensate. If condensate is allowed to freeze in the line or if the line is obstructed in any other manner, condensate can exit from the water heater condensate trap, resulting in potential water damage to property.

4. A condensate removal pump is required if the water heater is below the drain. When installing a condensate pump, select one approved for use with condensing water heaters and furnaces. The pump should have an overflow switch to prevent property damage from condensate spillage. The switch should be wired to the auxiliary device proving switch terminals on the low voltage connection board.

Figure 8-1 *Condensate Disposal*

9 Start-up

Chlorine concentration less than 200 ppm



1. Do not fill the water heater or operate with water containing chlorine in excess of 200 ppm.
2. Filling with chlorinated fresh water should be acceptable since drinking water chlorine levels are much lower.
3. Do not use the water heater to directly heat swimming pool or spa water.
4. At initial fill and during water heater startup and testing, check system thoroughly for any leaks. Repair all leaks before proceeding further.

Check for gas leaks

⚠ WARNING Before starting the water heater, and during initial operation, smell near the floor and around the water heater for gas odorant or any unusual odor. Remove the top access panel and smell the interior of the water heater enclosure. Do not proceed with startup if there is any indication of a gas leak. Use an approved leak detection solution. Repair any leaks at once.

⚠ WARNING DO NOT attempt to measure gas valve outlet pressure. The gas valve is factory-set for the correct outlet pressure. This setting is suitable for natural gas and propane (when configured for LP), requiring no field adjustment. Attempting to measure the gas valve outlet pressure could result in damage to the valve, causing potential severe personal injury, death, or substantial property damage.

Figure 9-1 *Condensate Trap*

⚠ WARNING Propane water heaters only – Your propane supplier mixes an odorant with the propane to make its presence detectable. In some instances, the odorant can fade, and the gas may no longer have an odor. Before startup (and periodically thereafter), have the propane supplier verify the correct odorant level in the gas.

Inspect/fill condensate system

Inspect/check condensate lines and fittings

1. Inspect the condensate drain line, condensate PVC fittings and condensate trap.

Fill condensate trap with water

1. Remove the PVC cap retaining screw from the PVC cap (FIG. 9-1).
2. Remove the 2 inch PVC cap with the switch located at the top of the trap (FIG. 9-1).
3. Fill with fresh water until the water begins to pour out of the drain.
4. Replace the cap. Press the cap onto the trap until the cap makes contact with the drain.
5. Replace the retaining screw.

⚠ WARNING The condensate trap (FIG. 9-1) must be filled with water during all times of water heater operation to avoid flue gas emission from the condensate drain line. Failure to fill the trap could result in severe personal injury or death.

Final checks before starting the water heater

- ❑ Read this manual to familiarize yourself with electronic control module operation. Read pages 52 and 53 for proper steps to start the water heater.
- ❑ Verify the water heater and system are full of water and all system components are correctly set for operation.
- ❑ Verify the preparation procedures of Section 9, pages 50 and 51 have been completed.
- ❑ Fill the vent condensate trap with water (removing the retaining screw in order to remove the 2 inch PVC cap with the switch located at the top of the trap). Replace the cap. Press the cap onto the trap until the cap makes contact with the drain. Replace the retaining screw.
- ❑ Verify electrical connections are correct and securely attached.
- ❑ Inspect vent piping and air piping for signs of deterioration from corrosion, physical damage or sagging. Verify air piping and vent piping are intact and correctly installed per this manual.

9 Start-up *(continued)*

Start the water heater

1. Read and follow the Operating instructions in FIG.'s 9-2 and 9-3, pages 52 and 53.

If water heater does not start correctly

1. Check for loose connections, blown fuse or service switch off.
2. Is external limit control (if used) open? Is water temperature above 200°F?
3. Is tank set point set below tank temperature?
4. Is gas turned on at meter and water heater?
5. Is incoming gas pressure less than 4 inches w.c.?

If none of the above corrects the problem, refer to the *Troubleshooting* section of this manual.

Check system and water heater

❑ Check water piping

1. Check system piping for leaks. If found, shut down the water heater and repair immediately.
2. Check Delta T. Ensure Delta T is less than 25°F, if not, reference *Section 12 - Troubleshooting.*
3. Vent any remaining air from the system using manual vents. Air in the system will interfere with circulation and cause hot water distribution problems and noise.

❑ Check vent piping and air piping

1. Check for gastight seal at every connection, seam of air piping, and vent piping.

⚠ WARNING Venting system must be sealed gastight to prevent flue gas spillage and carbon monoxide emissions, which will result in severe personal injury or death.

❑ Check gas piping

1. Check around the water heater for gas odor following the procedure on page 42 of this manual *(Connecting Gas Supply Piping).*

⚠ WARNING If you discover evidence of any gas leak, shut down the water heater at once. Find the leak source with a bubble test and repair immediately. Do not start the water heater again until corrected. Failure to comply could result in severe personal injury, death, or substantial property damage.

Check flame and combustion

1. Shut the water heater down by pressing the UP button for five (5) seconds.
2. Locate the flue sensor in the vent connection. Remove the flue sensor and grommet from the unit. **Note:** Combustion measurements will be made at this point.
3. Place the water heater in active position by pressing the UP button for five (5) seconds.
4. Press ENTER plus the UP button for five (5) seconds to enter Service Mode.
5. Insert the probe from a combustion analyzer into the hole left by the removal of the flue temperature sensor.
6. Once the water heater has modulated up to full fire, measure the combustion. The values should be in the range listed in Table 9A. The CO levels should be less than 150 ppm for a properly installed unit.

   If the combustion is not within the specified range, reference the *Troubleshooting* section of this manual for possible causes and corrective actions.
7. Once the combustion analysis is complete, exit Service Mode.

***Table 9A** Flue Products Chart*

Natural Gas		Propane	
CO_2	O_2	CO_2	O_2
8.0% - 10%	3.0% - 6.5%	9.0% - 11%	4.1% - 6.9%

8. Replace the flue sensor and grommet into the vent connection.
9. Place the Shield water heater back into normal operation.

⚠ WARNING You must replace the flue sensor to prevent flue gas spillage into the room. Failure to comply could result in severe personal injury, death, or substantial property damage.

9 Start-up

Figure 9-2 *Operating Instructions - Models 126-065 -- 286-125*

FOR YOUR SAFETY READ BEFORE OPERATING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury, or loss of life.

A. This appliance does not have a pilot. It is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.

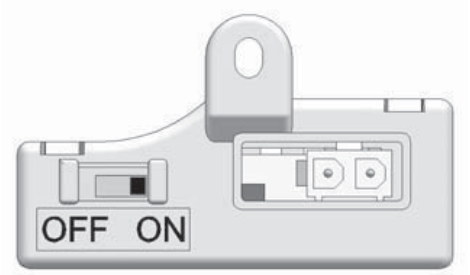
B. BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS

Do not try to light any appliance.

Do not touch any electric switch; do not use any phone in your building.

Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.



If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to move the gas control switch. Never use tools. If the switch will not move by hand, don't try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

OPERATING INSTRUCTIONS

1. **STOP!** Read the safety information above on this label.
2. Set the thermostat to lowest setting.
3. Turn off all electric power to the appliance.
4. This appliance is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.
5. Remove front door.
6. Move switch to the "OFF" position.
7. Wait five (5) minutes to clear out any gas. If you then smell gas, **STOP!** Follow "B" in the safety information above this label. If you don't smell gas, go to next step.
8. Move the switch to the "ON" position.
9. Install front door.
10. Turn on all electric power to appliance.
11. Set thermostat to desired setting.
12. If the appliance will not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

TO TURN OFF GAS TO APPLIANCE

1. Set the thermostat to lowest setting.
2. Turn off all electric power to the appliance if service is to be performed.
3. Remove front door.
4. Move switch the "OFF" position.
5. Install front door.

LBL2339 REV B

9 Start-up *(continued)*

Figure 9-3 *Operating Instructions - Models 401-125 -- 501-125*

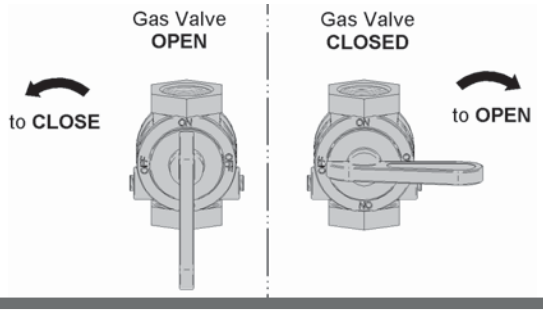
FOR YOUR SAFETY READ BEFORE OPERATING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury, or loss of life.

A. This appliance does not have a pilot. It is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.

B. BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS



- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to turn the gas control knob. Never use tools. If the handle will not turn by hand, don't try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

OPERATING INSTRUCTIONS

1. **STOP!** Read the safety information above on this label.
2. Set the thermostat to lowest setting.
3. Turn off all electric power to the appliance.
4. This appliance is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.
5. Remove top cover.
6. Turn gas shutoff valve counterclockwise to "OFF". Handle will be perpendicular to pipe. Do not force.
7. Wait five (5) minutes to clear out any gas. If you then smell gas, **STOP!** Follow "B" in the safety information above this label. If you don't smell gas, go to next step.
8. Turn gas shutoff valve clockwise to "ON". Handle will be parallel to pipe.
9. Install top cover.
10. Turn on all electric power to appliance.
11. Set thermostat to desired setting.
12. If the appliance will not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

TO TURN OFF GAS TO APPLIANCE

1. Set the thermostat to lowest setting.
2. Turn off all electric power to the appliance if service is to be performed.
3. Remove top cover.
4. Turn gas shut off valve counterclockwise to "OFF". Handle will be perpendicular to pipe. Do not force
5. Install top cover.

LBL2284 REV -

10 Operating information

General

How the water heater operates

The Shield water heater combines an advanced stainless steel heat exchanger, electronic control module, and tank that allows fully condensing operation. The blower pulls in air and pushes flue products out of the heat exchanger and flue piping. The control module regulates blower speed to control the water heater firing rate. The gas valve senses the amount of air flowing into the water heater and allows only the right amount of gas to flow. An internal pump circulates the water between the tank and heater and mixes the incoming water to provide maximum efficiency.

Temperature control

Modulation

The Shield water heater is capable of modulating its firing rate from a minimum of 20% to a maximum of 100%. The firing rate is dictated by the hot water draw and various other temperature limitations.

Night setback

The controller may be programmed to reduce the tank set point during a certain time each day. There are seven (7) start and seven (7) stop triggers.

Flame current support

To prevent nuisance shutdowns when the water heater is firing at minimum rates, the control will increase fan speed when the flame signal drops too low.

Protection features

Outlet temperature, flue temperature, and temperature rise limiting

The heat exchanger outlet temperature is monitored by the heat exchanger outlet temperature sensor. When the heat exchanger outlet temperature exceeds 190°F, the unit will reduce the fan speed. If the heat exchanger outlet water temperature exceeds 198°F the control will shut the unit down until it cools off.

The control module monitors the flue temperature by a sensor located in the flue exhaust. If the flue temperature exceeds 215°F the control will reduce the maximum fan speed. If the flue temperature exceeds 225°F (107°C) the control will shut the unit down. The unit will restart automatically once the flue temperature drops 10°F (6°C) and the minimum off time has expired.

The control monitors the temperature difference between the heat exchanger inlet and the heat exchanger outlet sensors. If this difference exceeds 25°F the control will reduce the fan speed. If the temperature difference exceeds 30°F the control will shut the unit down. The unit will restart automatically once the temperature difference has dropped below 25°F and the minimum off time has expired.

Freeze protection

DO NOT install the water heater in a room likely to freeze.

The following integral feature of the electronic control module provides some protection for the water heater.

- The electronic control module provides freeze-up protection as follows when the water heater water temperature drops below 45°F:
- Below 45°F, the internal pump operates constantly.
- Below 37°F, the burner turns on.
- The burner and pump will turn off if water heater water temperature rises above 45°F.

⚠ CAUTION This feature of the electronic control module does not eliminate the possibility of freezing. The installation must still use recognized design, installation and maintenance practice to prevent freeze potential for the water heater.

Runtime and alarm outputs

The water heater provides dry contacts for indicating when the water heater is running, and when it is unable to operate.

Error logging

The control will hold in memory the last 10 faults. The date and time of the occurrence will be recorded as well. Only the 10 most current occurrences will be held in memory.

10 Operating information *(continued)*

Water heater temperature regulation

Operating temperature (target)

The electronic control module senses water temperature in the tank and regulates water heater ignition and firing rate to achieve a target temperature. The target temperature can be set between 60°F and 185°F.

High limit operations

The Shield water heater is equipped with a fixed automatic reset high limit and an adjustable manual reset high limit. The automatic reset high limit has a set point of 200°F and the manual reset high limit has a maximum set point of 210°F.

When the outlet temperature exceeds 200°F, the automatic high limit action occurs. The water heater shuts down until the outlet water temperature cools below 190°F, and a 60 second timer has expired. If the outlet temperature continues to increase, the manual reset high limit action will occur at 210°F.

High limit test procedure

NOTICE Please note that the brackets ([]) denote screen status.

1. Connect the water heater to 120V power.
2. Note the outlet temperature shown on the display.
3. Press and hold the ENTER and DOWN keys until “P01” appears in the lower digits on the display.
4. Press and hold the DOWN key until the set point shown in the upper digits is less than the outlet temperature (or it reaches its minimum setting, whichever is higher).
5. Press the ENTER key four (4) times. The word “SET” will appear on the display.
6. Once the outlet temperature reaches the new Manual Reset High Limit setting, the control will lock out, run the blower and DHW pump, and display “E15” in the lower digits on the display. It may be necessary to activate Service Mode to bring the outlet temperature above the Manual Reset High Limit set point. Press and hold the ENTER and UP keys for 5 seconds to activate Service Mode.
7. Press the ENTER and DOWN keys again until ‘P01” appears in the lower digits.
8. Press and hold the UP key to readjust the set point to the desired setting.
9. Press the ENTER key four (4) times. The word “SET” will appear on the display.
10. Press the RESET key to clear the Manual Reset High Limit.
11. If Service Mode was activated, press ENTER for 5 seconds to deactivate Service Mode.

Adjustable control parameters

Date and time

The control uses an internal clock for the night setback feature and for logging of events. For these features to work correctly, the clock must be set when the water heater is first installed or anytime the water heater has been powered off for more than 15 minutes. Note that hours are displayed as 24 hour time (2:00PM = 14:00). Days are displayed as a number (Monday = 1, Tuesday = 2, ..., Sunday = 7).

NOTICE The internal clock does not adjust for Daylight Savings Time and therefore, will require a manual adjustment.

User adjustable parameters

To access the User Adjustable Parameter Menu, press and hold the ENTER button for five (5) seconds. Once pressed, the temperature unit’s adjustment will be shown. Press the ENTER button to cycle to other adjustment values. Once you have cycled through all of the values, the new values will be saved.

***Table 10A** User Adjustable Parameters*

Code	Description
u01	Temperature Units (°C/°F)
u02	Hot Water Set Point
u03	Year
u04	Month
u05	Day
u06	Hour
u07	Minute

Installer settings

Set the Hot Water (HW) Temperature as follows:

1. Press and hold the ENTER button for five (5) seconds.
2. Press ENTER again and the u02 Screen should appear.
3. Press the UP and DOWN buttons to set the temperature.
4. Once you have successfully set the temperature, press the ENTER button seven (7) times to save your data.

10 Operating information

***Table 10B** Temperature Parameter Settings*

Code	Description	Factory Default	Min	Max
p01	Manual Reset High Limit Set Point	210	32	210
p02	Night Setback Set Point	0	0	90
p03	Maximum Tank Set Point	125	32	190
p04	HW Pump Delay	0:30	0:00	0:40:00
--	HW Temp	125	60	185

Installer adjustable parameters

To access the Installer Adjustable Parameter Menu, press and hold the ENTER and DOWN buttons simultaneously for five (5) seconds. Once pressed, the temperature unit's adjustment will be shown. Press the OK button to cycle to other adjustment values. Once you have cycled through all of the values, the new values will be saved.

***Table 10C** Installer Adjustable Parameters*

Code	Description
p01	Manual Reset High Limit
p02	Night Setback Offset
p03	Maximum Tank Set Point
p04	Pump Delay Time

Night setback

Access the Night Setback Menu by pressing the UP and DOWN buttons simultaneously for five (5) seconds.

This feature allows the user to lower the tank set point at certain times each week. The Night Setback Offset (see *Installer Adjustable Parameters*, this page) determines how much the set point is lowered. The times at which the set point is lowered are controlled by seven (7) start triggers and seven (7) stop triggers. Each trigger can be set to any time on any day. When the internal clock (see *User Adjustable Parameters*, page 55) reaches a start trigger, Night Setback will begin. When the internal clock reaches a stop trigger, Night Setback will end. When a start trigger and a stop trigger are programmed to the same day and time, the stop trigger will have priority, so Night Setback will not become active. (The default settings are all set to the same day and time.) Use the following procedure to adjust the triggers:

1. Press the UP and DOWN buttons simultaneously for five (5) seconds.
2. The top digits on the display will show the trigger type. To change from ON to OFF, or back, press the UP or DOWN button, then press the ENTER button.
3. The trigger number will then appear. Press the UP or DOWN buttons to change the trigger number you are programming, then press the ENTER button.
4. The day of the week (1 - 7) for that trigger will then appear in the lower digits on the display (1 = Monday, 2 = Tuesday, etc.,). Press the UP or DOWN buttons to change the day of the week, then press the ENTER button.
5. The time for that trigger then appears in a 24 hour format (for example, 2:00 PM = 1400), with the hours digits flashing. Use the UP and DOWN buttons to adjust the hours, then press the ENTER button.
6. The minutes digits will then start flashing. Press the UP and DOWN buttons to adjust the minutes. If you are finished programming all of the triggers, press and hold the ENTER key for 5 seconds. Otherwise, press the ENTER button once. The bottom digits will clear and the top digits will show ON or OFF again. Go back to Step 2 of this procedure.

Low water cutoff protection

The electronic control module uses sensing of both heat exchanger supply and return temperatures. If the flow rate is too low or either temperature too high, the control module modulates and shuts the burner down. This ensures water heater shutdown in the event of low water or low flow conditions in the heat exchanger.

To turn the heater ON/OFF

To turn the heater ON, press the UP button and hold it for five (5) seconds. To turn the heater OFF, press the UP button and hold again for five (5) seconds.

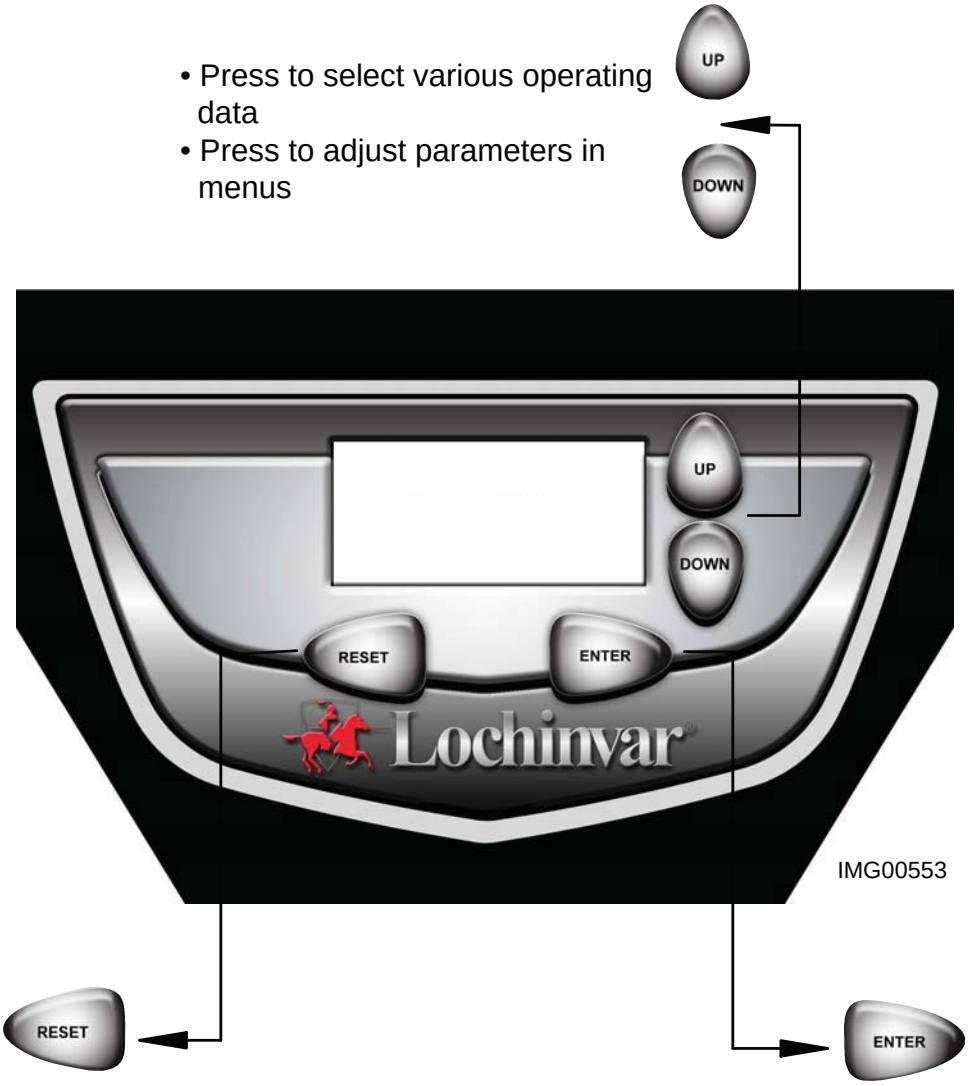
Service mode

To control the modulation of the heater for troubleshooting procedures, the Service Mode can be accessed by pressing the ENTER and UP buttons simultaneously, holding them for five (5) seconds. Once in the Service Mode, the UP and DOWN buttons control the speed of the blower. To toggle between the maximum and minimum speeds, press the ENTER button momentarily. When ready to return to the normal state, press the ENTER button for five (5) seconds. The control will also leave Service Mode in the event of a lockout.

Error logging

To access the error log, press the DOWN button for five (5) seconds. The error codes will be displayed beginning with the most recent. The top number indicating the error number starting with "1" being the most recent. The bottom of the display will show the following information in two (2) second intervals:

1. Error Code
2. Hour and Minute of the Error
3. Date of the Error
4. Year of the Error



To view the next error press the UP button. To pause the information on the screen, press and hold the ENTER button, when released it will skip to the next value. To leave the Error Log Menu press and hold the DOWN button for five (5) seconds.

10 Operating information *(continued)*

Shield control module

Use the control panel (FIG. 10-1) to set temperatures, operating conditions, and monitor water heater operation.

Figure 10-1 *Control Panel*

11 Maintenance

Maintenance and annual startup

Table 11A *Service and Maintenance Schedules*

Service technician (see the following pages for instructions)		Owner maintenance	
ANNUAL START-UP	**General:** • Address reported problems • Inspect interior; clean and vacuum if necessary; • Clean condensate trap and fill with fresh water • Check for leaks (water, gas, flue, condensate) • Verify flue and air lines in good condition and sealed tight • Check system water pressure/system piping/expansion tank • Check control settings • Check ignition and flame sense electrodes (sand off any deposits; clean and reposition) • Check wiring and connections • Perform start-up checkout and performance verification per Section 9 in this manual. • Flame inspection (stable, uniform) • Flame signal (at least 10 microamps at high fire) • Clean the heat exchanger if flue temperature is more than 54°F above return water temperature. • Check anode rods. • Check Delta T (Temperature Rise) **If combustion or performance indicate need:** • Clean heat exchanger • Remove and clean burner using compressed air only • Clean the blower wheel	**Daily**	• Check water heater area
		Monthly	• Check vent piping • Check air piping • Check relief valve • Check condensate drain system • Check Delta T (Temperature Rise)
		Every 6 months	• Check water heater piping (gas and water) for leaks • Operate relief valve

11 Maintenance *(continued)*

⚠ WARNING Follow the service and maintenance procedures given throughout this manual and in component literature shipped with the water heater. Failure to perform the service and maintenance could result in damage to the water heater or system. Failure to follow the directions in this manual and component literature could result in severe personal injury, death, or substantial property damage.

⚠ WARNING The water heater should be inspected annually only by a qualified service technician. In addition, the maintenance and care of the water heater designated in Table 11A and explained on the following pages must be performed to assure maximum water heater efficiency and reliability. Failure to service and maintain the water heater and system could result in equipment failure.

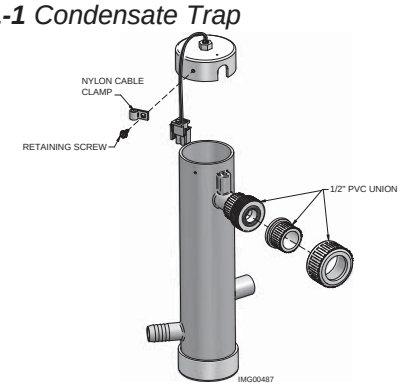
⚠ WARNING Electrical shock hazard – Turn off power to the water heater before any service operation on the water heater except as noted otherwise in this instruction manual. Failure to turn off electrical power could result in electrical shock, causing severe personal injury or death.

Address reported problems

1. Inspect any problems reported by the owner and correct before proceeding.

Inspect water heater area

1. Verify that water heater area is free of any combustible materials, gasoline and other flammable vapors and liquids.
2. Verify that air intake area is free of any of the contaminants listed in Section 1 of this manual. If any of these are present in the water heater intake air vicinity, they must be removed. If they cannot be removed, reinstall the air and vent lines per this manual.



Inspect water heater interior

1. Remove the pump access panel and inspect the interior of the water heater.
2. Vacuum any sediment from inside the water heater and components. Remove any obstructions.

Clean condensate trap

1. Inspect the condensate drain line, condensate PVC fittings, and condensate trap.
2. Remove the PVC cap retaining screw from the PVC cap (FIG. 11-1).
3. Remove the 2 inch PVC cap with the switch located at the top of the trap (FIG. 11-1).
4. Remove any sediment in the trap.
5. Fill with fresh water until the water begins to pour out of the drain.
6. Replace the cap. Press the cap onto the trap until the cap makes contact with the drain.
7. Replace the retaining screw.

Figure 11-1 *Condensate Trap*

⚠ WARNING The condensate trap must be filled with water during all times of water heater operation to avoid flue gas emission from the condensate drain line. Failure to fill the trap could result in severe personal injury or death.

Check all piping for leaks

⚠ WARNING Eliminate all system or water heater leaks. Leaking water may cause severe property damage.

1. Inspect all water and gas piping and verify to be leak free.
2. Look for signs of leaking lines and correct any problems found.
3. Check gas line using the procedure found in Section 7 - Gas Connections.

Flue vent system and air piping

1. Visually inspect the entire flue gas venting system and air piping for blockage, deterioration or leakage. Repair any joints that show signs of leakage. Verify that air inlet pipe is connected and properly sealed.
2. Verify that water heater vent discharge and air intake are clean and free of obstructions.

⚠ WARNING Failure to inspect for the above conditions and have them repaired can result in severe personal injury or death.

Check water system

1. Verify all system components are correctly installed and operational.
2. Check the cold fill pressure for the system. Verify it is correct (must be a minimum of 12 PSI).
3. Watch the system pressure as the water heater heats up (during testing) to ensure pressure does not rise too high. Excessive pressure rise indicates expansion tank sizing or performance problem.
4. Inspect automatic air vents and air separators. Remove air vent caps and briefly push valve to flush vent. Replace caps. Make sure vents do not leak. Replace any leaking vents.

11 Maintenance

Check expansion tank

1. Expansion tanks provide space for water to move in and out as the water expands due to temperature increase or contracts as the water cools. Tanks must be approved for potable water systems. See Section 5 - System Piping for suggested best location of expansion tanks.

Check water heater relief valve

1. Inspect the relief valve and lift the lever to verify flow. Before operating any relief valve, ensure that it is piped with its discharge in a safe area to avoid severe scald potential. Read Section 5 - System Piping before proceeding further.

⚠ WARNING Safety relief valves should be re-inspected AT LEAST ONCE EVERY THREE YEARS, by a licensed plumbing contractor or authorized inspection agency, to ensure that the product has not been affected by corrosive water conditions and to ensure that the valve and discharge line have not been altered or tampered with illegally. Certain naturally occurring conditions may corrode the valve or its components over time, rendering the valve inoperative. Such conditions are not detectable unless the valve and its components are physically removed and inspected. This inspection must only be conducted by a plumbing contractor or authorized inspection agency – not by the owner. Failure to re-inspect the water heater relief valve as directed could result in unsafe pressure buildup, which can result in severe personal injury, death, or substantial property damage.

⚠ WARNING Following installation, the valve lever must be operated AT LEAST ONCE A YEAR to ensure that waterways are clear. Certain naturally occurring mineral deposits may adhere to the valve, rendering it inoperative. When manually operating the lever, water will discharge and precautions must be taken to avoid contact with hot water and to avoid water damage. Before operating lever, check to see that a discharge line is connected to this valve directing the flow of hot water from the valve to a proper place of disposal. Otherwise severe personal injury may result. If no water flows, valve is inoperative. Shut down the water heater until a new relief valve has been installed.

2. After following the warning directions, if the relief valve weeps or will not seat properly, replace the relief valve. Ensure that the reason for relief valve weeping is the valve and not over-pressurization of the system due to expansion tank waterlogging or undersizing.

Inspect ignition and flame sense electrodes

1. Remove the ignition and flame sense electrodes from the water heater heat exchanger access cover.
2. Remove any deposits accumulated on the ignition/flame sense electrode using sandpaper. If the electrodes cannot be cleaned satisfactorily, replace with new ones.
3. Replace ignition/flame sense electrode, making sure gasket is in good condition and correctly positioned.

Check ignition ground wiring

1. Inspect water heater ground wire from the heat exchanger access cover to ground terminal strip.
2. Verify all wiring is in good condition and securely attached.
3. Check ground continuity of wiring using continuity meter.
4. Replace ground wires if ground continuity is not satisfactory.

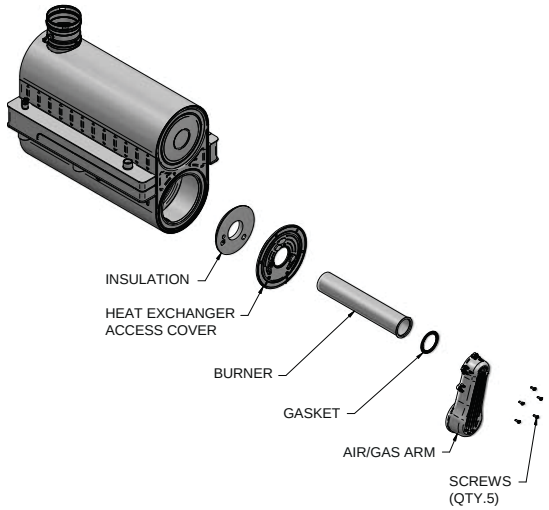
Check all water heater wiring

1. Inspect all water heater wiring, making sure wires are in good condition and securely attached.

Check control settings

1. Set the control module display to Parameter Mode and check all settings. Adjust settings if necessary. See Section 10 of this manual for adjustment procedures.
2. Check settings of external limit controls (if any) and adjust if necessary.

Perform start-up and checks



1. Start water heater and perform checks and tests specified in Section 9 - Start-up.
2. Verify cold fill pressure is correct and that operating pressure does not go too high.

11 Maintenance *(continued)*

Check burner flame

1. Inspect flame through observation window.
2. If the flame is unsatisfactory at either high fire or low fire, turn off water heater and allow water heater to cool down. Remove the burner and clean it thoroughly using a vacuum cleaner or compressed air. Do not use compressed air to clean burner if performed inside a building.
3. Remove the burner, reference FIG. 11-2 below.
4. When replacing the burner, ensure gasket is in good condition and positioned correctly (FIG. 11-2).

***Figure 11-2** Burner Assembly*

Check flame signal

1. At high fire the flame signal shown on the display should be at least 10 microamps.
2. A lower flame signal may indicate a fouled or damaged flame sense electrode. If cleaning the flame sense electrode does not improve, ground wiring is in good condition, and ground continuity is satisfactory, replace the flame sense electrode.
3. See Section 12 - Troubleshooting for other procedures to deal with low flame signal.

Review with owner

1. Emphasize the need to perform the maintenance schedule specified in this manual.
2. Remind the owner of the need to call a licensed contractor should the water heater or system exhibit any unusual behavior.

Handling ceramic fiber materials

REMOVAL OF COMBUSTION CHAMBER LINING

⚠ WARNING The combustion chamber insulation in this appliance contains ceramic fiber material. Ceramic fibers can be converted to cristobalite in very high temperature applications. The International Agency for Research on Cancer (IARC) has concluded, “Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (Group 1).” Normal operating temperatures in this appliance are below the level to convert ceramic fibers to cristobalite. Abnormal operating conditions would have to be created to convert the ceramic fibers in this appliance to cristobalite.

The ceramic fiber material used in this appliance is an irritant; when handling or replacing the ceramic materials it is advisable that the installer follow these safety guidelines.

- Avoid breathing dust and contact with skin and eyes.
  - Use NIOSH certified dust respirator (N95). This type of respirator is based on the OSHA requirements for cristobalite at the time this document was written. Other types of respirators may be needed depending on the job site conditions. Current NIOSH recommendations can be found on the NIOSH website at http://www.cdc.gov/niosh/homepage.html. NIOSH approved respirators, manufacturers, and phone numbers are also listed on this website.
  - Wear long-sleeved, loose fitting clothing, gloves, and eye protection.
- Apply enough water to the combustion chamber lining to prevent airborne dust.
- Remove the combustion chamber lining from the appliance and place it in a plastic bag for disposal.
- Wash potentially contaminated clothes separately from other clothing. Rinse clothes washer thoroughly.

NIOSH stated First Aid.

- Eye: Irrigate immediately.
- Breathing: Fresh air.

Cleaning heat exchanger

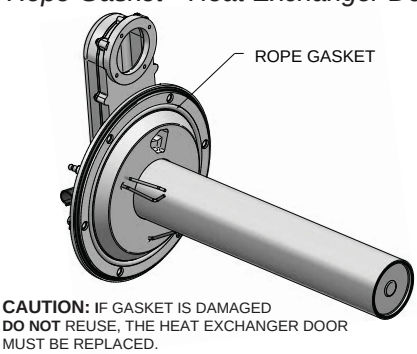
For recommended materials; including brush, appropriate extension(s), refractory cover, and detailed instructions see Table 11B - Heat Exchanger Cleaning Kits on page 62.

1. Shut down water heater:
   - Follow the “To Turn Off Gas to Appliance” instructions for the water heater in Section 9 - Startup.
   - Do not drain the water heater unless it will be exposed to freezing temperatures. If using freeze prevention fluid in system, do not drain.
2. Allow time for the water heater to cool to room temperature if it has been firing.

11 Maintenance

3. Remove the nuts securing the heat exchanger access cover to the heat exchanger and set aside.
4. Remove the heat exchanger access cover, burner, and gas/air arm assembly.

⚠ WARNING The water heater contains ceramic fiber materials. Use care when handling these materials per instructions in this manual. Failure to comply could result in severe personal injury.



5. Remove the condensate hose from the heat exchanger end. Connect a field supplied 3/4" diameter hose to a drain pan. Using field supplied means, cover the refractory in the back of the combustion chamber of the heat exchanger.
6. Use a vacuum cleaner to remove any accumulation on the water heater heating surfaces. Do not use any solvent.
7. Brush the heat exchanger while dry using a nylon bristle brush. **Caution:** DO NOT use a metal brush. Re-vacuum the heat exchanger.
8. Finish cleaning using a clean cloth dampened with warm water. Rinse out debris with a low pressure water supply.
9. Allow the heat exchanger to thoroughly dry.
10. Remove the field supplied rear refractory cover from the back of the combustion chamber of the heat exchanger and reassemble.
11. Close isolation valves on piping to isolate water heater from system. Attach a hose to the water heater drain and flush water heater thoroughly with clean water by using purging valves to allow water to flow through the water make-up line to the water heater.
12. Perform start-up and check-out procedures in the Check Flame and Combustion - Section 9 - Startup on page 51 of this manual.
13. Replace the access cover and restore water heater to operation.

Table 11B *Heat Exchanger Cleaning Kits*

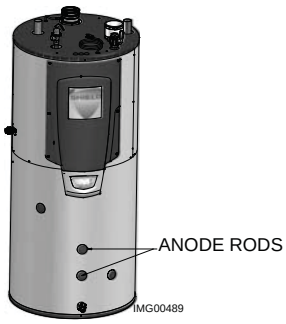
Model	Kit Number	Part Number	Component Description
126-065 -- 201-100 286-125 -- 401-125	100157627	100140243	Rear Refractory Cover
		100162565*	Nylon 4" Wheel Brush*
		100162566	3mm Allen Wrench
		100162568	1/4" x 24" Drill Extension
501-125	100157628	100140243	Rear Refractory Cover
		100162565*	Nylon 4" Wheel Brush*
		100162567	1/4" x 12" Drill Extension
		100162568	1/4" x 24" Drill Extension

⚠ CAUTION * Do NOT use a metal brush. Only use the kit provided brush or an equivalent replacement nylon brush.

Figure 11-3 *Rope Gasket - Heat Exchanger Door*

NOTICE Rope gasket is intended for sealing combustion (FIG. 11-3). If damaged DO NOT reuse, the heat exchanger door must be replaced. Consult factory for replacement heat exchanger door (kit 100173749).

Oiled bearing circulators



1. The circulator shipped with the Shield water heater is water-lubricated. No oiling is required.
2. Check other circulators in the system. Oil any circulators requiring oil, following circulator manufacturer's instructions. Over-oiling will damage the circulator.

Magnesium anode rod inspection

Glass lined storage tanks have a magnesium anode(s) (FIG. 11-4) to provide cathodical protection of the lining and minimize corrosion. Aggressive water conditions in some areas of the country may accelerate the deterioration of the anode(s). The anode(s) should be periodically removed and inspected to determine if replacement is necessary.

The heater must be valved off from the system and fully drained to remove an anode for inspection. Anodes are supplied in threaded fittings on the side of the tank. Adequate service clearance is required to allow removal of an anode. The anode(s) should be replaced when more than six inches of the core wire is exposed at either end of the rod.

Figure 11-4 *Anode Location*

NOTICE Anode rods showing excessive decomposition may indicate electrolysis. An earth ground should be attached to the vessel to divert stray current and prevent tank damage.

12 Troubleshooting

⚠ WARNING Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Always disconnect power to the water heater before servicing. Failure to comply could result in severe personal injury, death, or substantial property damage.

⚠ WARNING Never jumper (bypass) any device except for momentary testing as outlined in the Troubleshooting chart. Severe personal injury, death, or substantial property damage can result.

Before troubleshooting:

1. Have the following items:
   a. Voltmeter that can check 120 VAC, 24 VAC, and 12 VDC.
   b. Continuity checker.
   c. Contact thermometer.

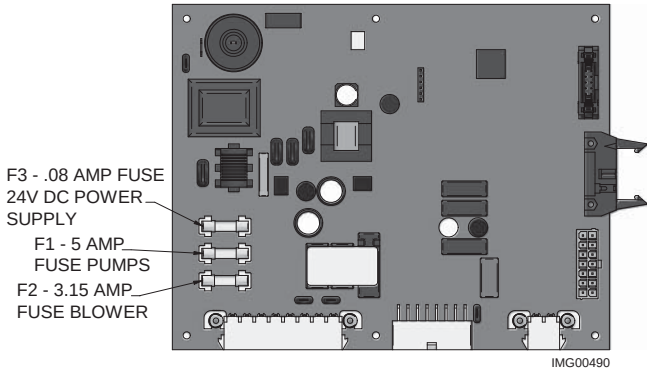
2. Check for 120 VAC (minimum 102 VAC to maximum 132 VAC) to water heater.

3. Make sure the tank is calling for heat.

4. Make sure all external limit controls are installed and operating.

Check the following:

1. Wire connectors to control module and connection board are securely plugged in.



2. Gas pressures:
   - Maximum: 14 inches w.c. (natural and LP) with no flow (lockup) or with water heater on
   - Minimum: 4 inches w.c. (natural), 8 inches w.c. (LP) with gas flowing (verify during water heater startup)

Check control module fuses

NOTICE ALWAYS check control module fuses before replacing control module or any major components (blower, etc.). If one of these fuses is blown, it can prevent the control module or other components from operating.

1. Turn OFF power to the water heater at the external disconnect switch.
2. Remove front access cover.
3. Remove the control module cover.
4. Inspect fuses F2, F3, F4, and F5, see FIG. 12-1 below.

Figure 12-1 *Control Module Fuses*

5. The water heater is shipped with three (3) spare fuses in a plastic bag attached to the control module cover.

6. If necessary, replace open fuse (F3 is 1.25 amps, F2 and F4 are 3.15 amps, and F5 is 5 amps).

Note: Fuses F2 - F5 are all slow blow fuses.

⚠ WARNING Do not jumper fuse or replace with any fuse except as specified. Failure to comply could result in severe personal injury, death, or substantial property damage.

7. Install control module cover and front access cover after fuse inspection.

8. Restore power to the water heater at the external disconnect switch and verify water heater operation (Section 9 - Start-up) after completing water heater service.

12 Troubleshooting

Table 12A *Troubleshooting Chart - No Display*

FAULT	CAUSE	CORRECTIVE ACTION
No Display	- No 120 VAC supplied to unit.	• Check external line switch, fuse, or breaker. • Check wiring harness connection between display board and main control board. Connect harness at both points.
	- Bad display board.	• Replace board.
	- Bad main control board.	• Replace the main control board.
	- Blown fuse.	• Replace fuse F3 on the main control board, see page 63 of this manual.
No Burner Operation	- Tank temperature set point satisfied.	• Review temperature setting.
	- Unit locked out on fault.	• Consult display for specific fault. Refer to fault descriptions on page 67 of this manual for corrective actions.
Unit Does Not Modulate Above 50%	- Flue sensor open.	• Verify that the flue sensor is located in the flue outlet. • Check wiring connections at the flue sensor. • Check the resistance of the flue sensor and compare to Table 12C on page 65 of this manual.

12 Troubleshooting *(continued)*

Checking temperature sensors

The water heater temperature sensors (inlet water, outlet water, tank water, and flue) are all resistance type devices. The following tables show the correct values for the sensors at various temperatures. Use an ohmmeter to read the resistance of the sensor at a known temperature. If the resistance of the sensor does not closely match its corresponding table, replace the sensor.

Table 12B - *Inlet/Outlet Tank Sensor Resistance vs. Temperature*

Temperature °F	Resistance Ω	Temperature °F	Resistance Ω
50	18,780	158	1,990
68	12,263	176	1,458
86	8,194	194	1,084
104	5,592	212	817
122	3,893	--	--
140	2,760	--	--

Table 12C - *Flue Temperature Sensor Resistance vs. Temperature*

Temperature °F	Resistance Ω	Temperature °F	Resistance Ω
68	14,773	176	1,707
86	9,804	194	1,266
104	6,652	212	952
122	4,607	230	726
140	3,252	248	560
158	2,337	--	--

12 Troubleshooting

Table 12D *Troubleshooting Chart - Noisy System*

FAULT	CAUSE	CORRECTIVE ACTION
Noisy Operation	- Supply gas problem. Natural gas pressures should be between 4 inches w.c. and 14 inches w.c. LP gas pressures should be between 8 inches w.c. and 14 inches w.c.	• Refer to Section 6 - Gas Connections for detailed information concerning the gas supply.
	- Gas/air mixture problem.	• Refer to the Gas Valve Adjustment Procedure on page 74 of this manual for the proper gas valve setting. Verify that the vent/air intake lengths do not exceed the maximum listed in the General Venting section.
	- Dirty/damaged burner.	• Refer to page 62 in this manual for the burner removal and inspection procedure. Clean or replace the burner as necessary.
	- Low water flow through the heat exchanger.	• Very pump operation.
	- Air in the piping system.	• Properly purge all air from the piping system.
No Pump Operation	- Blown fuse.	• Replace fuse F5 on the control board, see page 63 of this manual.
	- Faulty pump.	• Replace pump.
	- Faulty pump relay.	• Replace pump relay.
	- Internal fault on control board.	• Replace main control board.
Relief Valve Opening	- System pressure exceeds relief valve setting.	• Lower the system pressure below the 150 PSI rating of the supplied relief valve.

12 Troubleshooting *(continued)*

***Table 12E** Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
E00	Invalid lockout code.	• Reset control module. • Switch power OFF and ON. • Replace control module.
E01	The control module has detected parameter settings that are corrupted.	• Replace control module.
E02 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The actual fan RPM is more than 30% above or below the fan speed RPM target.	• Vent/air intake lengths exceed the maximum allowed lengths. Refer to Section 2 - General Venting for proper lengths. • Check for obstruction or blockage in the vent/air intake pipes or at terminations. • Check the wiring connections at the fan and at the main control board. • Replace the fan. • Replace the main control board.
	Blown fuse.	• Replace fuse F2 on the control board, see page 63 of this manual.
E04 (will require a manual reset once condition has been corrected. Press the RESET button on the display to reset.)	Either the optional flow switch or the optional low water cutoff is not making.	• Check pump operation on a call for heat. • Check for closed valves or obstructions in the piping. • Verify system is full of water and all air has been purged from the system. • Check for loose or misplaced jumpers if flow switch or LWCO is not installed.
	Blown fuse.	• Replace fuse F3 on the control board, see page 63 of this manual.
E05 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The flame detector circuit is seeing a flame signal when the gas valve is closed.	• Verify flame is not present. If present, turn off gas supply and replace gas valve. • Check supply voltage for proper polarity. • Check external wiring for voltage feedback. • Check the flame rod and make sure it is clean. • Check the internal wiring for bad connections. • Replace main control board.

12 Troubleshooting

***Table 12E** (continued from previous page) Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
E06	The outlet water temperature has exceeded the setting of the automatic reset high limit.	• Adjust the set point of the auto reset limit to a higher setting up to a maximum of 200°F. Reference Section 10 - Operating Information for adjusting procedures. • Verify that the system is full of water and that all air has been properly purged from the system. • Verify that the boiler is piped properly into the heating system. Refer to Section 5 - System Piping for the proper piping methods for the Shield water heater. • Check 120 vac to boiler pump motor on a call for heat. If voltage is not present, check wiring back to the main control board. • Replace the main control board if necessary. • If 120 vac is present on a call for heat and the pump is not operating, replace the pump. • If operating on something other than an outlet sensor, check temperature setting of the main control board. • If the optional manual reset high limit has tripped, check setting of the device. • Check resistance of water sensors and compare to Table 12B on page 65 of this manual. Replace sensor if necessary.
E07 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	Either the air pressure switch, the O-temp heat exchanger switch, or the burner door temperature switch has opened. **⚠ WARNING** If the burner door temperature switch trips, the burner door and the burner door temperature switch will be extremely HOT. Allow the unit to cool before touching. Failure to follow this warning could result in severe personal injury, death, or substantial property damage.	**AIR PRESSURE SWITCH** • Check the wiring connections to switch. Wires should be connected to the common and normally closed terminals. • Air intake lengths exceed the maximum allowed lengths. Refer to Section 2 - General Venting for proper lengths. • Check for obstruction or blockage in the air intake pipes or at terminations. • Check reference hoses connected to the air pressure switch for blockage or obstruction. • Inspect the burner. Reference page 61 of this manual for removal and cleaning procedures. Replace if necessary. • Inspect the heat exchanger. Reference page 61 of this manual for removal and cleaning procedures. • Faulty air pressure switch. Replace switch. **O-TEMP HEX SWITCH (Applies to the 286 Model Only):** • Check the wiring connections to the fuse on the heat exchanger. • Check continuity across the thermal fuse. If open, replace heat exchanger. **BURNER DOOR TEMPERATURE SWITCH (Applies to the 286-125 -- 501-125 Models Only):** • The underlying cause of the fault must be identified and resolved by a qualified service technician before resetting the burner door temperature switch. • Check continuity across two contacts. Wires should be connected at both poles of the normally closed switch. • Faulty burner door temperature switch. Replace burner door temperature switch.

12 Troubleshooting *(continued)*

***Table 12E** (continued from previous page) Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
E08	Louver proving switch open.	• Check wiring to louver proving switch. • Check louver proving switch.
E09	The blocked drain switch has detected excessive condensate build up inside the unit.	• Check condensate tube from unit to floor drain for proper installation and obstructions. • Inspect condensate trap for blockage. Clean if necessary. • Check for loose wiring connection at wire harness plug. • Bad blocked drain switch. Replace switch.
E11 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The unit has lost flame signal four (4) times during a call for heat.	• Inspect spark electrode and associated wiring for damage and connection. Reference page 60 of this manual for removal and cleaning procedures. Replace if necessary. • Check for proper electrical grounding of the unit. • Check incoming supply gas pressure. Natural gas pressures should be between 4 - 14 inches w.c. and LP gas pressures should be between 8 - 14 inches w.c. Refer to Section 6 - Gas Connections for detailed information concerning the gas supply. • Verify that the plastic hose from the gas valve to the air inlet is connected and is not damaged. • Verify that the vent/air intake pipes are correctly installed and that there are no obstructions. • Check for 24 vac to the gas valve at the 2-pin connection on the side of the main control board during the ignition attempt. If no voltage is present, replace the main control board. • If 24 vac is present at the main control board, check the wiring between the main control board and the gas valve. Replace the wiring if necessary. Do not disconnect the wiring from the gas valve and attempt to measure voltage at that point. The main control board can detect if the gas valve is not connected and will display the Gas Valve or Gas Valve Fail fault. • If 24 vac is present, check the outlet of the valve to ensure the valve is flowing gas. With a manometer connected to the outlet tap of the gas valve, when the unit is in the prepurge period, there should be a negative pressure present. When the valve is energized a change in pressure should occur. If the pressure change does not occur, the gas valve is not opening. Replace the gas valve. • Inspect flame sensor and associated wiring. Reference page 60 of this manual for removal and cleaning procedures. Replace if necessary. • Inspect and clean the heat exchanger as necessary. Reference page 61 of this manual for cleaning procedures. • Inspect the burner. Reference page 61 of this manual for removal and cleaning procedures. Replace if necessary. • Replace the main control board.
E12 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The unit has failed to prove main burner ignition after four (4) attempts.	
n05	The fan speed is being increased due to the flame current going below 5 microamps.	

12 Troubleshooting

***Table 12E** (continued from previous page) Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
E13	The flue temperature has exceeded 250°F.	• Inspect the heat exchanger. Reference page 61 of this manual for the procedure on how to clean the flue side of the heat exchanger. • Inspect the flue sensor and associated wiring. Measure the resistance of the flue sensor and compare to Table 12C on page 65 of this manual. Replace the sensor if necessary. • Verify that the vent/air intake pipes are properly installed and that there are no obstructions. • Replace the main control board.
b05	The flue temperature has exceeded 240°F.	
n04	The fan speed is being limited due to the flue temperature exceeding 215°F.	
E15 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The outlet water temperature has exceeded the 210°F manual reset high limit (MRHL) setting.	• Verify that the system is full of water and that all air has been properly purged from the system. • Verify that the boiler is piped properly into the heating system. Refer to Section 5 - System Piping for the proper piping methods for the Shield water heater. • Check 120 vac to pump motor on a call for heat. If voltage is not present, check wiring back to the main control board. • Replace the main control board if necessary. • If 120 vac is present on a call for heat and the boiler pump is not operating, replace the pump. • If operating on something other than an outlet sensor, check temperature setting of the main control board. • Check resistance of water sensors and compare to Table 12B on page 65 of this manual. Replace sensor if necessary.
b03	The outlet water temperature has exceeded 195°F.	
n02	The fan speed is being limited due to the outlet temperature exceeding 185°F.	
E18 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The control module reads an excessive temperature difference between the two outlet sensors.	• Check wiring to sensor. Make sure wiring is connected and not damaged. Reconnect / repair wiring if necessary. • Measure the resistance of the sensor and compare to the resistance in Table 12B on page 65 of this manual. Replace sensor if necessary. • Replace control module.
E19 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	One or both of the flue sensors is open or shorted.	• Inspect the flue sensor and associated wiring. Measure the resistance of the flue sensor and compare to Table 12C on page 65 of this manual. Replace the sensor if necessary. • Replace the main control board.

12 Troubleshooting *(continued)*

***Table 12E** (continued from previous page) Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
E21 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	One or both of the outlet sensors has opened or shorted.	• Check the sensor and its associated wiring. Repair or replace the sensor or wiring if damaged. • Measure the resistances of the sensors and compare the resistances to the tables on page 65. Replace if necessary.
E22 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The inlet sensor is open.	• Check the sensor and its associated wiring. Repair or replace the sensor or wiring if damaged.
E23 (will require a manual reset once the condition has been corrected. Press the RESET button on the display to reset.)	The inlet sensor is shorted.	
b01	The temperature has reached the set point + 4°F.	• None
b02	The main control board has received a call for heat too quickly after the previous call for heat has ended.	• The control board will release the call for heat after 60 seconds. • The control board will release the call for heat if the outlet temperature drops 10°F.
b04	The temperature rise across the heat exchanger has exceeded 30°F.	• Verify that the system is full of water and that all air has been properly purged from the system. • Check for 120 vac to the pump motor on a call for heat. If voltage is not present, check the wiring on the pump relay back to the main control board. Replace the main control board if necessary. • If 120 vac is present on a call for heat and the pump is not operating, replace the pump. • Scale accumulation in the heat exchanger. Verify that the water chemistry meets the requirements listed in Section 5 - System Piping.
n03	The fan speed is being limited due to the temperature rise across the heat exchanger exceeding 25°F.	

12 Troubleshooting

Table 12E *(continued from previous page) Troubleshooting Chart - Fault Messages Displayed on Water Heater Interface*

ERROR CODE	DESCRIPTION	CORRECTIVE ACTION
b06	120 vac input to the main control board has dropped below 80 vac.	• Check 120 vac supply to the transformer. • Check wiring connections at the low voltage terminal strip. • Check the wire size/length to remote devices. • Replace the transformer. • Check 24V.
n01	The flue temperature did not change after the burner started firing.	• Verify that the flue sensor is installed. • Check the sensor and its associated wiring. Repair or replace the sensor or wiring if damaged.
n06	Tank sensor is not connected.	• Check the tank sensor and its associated wiring. Repair or replace as needed.
n07	The inlet sensor has been disconnected.	• Check the sensors and their associated wiring. Repair or replace the sensor or wiring if damaged. • Measure the resistance of the sensors and compare the resistance to the tables on page 65 of this manual. • Replace the sensor if necessary.
n08	The inlet sensor has been shorted.	• Check the sensors and their associated wiring. Repair or replace the sensor or wiring if damaged. • Measure the resistance of the sensors and compare the resistance to the tables on page 65 of this manual. • Replace the sensor if necessary.

12 Troubleshooting *(continued)*

Combustion Analysis Procedure

1. Shut the water heater down by pressing the UP button for five (5) seconds.
2. Locate the flue sensor in the vent connection. Remove the flue sensor and grommet from the unit. **Note:** Combustion measurements will be made at this point.
3. Place the water heater in active position by pressing the UP button for five (5) seconds.
4. Press ENTER plus the UP button for five (5) seconds to enter Service Mode.
5. Insert the probe from a combustion analyzer into the hole left by the removal of the flue temperature sensor.
6. Once the water heater has modulated up to full fire, measure the combustion. The values should be in the range listed in Table 12F. The CO levels should be less than 150 ppm for a properly installed unit.

   If the combustion is not within the specified range, reference the *Troubleshooting* section of this manual for possible causes and corrective actions.
7. Once the combustion analysis is complete, exit Service Mode.
8. Replace the flue sensor and grommet into the vent connection.
9. Place the Shield water heater back into normal operation.

⚠ WARNING You must replace the flue sensor to prevent flue gas spillage into the room. Failure to comply could result in severe personal injury, death, or substantial property damage.

***Table 12F** Flue Products*

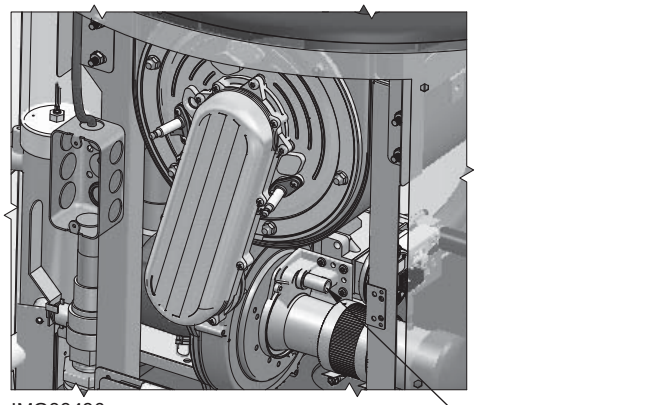
Natural Gas		Propane	
CO_2	O_2	CO_2	O_2
8.0% - 10%	3.0% - 6.5%	9.0% - 11%	4.1% - 6.9%

***Table 12G** Troubleshooting Chart - Combustion Levels*

POSSIBLE CAUSE	CORRECTIVE ACTION
Vent/Air Intake Length or Obstruction	• Refer to Section 2 - General Venting for the proper venting and air intake methods for the Shield water heater. • Check for obstructions at the vent/air intake terminals.
Gas Supply Pressure	• Refer to Section 7 - Gas Connections for the proper gas supply for the Shield water heater.
Dirty/Damaged Burner	• Refer to page 61 of this manual for burner removal and cleaning procedures. • Replace burner if necessary.
Gas Valve Adjustment	• Refer to page 74 of this manual for the gas valve adjustment procedure.

12 Troubleshooting

Gas valve adjustment procedure



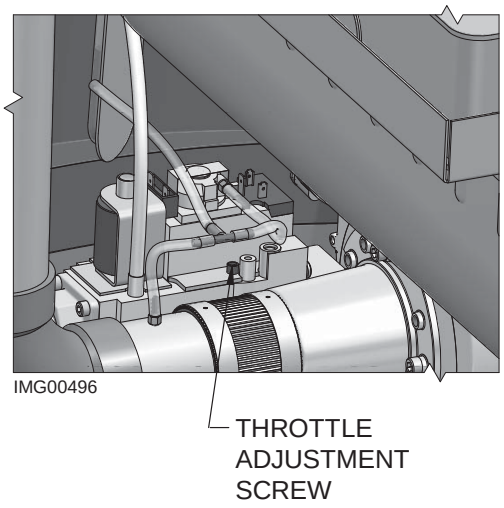
If adjustment of the gas valve is deemed necessary, use the following procedures: (**Note:** The procedures below are model specific.)

Models 126-065 -- 286-125

Locate the throttle adjustment screw on the side of the venturi valve (FIG. 12-2). Using a screwdriver, turn the screw a 1/4 turn **clockwise** to decrease CO_2 levels or a 1/4 turn **counterclockwise** to increase CO_2 levels. After performing one adjustment on the valve, follow the Combustion Analysis Procedure on page 73 of this manual to measure the combustion.

If combustion is still not within the specified range, repeat the procedure. This procedure SHOULD NOT be performed more than four (4) times. If after four (4) adjustments and the combustion is still not within the specified range, revisit the possible causes in Table 12G on page 73 or replace the gas valve.

Figure 12-2 *Gas Valve Adjustment: Models 126-065 -- 286-125*

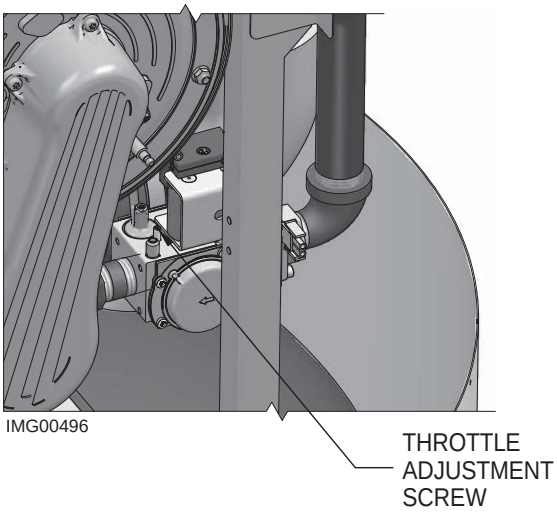


Model 401-125

Locate the throttle adjustment screw on the top of the gas valve, see FIG. 12-3. Using a screwdriver, turn the screw 1/8 turn **counterclockwise** to increase CO_2 levels or 1/8 turn **clockwise** to decrease CO_2 levels. After one adjustment on the valve, follow the Combustion Analysis Procedure on page 73 of this manual to measure the combustion.

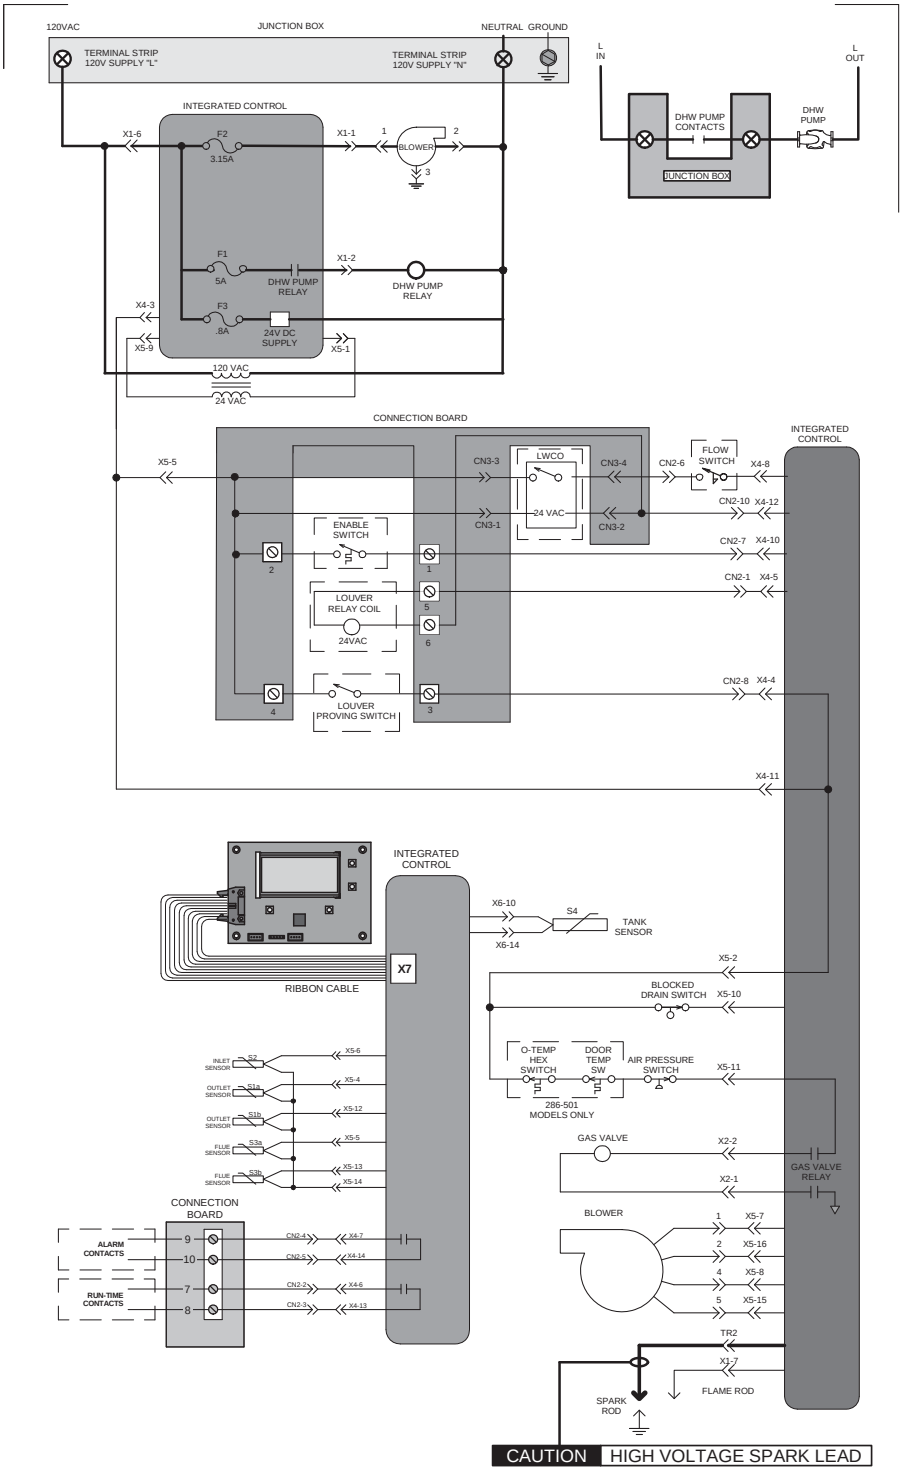
If combustion is still not within the specified range, repeat the procedure. This procedure SHOULD NOT be performed more than four (4) times. If after four (4) adjustments and the combustion is still not within the specified range, revisit the possible causes in Table 12G on page 73 or replace the gas valve.

Figure 12-3 *Gas Valve Adjustment: Model 401-125*



Model 501-125

Locate the throttle adjustment screw on top of the gas valve, see FIG. 12-4. Using a screwdriver, turn the screw a 1/4 turn **counterclockwise** to increase CO_2 levels or a 1/4 turn **clockwise** to decrease CO_2 levels. After one adjustment on the valve, follow the Combustion Analysis Procedure on page 73 of this manual to measure the combustion.



If combustion is still not within the specified range, repeat the procedure. This procedure SHOULD NOT be performed more than four (4) times. If after four (4) adjustments and the combustion is still not within the specified range, revisit the possible causes in Table 12G on page 73 or replace the gas valve.

NOTES:

1. **Where possible, switches are shown without utilities (gas, water or electricity) connected to the unit. As such, actual switch states may vary from those shown on diagrams depending upon whether utilities are connected or a fault condition is present.**
2. **See wiring diagram for additional notes.**

Notes

Notes

Notes

Revision Notes: *Revision A (ECO #C12258) initial release.*

Revision B (ECO #C12665) reflects the addition of the CSA Low Lead Content logo.

Revision C (ECO #C11814) reflects the addition of Metal Fab and Security Chimney to the manual.

Revision D (ECO #C13833) reflects the removal of the page number reference on page 15, the addition of the corrosive contaminant warning on page 3 (R06313), changes made to Table 6A - Gas Piping Chart on page 41 (R6621), the addition of the Temperature Parameter Setting Table and HW Temperature Setting instructions on pages 52 and 53 (R6658), edits made to the callouts on page 5 (R06493), along with updating the flex piping information (R06464) on page 21.

Revision E (ECO #C14411) reflects a note that the SNA286-125 model can be vented using 3" diameter pipe up to a maximum of 60 equivalent feet, pages 7 and 17, along with changing out LBL20026 and LBL20025 (R6979).

Revision F (ECO #C14713) reflects high altitude updates.

Revision G (ECO #C14988) reflects the correction of FIG. 2-2 on page 15.

Revision H (ECO #C15251) reflects the addition of the burner door temperature switch updates (R6322).

Revision I (ECO C16918) reflects the update of ratings information on page 7 (R07744), FIG. 3-13 description on page 29 (R07478), water chemistry information on page 35 (R07142), and water column information on page 40.

Revision K (Change #500000930) reflects edits made to FIG 4-7 on page 33.

Revision L (PCP# 3000001537 / CN# 500001784) reflects the addition of a note that the starter is factory installed on the 126-201 models under General Venting on page 20.

Revision M (PCP# 3000000426 / CN# 500000623) reflects the addition of combustion clearance dimensions in FIG.'s 1-1 and 1-2 on page 9.

Revision N (PCP# 3000004287 / CN# 500004864) reflects a change to the numbers of the Polypropylene Adapters in Table 2F on page 21. Figure 2-9 has also been updated.

Revision P (PCP# 3000005143 / CN# 500006666) reflects the addition of new venting category information on pages 25 through 27.

Revision R (PCP# 3000004438 / CN# 500005574) reflects an update to the flue temperatures on page 54.

Revision T (PCP# 3000006133 / CN# 500007549) reflects the addition of a PVC-DWV vent fitting in Table 2D on page 20.

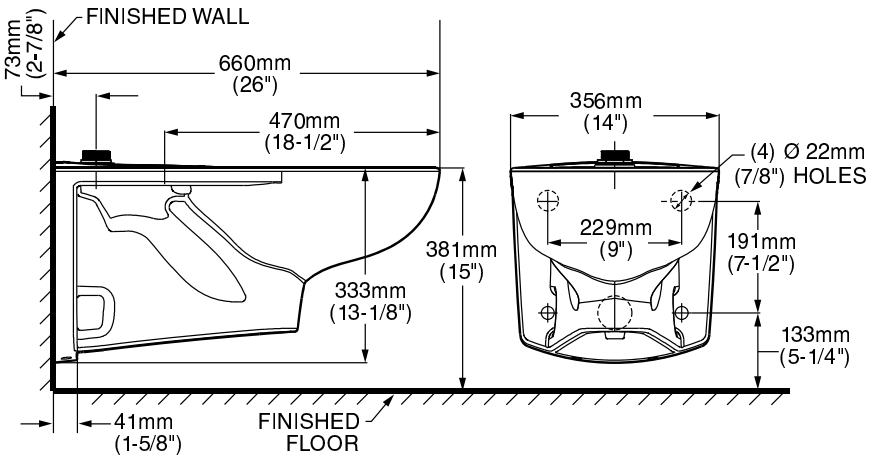
INSTALLATION INSTRUCTIONS

AFWALL® MILLENNIUM™ FLUSHOMETER WALL-MOUNTED TOILETS

Models 3351.101, 3352.101, 3353.101, 3354.101, 2257.101, 2257.101.NAF, 2633.101, 2634.101

Meets the American Disabilities Act Guidelines and ANSI A117.1 Requirements for the Physically Challenged

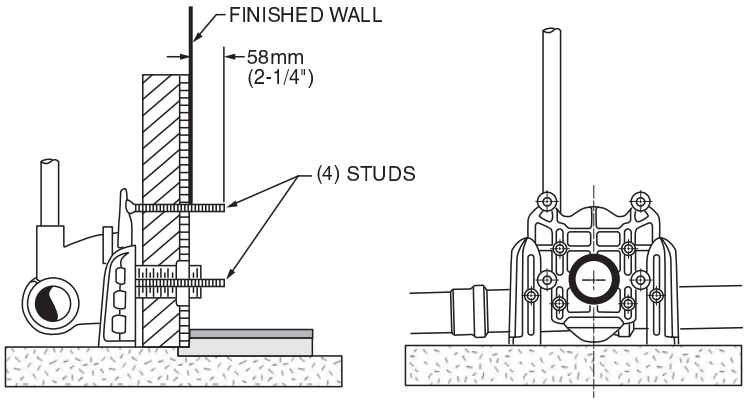
Thank you for selecting American Standard – the benchmark of fine quality for over 100 years. To ensure this product is installed properly, please read these instructions carefully before you begin. (Certain installations may require professional help.) Also be sure your installation conforms to local codes.



⚠ CAUTION: PRODUCT IS FRAGILE. TWO PEOPLE ARE RECOMMENDED FOR HANDLING TO AVOID BREAKAGE AND POSSIBLE INJURY!

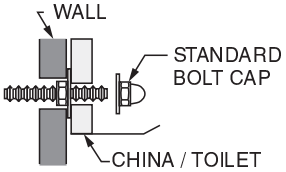
NOTE: *For proper operation product requires a minimum of 30 psi working line pressure*

RECOMMENDED TOOLS AND MATERIALS



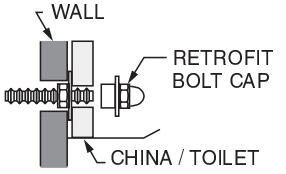
Closet Carrier Support	Regular Screwdriver	Sealant	Carpenters Level
Putty Knife	Adjustable Wrench	Tape Measure	Flush Valve

1 **Pictures may not exactly define contour of china**



2 **FIXTURE MOUNTING**

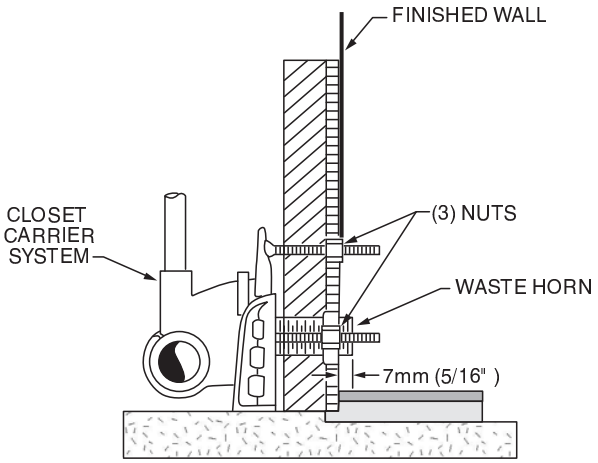
Fixture studs should project 58mm (2-1/4") from face of finished wall.



NOTE: If carrier bolt does not extend or is flush with china, use retrofit caps 7381285-200.0070A (sold separately).

STANDARD BOLT CAP

RETROFIT BOLT CAP



SAVE FOR FUTURE USE

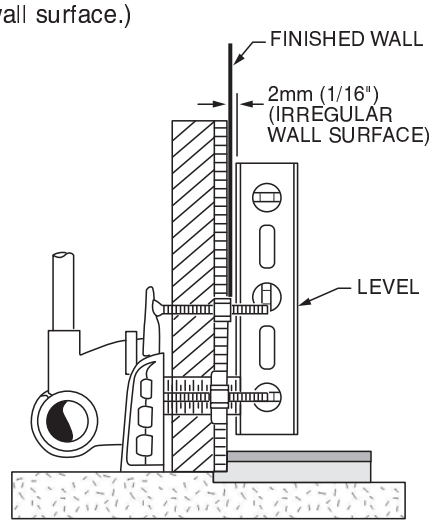
© AS America, Inc. 2014

7301962-100 Rev. D



3

- Place back-up nuts on both bottom bolts, and the top left-hand bolt only.
- Adjust the two lower back-up nuts so that front face of nuts is flush with finished wall.
- Adjust waste horn to project 7mm (5/16") from finished wall.

4

- Using a level, adjust the top left back-up nut so that it is in the same vertical plane as the lower left back-up nut. (If wall surface is irregular, the three back-up nuts must be positioned to allow a minimum 1/16" (2mm) gap between fixture and wall surface.)

5

- NOTE: Bearing nuts and washers must be set to take full loading from the fixture allowing 1/16" (2mm) clearance between fixture and wall.
- Follow support manufacturer's recommended setting of closet outlet connection.
- Place felt or neoprene gasket (wax ring not recommended) on closet outlet.
- When the fixture is installed, closet outlet gasket must be compressed sufficiently to assure a gas and watertight seal.

The following steps require a helper:

- Install bowl on support using cap nuts and fiber washers with the back-up nuts and washers.

  DO NOT APPLY TOP RIGHT FIBER WASHER AND CAP NUT UNTIL OTHER CAP NUTS HAVE BEEN FIRMLY TIGHTENED USING A WRENCH.

- Install top right cap nut with fiber washer and run up hand tight. Wrench tighten approximately 1/4 turn.

- Apply sealant to gap between bowl and finished wall. Remove excess sealant.

AS AMERICA, INC. ONE YEAR LIMITED WARRANTY FOR COMMERCIAL FIXTURES

If inspection of this AS America, Inc. ("American Standard®") plumbing product, within one year after its initial purchase, confirms that it is defective in materials or workmanship, American Standard® will repair or, at its option, exchange the product for a similar model.

If the commercial fixture is purchased with a matching American Standard flush valve, American Standard will extend the limited commercial warranty for the commercial fixture to five years. Proof of purchase is required and must show that the commercial fixture and flush valve are purchased together and in the same proof of purchase document.

This limited warranty applies only to the original purchaser and installation of these products. In the event of a limited warranty claim, proof of purchase will be required – **save sales receipt.**

This limited warranty does not apply to local building code compliance. Since local building codes vary considerably, the purchaser of this product should check with a local building or plumbing contractor to insure local code compliance before installation.

This limited warranty is void if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damages; if it was not installed in accordance with American Standard®'s instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard®.

American Standard®'s option to repair or exchange the product under this limited warranty does not cover any labor or other costs of removal or installation. IN NO EVENT WILL AMERICAN STANDARD® BE LIABLE FOR THE COST OF REPAIR OR REPLACEMENT OF ANY INSTALLATION MATERIALS, INCLUDING BUT NOT LIMITED TO, TILES, MARBLE, ETC. American Standard® will not be responsible for any other incidental or consequential damages attributable to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this limited warranty. This limited warranty does not cover any liability for consequential or incidental damages, all of which are hereby expressly disclaimed, or the extension beyond the duration of this limited warranty of any implied limited warranties, including those of merchantability or fitness for an intended purpose. (Some states or provinces do not allow the exclusion or limitation of implied limited warranties, so this exclusion may not apply to you.)

This limited warranty gives you specific legal rights. You may have other statutory rights that vary from state to state or from province to province, in which case this limited warranty does not affect such statutory rights.

AS AMERICA, INC. LIMITED WARRANTY FOR CHAMPION® PRO AND CHAMPION®4 TOILETS

This toilet comes with a limited lifetime warranty on chinaware, a limited 10 year warranty on all mechanical parts of the toilet and a limited 1 year warranty on the toilet seat if included with product. If inspection of this AS America, Inc. ("American Standard®") plumbing product, inclusive of the chinaware and all mechanical parts, confirms that it is defective in materials or workmanship, American Standard® will repair or, at its option, exchange the product for the same or a similar model.

This limited warranty applies only to the original non-commercial purchaser and installation of the products. In the event of a limited warranty claim, proof of purchase will be required – **save sales receipt.**

For this warranty to become effective, the warranty registration process must be completed via the internet or telephone per the warranty registration instructions.

This limited warranty does not apply to commercial installations. The warranty for commercial installations is 1 year on chinaware and mechanical parts and 1 year on the toilet seat if included with product.

This warranty **does not apply** to local building code compliance. Since local building codes vary considerably, the purchaser of the product should check with a local building or plumbing contractor to ensure local code compliance before installation.

This warranty **will be void** if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damage; if it was not installed in accordance with American Standard®'s instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard®.

WARNING: This warranty **DOES NOT COVER** any damages caused by the use of in-tank cleaners. These products can seriously corrode the fittings in the tank. This damage can cause leakage and property damage. **American Standard® will not be responsible or liable for any damage caused by the use of in-tank cleaners.**

American Standard®'s option to repair or exchange the product under this warranty does not cover any labor or other costs of removal or installation including any costs of any surrounding material such as tile or marble. **American Standard® is not responsible for any other incidental or consequential damages attributed to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this warranty.** (Some states or provinces do not allow the exclusion or limitation of implied warranties, so this exclusion may not apply to you.)

This warranty gives you specific rights. You may have other statutory rights that may vary from state to state or province to province, in which case this warranty does not affect such statutory rights.

Shown without optional Override Button

8186 HEU Complete Flushometer Models

High Efficiency Sloan ECOS® Electronic Urinal Flush valves are complete flushometer valves and ideal for new installations.

RESS Series Retrofit Conversion Kit Models

RESS Sloan ECOS® Electronic models are used to convert existing Royal, Sloan, and Regal style Flushometers to sensor operation.

Sloan ECOS® Electronic Dual Flush Water Closet Models can be furnished for the following:

1.6 gpf/6.0 Lpf	For Low Consumption Bowls

Sloan ECOS® Electronic Single Flush Models can be furnished for the following:

1.28 gpf/4.8 Lpf	For High Efficiency Bowls
0.5 gpf/1.9 Lpf	For High Efficiency Urinals
0.25 gpf/1.0 Lpf	For High Efficiency Urinals
0.125 gpf/0.5 Lpf	For High Efficiency Urinals

LIMITED WARRANTY

Unless otherwise noted, Sloan Valve Company warrants this product, manufactured and sold for commercial or industrial uses, to be free from defects in material and workmanship for a period of three (3) years (one (1) year for special finishes, SF faucets, PWT electronics and 30 days for PWT software) from date of purchase. During this period, Sloan Valve Company will, at its option, repair, replace, or refund the purchase price of any product which fails to conform with this warranty under normal use and service. This shall be the sole and exclusive remedy under this warranty. Products must be returned to Sloan Valve Company, at customer's cost. No claims will be allowed for labor, transportation or other costs. This warranty extends only to persons or organizations who purchase Sloan Valve Company's products directly from Sloan Valve Company for purpose of resale. This warranty does not cover the life of the batteries.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO EVENT IS SLOAN VALVE COMPANY RESPONSIBLE FOR ANY CONSEQUENTIAL DAMAGES OF ANY MEASURE WHATSOEVER.

PRIOR TO INSTALLING THE SLOAN ECOS® ELECTRONIC FLUSHOMETER

Prior to installing the Sloan ECOS® Electronic Flushometer, install the items listed below as illustrated in the Rough-in Diagram. (New installations only.)

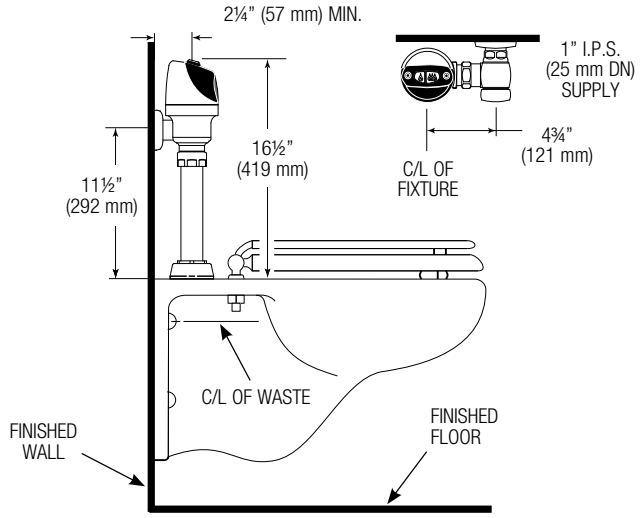
- Closet fixture
- Drain line
- Water supply line

Important:

- **ALL PLUMBING SHOULD BE INSTALLED IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS.**
- **WATER SUPPLY LINES MUST BE SIZED TO PROVIDE AN ADEQUATE VOLUME OF WATER FOR EACH FIXTURE.**
- **WHEN INSTALLING A FLUSHOMETER, IT IS IMPORTANT THAT THE FLUSH MODEL MATCHES THE REQUIREMENTS OF THE PLUMBING FIXTURE.**
- **FLUSH ALL WATER LINES PRIOR TO MAKING CONNECTIONS.**

The Sloan ECOS® is designed to operate with 15 to 100 PSI (104 to 689 kPa) of water pressure. **THE MINIMUM PRESSURE REQUIRED TO THE VALVE IS DETERMINED BY THE TYPE OF FIXTURE SELECTED.** Consult fixture manufacturer for pressure requirements.

Most Low Consumption water closets (1.6 gallon/6 liter) require a minimum flowing pressure of 25 psi (172 kPa).

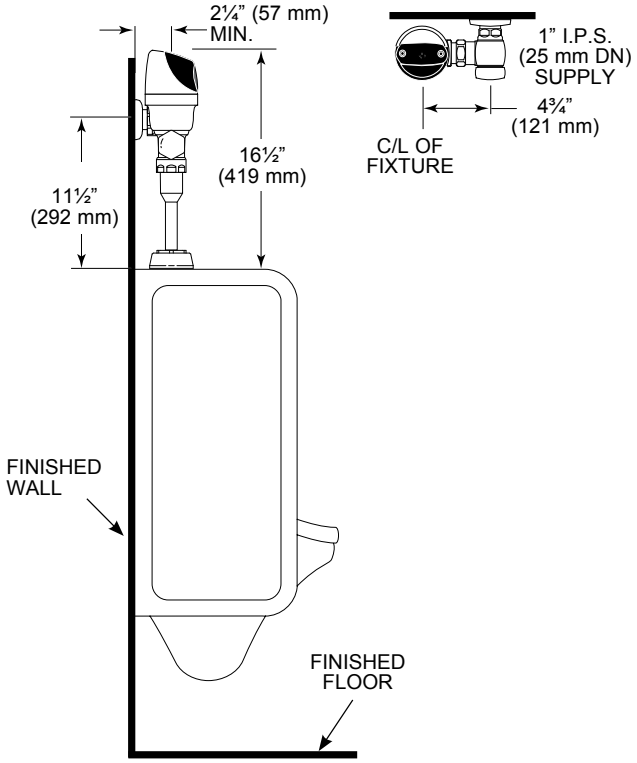


TOOLS REQUIRED FOR INSTALLATION

- Slotted screwdriver to adjust control stop.
- Sloan A-50 Super-Wrench™, Sloan A-109 Plier Wrench or smooth jawed spud wrench for couplings.
- Trimpot adjustment screwdriver (supplied) to adjust range, if necessary.
- Strap wrench (supplied) to install Sloan ECOS® Electronic to valve body.
- 7/64" hex wrench (supplied) to secure Sloan ECOS® Electronic cover to base plate.

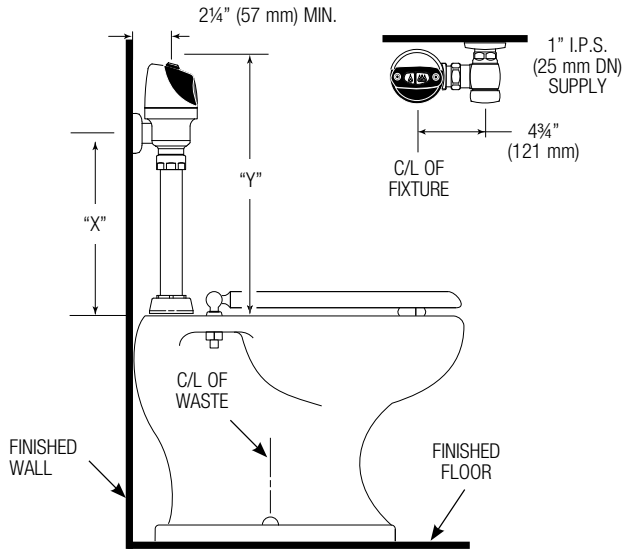
VALVE ROUGH-IN

Typical Water Closet Installation



Model 8110/8111
Reference for RESS-C Retrofit

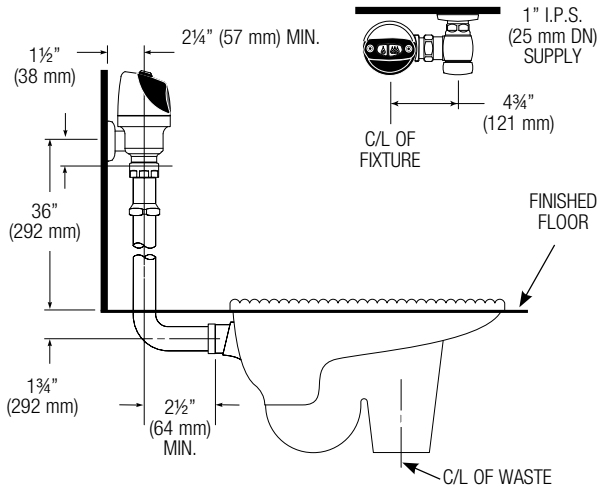
When installing the Sloan ECOS® Electronic in a handicap stall:
Per the ADA Guidelines (section 604.9.4) it is recommended that the grab bars be split or shifted to the wide side of the stall.



Urinal Installation

Models 8186-0.13, 8186-0.25, 8186-0.5

High Rough-in Water Closet Installation



Models 8113, 8115 & 8116

MODEL	"X"	"Y"
8113	16" (406 mm)	21" (533 mm)
8115	24" (610 mm)	29" (737 mm)
8116	27" (686 mm)	32" (813 mm)

Squat Toilet Water Closet Installation

Model 8137

Model 8115 & 8116 valves are designed for installations where the water supply is roughed-in 24" - 27" (610 mm - 686 mm) above the top of the water closet.

For new installations, Sloan strongly recommends the use of our Model 8111 which has a shorter installation height.

!!! IMPORTANT !!!

PROTECT THE CHROME OR SPECIAL FINISH OF SLOAN FLUSHOMETERS — DO NOT USE TOOTHED TOOLS TO INSTALL OR SERVICE THESE VALVES. USE A SLOAN A-50 SUPER-WRENCH™, SLOAN A-109 PLIER WRENCH OR SMOOTH JAWED SPUD WRENCH TO SECURE ALL COUPLINGS. ALSO SEE "CARE AND CLEANING" SECTION

!!! IMPORTANT !!!

THIS PRODUCT CONTAINS MECHANICAL AND/OR ELECTRICAL COMPONENTS THAT ARE SUBJECT TO NORMAL WEAR. THESE COMPONENTS SHOULD BE CHECKED ON A REGULAR BASIS AND REPLACED AS NEEDED TO MAINTAIN THE VALVE'S PERFORMANCE.

!!! IMPORTANT !!!

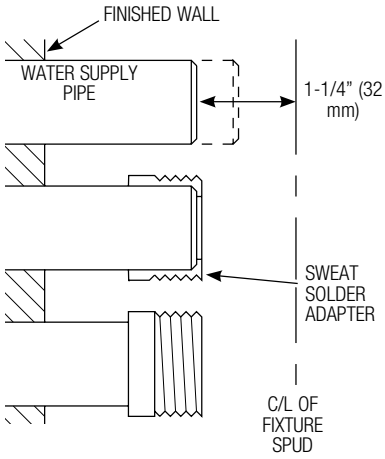
WITH THE EXCEPTION OF CONTROL STOP INLET, DO NOT USE PIPE SEALANT OR PLUMBING GREASE ON ANY VALVE COMPONENT OR COUPLING!

!!! IMPORTANT !!!

THE STRAP WRENCH PROVIDED WITH SLOAN ECOS® ELECTRONIC IS A CONVENIENCE TOOL AND IS NOT TO BE USED TO REMOVE OR INSTALL THE FLUSHOMETER COUPLINGS. USE STRAP WRENCH ONLY TO INSTALL SLOAN ECOS® ELECTRONIC LOCKING RING.

When further assistance is required, please contact your local Sloan Representative or call Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614)

1 - FOR COMPLETE VALVE INSTALLATION, START HERE. FOR RESS RETROFIT INSTALLATIONS, START AT STEP 6. INSTALL OPTIONAL SWEAT SOLDER ADAPTER (ONLY IF YOUR SUPPLY PIPE DOES NOT HAVE A MALE THREAD).



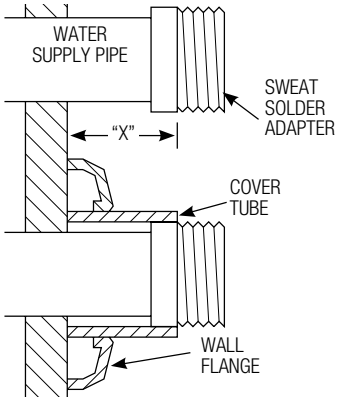
A Measure from finished wall to C/L of Fixture Spud. Cut pipe 1¼" (32 mm) shorter than this measurement. Chamfer O.D. and I.D. of water supply pipe.

B Slide Threaded Adapter fully onto pipe.

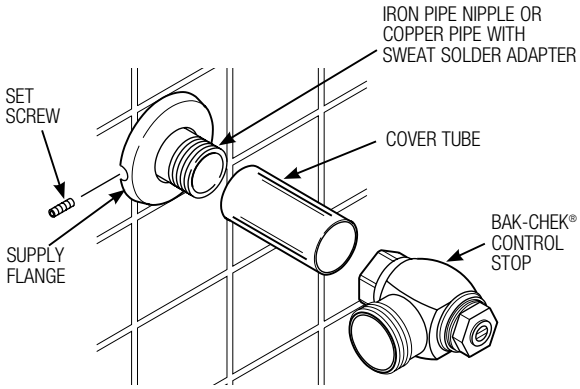
C Sweat solder the Adapter to pipe.

!!! IMPORTANT !!!

WITH THE EXCEPTION OF CONTROL STOP INLET, DO NOT USE PIPE SEALANT OR PLUMBING GREASE ON ANY VALVE COMPONENT OR COUPLING!



2 - INSTALL COVER TUBE, WALL FLANGE AND CONTROL STOP TO SUPPLY PIPE



A Measure from finished wall to first thread of Adapter or threaded supply pipe (dimension "X"). Cut Cover Tube to this length.

B Slide Cover Tube over pipe. Slide Wall Flange over Cover Tube until against wall.

C Thread Control Stop onto pipe. Tighten with a wrench.

D Tighten Set Screw with a 1/16" hex wrench. DO NOT install Vandal Resistant Stop Cap at this time.

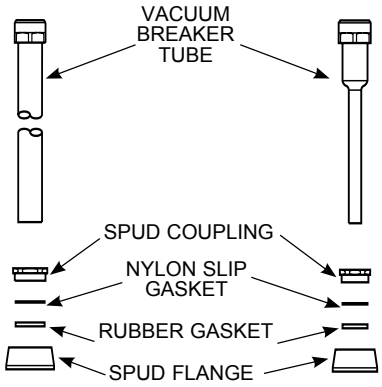
3 - FLUSH OUT SUPPLY LINE

A Open Control Stop.

B Turn on water supply to flush line of any debris or sediment.

C Close Control Stop.

4 - INSTALL VACUUM BREAKER FLUSH CONNECTION



NOTE

If cutting Vacuum Breaker Tube to size, note that Critical Line (C/L) on Vacuum Breaker must typically be 6" (152 mm) above fixture. Consult Code for details.

A. Slide Spud Coupling, Nylon Slip Gasket, Rubber Gasket and Spud Flange over Vacuum Breaker Tube.

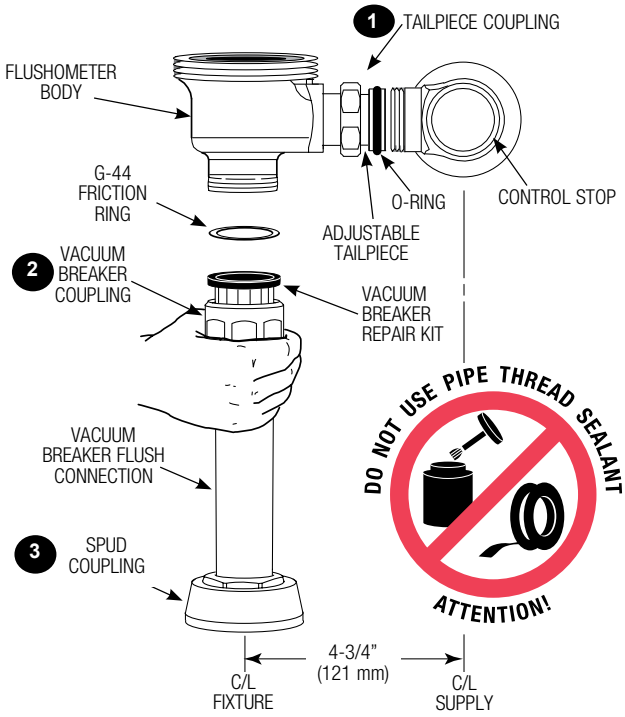
B. Insert Tube into Fixture Spud.

C. Hand tighten Spud Coupling onto Fixture Spud.

5 - INSTALL FLUSHOMETER

A. Lubricate tailpiece O-ring with water. Insert Adjustable Tailpiece into Control Stop. Tighten Tailpiece Coupling by hand.

B. Align Flushometer directly above the Vacuum Breaker Flush Connection by sliding the Flushometer Body IN or OUT as needed. Tighten Vacuum Breaker Coupling by hand.



NOTE

Maximum adjustment of the Sloan Adjustable Tailpiece is 1/2" (13 mm) IN or OUT from the standard 4-3/4" (121 mm) (centerline of Flushometer to centerline of Control Stop).

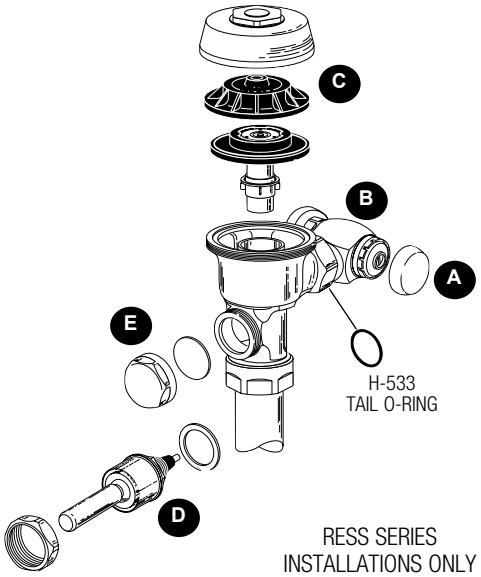
If roughing-in measurement exceeds 5-1/4" (133 mm), consult factory for longer tailpiece.

C. Align Flushometer Body and securely tighten first the Tailpiece Coupling (1), then the Vacuum Breaker Coupling (2), and finally the Spud Coupling (3). Use a wrench to tighten these couplings in the order shown.

D. Install Chrome Handle Cap with Gasket to handle opening on Flushometer Body. Tighten Chrome Handle Cap securely.

6 - WHEN RETROFITTING AN EXISTING VALVE, START HERE. REMOVE COMPONENTS FROM EXISTING FLUSHOMETER (RESS RETROFIT INSTALLATIONS ONLY)

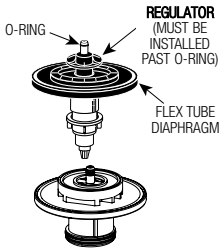
A. Remove Control Stop Cap.



B. Turn off water supply at Control Stop. Push Valve Handle to relieve water pressure.

C. Remove Outside and Inside Covers and old Inside Parts Kit.

D. Remove old Handle Assembly and Gasket.

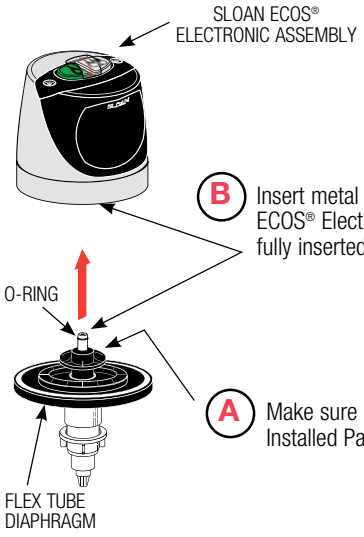


E. Install Chrome Handle Cap with Gasket to handle opening on Flushometer Body. Tighten Chrome Handle Cap securely.

NOTE: An extra H-533 Tail O-ring is included in the event leakage occurs if the valve is repositioned during the installation of the new Sloan ECOS® Electronic. Use only as needed.

7 - SLOAN ECOS® ELECTRONIC FLUSH VOLUMES (RESS RETROFIT INSTALLATIONS ONLY)

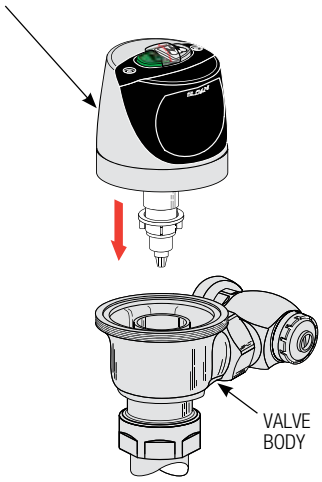
The Flush Volume of the Sloan ECOS® Electronic is controlled by the Flex Tube Diaphragm Kit (or Cartridge Assembly). Regulators are identified by color.



RESS-C Sloan ECOS® Electronic valves are supplied with it's lowest flush volume configuration.

When installing a new Regulator on a Flex Tube Diaphragm Kit, be sure to push the Regulator past the O-ring when installing.

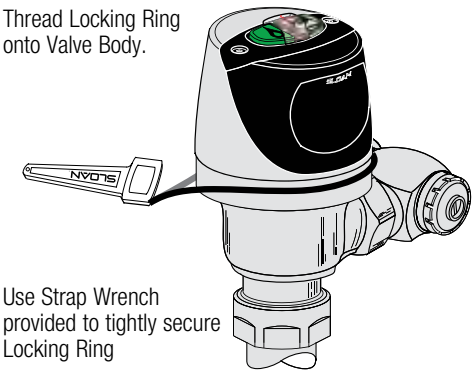
Note: Never use more water than needed. Low Consumption water closets will not function properly on excess water.



8 - ASSEMBLE FLEX TUBE DIAPHRAGM (OR CARTRIDGE ASSEMBLY) TO SLOAN ECOS® ELECTRONIC ASSEMBLY

B Insert metal end into hole in base of Sloan ECOS® Electronic Assembly. O-ring must be fully inserted into the hole.

A Make sure Flush Volume Regulator is Installed Past O-ring.

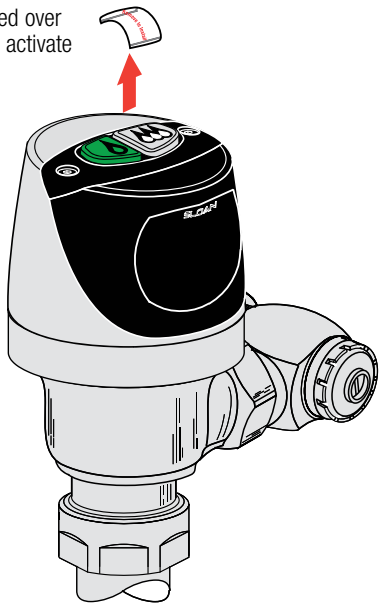


C Push Diaphragm securely against underside of Sloan ECOS® Electronic Assembly. Place entire Assembly onto the Valve Body.

To facilitate installation, the O-ring on the diaphragm assembly must be wet for easier insertion. NOTE: Sensor Lens must face directly forward. Rotating the Sensor to either side will decrease the Sensor's ability to detect a target.

9 - TIGHTEN LOCKING RING AND REMOVE TAB TO ACTIVATE SENSOR MODULE

A Thread Locking Ring onto Valve Body.



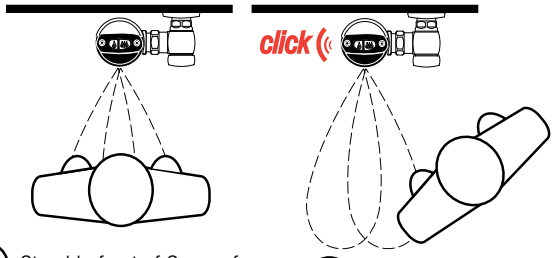
B Use Strap Wrench provided to tightly secure Locking Ring

Important: The Locking Ring must be installed down past the valve body threads by at least one thread. If difficulty is experienced installing the Locking Ring, turn the Locking Ring back and forth, each time working it further down the threads. The Locking Ring will act as a thread chaser in the event there has been a build-up of matter on the threads of the old valve body.

If retrofitting the Sloan ECOS Electronic onto a Zurn valve body, a special Locking Ring must be used (identified by a machined groove around the ring).

Order the Sloan ECOS™ Electronic Dual Flush with the "Z" variation to receive the unit supplied with this Ring.

A Remove the Tab located over the Override Button to activate the Sensor Module.

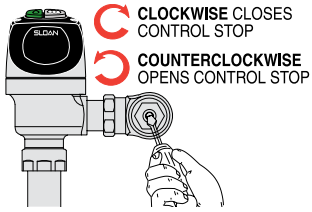


B For the first ten (10) minutes of operation, a Visible Light flashes in the Sensing Window of the Sloan ECOS™ Electronic Dual Flush Flushometer when a user is detected.

10 - TEST SENSOR OPERATION, ADJUST CONTROL STOP AND INSTALL VANDAL RESISTANT STOP CAP

The Sloan ECOS® Electronic has a factory set sensing range:
Water Closet Models - 22" to 42" (559 mm to 1067 mm)
Urinal Models - 15" to 30" (381 mm to 762 mm)

A Test Sensor with Cover in Place.



B Stand in front of Sensor for ten (10) seconds.

C Step away from Sensor and listen for "CLICK."

The Factory setting should be satisfactory for most installations. If a range adjustment is required, refer to the Range Adjustment instructions on this page.

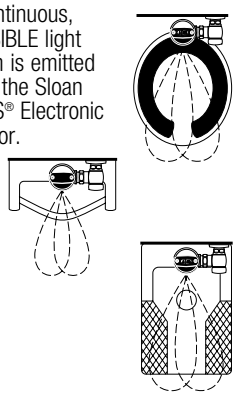
D Open Control Stop COUNTERCLOCKWISE ½ turn from closed position.

E Activate Flushometer by placing hand in front of Sloan ECOS® Electronic Sensor Lens for ten (10) seconds (or press override button) and then moving it away.

F Adjust Control Stop after each flush until the rate of flow delivered properly cleanses the fixture.

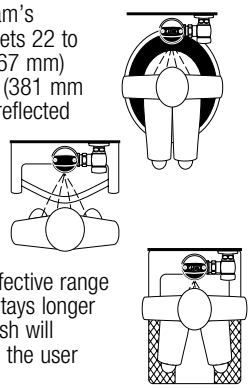
G Install Control Stop Cap onto Control Stop. For RESS retrofit applications, reuse Stop Cap from existing valve. In complete valve installations, a new Stop Cap is provided. Follow the instructions packaged with the Free Spinning Vandal Resistant Stop Cap.

!!! IMPORTANT !!!



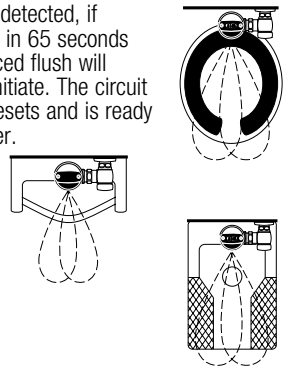
SLOAN FLUSHOMETERS ARE ENGINEERED FOR QUIET OPERATION. EXCESSIVE WATER FLOW CREATES NOISE, WHILE TOO LITTLE WATER FLOW MAY NOT SATISFY THE NEEDS OF THE FIXTURE. PROPER ADJUSTMENT IS MADE WHEN PLUMBING FIXTURE IS CLEANSED AFTER EACH FLUSH WITHOUT SPLASHING WATER OUT FROM THE LIP AND A QUIET FLUSHING CYCLE IS ACHIEVED.

!!! IMPORTANT !!!



THE CONTROL STOP SHOULD NEVER BE OPENED TO THE POINT WHERE THE FLOW FROM THE VALVE EXCEEDS THE FLOW CAPABILITY OF THE FIXTURE. IN THE EVENT OF A VALVE FAILURE, THE FIXTURE MUST BE ABLE TO ACCOMMODATE A CONTINUOUS FLOW FROM THE VALVE.

OPERATION



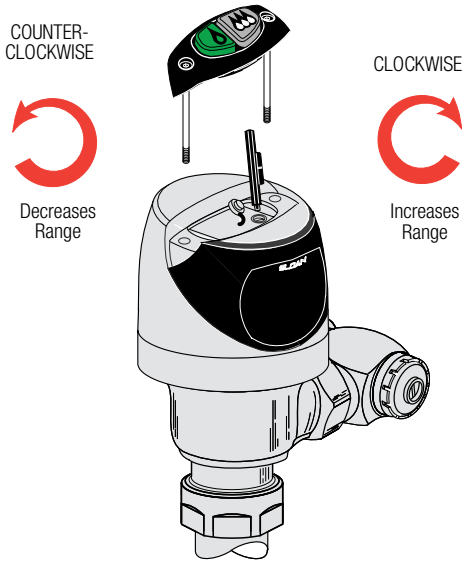
1. A continuous, INVISIBLE light beam is emitted from the Sloan ECOS® Electronic Sensor.

2. As the user enters the beam's effective range, water closets 22 to 42 inches (559 mm to 1067 mm) or urinals 15 to 30 inches (381 mm to 762 mm), the beam is reflected into the Scanner Window to activate the Output Circuit. Once activated, the Output Circuit continues in a "hold" mode for as long as the user remains within the effective range of the sensor. If the user stays longer than 65 seconds, a full flush will automatically initiate when the user leaves.

3. Once a user is detected, if the user leaves in 65 seconds or less, a reduced flush will automatically initiate. The circuit automatically resets and is ready for the next user.

RANGE ADJUSTMENT (ADJUST ONLY IF NECESSARY)

The Sloan ECOS® Electronic has a factory set sensing range:
Water Closet Models - 22" to 42" (559 mm to 1067 mm)
Urinal Models - 15" to 30" (381 mm to 762 mm)



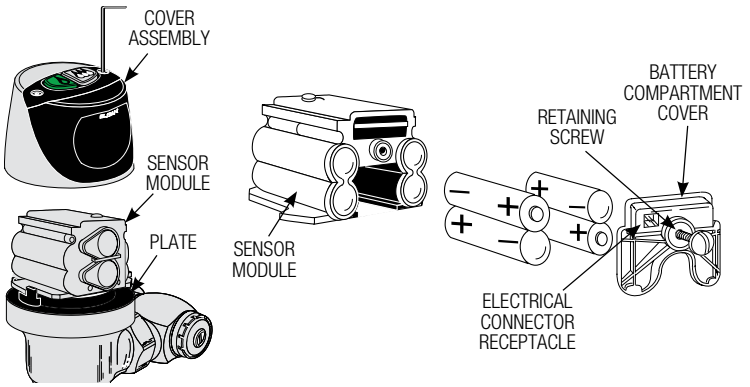
The Factory setting should be satisfactory for most installations.

If the range is too short (i.e., not picking up users) or too long (i.e., picking up opposite wall or stall door) the range can be adjusted. Note: Water does not have to be turned off to adjust range.

Loosen the two Screws on top of the unit. Remove the Override Button. Remove the Rubber Plug from top of Electronic Sensor Module to uncover the Potentiometer.

RANGE ADJUSTMENT PROCEDURE

For the first ten (10) minutes of operation, a Visible Light flashes in the Sensing Window of the Sloan ECOS when a user is detected. This Visible Light feature can be reactivated after ten (10) minutes by opening and closing the Battery Compartment Door. Check the range by stepping toward the unit until the Light flashes, indicating the Sensor's maximum detection limit. Adjust the Range Potentiometer Screw located on top of the Sensor Module a few degrees CLOCKWISE to increase the range or a few degrees COUNTERCLOCKWISE to decrease the range. Repeat this adjustment until the desired range is achieved. Always Determine the Sensing Range with Metal Cover and Lens Window On Top of the Unit. I**MPORTANT: ADJUST IN SMALL INCREMENTS ONLY!** Range Potentiometer Adjustment Screw rotates only ¾ of a turn; DO NOT over-rotate. When range adjustment is satisfactory, replace the Rubber Plug. Reinstall Override Button and tighten the two Screws on top of the unit.



BATTERY REPLACEMENT

When required, replace batteries with four (4) Alkaline AA-Size batteries.

Note: Water does not have to be turned off to replace batteries.

Loosen the two (2) screws on top of unit. Remove the complete cover assembly. Lift the sensor module from its plate. Unplug the electrical connector from battery compartment cover. Loosen the retaining screw on battery compartment cover and remove battery compartment cover. Install four (4) Alkaline AA-Size batteries exactly as illustrated.

Install battery compartment cover and secure with Retaining Screw. Make certain that battery compartment cover is fully compressed against gasket to provide a seal; DO NOT overtighten. Plug the electrical connector into the battery compartment cover. Reinstall the sensor module onto the plate. Reinstall the complete cover assembly onto the plate. Tighten the two (2) screws on top of the unit.

TROUBLESHOOTING GUIDE

1. Sensor Flashes Continuously Only When User Steps Within Range.
- A. Unit in Start-Up mode; no problem. This feature is active for the first ten (10) minutes of operation.

2. Valve Does Not Flush; Sensor Not Picking Up User.
- A. Range too short; increase the range.

3. Valve Does Not Flush; Sensor Picking Up Opposite Wall or Surface, or Only Flushes When Someone Walks By. Light Flashes Continuously for First 10 Minutes Even with No One in Front of the Sensor.
- A. Range too long; shorten range.

4. Valve Does Not Flush Even After Adjustment.
- A. Range Adjustment Potentiometer set at full "max" or full "min" setting. Readjust Potentiometer away from full "max" or "min" setting.
- B. Batteries completely used up; replace batteries.
- C. Problem with Electronic Sensor Module; replace Electronic Sensor Module.

5. Unit Flashes 4 Quick Times When User Steps Within Range.
- A. Batteries low; replace batteries.

6. Valve Does Not Shut Off.
- A. Bypass Orifice in Diaphragm is clogged with dirt or debris, or Bypass is clogged by an invisible gelatinous film due to "over-treated" water. Remove Flex Tube Diaphragm and wash under running water. Note: Size of Orifice in the Bypass is of utmost importance for the proper metering of water by the valve. **DO NOT ENLARGE OR DAMAGE THIS ORIFICE.** Replace Flex Tube Diaphragm if cleaning does not correct the problem.
- B. Dirt or debris fouling Stem or Flex Tube Diaphragm. Remove Flex Tube Diaphragm and wash under running water.
- C. O-ring on Stem of Flex Tube Diaphragm is damaged or worn. Replace O-ring if necessary.
- D. Problem with Electronic Sensor Module; replace Sensor Module.

7. Not Enough Water to Fixture.
- A. Wrong Flush Volume Regulator installed in Flex Tube Diaphragm Kit. Install the correct Regulator (see Step 7 of these instructions).
- B. Wrong Sloan ECOS® Electronic model installed; i.e., 1.6 gpf model installed on 3.5 gal. closet fixture.
- C. Enlarged Bypass in Diaphragm. Replace Flex Tube Diaphragm.
- D. Control Stop not adjusted properly. Readjust Control Stop.
- E. Inadequate volume or pressure at supply. Increase water pressure or supply (flow) to valve. Consult factory for assistance.

8. Too Much Water to Fixture.
- A. Wrong Flush Volume Regulator installed in Flex Tube Diaphragm Kit. Install the correct Regulator (see Step 7 of these instructions).
- B. Control Stop not adjusted properly. Readjust Control Stop.
- C. Wrong Sloan ECOS Electronic model installed; i.e., 3.5 gpf. model installed on 1.6 gal. fixture. Replace with proper Sloan ECOS Electronic model.
- D. Dirt in Diaphragm Bypass. Clean under running water or replace Flex Tube Diaphragm.

Note: The EBV-46-A Beam Deflector is no longer required or available for the Sloan ECOS.

When further assistance is required, please contact your local Sloan Representative or Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614) or visit us online at: www.sloanvalve.com

!!! IMPORTANT !!!

PROTECT THE CHROME OR SPECIAL FINISH OF SLOAN FLUSHOMETERS — DO NOT USE TOOTHED TOOLS TO INSTALL OR SERVICE THESE VALVES. USE A SLOAN A-50 SUPER-WRENCH™, SLOAN A-109 PLIER WRENCH OR SMOOTH JAWED SPUD WRENCH TO SECURE ALL COUPLINGS. ALSO SEE "CARE AND CLEANING" SECTION

!!! IMPORTANT !!!

THIS PRODUCT CONTAINS MECHANICAL AND/OR ELECTRICAL COMPONENTS THAT ARE SUBJECT TO NORMAL WEAR. THESE COMPONENTS SHOULD BE CHECKED ON A REGULAR BASIS AND REPLACED AS NEEDED TO MAINTAIN THE VALVE'S PERFORMANCE.

!!! IMPORTANT !!!

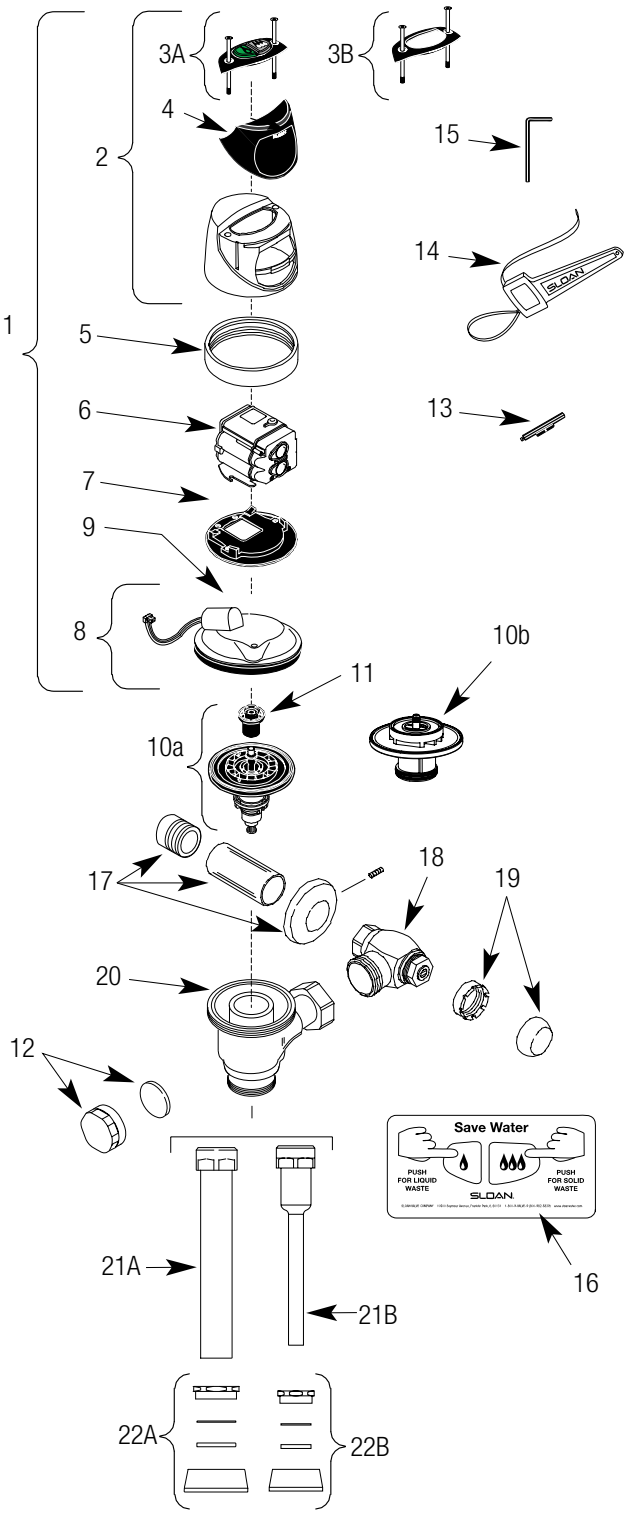
LAWS AND REGULATIONS PROHIBIT THE USE OF HIGHER FLUSHING VOLUMES THAN LISTED ON FIXTURE OR FLUSHOMETER

!!! IMPORTANT !!!

THE CONTROL STOP SHOULD NEVER BE OPENED TO THE POINT WHERE THE FLOW FROM THE VALVE EXCEEDS THE FLOW CAPABILITY OF THE FIXTURE. IN THE EVENT OF A VALVE FAILURE, THE FIXTURE MUST BE ABLE TO ACCOMMODATE A CONTINUOUS FLOW FROM THE VALVE.

!!! IMPORTANT !!!

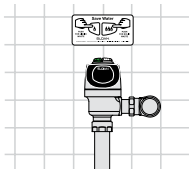
WITH THE EXCEPTION OF CONTROL STOP INLET, DO NOT USE PIPE SEALANT OR PLUMBING GREASE ON ANY VALVE COMPONENT OR COUPLING!



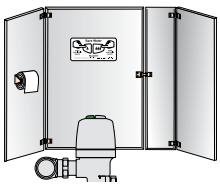
!!! IMPORTANT !!!

THE STRAP WRENCH PROVIDED WITH SLOAN ECOS® ELECTRONIC IS A CONVENIENCE TOOL AND IS NOT TO BE USED TO REMOVE OR INSTALL THE FLUSHOMETER COUPLINGS. USE STRAP WRENCH ONLY TO INSTALL SLOAN ECOS® ELECTRONIC LOCKING RING.

PARTS LIST



Item #	Part #	Description
Items Included with RESS Retrofit and Complete Sloan ECOS Flush Valves		
1	WES-55-A	Cover/Ring/Sensor Assembly - Dual Flush WC
	EBV-138-A	Cover/Ring/Sensor Assembly - Single Flush WC
	EBV-139-A	Cover/Ring/Sensor Assembly - Single Flush Urinal
	WES-60-A	Cover/Ring/Sensor Assembly w/ Zurn ring - Dual Flush WC
	EBV-149-A	Cover/Ring/Sensor Assembly w/ Zurn ring - Single Flush Water Closet
	EBV-150-A	Cover/Ring/Sensor Assembly w/ Zurn Ring - Single Flush Urinal
2	EBV-191-A	Cover Assembly - Dual Flush
	EBV-142-A	Cover Assembly - Single Flush
3A	WES-23-A	Button Cover Assembly with Screws - Dual Flush
	EBV-130-A	Button Cover Assembly with Screws - Single Flush
3B	EBV-132-A	Screws (2) and Hex Wrench Only
4	EBV-131	Lens Window Cover
5	EBV-168	Locking Ring
	EBV-172	Locking Ring - for Zurn valves
6	EBV-196-A	Module - ECOS Electronic Dual Flush
7	EBV-177	Cover Rest Plate
8	EBV-145-A	Inside Cover Assembly (includes solenoid)
9	EBV-136-A	Solenoid
10A	†	Flex Tube Diaphragm Assembly
10B	†	Cartridge Assembly
11	†	Flush Volume Regulator
12	EBV-1017-A	Handle Cap (RESS Retrofit Models only)
13	EBV-91	Range Adjustment Tool
14	EBV-22	Strap Wrench
15	EBV-137	7/64" Hex Wrench
16	WES-19	English Operation Instruction Plate
	WES-22	Spanish Operation Instruction Plate
Items Included with Complete Sloan ECOS Valves Only		
17	H-633-AA	1" (25 mm) Sweat Solder Kit
18	H-700-A	1" (25 mm) Bak-Chek® Control Stop
19	H-1010-A	Vandal Resistant Stop Cap
20	EBV-36-A	Valve Body
21	V-600-AA	1½" (38 mm) x 10" (254 mm) Vacuum Breaker (Model 8110)
	V-600-AA	1½" (38 mm) x 23" (584 mm) Vacuum Breaker (Model 8115)
	V-600-AA	1½" (38 mm) x 26" (660 mm) Vacuum Breaker (Model 8116)
22	F-5-AT	1½" Spud Coupling Assembly (Water Closet Models)



† Part No. varies with valve model variation; consult factory.

RECOMMENDED WALL PLATE LOCATIONS

- Centered over Flushometer
- On stall door

CARE AND CLEANING

DO NOT use abrasive or chemical cleaners to clean flushometers as they may dull the luster and attack the chrome or special decorative finishes. Use ONLY soap and water, then wipe dry with clean cloth or towel.

While cleaning the bathroom tile, the Flushometer should be protected from any splattering of cleaner. Acids and cleaning fluids can discolor or remove chrome plating.

Manufactured in the U.S.A. by Sloan Valve Company under one or more of the following patents: U.S. Patents. 4,839,039; 5,195,720; 5,295,655; 5,542,718; 5,558,120; 5,564,460; 5,887,848; 5,967,182; 6,212,697; 6,382,586; 6,619,614; 6,685,158; 6,691,979; Des. 411,609.

Other Pats. Pending. BAK-CHEK®, CID®, COURTESY FLUSH®, PARA-FLO®, PERMEX®, TURBO-FLO®.

UR-1		**UR-1 URINAL PER ADDENDUM #2-1**
A6590001020	AMERICAN STANDARD	0.125 GALLONS PER FLUSH URINAL TOP SPUD WHITE
S3250424	SLOAN	0.5 GALLONS PER FLUSH 8186.05 GAUGE URINAL FLUSH VALVE POWER SENSOR

INSTALLATION INSTRUCTIONS

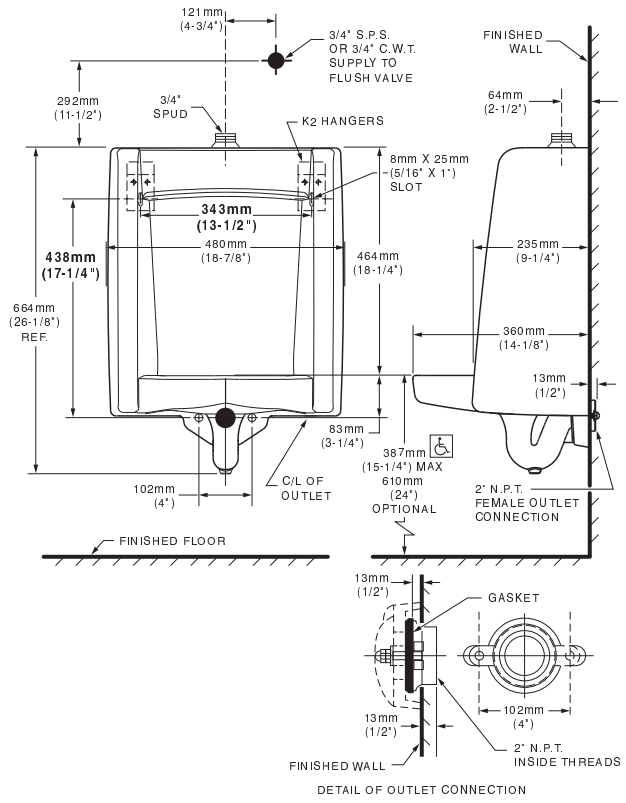
American Standard
Style That Works Better

WASHBROOK URINAL
6590 & 6515 SERIES

Thank you for selecting American Standard – the benchmark of fine quality for over 100 years. To ensure this product is installed properly, please read these instructions carefully before you begin. (Certain installations may require professional help.) Also be sure your installation conforms to local codes.

BEFORE YOU BEGIN

⚠ **CAUTION: PRODUCT IS FRAGILE. TO AVOID BREAKAGE AND POSSIBLE INJURY HANDLE WITH CARE!**



NOTES:

- *Pictures may not exactly define contour of china and components.*
- *Observe all local plumbing and building codes.*
- *Refer to local codes and manufacturer's instructions for flush valve requirements.*
- *Carefully inspect the new urinal for damage.*
- *Fixture dimensions are nominal and conform to tolerances by ASME Standard A112.19.2.*
- *Site preparation may require additional tools and hardware.*

RECOMMENDED TOOLS AND MATERIALS

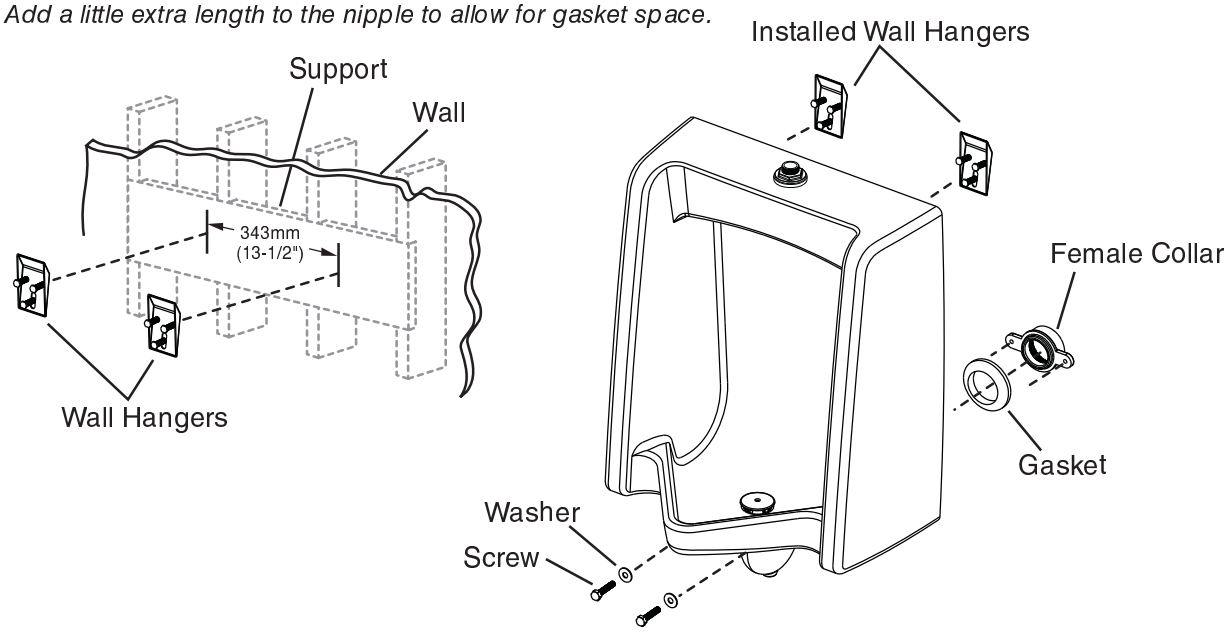
Back Spud

DETAIL OF OUTLET CONNECTION

SAVE FOR FUTURE USE



Product names listed herein are trademarks of AS America Inc.
© AS America Inc. 2011

7301778-100

1 PREPARATION

a. Turn the water supply OFF.
b. Install or relocate the supply tubing and waste pipe as necessary to conform to the roughing in dimensions.
c. Install the shut off valve.
d. Install adequate support framing for the wall hangers as needed.
e. Determine the position of the waste pipe nipple. When establishing the nipple length, take into account the length of the urinal outlet spud and the distance the female collar will thread onto the waste pipe nipple.

NOTE: *Add a little extra length to the nipple to allow for gasket space.*

2 INSTALL THE URINAL

⚠ CAUTION: RISK OF PERSONAL INJURY OR PRODUCT DAMAGE. HANDLE WITH CARE. VITREOUS CHINA CAN BREAK OR CHIP IF THE PRODUCT IS HANDLED CARELESSLY.

⚠ CAUTION: RISK OF PRODUCT DAMAGE. DO NOT OVERTIGHTEN THE BOLTS.

a. Install the wall hangers according to the roughing in illustration.
b. Apply thread sealant tape to the pipe threads and install the female collar to the waste pipe.
c. Place the gasket onto the female collar with the beveled surface facing away from the collar.
d. Carefully position the urinal on the wall hangers.
e. Secure the urinal to the female collar using the screws and washers provided.

3 COMPLETE THE INSTALLATION

a. Install the flush valve according to the manufacturer's instructions.
b. Connect the water supply and complete the waste pipe connections.
c. Turn on the water supply.
d. Flush and check the entire installation for leaks.

CARE & CLEANING

Wash with mild soapy water and rinse thoroughly. Dry with a soft cloth. Avoid detergents, disinfectants or cleaning products in aerosol cans as they may damage fittings.

Code No. 0816452
Rev. 5 (06/16)

INSTALLATION INSTRUCTIONS FOR RETROFIT AND COMPLETE VALVE INSTALLATION

8100 Series Complete Flushometer Models

8100 Series Optima Plus valves are complete flushometer valves and ideal for new installations.

RESS Series Retrofit Conversion Kit Models

RESS Optima Plus models are used to convert existing Royal, Regal and Sloan style flushometers to sensor activation.

Optima Plus Water Closet Models can be furnished for the following:

1.6 gpf/6.0 Lpf	For Low Consumption Bowls
2.4 gpf/9.0 Lpf	For 9 Liter European Water Closets
3.5 gpf/13.2 Lpf	For older Water Closets

Optima Plus Urinal Models can be furnished for the following:

0.5 gpf/1.9 Lpf	For Wash Down Urinals
1.0 gpf/3.8 Lpf	For Low Consumption Urinals
1.5 gpf/5.7 Lpf	For older Siphon Jet Urinals
3.5 gpf/13.2 Lpf	For older Blow Out Urinals

Made in the U.S.A.

LIMITED WARRANTY

Unless otherwise noted, Sloan Valve Company warrants this product, manufactured and sold for commercial or industrial uses, to be free from defects in material and workmanship for a period of three (3) years (one (1) year for special finishes, SF faucets, PWT electronics and 30 days for PWT software) from the date of first purchase. During this period, Sloan Valve Company will, at its option, repair, replace, or refund the purchase price of any product which fails to conform with this warranty under normal use and service. This shall be the sole and exclusive remedy under this warranty. Products must be returned to Sloan Valve Company, at customer's cost. No claims will be allowed for labor, transportation or other costs. Damage caused by misuse or improper installation are all excluded from this warranty. This warranty extends only to person or organizations who purchase Sloan Valve Company's products directly from Sloan Valve Company for purpose of resale. This warranty does not cover the life of the batteries.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO EVENT IS SLOAN VALVE COMPANY RESPONSIBLE FOR ANY CONSEQUENTIAL DAMAGES OF ANY MEASURE WHATSOEVER.

PRIOR TO INSTALLATION

Prior to installing the Optima Plus flushometer, install the items listed below as illustrated in the Rough-in Diagram. (New installations only.)

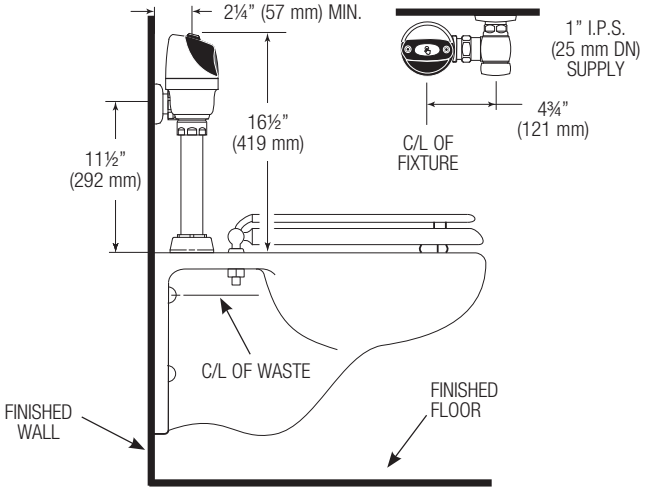
- Closet or Urinal fixture
- Drain line
- Water supply line

Important:

- **ALL PLUMBING SHOULD BE INSTALLED IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS.**
- **WATER SUPPLY LINES MUST BE SIZED TO PROVIDE AN ADEQUATE VOLUME OF WATER FOR EACH FIXTURE.**
- **WHEN INSTALLING A FLUSHOMETER, IT IS IMPORTANT THAT THE FLUSH MODEL MATCHES THE REQUIREMENTS OF THE PLUMBING FIXTURE.**
- **FLUSH ALL WATER LINES PRIOR TO MAKING CONNECTIONS.**

The Optima Plus is designed to operate with 15 to 100 PSI (104 to 689 kPa) of water pressure. **THE MINIMUM PRESSURE REQUIRED TO THE VALVE IS DETERMINED BY THE TYPE OF FIXTURE SELECTED.** Consult fixture manufacturer for pressure requirements.

Most Low Consumption water closets (1.6 gallon/6 liter) require a minimum flowing pressure of 25 psi (172 kPa).



TOOLS REQUIRED FOR INSTALLATION

- Slotted screwdriver to adjust control stop.
- Sloan A-50 Super-Wrench™, Sloan A-109 Plier Wrench or smooth jawed spud wrench for couplings.
- Strap wrench (supplied) to install Optima Plus to valve body.
- 7/64" hex wrench (supplied) to secure Optima Plus cover to base plate.

VALVE ROUGH-IN

Typical Water Closet Installation

Model 8110/8111
Reference for RESS-C Retrofit

When installing the Optima Plus in a handicap stall:

Per the ADA Guidelines (section 604.9.4) it is recommended that the grab bars be split or shifted to the wide side of the stall.

!!! IMPORTANT !!!

With the exception of Control Stop Inlet, DO NOT use pipe sealant or plumbing grease on any valve component or coupling!

!!! IMPORTANT !!!

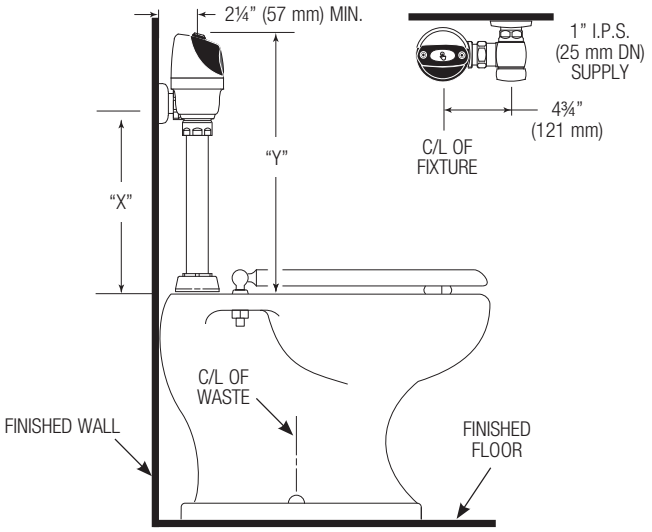
Protect the chrome or special finish of Sloan Flushometers — DO NOT USE toothed tools to install or service these valves. Use a Sloan A-50 Super-Wrench™, Sloan A-109 Plier Wrench or smooth jawed spud wrench to secure all couplings. Also see "Care and Cleaning" section of this manual.

!!! IMPORTANT !!!

LAWS AND REGULATIONS PROHIBIT THE USE OF HIGHER FLUSHING VOLUMES THAN LISTED ON FIXTURES OR FLUSHOMETERS.

!!! IMPORTANT !!!

This product contains mechanical and/or electrical components that are subject to normal wear. These components should be checked on a regular basis and replaced as needed to maintain the valve's performance.



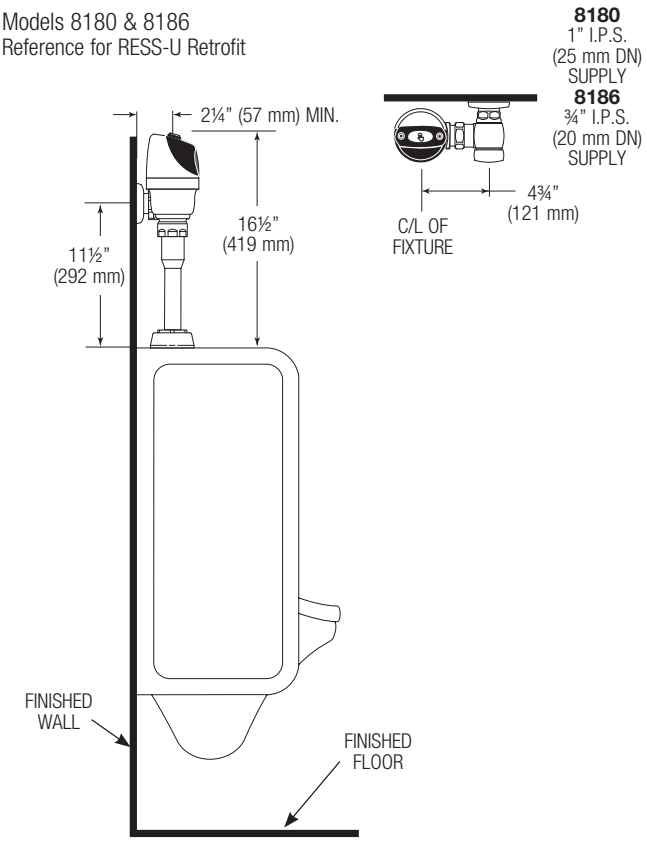
!!! IMPORTANT !!!

The Strap Wrench provided with Optima Plus is a convenience tool and is not to be used to remove or install the Flushometer Couplings. Use Strap Wrench ONLY to install Optima Plus Locking Ring.

When assistance is required, please contact Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614) or visit us online at: www.sloanvalve.com

High Rough-in Water Closet Installation

Models 8113, 8115 & 8116

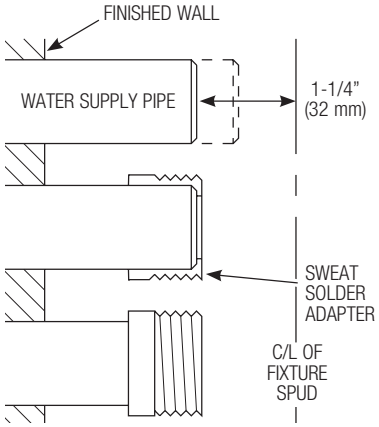


Model 8115 & 8116 valves are designed for installations where the water supply is roughed-in 24" - 27" (610 mm - 686 mm) above the top of the water closet.

For new installations, Sloan strongly recommends the use of our Model 8111 which has a shorter installation height.

Model	"X"	"Y"
8113	16" (406 mm)	21" (533 mm)
8115	24" (610 mm)	29" (737 mm)
8116	27" (686 mm)	32" (813 mm)

Typical Urinal Installation



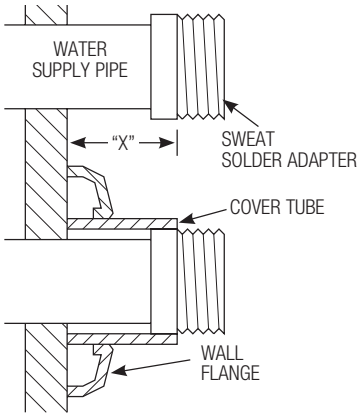
Models 8180 & 8186
Reference for RESS-U Retrofit

1 - FOR COMPLETE VALVE INSTALLATION START HERE. FOR RESS RETROFIT INSTALLATION, START AT STEP 6. INSTALL OPTIONAL SWEAT SOLDER ADAPTER (ONLY IF YOUR SUPPLY PIPE DOES NOT HAVE A MALE THREAD)

A Measure from finished wall to C/L of Fixture Spud. Cut pipe 1¼" (32 mm) shorter than this measurement. Chamfer O.D. and I.D. of water supply pipe.

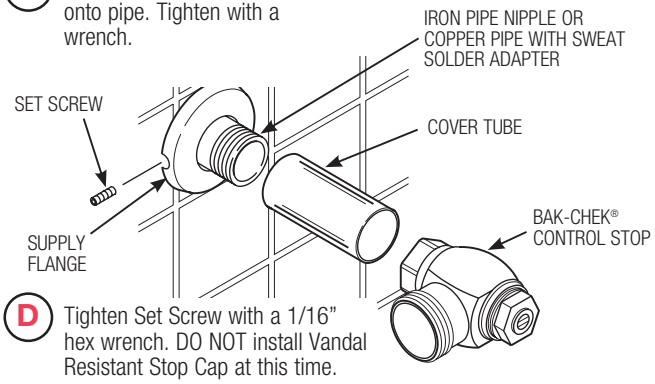
B Slide Threaded Adapter fully onto pipe.

C Sweat solder the Adapter to pipe.



!!! IMPORTANT !!!

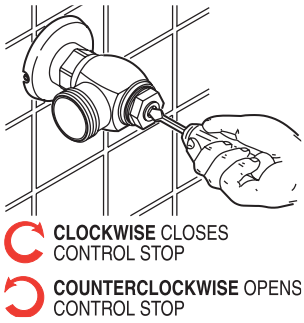
With the exception of Control Stop Inlet, DO NOT use pipe sealant or plumbing grease on any valve component or coupling!



2 - INSTALL COVER TUBE, WALL FLANGE AND CONTROL STOP TO SUPPLY PIPE

A Measure from finished wall to first thread of Adapter or threaded supply pipe (dimension "X"). Cut Cover Tube to this length.

B Slide Cover Tube over pipe. Slide Wall Flange over Cover Tube until against wall.



C Thread Control Stop onto pipe. Tighten with a wrench.

D Tighten Set Screw with a 1/16" hex wrench. DO NOT install Vandal Resistant Stop Cap at this time.

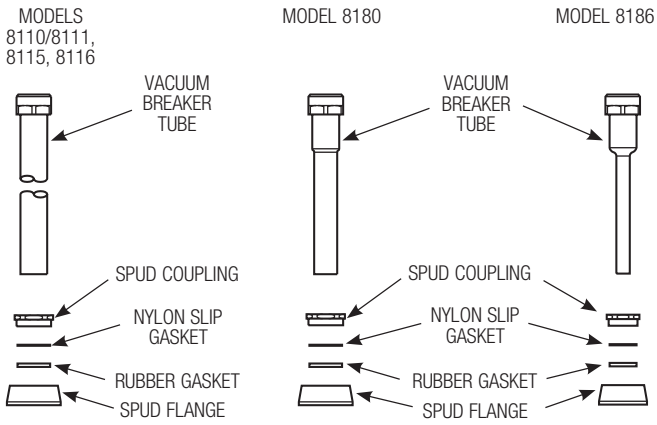
3 - FLUSH OUT SUPPLY LINE

A Open Control Stop.

B Turn on water supply to flush line of any debris or sediment.

C Close Control Stop.

4 - INSTALL VACUUM BREAKER FLUSH CONNECTION



NOTE

If cutting Vacuum Breaker Tube to size, note that Critical Line (C/L) on Vacuum Breaker must typically be 6" (152 mm) above fixture. Consult Code for details.

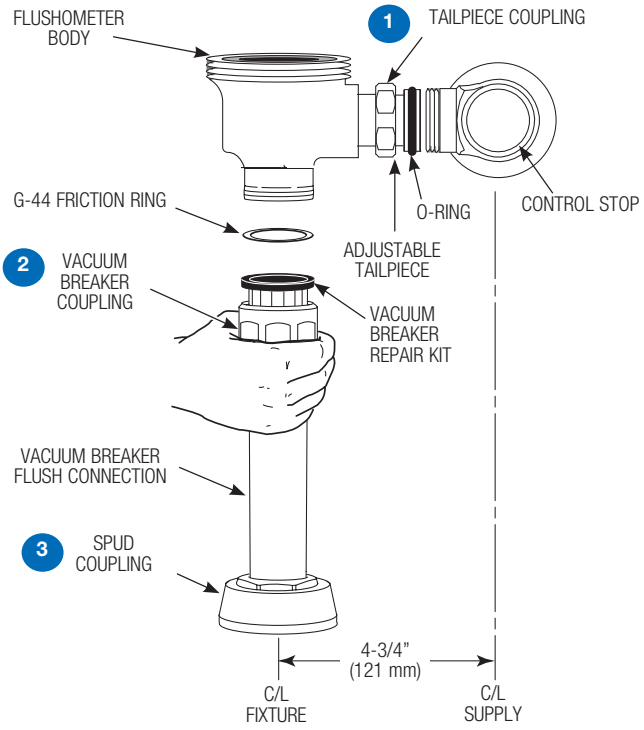
A Slide Spud Coupling, Nylon Slip Gasket, Rubber Gasket and Spud Flange over Vacuum Breaker Tube.

B Insert Tube into Fixture Spud.

C Hand tighten Spud Coupling onto Fixture Spud.

5 - INSTALL FLUSHOMETER

A Lubricate tailpiece O-ring with water. Insert Adjustable Tailpiece into Control Stop. Tighten Tailpiece Coupling by hand.



B Align Flushometer directly above the Vacuum Breaker Flush Connection by sliding the Flushometer Body IN or OUT as needed. Tighten Vacuum Breaker Coupling by hand.

NOTE

Maximum adjustment of the Sloan Adjustable Tailpiece is 1/2" (13 mm) IN or OUT from the standard 4-3/4" (121 mm) (centerline of Flushometer to centerline of Control Stop).

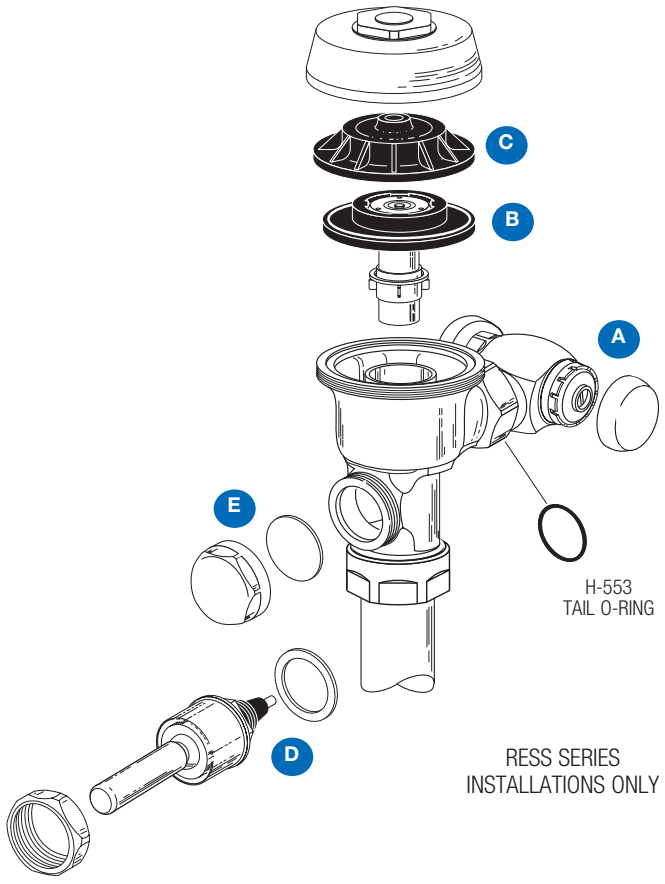
If roughing-in measurement exceeds 5-1/4" (133 mm), consult factory for longer tailpiece.

C Align Flushometer Body and securely tighten first the Tailpiece Coupling (1), then the Vacuum Breaker Coupling (2), and finally the Spud Coupling (3). Use a wrench to tighten these couplings in the order shown.

6 - WHEN RETROFITTING AN EXISTING VALVE, START HERE. REMOVE COMPONENTS FROM EXISTING FLUSHOMETER (RESS RETROFIT INSTALLATIONS ONLY)

A Remove Control Stop Cap.

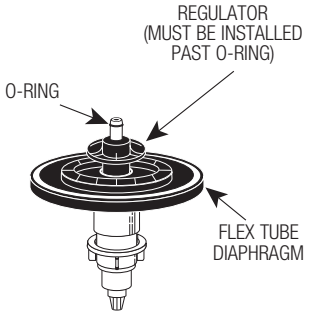
B Turn off water supply at Control Stop. Push Valve Handle to relieve water pressure.



C Remove Outside and Inside Covers and old Inside Parts Kit.

D Remove old Handle Assembly and Gasket.

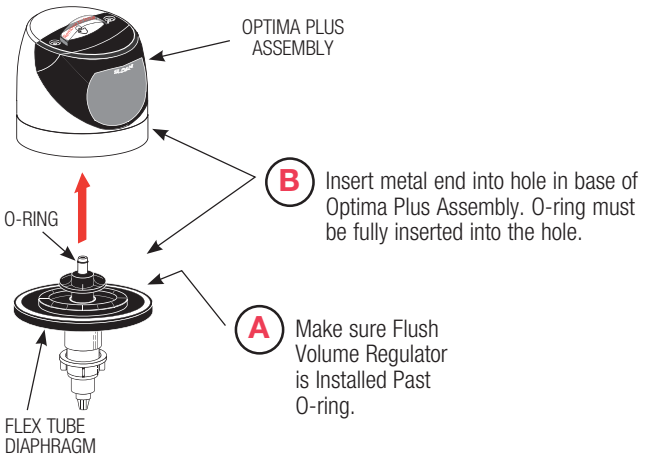
E Install Chrome Handle Cap with Gasket to handle opening on Flushometer Body. Tighten Chrome Handle Cap securely.



NOTE

An extra H-553 Tail O-ring is included in the event leakage occurs if the valve is repositioned during the installation of the new Optima Plus. USE ONLY AS NEEDED.

7 - OPTIMA PLUS FLUSH VOLUME

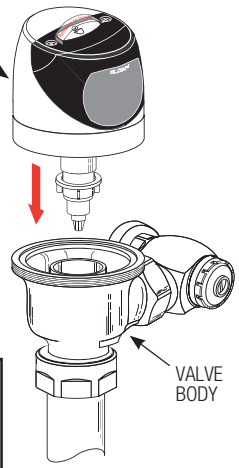


The Flush Volume of the Optima Plus is controlled by the Regulator in the Flex Tube Diaphragm Kit. Regulators are identified by color.

!!! IMPORTANT !!!

LAWS AND REGULATIONS PROHIBIT THE USE OF HIGHER FLUSHING VOLUMES THAN LISTED ON FIXTURES OR FLUSHOMETERS.

8 - ASSEMBLE FLEX TUBE DIAPHRAGM TO OPTIMA PLUS ASSEMBLY

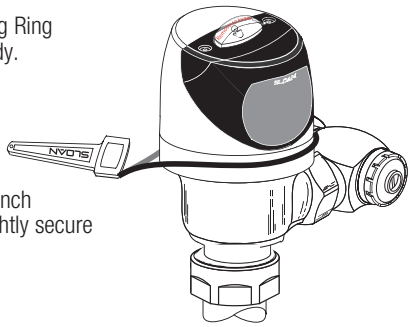


B Insert metal end into hole in base of Optima Plus Assembly. O-ring must be fully inserted into the hole.

A Make sure Flush Volume Regulator is Installed Past O-ring.

To facilitate installation, wet the diaphragm assembly (on top or completely).

C Push Diaphragm securely against underside of Optima Plus Assembly. Place entire Assembly onto the Valve Body.



NOTE

Sensor Lens must face directly forward. Rotating the Sensor to either side will decrease the Sensor's ability to detect a target.

9 - TIGHTEN LOCKING RING

A Thread Locking Ring onto Valve Body.

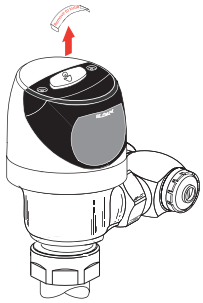
B Use Strap Wrench provided to tightly secure Locking Ring.

!!! IMPORTANT !!!

The Locking Ring must be installed down past the valve body threads by at least one thread. If difficulty is experienced installing the Locking Ring, turn the Locking Ring back and forth, each time working it further down the threads. The Locking Ring will act as a thread chaser in the event there has been a build-up of matter on the threads of the old valve body.

If retrofitting the Optima Plus onto a Zurn valve body, a special Locking Ring must be used (identified by a machined groove around the ring).

Order the Optima Plus with the "Z" variation to receive the unit supplied with this Ring.



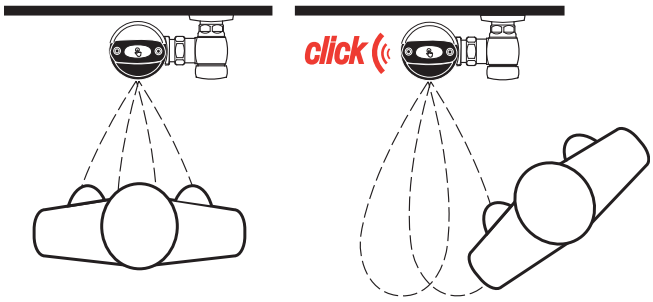
10 - REMOVE TAB TO ACTIVATE SENSOR MODULE

A Remove all removable objects in sensor view area and remove the Tab located over the Override Button to activate the Sensor Module. The sensor module will perform the start-up routine for one minute with LED blinking.

B For the first ten (10) minutes of operation, a Visible Red Light flashes in the Sensing Window of the Optima Plus Flushometer when a user is detected.

NOTE

The self adaptive sensor automatically adapts to the surrounding enviroment when the tab on the override button is removed. No manual adjustments are required. Start-up mode will take approximately one (1) minute to complete its cycle and it is important that no non-permanent (i.e. a wall or stall door) target is present at this time. If the target is permanent, the sensor will adapt itself around this target. A 3 seconds long Red light on and followed with slow Red light blinking in sensor window indicates sensor is in the start-up mode. When the start-up cycle is completed after one (1) (indicate new lithium battery installed) or two (2) (indicate new alkaline battery installed) 2 seconds long Red lights, there will be no light visible in the sensor window.

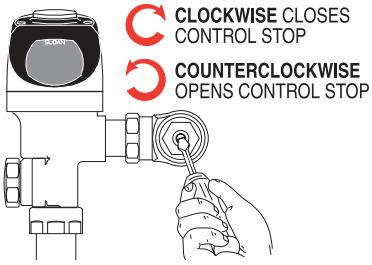


11 - TEST SENSOR OPERATION

The Optima Plus has a factory set sensing range:
Water Closet Models - 22" to 42" (559 mm to 1067 mm)
Urinal Models - 15" to 30" (381 mm to 762 mm)

The factory setting should be satisfactory for most installations. If a range adjustment is required, refer to the Range Adjustment instructions on this page.

A Test Sensor with Cover in Place.



B Stand in front of Sensor for ten (10) seconds

C Step away from Sensor and listen for "CLICK."

12 - ADJUST CONTROL STOP AND INSTALL VANDAL RESISTANT STOP CAP

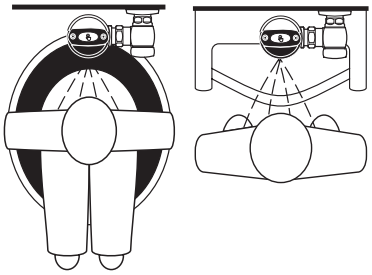
A Open Control Stop COUNTERCLOCKWISE ½ turn from closed position.

B Activate Flushometer by placing hand in front of Optima Plus Sensor Lens for ten (10) seconds (or press override button) and then moving it away.

C Adjust Control Stop after each flush until the rate of flow delivered properly cleanses the fixture.

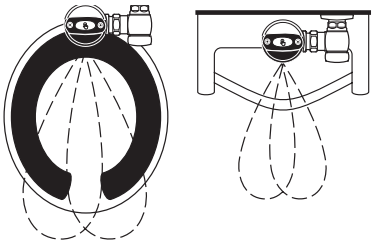
!!! IMPORTANT !!!

The flushometer is engineered for quiet operation. Excessive water flow creates noise, while too little water flow may not satisfy the needs of the fixture. Proper adjustment is made when plumbing fixture is cleansed after each flush without splashing water out from the lip AND a quiet flushing cycle is achieved.



!!! IMPORTANT !!!

The Control Stop should never be opened to the point where the flow from the valve exceeds the flow capability of the fixture. In the event of a valve failure, the fixture must be able to accommodate a continuous flow from the valve.



D Install Control Stop Cap onto Control Stop. For RESS retrofit applications, reuse Stop Cap from existing valve. In complete valve installations, a new Stop Cap is provided.
For G2 models, follow the instructions packaged with the Free Spinning Vandal Resistant Stop Cap.

OPERATION

1. A continuous, INVISIBLE light beam is emitted from the Optima Plus Sensor.
2. As the user enters the beam's effective range, 22 to 42 inches (559 mm to 1067 mm) for closet installations and 15 to 30 inches (381 mm to 762 mm) for urinal installations, the beam is reflected into the Scanner Window to activate the Output Circuit. Once activated, the Output Circuit continues in a "hold" mode for as long as the user remains within the effective range of the sensor.

3. When the user steps away, the loss of reflected light initiates an electrical "one-time" signal that activates the flushing cycle to flush the fixture. The Circuit automatically resets and is ready for the next user.

RANGE ADJUSTMENT (ADJUST ONLY IF NECESSARY)

The Optima Plus has a factory set sensing range:
Water Closet Models - 22" to 42" (559 mm to 1067 mm)
Urinal Models - 15" to 30" (381 mm to 762 mm)

The Factory setting should be satisfactory for most installations.

If the range is too short (i.e., not picking up users) or too long (i.e., picking up opposite wall or stall door) the range can be adjusted.

Note: Water does not have to be turned off to adjust range.

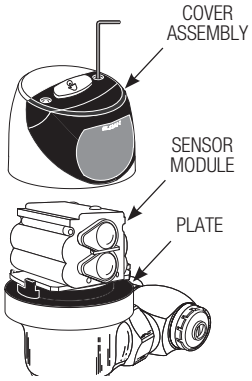
RANGE ADJUSTMENT PROCEDURE

For the first ten (10) minutes of operation, a Visible Red Light flashes in the Sensing Window of the Optima Plus Flushometer when a user is detected. This Visible Red Light feature can be reactivated by pushing the manual override button more than one minute.

RANGE ADJUSTMENT (ADJUST ONLY IF NECESSARY) - CONTINUED

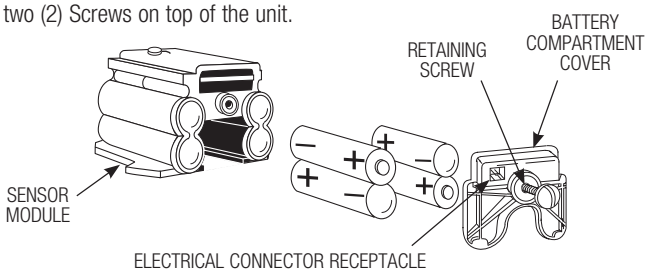
Make sure to remove all the non-permanent targets in sensor view area. Push manual override button for 20-30 seconds. the Red LED in the G2 sensor starts slow blinking. Release the button during the LED blinking. The G2 will into distance setting mode. The setting mode will run for one minute.

!!! IMPORTANT !!!



WHEN ADJUSTING RANGE FOR URINAL SENSOR, MAKE SURE TO SET-UP A PROPER TARGET IN FRONT OF URINAL SENSOR.

BATTERY REPLACEMENT



When required, replace batteries with four (4) Alkaline AA-Size Batteries.

Note: Water does not have to be turned off to replace Batteries.

Loosen the two (2) Screws on top of unit. Remove the complete Cover Assembly. Lift the Sensor Module from its Plate. Unplug the Electrical Connector from Battery Compartment Cover. Loosen the Retaining Screw on Battery Compartment Cover and remove Battery Compartment Cover. Install four (4) Alkaline AA-Size Batteries exactly as illustrated.

Install Battery Compartment Cover and secure with Retaining Screw. Make certain that Battery Compartment Cover is fully compressed against Gasket to provide a seal; Do Not overtighten. Plug the Electrical Connector into the Battery Compartment Cover. Reinstall the Sensor Module onto the Plate. Reinstall the complete Cover Assembly onto the Plate. Tighten the two (2) Screws on top of the unit.

TROUBLESHOOTING

1. Sensor Flashes Continuously Only When User Steps Within Range.
- A. Unit in Start-Up mode; no problem. This feature is active for the first ten (10) minutes of operation.

2. Valve Does Not Flush; Sensor Not Picking Up User.
- A. Range too short; increase the range.

3. Valve Does Not Flush; Sensor Picking Up Opposite Wall or Surface, or Only Flushes When Someone Walks By. Red Light Flashes Continuously for First 10 Minutes Even with No One in Front of the Sensor.
- A. Range too long; shorten range.

4. Valve Does Not Flush Even After Adjustment.
- A. Improper Range Adjustment; Follow Instructions and repeat steps.
- B. Batteries completely used up; replace batteries.
- C. Problem with Electronic Sensor Module; replace Electronic Sensor Module.

5. Unit Flashes 4 Quick Times When User Steps Within Range.
- A. Batteries low; replace batteries.

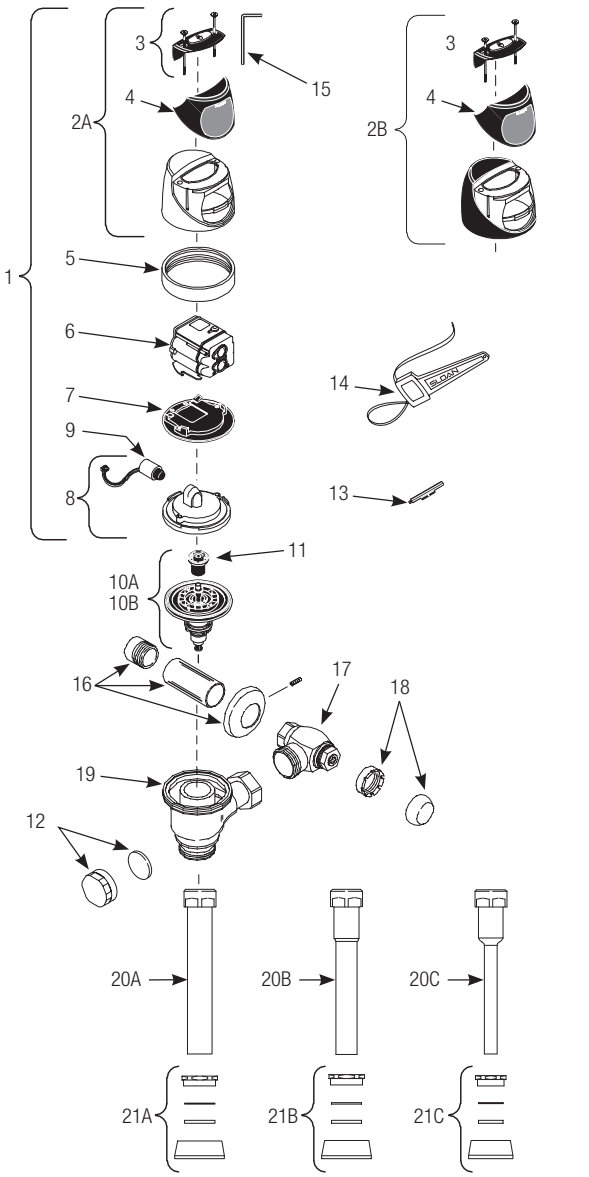
6. Valve Does Not Shut Off.
- A. Bypass orifice in diaphragm is clogged with dirt or debris, or bypass is clogged by an invisible gelatinous film due to "over-treated" water. Remove flex tube diaphragm and wash under running water.
  Note: Size of Orifice in the Bypass is of utmost importance for the proper metering of water by the valve. DO NOT ENLARGE OR DAMAGE THIS ORIFICE. Replace flex tube diaphragm if cleaning does not correct the problem.
- B. Dirt or debris fouling stem or flex tube diaphragm. Remove flex tube diaphragm and wash under running water.
- C. O-ring on stem of flex tube diaphragm is damaged or worn. Replace O-ring if necessary.
- D. Problem with Electronic Sensor Module; replace Sensor Module.

7. Not Enough Water to Fixture.
- A. Wrong Flush Volume Regulator installed in Flex Tube Diaphragm Kit. Install the correct Regulator (see Step 7 of these instructions).
- B. Wrong Optima Plus model installed; i.e., 1 gpf. urinal installed on 3.5 gal. closet fixture. Replace with proper Optima Plus model, or refer to the G2 Optima Plus Conversion Guide to convert existing unit to the proper model.
- C. Enlarged Bypass in Diaphragm. Replace Flex Tube Diaphragm.
- D. Control Stop not adjusted properly. Readjust Control Stop.
- E. Inadequate volume or pressure at supply. Increase water pressure or supply (flow) to valve. Consult factory for assistance.

8. Too Much Water to Fixture.
- A. Wrong flush volume regulator installed in flex tube diaphragm kit. Install the correct regulator (see Step 7 of these instructions).
- B. Control Stop not adjusted properly. Readjust Control Stop.
- C. Wrong Optima Plus model installed; i.e., 3 gpf. model installed on 1.0 or 1.5 gal. urinal fixture. Replace with proper Optima Plus model, or refer to the G2 Optima Plus Conversion Guide to convert existing unit to the proper model.
- D. Dirt in diaphragm bypass. Clean under running water or replace flex tube diaphragm.

Note: The EBV-46-A Beam Deflector is no longer required or available for the G2 Optima Plus.

When further assistance is required,
please contact Sloan Technical Support at:
1-888-SLOAN-14 (1-888-756-2614)
or visit us online at: www.sloanvalve.com



!!! IMPORTANT !!!

LAWS AND REGULATIONS PROHIBIT THE USE OF HIGHER FLUSHING VOLUMES THAN LISTED ON FIXTURES OR FLUSHOMETERS.

PARTS LIST

Item #	Part #	Description
Items Included with RESS Retrofit and Complete Optima Plus Valves		
1	–	Cover/Ring/Sensor Assembly
2A	EBV-142-A	Cover Assembly (G2 Optima Plus models)
2B	EBV-192-A	Cover Assembly (Sloan Optima Plus models)
3	EBV-130-A	Override Button Assembly (includes screws & hex wrench)
	EBV-132-A	Screws (2) and Hex Wrench Only
4	EBV-131	Lens Window Cover
5	EBV-168	Locking Ring
	EBV-172	Locking Ring - for Zurn valves
6	EBV-129-A-C	Electronic Module - Water Closet
	EBV-129-A-U	Electronic Module - Urinal
7	EBV-134	Cover Rest Plate
8	EBV-145-A	Inside Cover Assembly (includes solenoid)
9	EBV-136-A	Solenoid
10A	†	G2 Optima Plus Flex Tube Diaphragm Assembly
10B	†	Sloan Optima Plus Flex Tube Diaphragm Assembly
11	†	Flush Volume Regulator
12	EBV-1017-A	Handle Cap
13	EBV-91	Range Adjustment Tool
14	EBV-22	Strap Wrench
15	EBV-137	7/64" Hex Wrench
Items Included with Complete Optima Plus Valves Only		
16	H-633-AA	1" (25 mm) Sweat Solder Kit
	H-636-AA	¾" (19 mm) Sweat Solder Kit
17	H-700-A	1" (25 mm) Bak-Chek® Control Stop
	H-700-A	¾" (19 mm) Bak-Chek® Control Stop
18	H-1010-A	Vandal Resistant Stop Cap
19	EBV-36-A	Valve Body
20A	V-600-AA	1½" (38 mm) Vacuum Breaker
20B	V-600-AA	1¼" (32 mm) Vacuum Breaker (Model 8180)
20C	V-600-AA	¾" (19 mm) Vacuum Breaker (Model 8186)
21A	F-5-AT	1½" Spud Coupling Assembly (Models 8110, 8111, 8115 & 8116)
21B	F-5-AU	1¼" Spud Coupling Assembly (Model 8180)
21C	F-5-AW	¾" Spud Coupling Assembly (Model 8186)

† Part No. various depending on valve model, please contact your local Sloan Representative or Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614)

Optima Plus Valve Models Feature Sloan's Exclusive Flex Tube Diaphragm for the ultimate in valve performance, reliability and chloramines resistance.

CARE AND CLEANING

DO NOT use abrasive or chemical cleaners to clean flushometers as they may dull the luster and attack the chrome or special decorative finishes. Use ONLY soap and water, then wipe dry with clean cloth or towel.

While cleaning the bathroom tile, the Flushometer should be protected from any splattering of cleaner. Acids and cleaning fluids can discolor or remove chrome plating.

Manufactured in the U.S.A. by Sloan Valve Company under one or more of the following patents: U.S. Patents: D598,975; 7,124,997. Other Patents Pending. BAK-CHEK®, PARA-FLO®, PERMEX®, TURBO-FLO®.

INSTALLATION INSTRUCTIONS

0496221020

American Standard
Style That Works Better

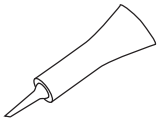
Undercounter Sink
Oval Shaped Models: 0495, 0496, 0497, 0630, 0632

Introduction: Thank you for selecting our products...products which have been the benchmarks of fine quality for years. To help ensure that the installation process will proceed smoothly, please read these instructions carefully before you begin. Also, review the recommended tools and materials list; carefully unpack and examine your new plumbing fixture.

⚠ **CAUTION: PRODUCT IS FRAGILE. TO AVOID BREAKAGE AND POSSIBLE INJURY HANDLE WITH CARE!**
NOTE: *Pictures may not exactly define contour of china and components.*

Observe Local Plumbing and Building Codes.

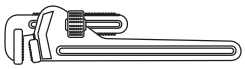
Product names listed herein are trademarks of American Standard Inc. unless otherwise noted.



Recommended Tools & Materials

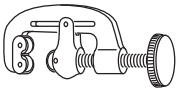
Putty Knife

Adjustable Wrench



Plumbers' Putty

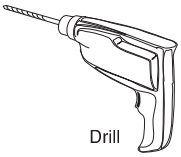
Channel Lock Pliers



Silicone Adhesive

Tape Measure

Pipe Wrench

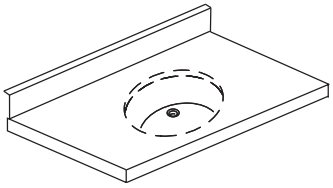


Basin Wrench

Tubing Cutter

Phillips Screwdriver

Regular Screwdriver

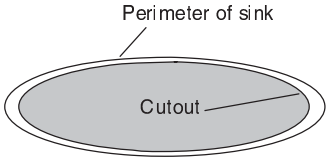


Hacksaw

Drill

Saber Saw

NOTE: More specialized tools may be necessary to install this sink to countertop materials other than wood or wood composites.

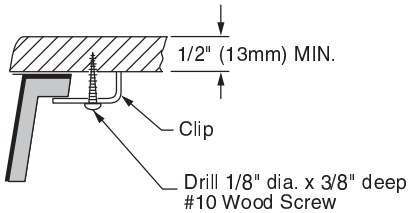


1

NOTE: To avoid damage to countertop, install sink such that future removal from underneath the countertop is possible.

First, make sure the clearance between the backsplash, faucet, fixtures and cabinets are acceptable for the new sink.

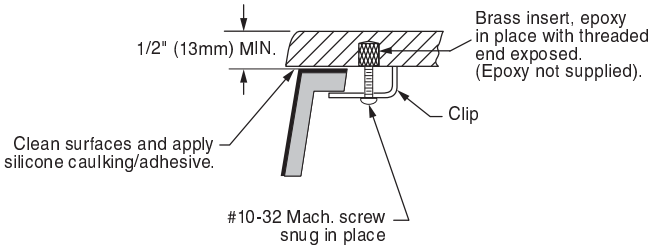
2



Carefully cut out the enclosed template, then position and trace the template on the countertop as shown on the template. Make a mark of the faucet hole centerline on the countertop. Drill a 1/2" pilot hole on the inside of the cut line. Use a saber saw or a keyhole saw to cut out the countertop opening.

3

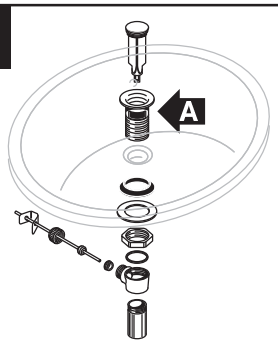
FOR WOOD COUNTERTOP



Mark and pre-drill the wood screw holes as located on the enclosed template. Waterproof any exposed areas of wood.

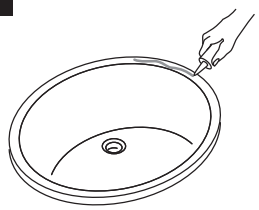
4

FOR MARBLE OR SOLID SURFACE COUNTERTOP



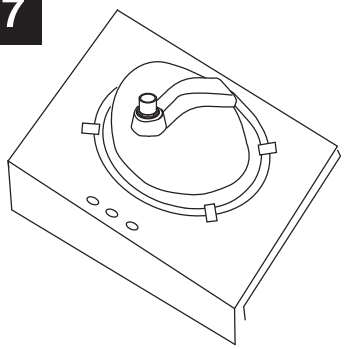
To protect countertop, place it on a foam padding and drill 3/8" Dia. x 1/4" deep hole as per location shown on template. Clean countertop surface and sink surface where silicone caulking/adhesive is applied.

Product names listed herein are trademarks of AS America, Inc.
© AS America, Inc. 2013



730431-100 Rev. F

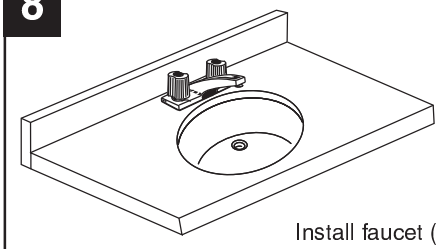
5



Mount the drain assembly (not included) on the sink, following faucet manufacturer's instructions. Be certain to apply a bead of sealing putty on the underside of the drain (Part "A") in order to ensure a watertight seal between the sink and drain. Remove excess putty after installing drain on sink.

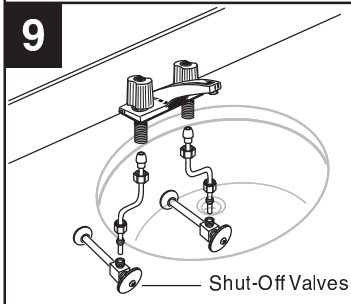
6

After checking fit and alignment of sink to cut out, apply a bead of silicone caulking/adhesive to rim of sink.



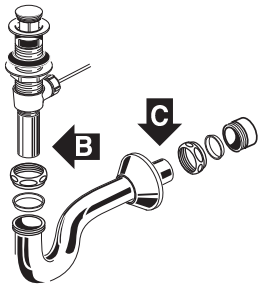
7

Center bowl over cutout and tighten screws (see step 4) to secure bowl to countertop. Remove excess sealant from inside lip.



NOTE: The screws provided should be used on countertops with a minimum 1" thickness. For thinner countertops, use appropriate anchors and fasteners.

8



Install faucet (not included) and countertop (not included) following manufacturers instructions.

9

Connect supply line to faucet (finger tight) and carefully bend tubes to engage with the supply shut-off valves. Tighten connections at faucet and shut-off valves for water tight seal.

10

Connect trap to drain assembly hand tight to check alignment. It may be necessary to cut off part of the tailpiece (area "B") or part of the horizontal leg of the trap (area "C"). Secure joints for watertight assembly.

AS AMERICA, INC. ONE YEAR LIMITED WARRANTY

If inspection of this AS America, Inc. ("American Standard") plumbing product, within one year after its initial purchase, confirms that it is defective in materials or workmanship, American Standard will repair or, at its option, exchange the product for a similar model.

This limited warranty applies only to the original purchaser and installation of these products. In the event of a limited warranty claim, proof of purchase will be required—save sales receipt.

This limited warranty does not apply to local building code compliance. Since local building codes vary considerably, the purchaser of this product should check with a local building or plumbing contractor to insure local code compliance before installation.

This limited warranty is void if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damages; if it was not installed in accordance with American Standard's instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard.

American Standard's option to repair or exchange the product under this limited warranty does not cover any labor or other costs of removal or installation. IN NO EVENT WILL AMERICAN STANDARD BE LIABLE FOR THE COST OF REPAIR OR REPLACEMENT OF ANY INSTALLATION MATERIALS, INCLUDING BUT NOT LIMITED TO, TILES, MARBLE, ETC. American Standard will not be responsible for any other incidental or consequential damages attributable to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this limited warranty. This limited warranty does not cover any liability for consequential or incidental damages, all of which are hereby expressly disclaimed, or the extension beyond the duration of this limited warranty of any implied limited warranties, including those of merchantability or fitness for an intended purpose. (Some states or provinces do not allow the exclusion or limitation of implied limited warranties, so this exclusion may not apply to you.)

This limited warranty gives you specific legal rights. You may have other statutory rights that vary from state to state or from province to province, in which case this limited warranty does not affect such statutory rights.

AS AMERICA, INC. ONE YEAR LIMITED WARRANTY

If inspection of this AS America, Inc. ("American Standard") plumbing product, within one year after its initial purchase, confirms that it is defective in materials or workmanship, American Standard will repair or, at its option, exchange the product for a similar model.

This limited warranty applies only to the original purchaser and installation of these products. In the event of a limited warranty claim, proof of purchase will be required—save sales receipt.

This limited warranty does not apply to local building code compliance. Since local building codes vary considerably, the purchaser of this product should check with a local building or plumbing contractor to insure local code compliance before installation.

This limited warranty is void if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damages; if it was not installed in accordance with American Standard's instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard.

American Standard's option to repair or exchange the product under this limited warranty does not cover any labor or other costs of removal or installation. IN NO EVENT WILL AMERICAN STANDARD BE LIABLE FOR THE COST OF REPAIR OR REPLACEMENT OF ANY INSTALLATION MATERIALS, INCLUDING BUT NOT LIMITED TO, TILES, MARBLE, ETC. American Standard will not be responsible for any other incidental or consequential damages attributable to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this limited warranty. This limited warranty does not cover any liability for consequential or incidental damages, all of which are hereby expressly disclaimed, or the extension beyond the duration of this limited warranty of any implied limited warranties, including those of merchantability or fitness for an intended purpose. (Some states or provinces do not allow the exclusion or limitation of implied limited warranties, so this exclusion may not apply to you.)

This limited warranty gives you specific legal rights. You may have other statutory rights that vary from state to state or from province to province, in which case this limited warranty does not affect such statutory rights.

AS AMERICA, INC. LIMITED WARRANTY FOR LXP, BOULEVARD® DUAL FLUSH, CHAMPION® PRO, CHAMPION®4, TITAN® PRO TOILETS

This toilet comes with a limited lifetime warranty on chinaware, a limited 10 year warranty on all mechanical parts of the toilet, and a limited 1 year warranty on the toilet seat if included with product. If inspection of this AS America, Inc. ("American Standard") plumbing product, inclusive of the chinaware and all mechanical parts, confirms that it is defective in materials or workmanship, American Standard will repair or, at its option, exchange the product for the same or a similar model.

This limited warranty applies only to the original non-commercial purchaser and installation of the products. In the event of a limited warranty claim, proof of purchase will be required – save sales receipts.

For this warranty to become effective, the warranty registration process must be completed via the internet or telephone per the warranty registration instructions.

This limited warranty does not apply to commercial installations. The warranty for commercial installations is 10 years on chinaware and mechanical parts, and 1 year on the toilet seat if included with product.

This warranty **does not apply** to local building code compliance. Since local building codes vary considerably, the purchaser of the product should check with a local building or plumbing contractor to ensure local code compliance before installation.

This warranty **will be void** if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damage; if it was not installed in accordance with American Standard's instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard.

WARNING: This warranty **DOES NOT COVER** any damages caused by the use of in-tank cleaners. These products can seriously corrode the fittings in the tank. This damage can cause leakage and property damage. **American Standard will not be responsible or liable for any damage caused by the use of in-tank cleaners.**

American Standard's option to repair or exchange the product under this warranty does not cover any labor or other costs of removal or installation including any costs of any surrounding material such as tile or marble. **American Standard is not responsible for any other incidental or consequential damages attributed to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this warranty.** (Some states or provinces do not allow the exclusion or limitation of implied warranties, so this exclusion may not apply to you.)

This warranty gives you specific rights. You may have other statutory rights that may vary from state to state or province to province, in which case this warranty does not affect such statutory rights.

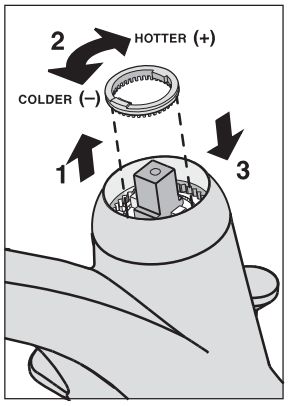
SYMMONS® Symmetrix®
the smart choice™

Lavatory Faucet S-20 Series

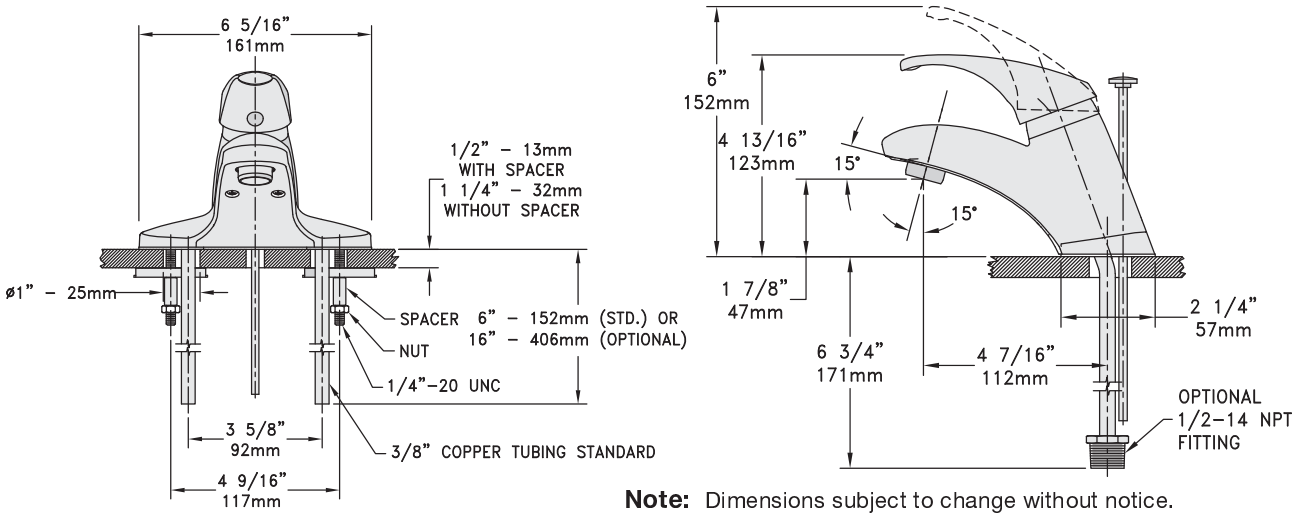


Installation and Service Instructions

Installation

Caution: Be sure to turn off hot and cold water supplies before installing or servicing faucet.

1. Loosely install the anchor bar (KN-23), spacer (KN-26) and nut (L-36) on the mounting bolts and place gasket on base of faucet. Push faucet supplies and anchor bolt/spacer/nut assemblies with gasket through holes in sink. Secure faucet to sink by tightening nuts from underside. (If sink or counter surface is uneven, use putty or sealant to make proper seal under base.)
2. Connect hot supply to left tube and cold supply to right tube using appropriate connectors.
3. Pop-up drain installation:
   a) Remove pop-up plug, tail piece and flange from the drain body. Make sure that locknut is threaded all the way down onto the body with flat friction washer in middle and beveled washer on top.
   b) Apply plumbers putty or sealant to bottom of flange.
   c) Install drain body through drain opening in lavatory and screw flange onto the drain body making sure that the threads are completely engaged for proper sealing and strength of the connection. Apply joint compound to all threaded parts to insure proper seal. Apply putty or teflon tape to tail piece before attaching to drain body.
   d) Tighten locknut to compress the beveled flange evenly across the bottom of the drain opening taking care not to over tighten the locknut, causing damage to the lavatory.
   e) Remove one of two ball washers from inside the threaded cavity. Insert pop-up plug and pivot rod into body. Add one ball washer (the second ball washer should remain inside the body) to the outside of the ball. Tighten the retaining nut until the ball is seated on the internal and external ball washers.
   Note: The pop-up plug can be installed either in the removable or non-removable position, depending on the location of the hole located in the guide at the bottom of the plug.
   f) Slide the pivot rod through one side of the spring clip, then the appropriate adjustment hole and then other side of the spring clip.
   g) Insert lift rod through faucet housing and the top of the lift strap and secure it in place by tightening the screw.
   Note: To ensure proper operation of lift rod and pop-up, some adjustment of the linkage may be required. There are two possible adjustment points: 1) lift strap to lift rod and 2) lift strap to pivot rod.
4. It is very important to thoroughly flush the supply lines to prevent foreign matter, i.e. copper chips, sand, stones, etc. from damaging the sealing surfaces of cartridge. Remove aerator and turn valve handle on to full cold position, open cold supply. Without closing, turn handle to full hot and open hot supply. Let water run in hot only and cold only positions long enough to flush supply lines thoroughly. Shut off faucet and replace aerator. Check for leaks.
5. The handle limit stop can be set to limit handle turn to the hot position. The limit mechanism is factory set to allow full handle travel. To adjust the limit stop, turn handle to the full hot position and lift handle to open faucet approximately half way to obtain a smooth flow for correct initial temperature measurement.



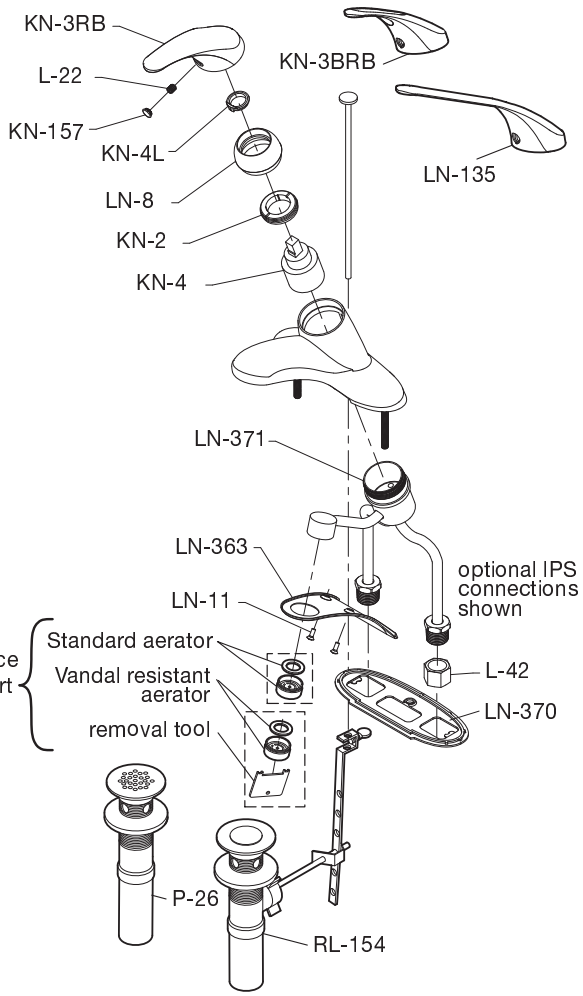
Stop limit adjust

6. If when faucet is on and in full hot position and water is too hot, remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135). Lift limit stop ring (KN-4L) using a small flat head screw driver and rotate counter clockwise to lower temperature. If water is not hot enough, rotate clockwise (See Figure 1 on reverse side). After correct temperature is achieved, reattach handle, reversing procedure above.

Replacing cartridge (KN-4)

1. Remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135).
2. Engage tabs in cartridge wrench (LN-34) with slots in compression ring (KN-2) and use screwdriver in wrench holes or pliers on wrench and turn counter clockwise until compression ring engages with cap (LN-8). Continue turning counter clockwise so that cap/ring assembly is removed from the body (LN-371). Remove cartridge and three ring seal (KN-4).
3. Install new cartridge while taking care to maintain position of the three ring seal at the base of the cartridge. Match posts in base of cartridge with alignment holes in valve body during assembly.
4. Reassemble faucet in reverse fashion. Thread cap onto body firmly by hand. Do not use a wrench which may damage the finish. Tighten compression ring (KN-2) finger tight using the wrench (LN-34) then 1/4 to 1/2 turn further.
5. Set hot water limit stop in accordance with installation step 5 above.

Dimensions Symmetrix Lavatory Faucet, *S-20-2*



Note: Dimensions subject to change without notice.

Parts Assembly Symmetrix Lavatory Faucet, *S-20 Series*

Lifetime Limited Warranty

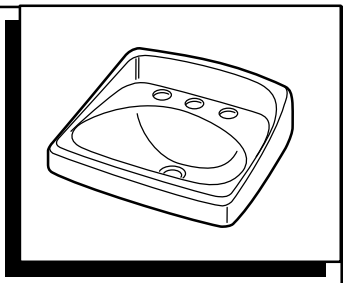
All warranty claims MUST be pre-approved by Symmons.

Symmons warrants to the original consumer purchaser/end-user that any Symmons product will be free of defects in material and workmanship during normal domestic use for the life of your home. All other purchasers including industrial, commercial or business users are warranted for a period of 5 years from the date of purchase.

At our option, we will either have you send the defective part or product prepaid to us for inspection, or we may elect to send you the replacement part or product without investigation. A replacement for any defective part will be supplied FREE OF CHARGE for installation by the purchaser only. Installation, repair, replacement, and any related costs associated with replacement or repair are not covered under this warranty, and are the responsibility of the purchaser. Failure or damage caused by the use of replacement product other than Symmons Genuine Replacement Parts will void this warranty.

This warranty is applicable only to Symmons products purchased after July 1, 1998 and shall be effective from the date of purchase as shown on the purchaser's receipt.

Damage to the chrome and/or other decorative finishes on Symmons products may be a result of improper handling or abusive treatment. Finishes should only be cleaned with a soft, damp cloth or sponge. Use of polish, abrasive cleaners, solvents, or acid cleaners will damage the finish and void this warranty.



This warranty excludes product damage due to installation error, product abuse, or product misuse whether performed by a contractor, service company or yourself. There are no other express warranties on this product and ALL WARRANTIES OF MERCHANTABILITY AND OTHER IMPLIED WARRANTIES ARE LIMITED IN ACCORDANCE WITH APPLICABLE LAW. SYMMONS INDUSTRIES, INC., EXPRESSLY DISCLAIMS CONTINGENT LIABILITY AND CONSEQUENTIAL DAMAGE OF EVERY KIND. Since some states do not allow limitations on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, the above limitation or exclusion may not be applicable. This warranty gives specific legal rights. Other rights may vary from state to state.

To obtain warranty service, please contact Symmons Customer Service between the hours of 7:30 AM to 7:00 PM Eastern at: 1-800-796-6667, or via email at: gethelp@symmons.com.

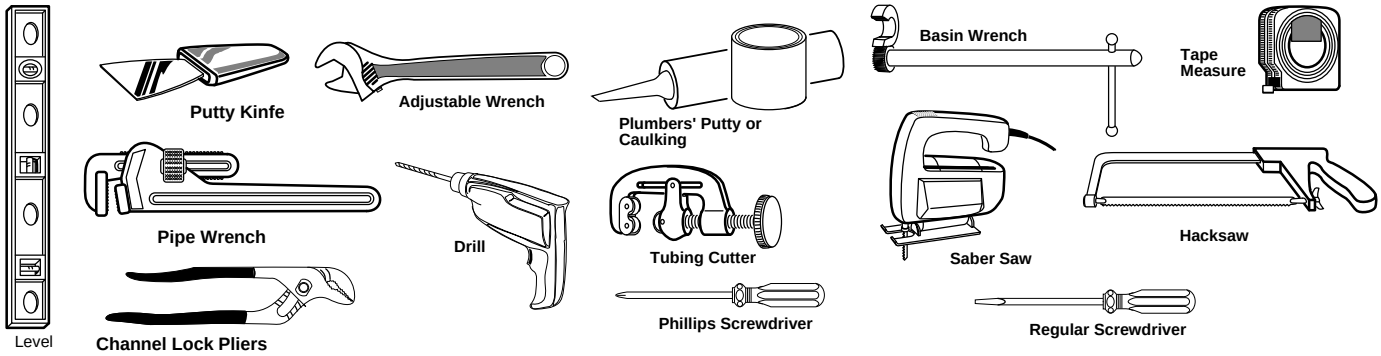
American Standard **INSTALLATION INSTRUCTIONS**

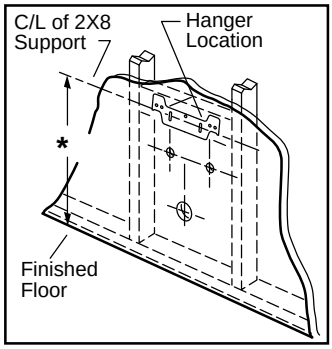
Wall Hung Bathroom Sink



***NOTE:** For installation of models using concealed or exposed arms, follow instruction provided by arms manufacturer.

Introduction: Thank you for selecting our products...products which have been the benchmarks of fine quality for years. To help insure that the installation process will proceed smoothly, please read these instructions carefully before you begin. Also, review the recommended tools and materials list; carefully unpack and examine your new plumbing fixture.

⚠ **CAUTION: PRODUCT IS FRAGILE. TO AVOID BREAKAGE AND POSSIBLE INJURY HANDLE WITH CARE!**

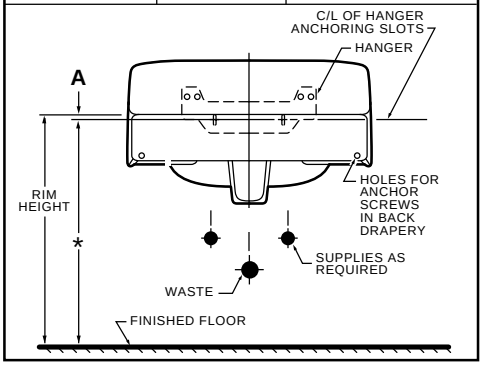


NOTE: *Pictures may not exactly define contour of china and components.*

Recommended Tools & Materials

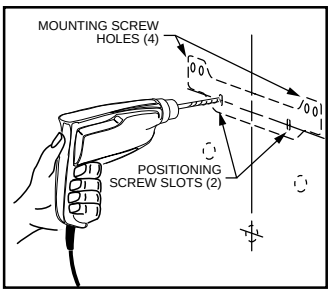
1 Provide suitable reinforcement behind finished wall for lavatory hanger mounting screws. *Determine horizontal center line location of support from the table listed in Step 2. (Make sure support bottom extends to lavatory back wall bottom.)

NOTE: If replacing an existing sink be certain to shut off water supply before removing old sink.



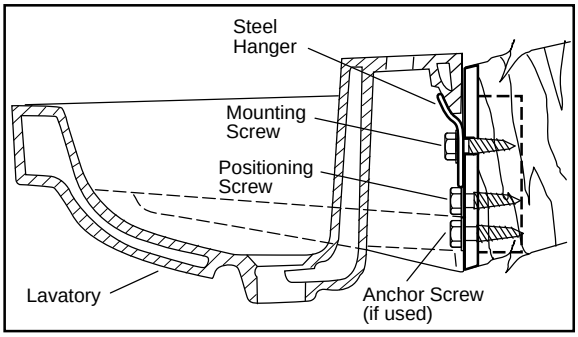
2 Determine the desired rim height (for example 32") then select from the Table at right the height of the hanger mounting bolts centerline

EXAMPLE:



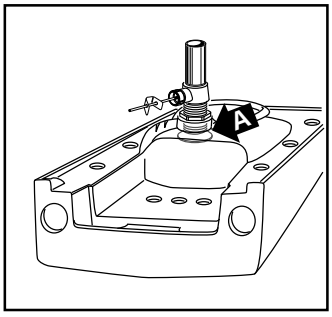
For Lucerne:
32"-1"=31"
For Ledgewood:
32"+2-7/8"=34-7/8"

TABLE		
Part #	**Model**	**Distance "A"**
0124	Comrade	- 2-1/2" (64mm)
0321	Declyn	- 2-3/4" (70mm)
0355/0356	Lucerne	- 1" (25mm)
0372/0373	Penlyn	- 1/8" (3mm)
4300	Ledgewood	+ 2-7/8" (73mm)
4867/4869	Regalyn	+ 2-3/4" (70mm)
5300	Ledgemere	+ 2-1/2" (64mm)

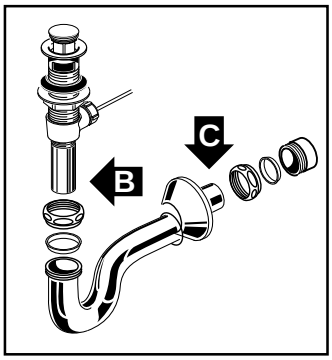


3 Position hanger according to Step 2, making sure its center is aligned with the waste hole centerline. Mark the hanger screw locations through its mounting holes.

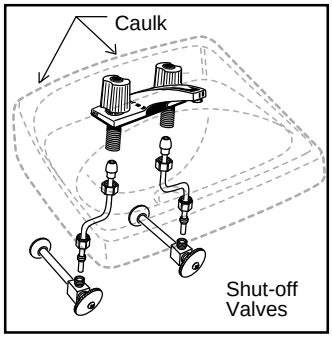
4 Drill pilot holes in positioning screw slots of hanger. (Note: Some models are supplied with anchor screws, or steel hangers for lavatory installations. Other models are not provided with mounting hardware which can be purchased at local hardware outlets. Lavator-ies with bottom anchor screw holes should be secured with anchor screws in addition to hangers.



© American Standard Inc. 2003



5 Affix hanger to wall (hand tighten only). Mount lavatory for positioning, level the deck, and mark bottom anchor screw holes (if applicable). Remove lavatory, tighten the hanger positioning screws and drill pilot holes for anchor screws and 4 mounting screws. Install and tighten the mounting screws.



6 Following manufacturers instructions, install faucet and drain assembly. (Not included). Be certain to apply a bead of sealing putty on the underside of the drain (Part "A") in order to ensure a watertight seal between the lavatory and drain. Remove excess putty after installing drain on lavatory.

7 Return the fitted lavatory to the installed position. Connect trap to drain assembly hand tight to check alignment. It may be necessary to cut off part of the tailpiece (area "B") or part of the horizontal leg of the trap (area "C").

8 Secure lavatory on hanger as shown in **5**. Insert and tighten anchor screws if applicable. Connect hot and cold supply lines to the shut-off valves. Tighten trap joints for watertight assembly. Apply a bead of caulk around the edge which contacts the wall as shown.

AMERICAN STANDARD ONE-YEAR LIMITED WARRANTY

If inspection of this American Standard plumbing product, within one year after its initial installation, confirms that it is defective in materials or workmanship, American Standard will repair or, at its option, exchange the product for a similar model.

This limited warranty **does not apply** to local building code compliance; since local building codes vary considerably, the purchaser of this product should check with a local building or plumbing contractor to insure local code compliance before installation.

This warranty **shall be void** if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damage; if it was not installed in accordance with American Standard's instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard.

American Standard's option to repair or exchange the product under this warranty does not cover any labor or other costs of removal or installation, **nor shall American Standard be responsible for any other incidental or consequential damages attributable to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this warranty.** (Some states or provinces do not allow the exclusion or limitation of implied warranties, so this exclusion may not apply to you.)

This warranty gives you specific legal rights. You may have other statutory rights that vary from state to state or from province to province, in which case this warranty does not affect such statutory rights.

For service under this warranty, it is suggested that a claim be made through the contractor or dealer from or through whom the product was purchased, or that a service request (including a description of the product model and of the defect) be sent to the following address:

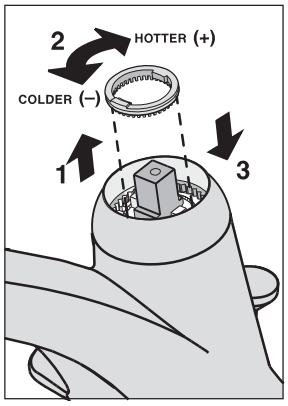
SYMMONS® Symmetrix®

the smart choice™

Lavatory Faucet S-20 Series

Installation and Service Instructions



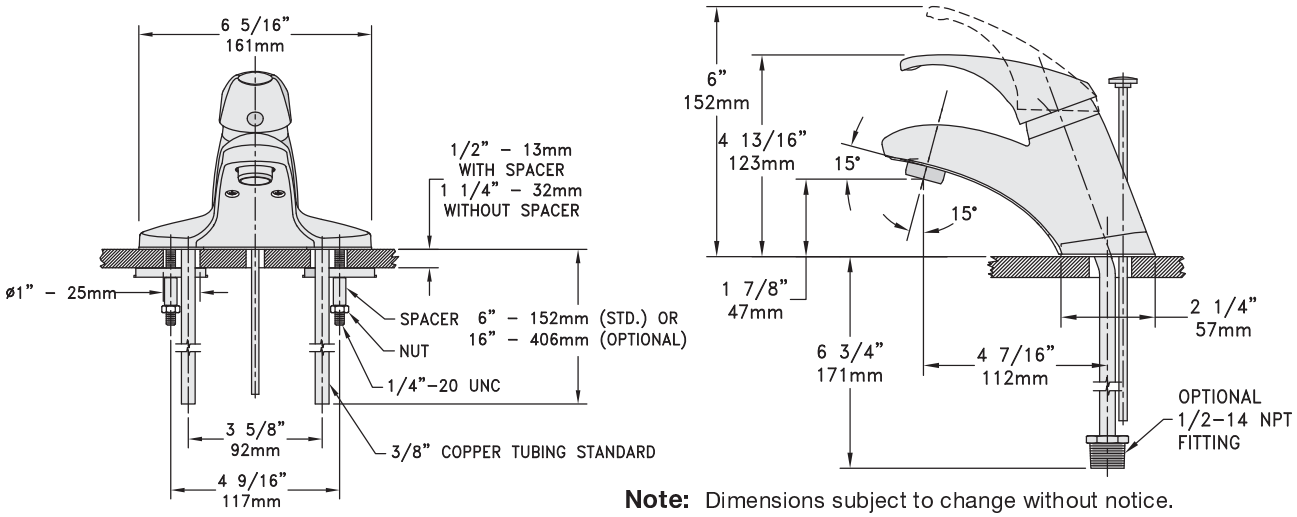
Installation

Caution: Be sure to turn off hot and cold water supplies before installing or servicing faucet.

1. Loosely install the anchor bar (KN-23), spacer (KN-26) and nut (L-36) on the mounting bolts and place gasket on base of faucet. Push faucet supplies and anchor bolt/spacer/nut assemblies with gasket through holes in sink. Secure faucet to sink by tightening nuts from underside. (If sink or counter surface is uneven, use putty or sealant to make proper seal under base.)
2. Connect hot supply to left tube and cold supply to right tube using appropriate connectors.
3. Pop-up drain installation:
   a) Remove pop-up plug, tail piece and flange from the drain body. Make sure that locknut is threaded all the way down onto the body with flat friction washer in middle and beveled washer on top.
   b) Apply plumbers putty or sealant to bottom of flange.
   c) Install drain body through drain opening in lavatory and screw flange onto the drain body making sure that the threads are completely engaged for proper sealing and strength of the connection. Apply joint compound to all threaded parts to insure proper seal. Apply putty or teflon tape to tail piece before attaching to drain body.
   d) Tighten locknut to compress the beveled flange evenly across the bottom of the drain opening taking care not to over tighten the locknut, causing damage to the lavatory.
   e) Remove one of two ball washers from inside the threaded cavity. Insert pop-up plug and pivot rod into body. Add one ball washer (the second ball washer should remain inside the body) to the outside of the ball. Tighten the retaining nut until the ball is seated on the internal and external ball washers.

      Note: The pop-up plug can be installed either in the removable or non-removable position, depending on the location of the hole located in the guide at the bottom of the plug.
   f) Slide the pivot rod through one side of the spring clip, then the appropriate adjustment hole and then other side of the spring clip.
   g) Insert lift rod through faucet housing and the top of the lift strap and secure it in place by tightening the screw.

      Note: To ensure proper operation of lift rod and pop-up, some adjustment of the linkage may be required. There are two possible adjustment points: 1) lift strap to lift rod and 2) lift strap to pivot rod.
4. It is very important to thoroughly flush the supply lines to prevent foreign matter, i.e. copper chips, sand, stones, etc. from damaging the sealing surfaces of cartridge. Remove aerator and turn valve handle on to full cold position, open cold supply. Without closing, turn handle to full hot and open hot supply. Let water run in hot only and cold only positions long enough to flush supply lines thoroughly. Shut off faucet and replace aerator. Check for leaks.
5. The handle limit stop can be set to limit handle turn to the hot position. The limit mechanism is factory set to allow full handle travel. To adjust the limit stop, turn handle to the full hot position and lift handle to open faucet approximately half way to obtain a smooth flow for correct initial temperature measurement.



Stop limit adjust

6. If when faucet is on and in full hot position and water is too hot, remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135). Lift limit stop ring (KN-4L) using a small flat head screw driver and rotate counter clockwise to lower temperature. If water is not hot enough, rotate clockwise (See Figure 1 on reverse side). After correct temperature is achieved, reattach handle, reversing procedure above.

Replacing cartridge (KN-4)

1. Remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135).
2. Engage tabs in cartridge wrench (LN-34) with slots in compression ring (KN-2) and use screwdriver in wrench holes or pliers on wrench and turn counter clockwise until compression ring engages with cap (LN-8). Continue turning counter clockwise so that cap/ring assembly is removed from the body (LN-371). Remove cartridge and three ring seal (KN-4).
3. Install new cartridge while taking care to maintain position of the three ring seal at the base of the cartridge. Match posts in base of cartridge with alignment holes in valve body during assembly.
4. Reassemble faucet in reverse fashion. Thread cap onto body firmly by hand. Do not use a wrench which may damage the finish. Tighten compression ring (KN-2) finger tight using the wrench (LN-34) then 1/4 to 1/2 turn further.
5. Set hot water limit stop in accordance with installation step 5 above.

Lifetime Limited Warranty

All warranty claims MUST be pre-approved by Symmons.

Symmons warrants to the original consumer purchaser/end-user that any Symmons product will be free of defects in material and workmanship during normal domestic use for the life of your home. All other purchasers including industrial, commercial or business users are warranted for a period of 5 years from the date of purchase.

At our option, we will either have you send the defective part or product prepaid to us for inspection, or we may elect to send you the replacement part or product without investigation. A replacement for any defective part will be supplied FREE OF CHARGE for installation by the purchaser only. Installation, repair, replacement, and any related costs associated with replacement or repair are not covered under this warranty, and are the responsibility of the purchaser. Failure or damage caused by the use of replacement product other than Symmons Genuine Replacement Parts will void this warranty.

This warranty is applicable only to Symmons products purchased after July 1, 1998 and shall be effective from the date of purchase as shown on the purchaser's receipt.

Damage to the chrome and/or other decorative finishes on Symmons products may be a result of improper handling or abusive treatment. Finishes should only be cleaned with a soft, damp cloth or sponge. Use of polish, abrasive cleaners, solvents, or acid cleaners will damage the finish and void this warranty.

This warranty excludes product damage due to installation error, product abuse, or product misuse whether performed by a contractor, service company or yourself. There are no other express warranties on this product and ALL WARRANTIES OF MERCHANTABILITY AND OTHER IMPLIED WARRANTIES ARE LIMITED IN ACCORDANCE WITH APPLICABLE LAW. SYMMONS INDUSTRIES, INC., EXPRESSLY DISCLAIMS CONTINGENT LIABILITY AND CONSEQUENTIAL DAMAGE OF EVERY KIND. Since some states do not allow limitations on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, the above limitation or exclusion may not be applicable. This warranty gives specific legal rights. Other rights may vary from state to state.

To obtain warranty service, please contact Symmons Customer Service between the hours of 7:30 AM to 7:00 PM Eastern at: 1-800-796-6667, or via email at: gethelp@symmons.com.

AS AMERICA, INC.
ONE YEAR LIMITED WARRANTY

If inspection of this AS America, Inc. (“American Standard®”) plumbing product, within one year after its initial purchase, confirms that it is defective in materials or workmanship, American Standard® will repair or, at its option, exchange the product for a similar model.

This limited warranty applies only to the original purchaser and installation of these products. In the event of a limited warranty claim, proof of purchase will be required **– save sales receipt.**

This limited warranty does not apply to local building code compliance. Since local building codes vary considerably, the purchaser of this product should check with a local building or plumbing contractor to insure local code compliance before installation.

This limited warranty is void if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damages; if it was not installed in accordance with American Standard®’s instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard®.

American Standard®’s option to repair or exchange the product under this limited warranty does not cover any labor or other costs of removal or installation. IN NO EVENT WILL American Standard® BE LIABLE FOR THE COST OF REPAIR OR REPLACEMENT OF ANY INSTALLATION MATERIALS, INCLUDING BUT NOT LIMITED TO, TILES, MARBLE, ETC. American Standard® will not be responsible for any other incidental or consequential damages attributable to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this limited warranty. This limited warranty does not cover any liability for consequential or incidental damages, all of which are hereby expressly disclaimed, or the extension beyond the duration of this limited warranty of any implied limited warranties, including those of merchantability or fitness for an intended purpose. (Some states or provinces do not allow the exclusion or limitation of implied limited warranties, so this exclusion may not apply to you.)

This limited warranty gives you specific legal rights. You may have other statutory rights that vary from state to state or from province to province, in which case this limited warranty does not affect such statutory rights.

AS AMERICA, INC. LIMITED WARRANTY FOR LXP®, BOULEVARD® DUAL FLUSH, CHAMPION® PRO, CHAMPION®4 TOILETS

This toilet comes with a limited lifetime warranty on chinaware, a limited 10 year warranty on all mechanical parts of the toilet, and a limited 1 year warranty on the toilet seat if included with product. If inspection of this AS America, Inc. (“American Standard®”) plumbing product, inclusive of the chinaware and all mechanical parts, confirms that it is defective in materials or workmanship, American Standard® will repair or, at its option, exchange the product for the same or a similar model.

This limited warranty applies only to the original non-commercial purchaser and installation of the products. In the event of a limited warranty claim, proof of purchase will be required **– save sales receipt.**

For this warranty to become effective, the warranty registration process must be completed via the internet or telephone per the warranty registration instructions.

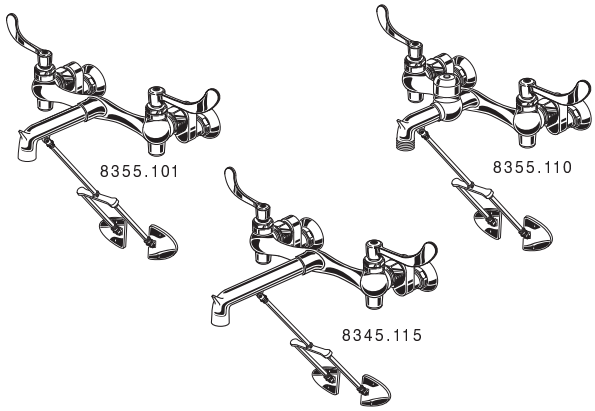
This limited warranty does not apply to commercial installations. The warranty for commercial installations is 10 years on chinaware and mechanical parts, and 1 year on the toilet seat if included with product.

This warranty **does not apply** to local building code compliance. Since local building codes vary considerably, the purchaser of the product should check with a local building or plumbing contractor to ensure local code compliance before installation.

This warranty **will be void** if the product has been moved from its initial place of installation; if it has been subjected to faulty maintenance, abuse, misuse, accident or other damage; if it was not installed in accordance with American Standard®’s instructions; or if it has been modified in a manner inconsistent with the product as shipped by American Standard®.

WARNING: This warranty **DOES NOT COVER** any damages caused by the use of in-tank cleaners. These products can seriously corrode the fittings in the tank. This damage can cause leakage and property damage. **American Standard® will not be responsible or liable for any damage caused by the use of in-tank cleaners.**

American Standard®’s option to repair or exchange the product under this warranty does not cover any labor or other costs of removal or installation including any costs of any surrounding material such as tile or marble. **American Standard® is not responsible for any other incidental or consequential damages attributed to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this warranty.** (Some states or provinces do not allow the exclusion or limitation of implied warranties, so this exclusion may not apply to you.)



This warranty gives you specific rights. You may have other statutory rights that may vary from state to state or province to province, in which case this warranty does not affect such statutory rights.

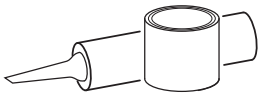
Installation Instructions

Exposed Yoke Wall Mount Utility Faucet with Bottom Brace

✔ **8355.110.002**
8355.101.002
8345.115.002

Thank you for selecting American-Standard... the benchmark of fine quality for over 100 years.

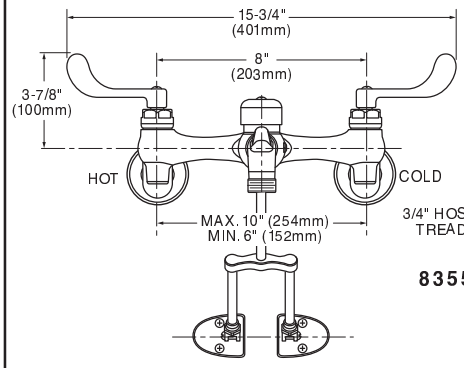
To ensure that your installation proceeds smoothly– please read these instructions carefully before you begin.



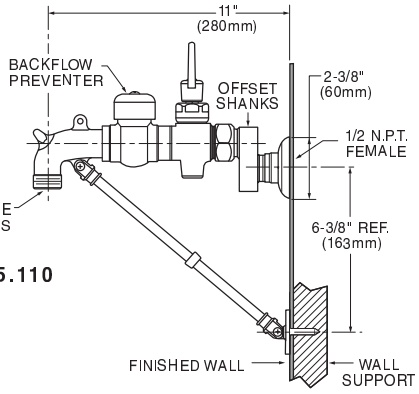
Certified to comply with ANSI A112.18.1M

M965042 Rev.1.4

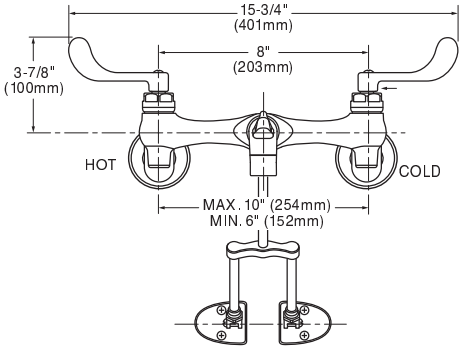
RECOMMENDED TOOLS



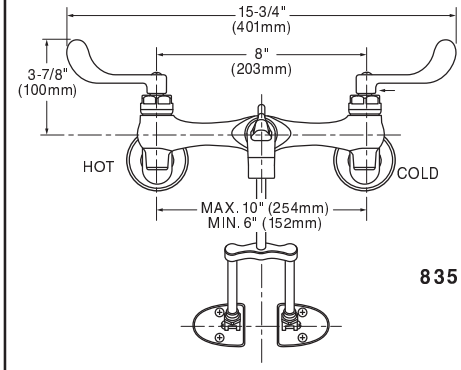
Channel Locks



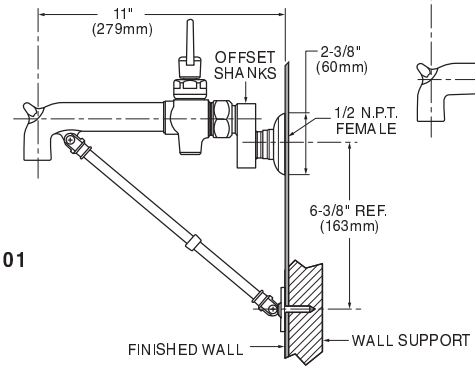
Adjustable Wrench



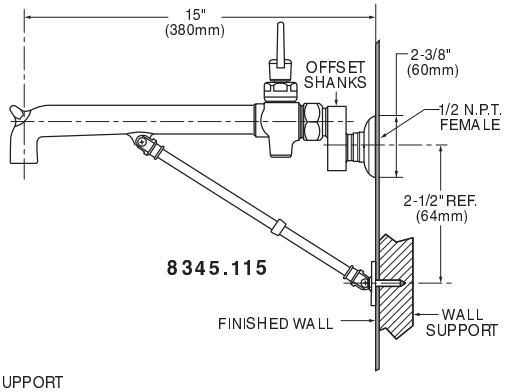
Plumbers' Putty or Caulking

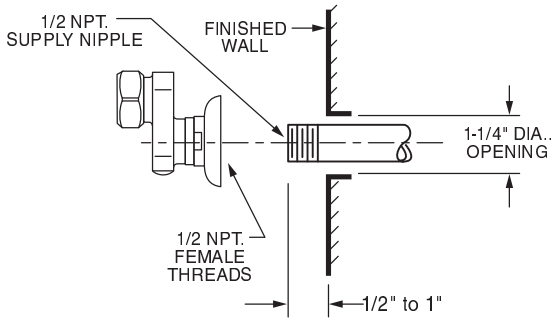


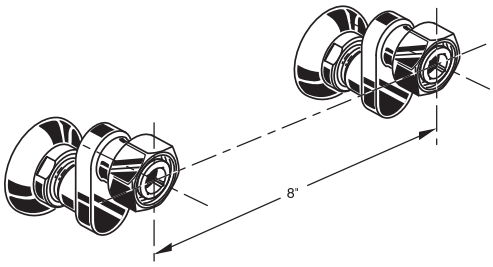
Phillips Screwdriver



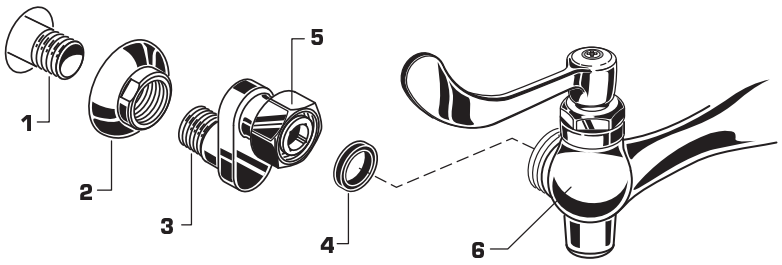
ROUGHING-IN DIMENSIONS





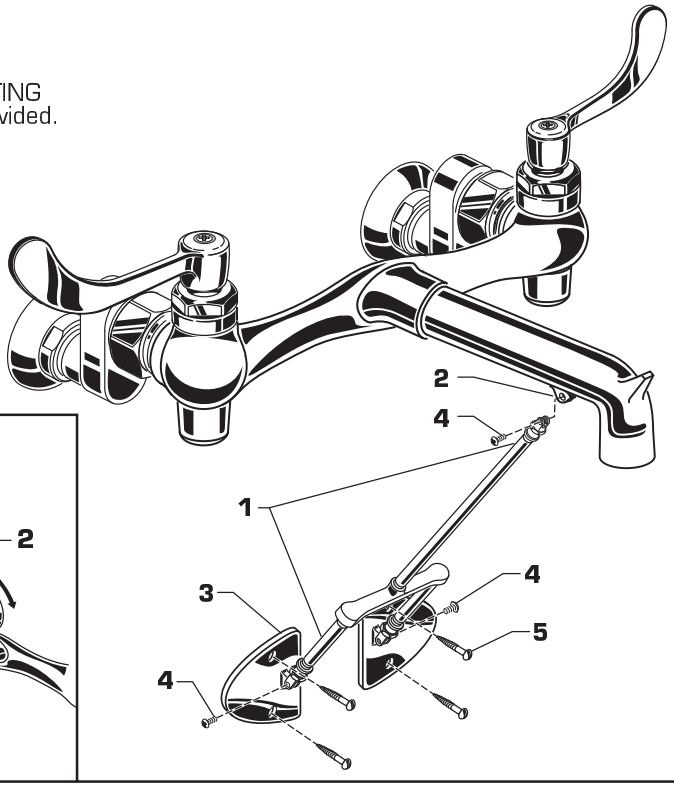


1 ROUGH-IN

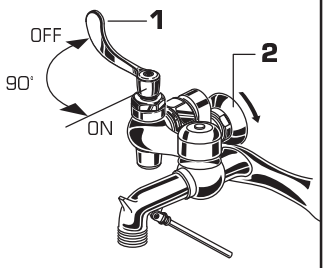


- Prepare water supply lines per "Roughing-in Dimensions". Install 1/2" NPT. SUPPLY NIPPLES

2 FINISH INSTALLATION

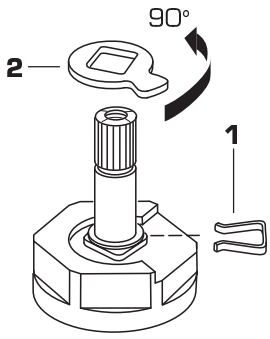


- Apply thread sealant or teflon tape to SUPPLY NIPPLES **(1)**.
- Thread ESCUTCHEONS **(2)** fully onto INLET SHANKS **(3)**.
- Thread INLET SHANKS **(3)** onto SUPPLY NIPPLES **(1)**. Distance between INLET SHANK **(3)** outlets must be 8" to match the VALVE.
- Insert RUBBER WASHERS **(4)** into COUPLING NUTS **(5)**.
- Attach VALVE **(6)** to INLET SHANKS **(3)**. Tighten both COUPLING NUTS **(5)** firmly.



3 ATTACH SPOUT BRACE

- Attach SPOUT BRACE **(1)** to SPOUT **(2)** and WALL MOUNTING PLATES **(3)** with the three SPOUT BRACE SCREWS **(4)** provided.
- IF WALL MOUNTING PLATES **(3)** are not fastened to a wall support within the wall, use wall anchors with MOUNTING SCREWS **(5)**.
- Mark mounting hole location on wall and fasten MOUNTING PLATE **(3)** to wall with MOUNTING SCREWS **(5)** provided.



4 TEST FAUCET

- Turn HANDLES **(1)** TO **OFF** POSITION.
- Slowly turn water supplies on and check all connections for leaks.
- Operate HANDLES to flush water lines thoroughly.
- Turn HANDLES to **OFF** position.
- Thread ESCUTCHEONS **(2)** against finished wall.

5 SERVICE

- To change direction of handle rotation, proceed as follows:
  - Turn HANDLE to OFF position.
  - Remove HANDLE SCREW and HANDLE.
  - Remove SPRING CLIP **(1)**.
  - Lift STOP WASHER **(2)**, turn 90° and replace.
  - Replace SPRING CLIP **(1)**.
  - Replace HANDLE and HANDLE SCREW.
- If spout drips, operate handles several times from OFF to ON position. Do not force - handles turn only 90°.

CARE INSTRUCTIONS:

DO: SIMPLY RINSE THE PRODUCT CLEAN WITH CLEAR WATER. DRY WITH A SOFT COTTON FLANNEL CLOTH.

DO NOT: DO NOT CLEAN THE PRODUCT WITH SOAPS, ACID, POLISH, ABRASIVES, HARSH CLEANERS, OR A CLOTH WITH A COARSE SURFACE.

M965042 Rev.1.4

AS AMERICA, INC. FAUCET
LIMITED LIFETIME FUNCTION AND FINISH WARRANTY

FOR RESIDENTIAL INSTALLATIONS: AS America, Inc. ("American Standard") warrants this product to be free from defects in materials or workmanship for as long as the original consumer purchaser owns this product. Proof of purchase (original sales receipt) from the original consumer purchaser must be made available to American Standard for all warranty claims. This warranty is non transferable. It does not apply in the event of product damage due to the use of other than genuine American Standard replacement parts, installation error, abuse, misuse or improper care and maintenance (whether performed by a plumber, contractor, service provider or member of the purchaser's household). The warranty excludes damage due to aggressive air or water conditions, or harsh or abrasive cleaners and/or materials.

FOR COMMERCIAL INSTALLATIONS: For all industrial, commercial and business usage the warranty period is five years, from date of purchase and except for duration, all other aforementioned warranty terms apply. For both Residential and Commercial warranties, batteries are not included in the warranty.

American Standard will provide free of charge, at it's sole option, replacement part(s) or product (or if no longer available, a comparable product) to replace those which have proven defective in materials or workmanship.

This warranty does not cover labor charges incurred and/or damage sustained in installation, repair or replacement, nor incidental or consequential damages. This warranty is applicable only to American Standard faucets manufactured after June 1, 1996 and installed in the United States, Mexico and/or Canada.

THIS WARRANTY IS EXCLUSIVELY IN LIEU OF ALL OTHER WARRANTIES, INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

This warranty gives the original consumer purchaser of an American Standard faucet specific legal rights which may vary from state to state or from province to province. In some states or provinces the exclusion or limitation of incidental or consequential damages is not allowed, so those exclusions may not apply to you.

For service under these warranties, it is suggested that a claim be made through the contractor or dealer from or through whom the product was purchased, or that a service request (including a description of the product model and of the defect) be sent to the following address:

In the United States:
American Standard Brands

LIMITED WARRANTY

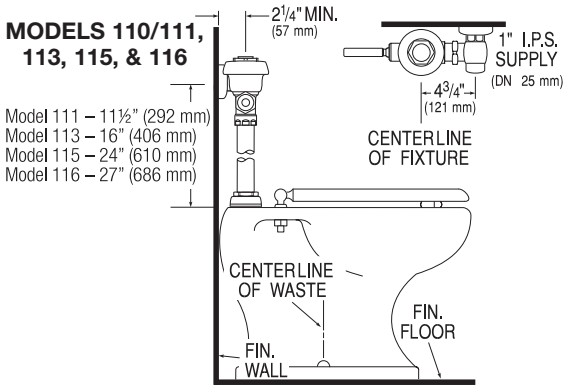
Unless otherwise noted, Sloan Valve Company warrants this product, manufactured and sold for commercial or industrial uses, to be free from defects in material and workmanship for a period of three (3) years (one (1) year for special finishes, SF faucets, PWT electronics and 30 days for PWT software) from date of first purchase. During this period, Sloan Valve Company will, at its option, repair, replace, or refund the purchase price of any product which fails to conform with this warranty under normal use and service. This shall be the sole and exclusive remedy under this warranty. Products must be returned to Sloan Valve Company, at customer's cost. No claims will be allowed for labor, transportation or other costs. This warranty extends only to persons or organizations who purchase Sloan Valve Company's products directly from Sloan Valve Company for purpose of resale. This warranty does not cover the life of the batteries.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO EVENT IS SLOAN VALVE COMPANY RESPONSIBLE FOR ANY CONSEQUENTIAL DAMAGES OF ANY MEASURE WHATSOEVER.

PRIOR TO INSTALLATION

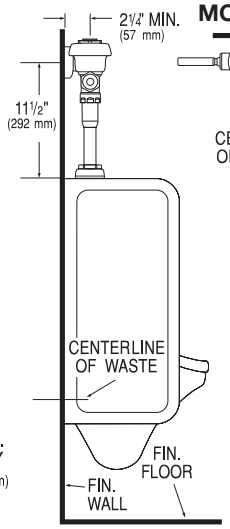
Before you install the flushometer, be sure the items listed below are installed. Also, refer to the rough-in diagram below.

• Closet fixture • Drain line • Water supply line



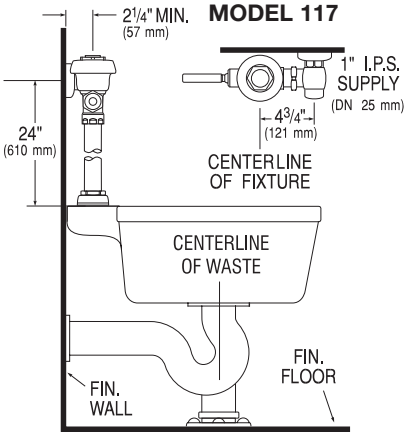
IMPORTANT:

- **ALL PLUMBING SHOULD BE INSTALLED IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS.**
- **WATER SUPPLY LINES MUST BE SIZED TO PROVIDE AN ADEQUATE VOLUME OF WATER FOR EACH FIXTURE.**
- **FLUSH ALL WATER LINES PRIOR TO MAKING CONNECTIONS.**

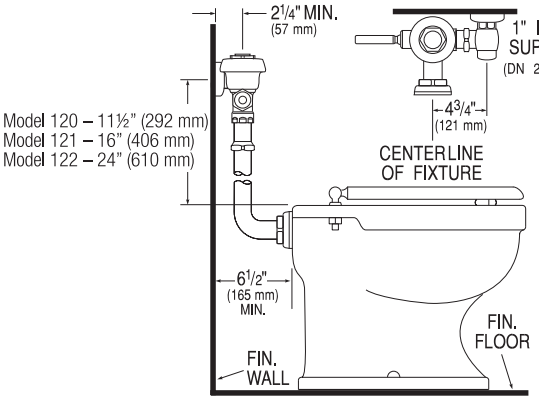


Sloan's flushometers are designed to operate with 15 to 80 psi (103 to 552 kPa) of water pressure. **THE MINIMUM PRESSURE REQUIRED TO THE VALVE IS DETERMINED BY THE TYPE OF FIXTURE SELECTED.** Consult fixture manufacturer for minimum pressure requirements. Most High Efficiency water closets require a minimum flowing pressure of 25 psi (172 kPa). Many building codes and the ASME A112.19.2 fixture standard list Maximum static water pressure as 80 PSI (552 kPa).

ROUGH-INS



MODELS 110/111, 113, 115, & 116



MODELS 180/186

MODEL 117

MODELS 120, 121, & 122

!!! IMPORTANT !!!

WHEN MOUNTED ON AN ADA ACCESSIBLE BOWL, THE ROUGH-IN TO THE SUPPLY INLET SHOULD BE NO HIGHER THAN 37½" OR THE HANDLE WILL EXCEED MAXIMUM HEIGHT ALLOWANCES UNDER ADA GUIDELINES.

TOOLS REQUIRED FOR INSTALLATION

- Straight blade screwdriver
- Sloan A-50 Super-Wrench™, Sloan A-109 Plier Wrench or smooth jawed spud wrench

!!! IMPORTANT !!!

PROTECT THE CHROME OR SPECIAL FINISH OF SLOAN FLUSHOMETERS — DO NOT USE TOOTHED TOOLS TO INSTALL OR SERVICE THESE VALVES. USE A SLOAN A-50 SUPER-WRENCH™, SLOAN A-109 PLIER WRENCH OR SMOOTH JAWED SPUD WRENCH TO SECURE ALL COUPLINGS. SEE "CARE AND CLEANING" SECTION.

!!! IMPORTANT !!!

NEVER OPEN CONTROL STOP TO WHERE THE FLOW FROM THE VALVE EXCEEDS THE FLOW CAPABILITY OF THE FIXTURE. IN THE EVENT OF A VALVE FAILURE, THE FIXTURE MUST BE ABLE TO ACCOMMODATE A CONTINUOUS FLOW FROM THE VALVE.

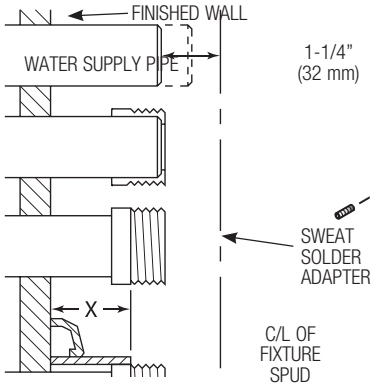
!!! IMPORTANT !!!

WITH THE EXCEPTION OF CONTROL STOP INLET, DO NOT USE PIPE SEALANT OR PLUMBING GREASE ON ANY VALVE COMPONENT OR COUPLING!

!!! IMPORTANT !!!

THIS PRODUCT CONTAINS MECHANICAL AND/OR ELECTRICAL COMPONENTS THAT ARE SUBJECT TO NORMAL WEAR. THESE COMPONENTS SHOULD BE CHECKED ON A REGULAR BASIS AND REPLACED AS NEEDED TO MAINTAIN THE VALVE'S PERFORMANCE.

Please take the time to read this manual to ensure proper product installation and longevity.



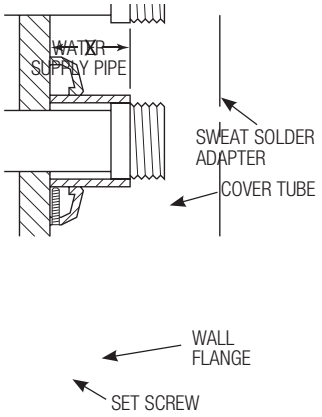
When further assistance is required, please contact your local Sloan Representative or Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614)

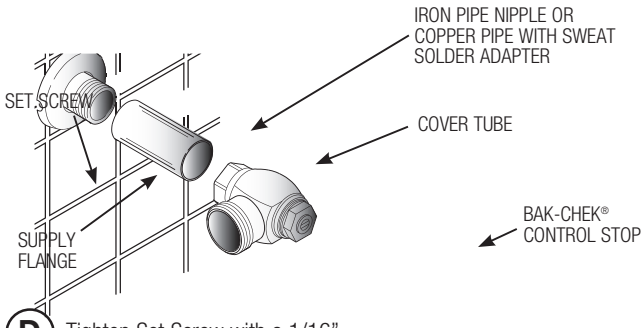
1 - INSTALL OPTIONAL SWEAT SOLDER ADAPTER (ONLY IF YOUR SUPPLY PIPE DOES NOT HAVE A MALE THREAD)

A Measure from finished wall to C/L of fixture spud. Cut pipe 1¼" (32 mm) shorter than this measurement. Chamfer O.D. and I.D. of water supply pipe.

B Slide threaded adapter fully onto pipe.

C Sweat solder the Adapter to pipe.



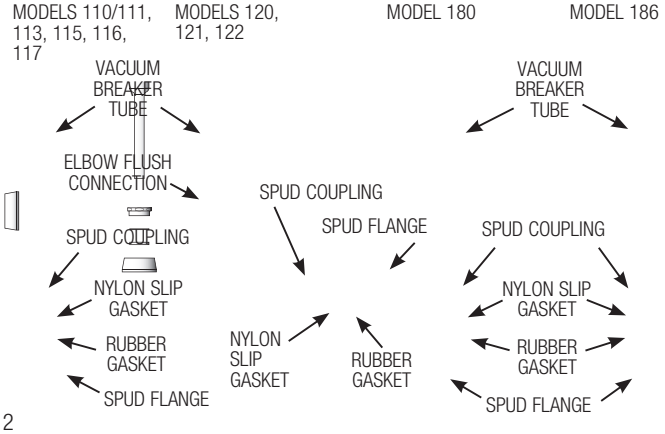


2 - INSTALL COVER TUBE, WALL FLANGE AND CONTROL STOP TO SUPPLY PIPE

A Measure from finished wall to first thread of Adapter or threaded supply pipe (dimension "X"). Cut Cover Tube to this length.

B Slide Cover Tube over pipe. Slide Wall Flange over Cover Tube until against wall.

C Thread Control Stop onto pipe. Tighten with a wrench.



D Tighten Set Screw with a 1/16" hex wrench. DO NOT install Vandal Resistant Stop Cap at this time.

3 - INSTALL VACUUM BREAKER FLUSH CONNECTION

A Slide Spud Coupling, Nylon Slip Gasket, Rubber Gasket and Spud Flange over Vacuum Breaker Tube.

B Insert Tube into Fixture Spud.

C Hand tighten Spud Coupling onto Fixture Spud.

4 - INSTALL FLUSHOMETER AND TRIPLE SEAL HANDLE ASSEMBLY

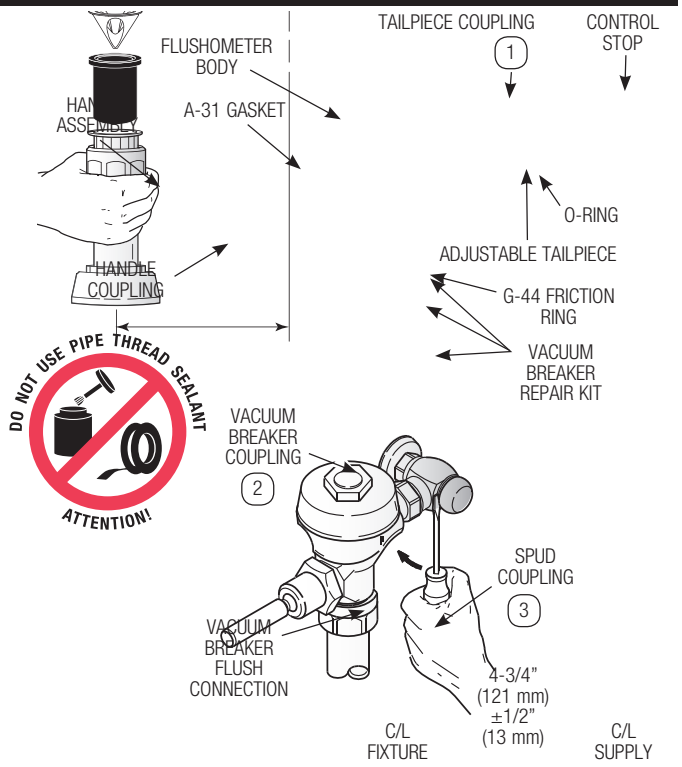
NOTE

For high efficiency urinal flushometers (0.5, 0.25 and 0.125 gpf), it is necessary to first insert the flow control component into the tailpiece assembly. See the H1015A flow control kit and separate instructions for details on how to install.

A Lubricate tailpiece O-ring with water. Insert Adjustable Tailpiece into Control Stop. Tighten Tailpiece Coupling by hand.

B Align Flushometer directly above the Vacuum Breaker Flush Connection by sliding the Flushometer Body IN or OUT as needed. Tighten Vacuum Breaker Coupling by hand.

NOTE



Maximum adjustment of the Sloan Adjustable Tailpiece is 1/2" (13 mm) IN or OUT from the standard 4-3/4" (121 mm) (centerline of Flushometer to centerline of Control Stop).

If roughing-in measurement exceeds 5-1/4" (133 mm), consult factory for longer tailpiece.

C Align Flushometer Body and securely tighten first the Tailpiece Coupling (1), then the Vacuum Breaker Coupling (2), and finally the Spud Coupling (3). Use a wrench to tighten these couplings in the order shown.

D Install the red A-31 Handle Gasket on the Handle Assembly. Insert the Handle Assembly into the Handle opening in the Flushometer Body. Securely tighten the Handle coupling with a wrench.

Sloan's triple-sealed Flushometer Handle is ADA-complaint.

5 - FLUSH OUT SUPPLY LINE

A Make sure Control Stop is CLOSED and remove Flushometer Outer Cover.

B Remove Inside Cover and lift out Inside Parts Assembly.

C Reinstall Outside and Inside Cover wrench tight. Open Control Stop to flush supply line. Close Control Stop and remove Outside and Inside Cover.

D Reinstall Inside Parts Assembly, Inside Cover and Outside Cover wrench tight.

6 - ADJUST CONTROL STOP AND INSTALL VANDAL RESISTANT STOP CAP

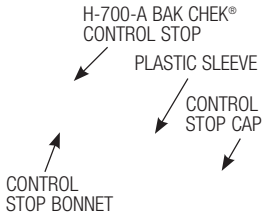
A Open Control Stop COUNTERCLOCKWISE one FULL turn from closed position.

B Activate Flushometer.

TURN COUNTER-CLOCKWISE TO OPEN

C Adjust Control Stop after each flush until the rate of flow delivered properly cleanses the fixture.

TURN CLOCKWISE TO CLOSE



!!! IMPORTANT !!!

Sloan's flushometers are engineered for quiet operation. Excessive water flow creates noise, while too little water flow may not satisfy the needs of the fixture. Proper adjustment is made when plumbing fixture is cleansed after each flush without splashing water out from the lip AND a quiet flushing cycle is achieved.

Never open Control Stop to where the flow from the valve exceeds the flow capability of the fixture. In the event of a valve failure, the fixture must be able to accommodate a continuous flow from the valve.

D Install Vandal Resistant Control St
- Thread the Plastic Sleeve onto t (tighten only by hand; do not use
- Place the metal Control Stop Ca use the palm of the hand to push fingers of the Plastic Sleeve. The

Important: DO NOT install Cap onto Sle threaded onto Control Stop Bonnet. If th off of the Control Stop, the Sleeve WILL NOT come apart from the Cap.

VANDAL RESISTANT CONTROL STOP CAP REMOVAL

Use a large flat screwdriver as a lever to remove the Cap from the Control Stop. Insert the screwdriver blade between the bottom edge of the Cap and the flat surface of the Control Stop body as shown. Push the screwdriver handle straight back toward the wall to gently lift the Cap. If necessary, work the screwdriver around the diameter of the Cap until you can grasp the Cap and lift it completely off the Sleeve. The Sleeve should remain attached to the bonnet of the Control Stop.

TROUBLESHOOTING GUIDE

1. Flushometer does not function (no flush).

A. Control stop or main valve is closed. Open control stop or main valve.
B. Handle assembly is damaged. Replace handle or install handle repair kit.
C. Relief Valve is damaged. Replace relief valve.

2. Volume of water is not sufficient to siphon fixture.

A. Control stop is not open wide enough. Adjust control stop for desired delivery of water volume.
B. Diaphragm assembly is damaged. Replace diaphragm assembly.
C. Incorrect diaphragm assembly is installed in flushometer; for instance, urinal assembly inside a closet flushometer, or low consumption assembly inside a higher consumption fixture. Determine the flush volume required by the fixture and replace diaphragm. Use valve label and markings on fixture for reference.
D. Water supply volume or pressure is inadequate. If no gauges are available to properly measure supply pressure or volume of water at the flushometer, then remove the relief valve from the diaphragm assembly, reassemble the flushometer and completely open the control stop.
- If the fixture siphons, more water volume is required. Install a higher flushing volume diaphragm. **IMPORTANT – LAWS AND REGULATIONS PROHIBIT THE USE OF HIGHER FLUSHING VOLUMES THAN LISTED ON FIXTURE OR FLUSHOMETER.**
- If the fixture DOES NOT siphon or if a low consumption flush is required, steps must be taken to increase the water supply pressure and/or volume. Contact the fixture manufacturer for minimum water supply requirements of the fixture.

3. Length of flush is too short (short flush).

A. Diaphragm assembly is worn or damaged. Replace diaphragm assembly.
B. Handle assembly is damaged. Replace handle or install handle repair kit.
C. Incorrect diaphragm assembly is installed in flushometer; for instance, urinal assembly inside a closet flushometer, or low consumption assembly inside a higher consumption fixture. Determine the flush volume required by the fixture and replace diaphragm. Use valve label and markings on fixture for reference.

4. Length of flush is too long (long flush) or continuous.

A. Metering bypass hole (upper filter ring) in diaphragm is clogged. Remove the diaphragm assembly. Remove the primary and secondary filter rings from the diaphragm, wash under running water, and reassemble. Replace as necessary.
B. Diaphragm or relief valve is damaged. Replace diaphragm or relief valve.
C. Incorrect diaphragm assembly is installed in flushometer; for instance, closet assembly inside a urinal flushometer, or water saver assembly inside a low consumption flushometer. Determine the flush volume required by the fixture and replace the diaphragm. Use valve label and markings on fixture for reference.
D. Inside cover is damaged. Replace Inside cover.
E. Supply line water pressure has dropped and is not sufficient to close the valve. close control stop until pressure is restored.
F. Relief valve is not seated properly. Disassemble diaphragm components (relief valve, filter rings, and diaphragm unit), wash under running water, and reassemble. Replace as necessary.

5. Chattering noise is heard during flush.

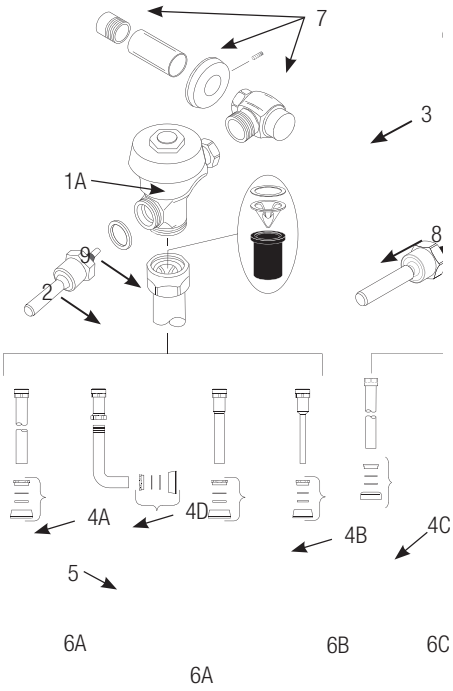
A. Inside cover is damaged. Replace inside cover.
B. Relief valve or diaphragm is damaged. Replace relief valve or diaphragm assembly.

6. Handle Leaks.

A. Handle seal or assembly is damaged. Replace handle or install handle repair kit.

7. Water splashes from fixture.

A. Control stop is open wider than necessary. Adjust control stop for desired delivery of water volume.
B. Water saver/conventional diaphragm assembly is installed on low consumption fixture or closit diaphragm assembly is installed on urinal fixture. Determine the required flush volume (see label on valve or markings on fixture). Replace diaphragm assembly or relief valve for appropriate flush volume of fixture.



When assistance is required, please contact your local Sloan Representative or Sloan Technical Support at: 1-888-SLOAN-14 (1-888-756-2614)

CARE AND CLEANING

DO NOT use abrasive or chemical cleaners (including chlorine bleach) to clean Flushometers that may dull the luster and attack the chrome or special decorative finishes. Use ONLY mild soap and water, then wipe dry with clean cloth or towel.

While cleaning the bathroom tile, protect the Flushometer from any splattering of cleaner. Acids and cleaning fluids will discolor or remove chrome plating.

IMPORTANT END USER INFORMATION

Care and Cleaning Instructions

1) Never use any cleaner or cleanser based cleaning material on this product.

2) Keep the faucet dry! While drying your hands, dry the faucet as well. The water in certain parts of the world can be very caustic. Any standing water around the faucet could damage the intrinsic coating; remove it as soon as possible.

Discover why the professional's choice for sinks and faucets is also the right choice to take care of all of your home's stainless surfaces and accessories. Visit **www.byelkay.com** for more information or for a complete list of all domestic showrooms in your area visit **www.elkayusa.com, where to buy**.

ELKAY LIMITED FIVE YEAR FAUCET WARRANTY ON COMMERCIAL FAUCETS

Limited Five Year Functional and Finish Warranty
Elkay warrants to the original consumer purchaser that the Elkay faucet will be free from defects in material and workmanship for Five Years from the original installation date. Elkay will, at its option, supply replacement parts (or if no longer available a comparable product) if the faucet fails due to a defect in material or workmanship. This warranty does not apply in the event of produce surface damage caused by abuse, misuse or improper care and maintenance. This warranty excludes damage caused by harsh or abrasive cleaners and/or materials. This warranty includes all industrial, commercial and business use. Product replacement does not include transportation cost or labor installation cost. Elkay reserves the right to examine product in question and its installation prior to replacement.

OTHER WARRANTY CONDITIONS ON FAUCETS
Our warranty does not cover product failure or damage caused by abusive treatment, misuse, environmental factors, improper care and cleaning, or damage due to handling or faulty installations. This warranty is extended only to the original consumer purchaser of the product. This warranty does not cover shipping costs, labor costs, or any other charges for such items as installation or replacement of the sink, diagnosis or replacement of any faucet or component part, or any other expense or loss.

ALL INCIDENTAL OR CONSEQUENTIAL DAMAGES ARE SPECIFICALLY EXCLUDED. NO ADDITIONAL WARRANTIES, EXPRESS OR IMPLIED ARE GIVEN. ANY IMPLIED WARRANTY, INCLUDING ONE OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS LIMITED TO THE DURATION OF THIS WRITTEN WARRANTY.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

TO OBTAIN SERVICE UNDER WARRANTY
1. Write to: Elkay

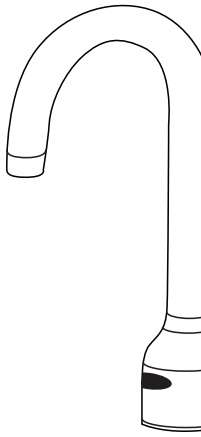
   Oak Brook, IL 60523
2. Include a letter containing the following information:
   a. Date of purchase and installation
   b. Description of nature of defect
   c. Model number or description of model and/or component part if possible.

Product Specifications

Power: (a) DC – Alkaline AA Batteries (4); (b) AC/DC alternatively
Water Supply pipe size: NPSM 1/2-1/4
Working Pressure: 2.8 – 213 psi
Ambient Temp. Range: 36°F – 194°F
Sensing Distance: 7/8" – 6-3/4"
Sensing Range Setup: Digital
Response Time: Default 0.3 sec
Off Delay Time: Default 1 sec
Fresh Battery Life Cycle: 400,000
Weak Power Indicator: Steady red LED



Sensor Range Setup (Default range is preset at 5-1/2")

NOTE – Do not attempt to open control module to adjust sensing range
1. Press and hold On/Off button for 5-7 seconds. Red LED on.
2. Release button. Red LED off.
3. Place hand 2-3" from spout. Wait 5-10 seconds until red LED flashes.
4. Place hand at desired sensor distance. Hold hand in place and press the On/Off button.

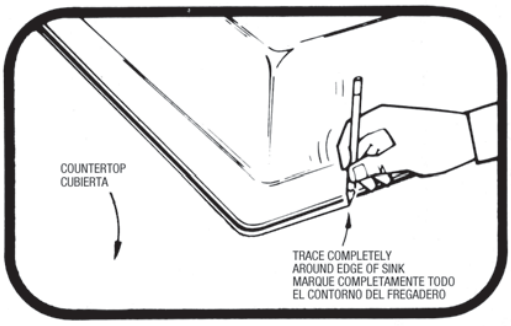
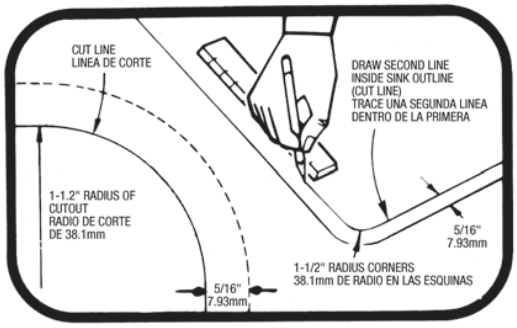
ELKAY STAINLESS STEEL SINKS
FREGADEROS DE ACERO INOXIDABLE ELKAY

MANUAL CON ILUSTRACTIONES PARA INSTALAR SU FREGADERO DE ACERO INOXIDABLE



STEP ONE



If counter top must be cut out, locate sink cutout by turning sink upside down and position so bowl compartments are located directly over sink cabinet. Position sink, front to rear, so that sink rim will fit flat on top surface and that sink compartments will fit into cabinet without interfering with cabinet.

PASO UNO

Si la cubierta no tiene el corte hecho, coloque el fregadero boca abajo sobre la cubierta, para proceder a trazar la linea de corte. Asegúrese que el fregadero quede de atras para adelante, de forma que el borde de éste calce perfectamente y que los compartimientos no interfieran con el gabinete.

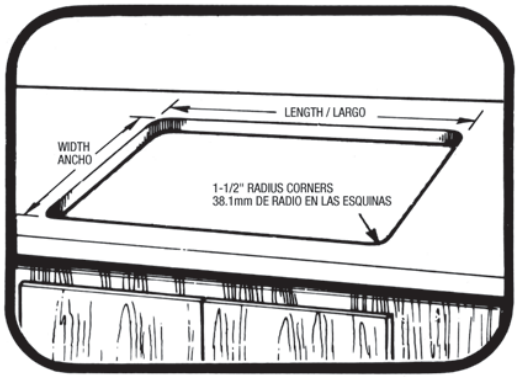
STEP TWO / PASO DOS

STEP THREE

Check your dimensions. Measure the cut line you have drawn on the counter top or check your pre cut opening to make sure it conforms to the following sample sizes.

Cutout is 5/8" shorter than overall size of sink.

SAMPLE CUTOUT SIZES



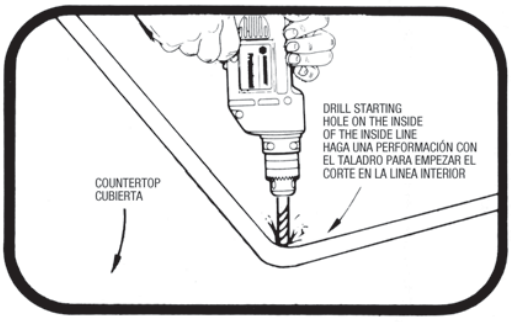
SINK SIZE	CUTOUT LENGTH	CUTOUT WIDTH
25×22	24⅜	21⅜
33×22	32⅜	21⅜
37×22	36⅜	21⅜
38×22	37⅜	21⅜
40×22	39⅜	21⅜
43×22	42⅜	21⅜
48×22	47⅜	21⅜
54×22	53⅜	21⅜

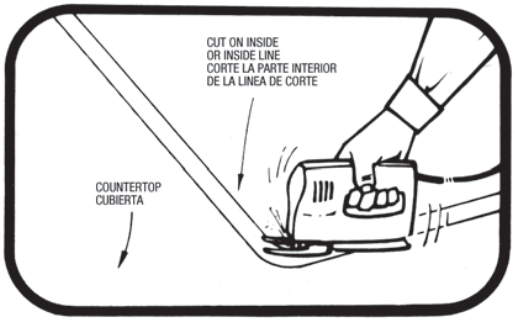
PASO TRES

Verifique las medidas. Asegúrese antes de empezar a cortar, que la linea de corte sea 15.9mm más pequeña que la medida de su fregadero.

EJEMPLOS DE LINEA DE CORTE

Medida de Fregadero	Longitud del Corte	Anchura del Corte
635mm× 558mm	619.1mm	542.9mm
838.2mm× 558mm	822.3mm	542.9mm
939.8× 558mm	923.9mm	542.9mm
965.2× 558mm	949.3mm	542.9mm
1016× 558mm	1000.1mm	542.9mm
1092.2× 558mm	1076.3mm	542.9mm
1219.2× 558mm	1203.3mm	542.9mm
1371.6× 558mm	1355.7mm	542.9mm



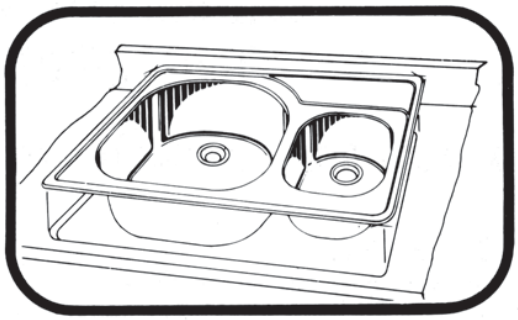


STEP FOUR

Cut hole in counter top.

PASO CUATRO

Haga una perforación con el taladro para empezar el corte en la linea interior. Con una sierra de mano corte a todo lo largo de la linea de corte.

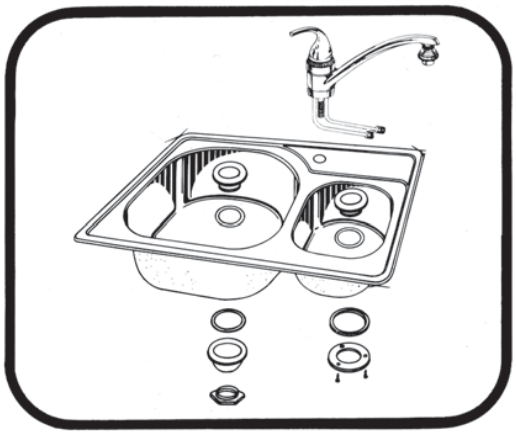


STEP FIVE

Check the countertop cutout opening to be sure it is sized properly. The easiest way to do this is to set the new sink into the opening to see if it fits. The sink rim must set uniformly on the countertop. If the sink does not fit, enlarge the cut-out opening with a sabre saw, or keyhole saw.

PASO CINCO

Verifique el tamaño de la apertura. La manera más sencilla de hacerlo es colocar el fregadero y ver si las dimensiones son las correctas. Si no, hacer los ajustes necesarios con lima o sierra.



STEP SIX

Attach faucet, drain fittings and accessories according to the manufacturer's instructions.

PASO SEIS

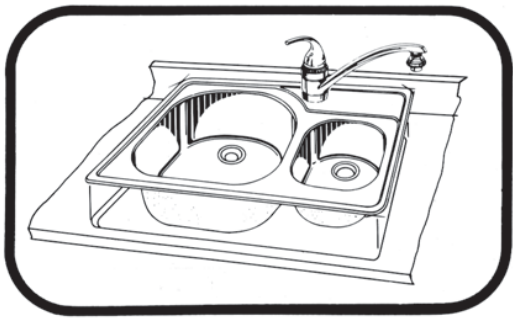
Colocar la llave, tubería de desagüe y accesorios como lo indique el fabricante.

STEP SEVEN

Apply a bead of good quality caulk to the underside of sink flange and position sink into counter top opening.

PASO SIETE

Aplique una capa de empaque o silicón de buena calidad por debajo del marco del fregadero y colocar éste sobre la cubierta.



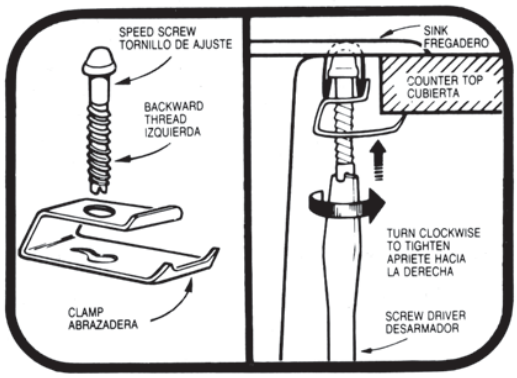
STEP EIGHT

Assemble and Insert Sink Fasteners

Note: Screws and clips contained in this sink package will secure this sink to a countertop not exceeding 7/8″ thickness. For thicker countertop applications, up to 1-1/2″ in thickness, order Model 364 14 pc - Long Screw Only Kit or Model 363 14 pc - Long Screw and Clip Kit.

Assemble the screws into the clamps as shown. (Note: Screws are designed to insert into the clamps with backward threading, so that in mounting, they will turn the normal direction.)

With your screwdriver, tighten the fasteners. Begin with the fasteners located in the middle of each side, tighten the remaining fasteners until the entire rim is sealed with no gaps. It may be necessary to slide a fastener to a different position to compensate for an uneven counter. (**Be careful not to over-tighten.** It is only necessary to draw the rim down snugly to the counter.)

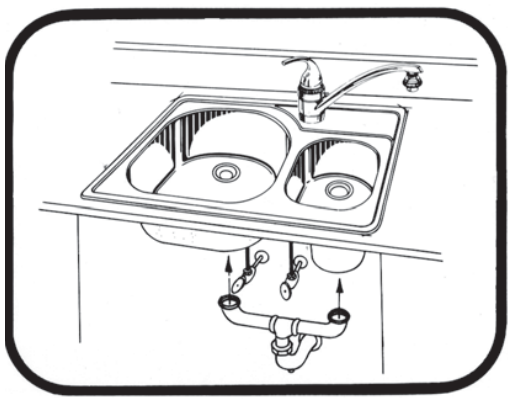


PASO OCHO

Coloque los tornillos de ajuste del fregadero, Nota: las abrazaderas y tornillos que vienen con el fregadero servirán para fijar éste a una cubierta de 22.2mm de espesor. Si la cubierta mide mas de 38.1mm de espesor ordene el modelo 364 de 14 piezas con tornillos largos solamente o el modelo 366 con tornillos largos y juego de abrazaderas.

Coloque las abrazaderas y tornillos como lo indica la ilustración. Los tornillos se colocan a las abrazaderas al revés para voltearlas al momento de instalarlas.

Con un desarmador del gado y largo apriete los tornillos, empezando con los que están en medio de cada lado, posteriormente apriete los demás hasta que no quede ningún espacio sin sellar. Es posible que tenga que mover algun tornillo de lugar para nivelar el fregadero. Tenga cuidado de no apretar demasiado. Solo es necesario unir el borde firmemente a la cubierta.



STEP NINE

Connect Faucet Supplies and Drain Fittings

Connect the faucet supply fittings and the drain trap fittings. Turn on the water supply. Check for possible leaks at these locations: (1) Supply riser tubes to faucet, and (2) Supply riser tubes to shut-off valves (or, lower connections). Next fill the sink bowl with water and check for possible leaks around the drain flange(s). (This would show up as dripping into the cabinet below.) Release water from sink and check for possible leaks at drain connections. Tighten any joints which leak.

PASO NEUVE

Conecte llaverías y tubería de desagüe. Conecte los tubos de desagüe y luego las llaves de paso, abra la llave general del agua. Verifíque que no haya fugas o goteras en los siguientes lugares: 1) En la llavería y las llaves de paso 2) En las conexiones. Llene el fregadero con agua, asegúrese que no gotée en el interior del mueble. Vacíe el fregadero y apriete las conexiones que gotéen.

USE AND CARE HINTS

Congratulations on purchasing your new ELKAY sink. Your sink is made from the best nickel bearing stainless steel and with proper care and maintenance will give you a lifetime of service.

Elkay sinks are designed for the demanding use of today's fast paced kitchen environment. The sink is finished through a series of sophisticated processes to develop its unique satin finish that requires minimal maintenance.

What You Should Know About Elkay's Stainless Steel Finish

An Elkay stainless steel sink is made of the finest nickel-bearing stainless steel available. Its mellow satin surface harmonizes with any color scheme...any decor. Timeless. Elegant. And, like fine silver, its beautiful finish develops an heirloom patina...actually becoming lovelier with use and age. Your Elkay sink is solid stainless steel. There is no coating which will wear off.

Elkay Satin Finish

Elkay's original highlighted satin finish is produced by an abrasive grinding operation which lends a uniform pattern of grain lines to the metal surface. All exposed areas then undergo a series of progressive machine and hand polishing operations. It is this careful polishing that makes an Elkay satin luster finish so beautiful...and so easy to clean and maintain! Please remember that a fine Elkay sink is not self cleaning. It will require a small amount of maintenance to retain its lustrous finish.

Reasons For Cleaning Your Stainless Steel Sink

Your stainless steel sink has been produced of the finest material to provide a quality product for many years of service. Like all quality products it does require some maintenance to assure that the finish will continue to look bright and sanitary.

Easy Cleaning Instructions

Rinsing is the most important part of sink care. An Elkay stainless steel sink finish will retain its original bright appearance if the sink is **rinsed** thoroughly after each use. "Thorough" rinsing can be done by running the water from the spray hose for a few minutes. Typically, a rinse and towel drying after each use takes care of most everyday clean ups. Ideally, once a week the sink should be scoured with a mildly abrasive cleanser, such as Comet. Rubbing back and forth in the direction of the polish or grain lines will not only remove stubborn stains and greasy film buildups, but will blend usage scratches into the satin finish of the sink. After scouring, rinse thoroughly and wipe dry. Your sink will shine like new!

Scratching

Like most metals, your new stainless steel sink will scratch. The feature benefit of the unique satin finish is the ease with which these scratches blend into the uniform finish of the sink. This is accomplished with a periodic scouring with a mildly abrasive kitchen cleanser, such as Comet.

Rubber Mats

The resiliency of stainless steel makes it unnecessary to use rubber mats to protect your sink, dishes and glassware. However, if you do use mats, please remove them after each use. If left in the sink, the water trapped underneath could cause discoloration.

Discoloration, Rust and Possible Pitting

Wet sponges, clothes, cleaning pads and rubber mats left on the sink can lead to discoloration. Steel wool pads should never be used to clean your sink as they leave small iron particles in the grain lines which rust and can damage the sink. Continued usage in this manner may eventually lead to the sink itself rusting and pitting.

Liquid Soap

Do not allow concentrated liquid detergent to dry on your sink. Most brands contain chemical additives which will affect the original high luster finish.

Chlorides

Today, chlorides are found in almost all soaps, detergents, bleaches and cleansers. Chlorides are not friendly to the stainless steel surface. They should not come in contact with the surface of the sink for extended periods. When these chemicals are used in your sink, it should be thoroughly rinsed. This is especially noticed when clothes are soaked in a diluted bleach mixture. This mixture can attack the sink at the water line and cause rusting and pitting.

Knives

Your sink is designed to serve as many things but not as a cutting board or chopping block. This type of use will lead to deep scratches in the sink finish and will dull your knives. Elkay does offer various cutting boards to fit over the compartment of your sink that will give you additional work area.

Spotting

The quality of your water can affect your sink's appearance. In areas with hard water, a brown surface stain can form on the sink giving the appearance of rust. This phenomena also occurs in water with high iron content. Additionally, in areas with a high concentration of minerals, or with over-softened water, a white film may develop on the sink. To combat this problem, we suggest that the sink be towel dried after use.

Foods

Heavy salt concentration or foods containing high levels of salt should not be allowed to dry onto the sink surface. Rinse your sink thoroughly after use.

What To Do If You Have A Problem

Elkay Manufacturing Company is proud of the quality of its stainless steel sinks.

If you feel you have a defective sink, please contact your plumber for the name of your local Elkay factory representative, or contact the Consumer Service Department of Elkay Manufacturing Company. Please provide your sink model number, the date of installation, and description of the problem.

For a full warranty explanation, and limitations, please consult your warranty sheet.

Accessories

Elkay colanders, drain trays and vinyl covered rinsing baskets are not designed as "Dishwasher Safe". These products should be hand washed in mild detergent, rinsed thoroughly and hand dried. Wood cutting boards should never be soaked in water. Rinse after use and then dry. This should be all the care required.

CUIDADO Y LIMPIEZA DE SU FREGADERO

Lo felicitamos por haber comprado un fregadero Elkay, fabricado con el acero inoxidable de más alta calidad, con un alto contenido de niquel. Con el cuidado debido, puede durarle toda la vida.

Los fregaderos Elkay están diseñados para satisfacer las necesidades de las cocinas modernas, y fabricados trás de una serie de sofisticados procesos, que le darán ese terminado satinado que requiere cuidados mínimos.

LO QUE DEBE USTED SABER Á CERCA DE LOS FREGADEROS ELKAY

Cada fregadero Elkay está fabricado con el acero inoxidable de más alta calidad. Su terminado satinado armoniza con cualquier estilo y decoración de cocina, sin que pase de moda, siempre elegante, al igual que la plata fina, embellece con los años.

EL TERMINADO SATINADO DE LOS PRODUCTOS ELKAY

El terminado satinado con reflejos es exclusivo de Elkay y se logra gracias a un sofisticado proceso que incluye pulidos a mano para darle ese acabado brillante y satinado tan sencillo de mantener, pero recuerde que los fregaderos Elkay no son auto limpiantes y requieren un mínimo de cuidado para conservar su brillo.

RAZONES POR LAS QUE USTED DEBE LIMPIAR SU FREGADERO

Aunque los fregaderos de acero inoxidable Elkay han sido fabricados con el material de más alta calidad, requieren, como cualquier producto de primera, de cierto mantenimiento para conservar su brillo.

INSTRUCCIONES FÁCILES PARA SU LIMPIEZA

Enjuagarlos es la parte más importante del cuidado de su fregadero. Si usted lo hace después de usarlo, siempre brillará como nuevo. Enjuague con agua corriente, con la manguera auxiliar o con cualquier recipiente, séquelo con trapo o toalla de cocina. Una vez a la semana se recomienda tallarlo con algún polvo limpiador como ajax, siguiendo la dirección en la que fué pulido. Esto no se hace para quitar manchas o acumulación de grasa si no para desvanecer cualquier rallón que se le haya hecho al fregadero. Después de tallar, enjuague y seque fuertemente. Su fregadero brillará como nuevo!

RALLONES

Como todos los productos de metal, su fregadero puede rallarse con utencilios de cocina, es por eso que se recomienda esta limpieza periódica con polvo limpiador.

PROTECTORES DE HULE

La resistencia de nuestros productos de acero inoxidable, hace innecesario el uso de protectores de hule. Sin embargo, si usted prefiere usarlos, es conveniente que los quite una vez que termine de usar su fregadero, el dejarlos puede causar decoloración en su fregadero.

DECOLORACIÓN, SARRO Y PICADURAS

Esponjas mojadas, trapos húmedos, estropajos, protectores de hule pueden decolorarlo. Fibras metálicas no deberán nunca usarse para limpiarlos, pues dejan partículas pequeñas de metal que se oxidan y pueden a su vez oxidar el fregadero.

JABON LIQUIDO

No deje nunca que los jabones líquidos o de trastes se queden en su fregadero, pues contienen abrasivos y químicos que dañarán su brillo.

CLORO

Casi todos los jabones, detergentes y polvos limpiadores contienen cloro, químico que no se recomienda para limpiar acero inoxidable, por ésta razón insistimos que después de usar cualquier producto de limpieza, enjuague perfectamente su fregadero y enseguida lo seque. Recuerde, no dejar nunca trapos mojados o esponjas con jabón en su fregadero porque puede causar manchas y oxidarlo.

CUCHILLOS

Su fregadero tiene muchos usos, pero no lo utilize como tabla de partir. Los cuchillos pueden hacer rallas profundas en el acero inoxidable, además de que éstos pierden su filo. Elkay le ofrece tablas de cortar que se adaptan perfectamente al compartimiento y le permiten contar con un area más amplia de trabajo en su cocina.

MANCHAS

La calidad del agua puede afectar la apariencia de su fregadero. En lugares con agua dura pueden formarse manchas con aparienca de óxido en el acero inoxidable. Éste fenómeno ocurre también en lugares con agua que tiene un alto contenido en minerales y en fierro, o un agua demasiado blanda. Para combatir ésto le recomendamos secar su fregadero después de usarlo.

COMIDA

No deje por tiempo prolongado en su fregadero comida con alto contenido de sal. Recuerde siempre enjuagarlo después.

QUE HACER ANTE CUALQUIER PROBLEMA

Elkay es una compañía que está orgullosa de la calidad de sus productos.

Si usted piensa que su fregadero tiene algún defecto, póngase en contacto con el representante de Elkay más cercano o diréctamente con el departamento de servicio al cliente, proporciónele el número de modelo de su fregadero y una descripción del problema. Consulte su certificado de garantía que contiene una completa explicación de sus derechos y limitaciones.

ACCESORIOS

Elkay le ofrece coladeras metálicas con cubierta de vinilo, que se adaptan perfectamente al tamaño del compartimiento, éstas no deben lavarse en el lava-trastes, sino a mano con jabon suave, enjuagando y secando después.

CERTIFICADO DE GARANTÍA LIMITADA DE POR VIDA DE FREGADEROS ELKAY

Elkay garantiza al comprador inicial de fregaderos de acero inoxidable Elkay que reemplazará sin cargo todo producto que falle debido a defectos de fabricación durante todo el período normal de uso residencial. El reemplazo del producto no incluye el costo del transporte o de la mano de obra para la instalación. Esta garantía cubre únicamente el fregadero de acero inoxidable y las piezas necesarias para el montaje cuando se instalen fregaderos con borde autoadherente embutidos en sobremuebles comunes o se instale un fregadero de montaje por debajo en un sobremueble con superficie sólida común, únicamente en usos residenciales. Elkay se reserva el derecho de examinar el producto y su instalación antes de efectuar el reemplazo.

NO SE GARANTIZAN LOS ACCESORIOS Y CONEXIONES PARA EL DESAGÜE

OTRAS CONDICIONES EN LA GARANTÍA DE FREGADEROS Y LLAVES MEZCLADORAS

Nuestra garantía no cubre las fallas o daños causados por maltrato o uso indebido, factores ambientales, cuidado o limpieza inadecuados o los daños causados por instalaciones incorrectas o defectuosas. Esta garantía se extiende sólo al comprador inicial del producto. La garantía no cubre los costos de envío de mano de obra y ningún otro costo ocasionado la instalación o reemplazo del fregadero, el diagnóstico o reemplazo de llaves mezcladoras o piezas y ningún otro gasto o pérdida.

Todos los daños incidentales o consecuentes están específicamente excluidos. No se extiende ninguna otra garantía adicional expresa o implícita. Toda garantía implícita e inclusive toda garantía de comerciabilidad o adecuación a un uso en particular, se limita a la duración de esta garantía escrita.

Algunos estados no permiten la exclusión o limitación de los daños consecuentes o incidentales así como tampoco la limitación en la duración de la garantía implícita, quedando invalidada por lo tanto en dichos casos la limitación precedente.

Esta garantía le otorga derechos legales específicos y usted puede tener además otros derechos que dependen del estado en donde resida.

CÓMO HACER EFECTIVA LA GARANTÍA

ELKAY®

LIMITED LIFETIME SINK WARRANTY

Elkay warrants to the original purchaser of an Elkay stainless steel sink, that Elkay will, at its option, replace, without charge, such product if it fails due to a manufacturing defect for a lifetime of normal residential use. Product replacement does not include transportation cost or labor installation cost. This warranty covers only the stainless steel sink and mounting hardware when a self-rimming drop-in sink is installed in a conventional countertop surface or an undermount sink is installed in a conventional solid surface countertop in residential applications only. Elkay reserves the right to examine product in question and its installation prior to replacement.

WASTE FITTINGS AND ACCESSORIES ARE NOT WARRANTED

OTHER WARRANTY CONDITIONS ON SINKS AND FAUCETS

Our warranty does not cover product failure or damage caused by abusive treatment, misuse, environmental factors, improper care and cleaning, or damage due to handling or faulty installations. This warranty is extended only to the original consumer purchaser of the product. This warranty does not cover shipping costs, labor costs, or any other charges for such items as installation or replacement of the sink, diagnosis or replacement of any faucet or component part, or any other expense or loss.

All incidental or consequential damages are specifically excluded. No additional warranties, express or implied are given. Any implied warranty, including one of merchantability or fitness for a particular purpose, is limited to the duration of this written warranty.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

TO OBTAIN SERVICE UNDER WARRANTY

1. Write to: Elkay Manufacturing Company
   Attention: Consumer Services
   2222 Camden Court
   Oak Brook, IL 60523

2. Include a letter containing the following information:
   a. Date of purchase and installation
   b. Description of nature of defect
   c. Model number or description of model and/or component part if possible.

ELKAY MANUFACTURING COMPANY

PART NO. 74180147-C

Installation should be in accordance with local plumbing codes. Flush all pipes thoroughly before installation.

La instalación se debe hacer solo de acuerdo con los códigos de plomería locales. Nivele bien todas las tuberías antes de instalar.

L'installation doit se faire conformément aux codes de plomberie locaux. Videz tous les tuyaux entièrement avant de commencer l'installation.

Limited Warranty

The CHICAGO FAUCET COMPANY ("Chicago Faucets") extends to the original consumer the following warranties for Genuine Chicago Faucets manufactured products and components, or other components under the Chicago Faucets Warranties, (collectively, the "Products") .

Lifetime Faucet Warranty The "Faucet", defined as any metal cast, forged, stamped of formed portion of the Product, not including electronic or moving parts or water restricting components, or other components covered under the Chicago Faucet warranties, is warranted against defects for the life of the product.

Five Year Cartridge Warranty The "Cartridge", defined as the metal portion of any Product typically referred to by the product numbers containing 1-099X, 1-100X, 217-X, 377-X, 274-X excluding any rubber or plastic components, is warranted against manufacturing defects for a period of five (5) years from the date of Product purchase.

One Year Finish Warranty The finish of the Product is warranted against manufacturing defects for a period of one (1) year from the date of Product purchase.

Garantía limitada

CHICAGO FAUCET COMPANY ("Chicago Faucets") extiende al consumidor original las siguientes garantías para los productos y los componentes fabricados de Genuine Chicago Faucets, o cualquier otro componente de las garantías de Chicago Faucets, (en conjunto, los "Productos").

Garantía de por vida del grifo El "Grifo", definido como cualquier porción formada de metal fundido, forjado, estampado del Producto, que no incluye piezas electrónicas o movibles, o componentes limitados por agua, u otro componente que se incluya en las garantías de Chicago Faucet , está garantizada por los defectos de la vida del producto.

Garantía del cartucho de cinco años El "Cartucho", definido como la porción de metal de cualquier Producto generalmente indicado por los números del producto con 1-099X, 1-100X, 217-X, 377-X, 274-X sin contar ningún componente de goma o de plástico, está garantizado por defectos de fabricación durante cinco (5) años a partir de la fecha de compra del Producto.

Garantía para el acabado de un año El acabado del Producto está garantizado por defectos de fabricación durante un (1) año a partir de la fecha de compra del Producto.

Garantie limitée

CHICAGO FAUCET COMPANY (Chicago Faucets) offre au consommateur initial les garanties suivantes pour les produits fabriqués par Genuine Chicago Faucets et leurs composants, ou les autres composants couverts par les garanties de Chicago Faucets (collectivement appelés les « produits »).

Garantie à vie du robinet: Le robinet, défini comme toute partie en métal moulé, forgée, estampée ou formée du produit, mais ne comprenant pas les pièces électroniques ou amovibles ni les composants servant à contenir l'eau, ni les autres composants couverts par les garanties de Chicago Faucet, est garanti contre les défauts pendant la durée de vie du produit.

Garantie de cinq ans de la cartouche : La cartouche est définie comme la portion métallique de tout produit auquel on fait habituellement référence par les numéros de produit contenant 1-099X, 1-100X, 217-X, 377-X, 274-X, à l'exception des composants en caoutchouc ou en plastique, et elle est garantie contre les défauts de fabrication pour une période de cinq (5) ans à compter de la date d'achat du produit.

GGarantie de un an sur le fini : Le fini du produit est garanti contre les défauts de fabrication pour une période de un (1) an à partir de la date d'achat du produit.

CHICAGO FAUCETS®

a Geberit company

Care & Maintenance

All Chicago Faucet fittings are designed and engineered to meet or exceed industry performance standards. Care should be taken cleaning this product. Do not use abrasive cleaners, chemicals or solvents as they can result in surface damage. Use mild soap with warm water for cleaning and protecting the life of Chicago Faucets fittings.

Cuidado y mantenimiento

Todos los accesorios de Chicago Faucet están diseñados para cumplir o superar las normas de rendimiento de la industria. Este producto se debe limpiar con cuidado. No utilice limpiadores abrasivos, productos químicos o solventes ya que pueden dañar la superficie. Para limpiar y proteger la vida útil de los accesorios Chicago Faucet, utilice jabón suave con agua tibia.

Entretien

Tous les accessoires Chicago Faucet sont conçus et élaborés pour respecter et dépasser les normes de rendement de l'industrie. Ce produit doit être nettoyé soigneusement. N'utilisez pas de produits nettoyants abrasifs, de produits chimiques ni de solvants, ils risqueraient d'endommager la surface. Utilisez un savon doux et de l'eau tiède pour nettoyer et assurer la durée de vie des accessoires Chicago Faucets.

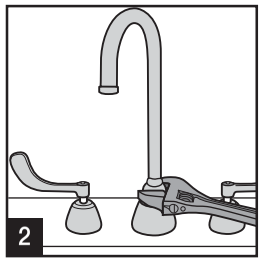
Waste Fitting / Montaje Para Desechos / Tuyau d'évacuation

Spout Installation / Instalación de la boquilla / Installation du bec

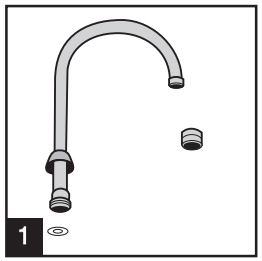


Swing Spout / Boquilla giratoria / Bec pivotant

Remove outlet from spout. Place two split rings on spout near the base. Slide spout nut onto spout.

Retire la salida de la boquilla. Coloque dos anillos divididos en la boquilla cercana a la base. Deslice la tuerca de la boquilla hasta la boquilla.

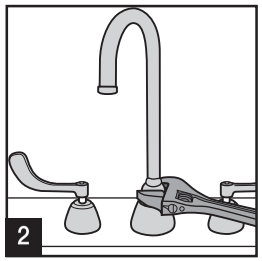
Retirez l'embout de sortie du bec. Posez deux bagues fendues sur le bec près de la base. Glissez l'écrou du bec sur le bec.



Place spout onto valve body until fully seated. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla sobre el cuerpo de la válvula hasta que esté completamente en su lugar. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

Posez le bec sur le corps du robinet jusqu'à ce qu'il soit bien en place. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.

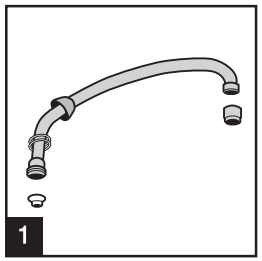


Rigid Spout / Boquilla rígida / Bec fixe

Remove outlet from spout. Slide spout nut onto spout. Place solid white washer into base outlet.

Retire la salida de la boquilla. Deslice la tuerca de la boquilla hasta la boquilla. Coloque la arandela sólida blanca sobre la salida base.

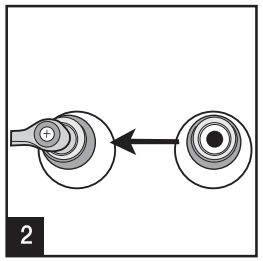
Retirez l'embout de sortie du bec. Posez deux bagues fendues sur la base près du tuyau du bec. Glissez l'écrou du bec sur le bec.



Place spout onto valve body until fully seated. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla sobre el cuerpo de la válvula hasta que esté completamente en su lugar. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

Posez le bec sur le corps du robinet jusqu'à ce qu'il soit bien en place. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.

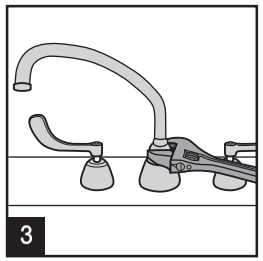


Restricted Swing Spout / Boquilla giratoria con límite / Bec à pivot restreint

Remove outlet from spout. Place two split rings on spout tubing near base. Slide spout nut onto spout.

Retire la salida de la boquilla. Coloque dos anillos divididos en las tuberías de la boquilla cercana a la base. Deslice la tuerca de la boquilla hasta la boquilla.

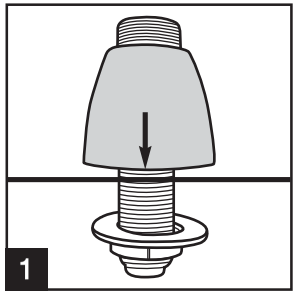
Retirez l'embout de sortie du bec. Posez deux bagues fendues sur la base près du tuyau du bec. Glissez l'écrou du bec sur le bec.



Place restricted swing adaptor into valve body and align with internal valve body tab. Position small opening (70º) or large opening (120º) toward "hot" side of body.

Coloque el adaptador giratorio con límites en el cuerpo de la válvula y alinee con la ranura del cuerpo de la válvula interna. Coloque la pequeña abertura (70º) o la abertura grande (120º) contra el lado "caliente" del cuerpo.

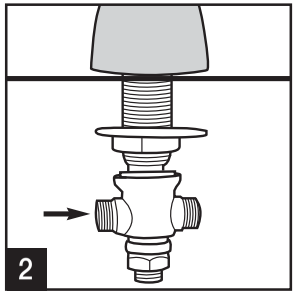
Posez l'adaptateur à pivot restreint sur le corps du robinet et alignez-le sur la languette du corps du robinet interne. Placez la petite ouverture (70 °) ou la grande ouverture (120 °) en direction du côté « eau chaude » du corps.



Place spout into stem. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla en la barra. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

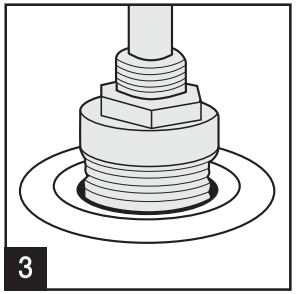
Posez le bec sur la tige. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.



Fully Adjustable Body Installation / Instalación del cuerpo completamente ajustable / Installation du corps entièrement réglable

Drop in spout body.

Deje caer en el cuerpo de la boquilla.

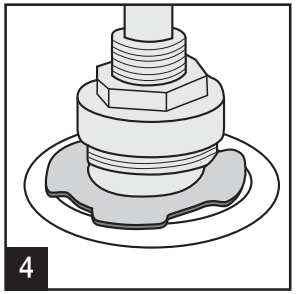


Posez le corps du bec.

Tighten water connection.

Apriete la conexión de agua.

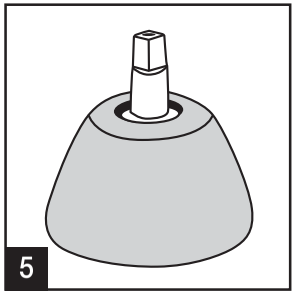
Serrez les raccordements des conduites d'eau.



Place a sealing washer over each handle stem. Be sure to have recessed rim of washer facing up. See Illustration A.

Coloque una arandela de sellado sobre cada barra de la manija. Asegúrese de que el reborde de la arandela empotrado se encuentre hacia arriba. Vea ilustración A.

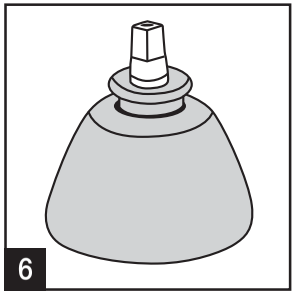
Posez une rondelle d'étanchéité sur la tige de chaque poignée. Assurez-vous que le bord renfoncé de la rondelle est face vers le haut. Voir A d'illustration.



Insert retaining clips firmly into channel on each valve body. Remove hanger from spout hole.

Coloque firmemente las abrazaderas en la canaleta del cuerpo de cada válvula. Retire el colgador del orificio de la boquilla.

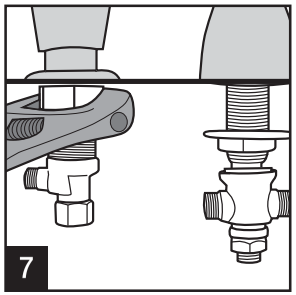
Insérez les attaches de retenue fermement dans la rainure du corps de chaque robinet. Retirez le support du trou du bec.



Place handle escutcheons over handle stems. Handles should cover the sealing washers.

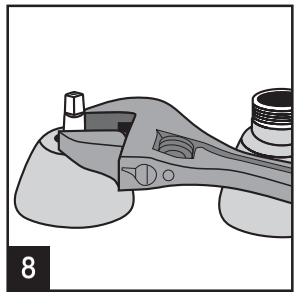
Coloque las manijas de los escudos de la bocallaves sobre las barras de la manija. Las manijas deben cubrir las arandelas de sellado.

Placez les écussons de la poignée sur les tiges de la poignée. Les poignées devraient couvrir les rondelles d'étanchéité.



Place a hold–down nut onto each handle stem and hand tighten.

Coloque una tuerca de fijación en cada barra de la manija y apriete manualmente.

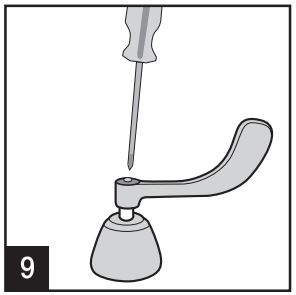


Posez un écrou de retenue sur la tige de chaque poignée et serrez à la main.

Using adjustable wrench, tighten underbody nuts.

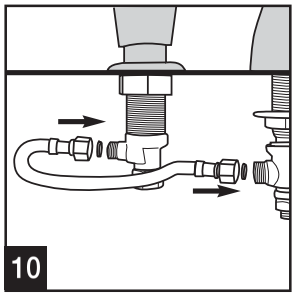
Utilice una llave inglesa ajustable para apretar las tuercas en la parte inferior.

À l'aide d'une clé à molette, serrez les écrous de dessous.



Using adjustable wrench, tighten handle hold–down nuts.

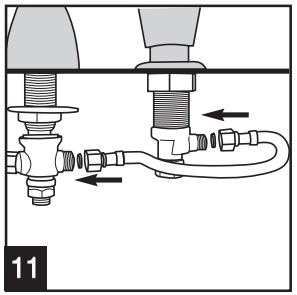
Utilice una llave inglesa ajustable para apretar las tuercas de fijación.



À l'aide d'une clé à molette, serrez les écrous de retenue de la poignée.

Align both handles on stem as desired. Insert index buttons, screws, and tighten.

Alinee ambas manijas en la barra, según lo desee. Coloque los botones indicadores, los tornillos, y apriételos.



Alignez les deux poignées sur la tige comme vous le souhaitez. Insérez les capuchons indicateurs, les vis, puis serrez.

Connect left supply line to left handle and left side of water connector.

Conecte la tubería de suministro izquierda a la manija izquierda y al lado izquierdo del conector de agua.

Raccordez la conduite d'alimentation de gauche à la poignée gauche et au raccord d'alimentation en eau de gauche.

Connect right supply line to right handle and right side of water connector.

Conecte la tubería de suministro derecha a la manija derecha y al lado derecho del conector de agua.

Raccordez la conduite d'alimentation de droite à la poignée droite et au raccord d'alimentation en eau de droite.

Timing Adjustment on an MVP Metering Cartridge

Ajuste de temporización en un cartucho de medición MVP /
Réglage de la durée de distribution d'une cartouche de dosage MVP

1 **With cartridge and handle installed in body and water supply turned on, purge cartridge of air by pushing handle completely down 4-8 times repeatedly, then check timing cycle.**

Después de haber instalado el cartucho y la manija en el cuerpo y de haber encendido el suministro de agua, presione la manija por completo hacia abajo 4 a 8 veces seguidas para purgar el cartucho de aire. Luego, verifique el tiempo.

Pendant que la cartouche et la poignée sont installées sur le corps et que l'alimentation en eau est activée, évacuez l'air de la cartouche en poussant la poignée en bas complètement de quatre à huit fois, à répétition, puis vérifiez le cycle de distribution.

2 **To change cycle time, remove index button, then handle using a 3/32 hex wrench. (Figure 'A')**

Para cambiar el tiempo de ciclo, retire el botón indicador y luego la manija con una llave Allen de 3/32. (Figura 'A')

Pour modifier le cycle de distribution, retirez le capuchon indicateur, puis la poignée à l'aide d'une clé hexagonale de 3/32 po. (Figure A)

3 **Using your fingers change height of adjustment nut by 1/4 turn only. Turn adjustment nut clockwise to increase cycle time or counter-clockwise to decrease cycle time. (Figure 'B')**

Con los dedos, cambie la altura de la tuerca de ajuste con un solo giro de 1/4. Gire la tuerca de ajuste en dirección de las manecillas del reloj para aumentar el tiempo, o gírela en dirección contraria para disminuirlo. (Figura 'B')

Utilisez vos doigts pour modifier la hauteur de l'écrou de réglage en le tournant de un quart de tour seulement. Tournez l'écrou de réglage dans le sens des aiguilles d'une montre pour augmenter la durée du cycle ou dans le sens contraire des aiguilles d'une montre pour en diminuer la durée. (Figure B)

4 **Reinstall handle and verify desired cycle time. NOTE: TIMING MUST BE CHECKED WITH HANDLE IN PLACE.**

Vuelva a colocar la manija y verifique que el tiempo sea el deseado. NOTA: EL TIEMPO SE DEBE REVISAR CON LA MANIJA EN SU LUGAR.

Réinstallez la poignée et vérifiez si la durée du cycle est celle que vous souhaitez. REMARQUE : LA DURÉE DOIT ÊTRE VÉRIFIÉE ALORS QUE LA POIGNÉE EST EN PLACE.

5 **If additional adjustment is necessary, repeat steps 3 and 4 until desired cycle time is achieved.**

Si necesita de un ajuste adicional, repita los pasos 3 y 4 hasta obtener el tiempo deseado.

Si un réglage supplémentaire est nécessaire, répétez les étapes 3 et 4 jusqu'à ce que vous ayez la durée de cycle souhaitée.

6 **Attach handle and tighten screw. If index button is included, snap into handle.**

Instale el mango en el vástago del actuante, luego apriete firmemente el tornillo de ajuste con el mango en la posición inferior. Oprima el botón o tapa de presión hasta que se ajuste en su sitio.

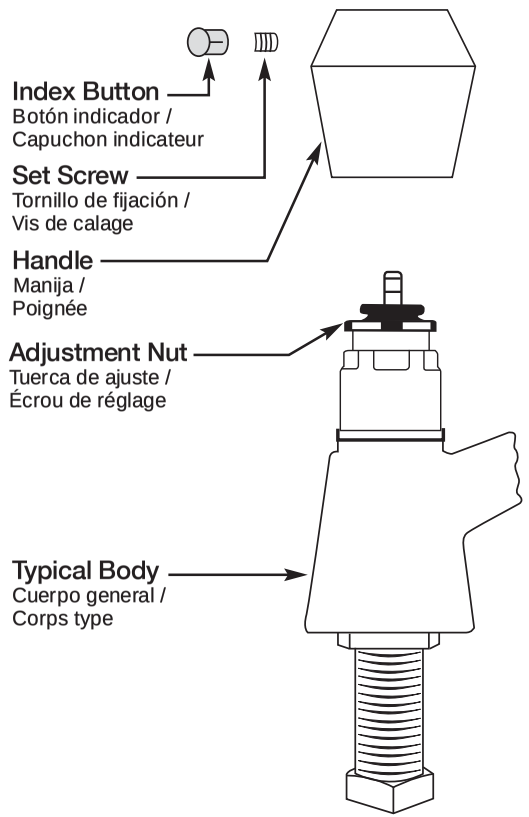
Insérer la manette sur la tige de l'actionneur et serrer la vis de réglage en positionnant la manette vers le bas. Appuyer sur la coiffe indicatrice de la manette jusqu'à ce qu'elle soit assise.

Note: Some new installations might produce a slight closing noise. This is normally the result of air trapped in the cartridge and noise will dissipate over time.

Nota: Algunas instalaciones nuevas podrían generar un leve ruido al cerrar. Generalmente, se produce debido al aire atrapado en el cartucho. El ruido desaparecerá con el tiempo.

Remarque : Certaines nouvelles installations pourraient produire un léger bruit de fermeture. Cela est normalement dû au fait que de l'air est emprisonné

FIGURE 'A' / ILUSTRACIÓN 'A' / FIGURE « A »



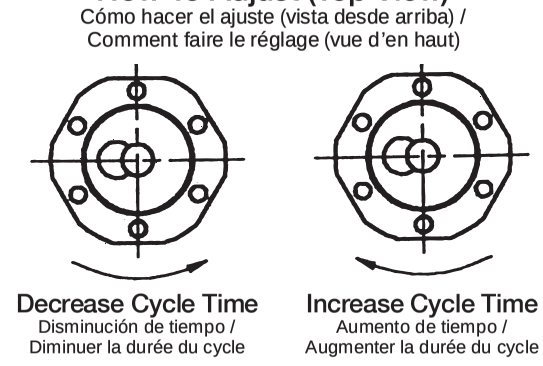


FIGURE 'B' / ILUSTRACIÓN 'B' / FIGURE « B »

MVP Metering Cartridges */ Cartuchos de medición MVP / Cartouches de dosage MVP*

1. If filter and lower valve cartridge have been removed from fitting, replace them by inserting filter first.
Si se retiró el filtro y el cartucho de la válvula inferior del accesorio, para colocarlo nuevamente, ingrese primero el filtro.
Si le filtre et la cartouche du robinet inférieur ont été retirés du raccord, replacez-les en commençant par le filtre.

2. If gasket has been removed from the actuator assembly, replace it by inserting into bottom of actuator assembly.
Si se retiró la empaquetadura del ensamble del activador, reemplácela e ingrésela en la parte inferior del ensamble del activador.
Si le joint a été retiré de l'ensemble de l'actionneur, replacez-le en l'insérant au bas de l'ensemble de l' actionneur.

3. Assemble actuator assembly to body and tighten to 12-15 FT. LBS. torque.
Arme el ensamble del activador al cuerpo y apriete a 1,81-2,26 Kgf M.
Assemblez l'ensemble de l'actionneur au corps et serrez jusqu'à ce que le couple soit de 12 à 15 LB-PI.

4. Assemble handle and check timing, adjust if necessary.
Arme la manija y verifique el tiempo, ajuste de ser necesario.
Assemblez la poignée et vérifiez la durée de distribution, réglezla au besoin.

5. Tighten set screw with a 3/32 allen wrench.
Apriete el tornillo de fijación con una llave Allen de 3/32.
errez la vis de calage à l'aide d'une clé hexagonale de 3/32 po.

6. Insert index button into handle.
Coloque el botón indicador en la manija.
Insérez le capuchon indicateur sur la poignée.

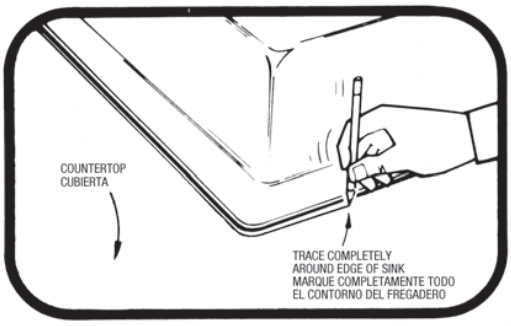
SK-2

SK-2 SINK PER ADDENDUM #2-1

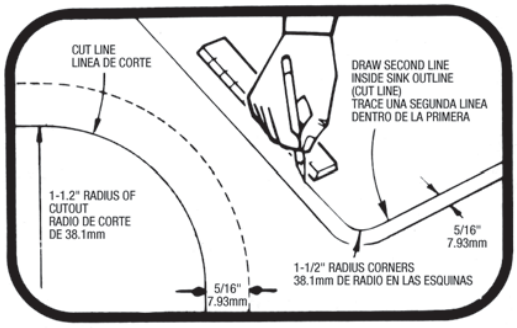
ELRAD1517653	ELKAY	LRAD1517-6.5-3 18 GA 304 S.S. SINGLE BOWL SINK
C895317GN2AE29A BCP	CHICAGO	CCN LEAD LAW COMPLIANT 2 HANDLE WRISTBLADE HANDLE KITCHEN FAUCET CHROME 2.2

ELKAY STAINLESS STEEL SINKS
FREGADEROS DE ACERO INOXIDABLE ELKAY

MANUAL CON ILUSTRACTIONES PARA INSTALAR SU FREGADERO DE ACERO INOXIDABLE



STEP ONE



If counter top must be cut out, locate sink cutout by turning sink upside down and position so bowl compartments are located directly over sink cabinet. Position sink, front to rear, so that sink rim will fit flat on top surface and that sink compartments will fit into cabinet without interfering with cabinet.

PASO UNO

Si la cubierta no tiene el corte hecho, coloque el fregadero boca abajo sobre la cubierta, para proceder a trazar la linea de corte. Asegúrese que el fregadero quede de atras para adelante, de forma que el borde de éste calce perfectamente y que los compartimientos no interfieran con el gabinete.

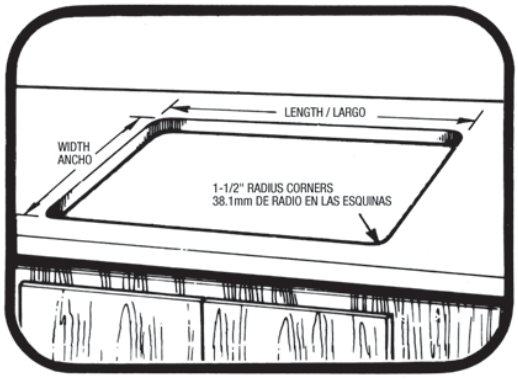
STEP TWO / PASO DOS

STEP THREE

Check your dimensions. Measure the cut line you have drawn on the counter top or check your pre cut opening to make sure it conforms to the following sample sizes.

Cutout is 5/8" shorter than overall size of sink.

SAMPLE CUTOUT SIZES



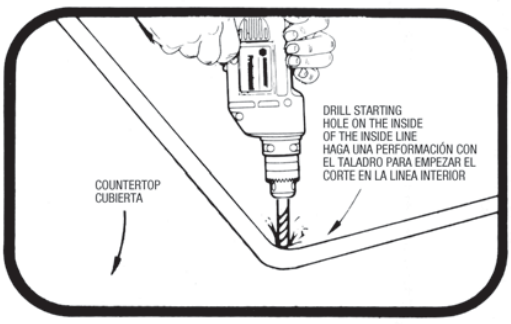
SINK SIZE	CUTOUT LENGTH	CUTOUT WIDTH
25×22	24⅜	21⅜
33×22	32⅜	21⅜
37×22	36⅜	21⅜
38×22	37⅜	21⅜
40×22	39⅜	21⅜
43×22	42⅜	21⅜
48×22	47⅜	21⅜
54×22	53⅜	21⅜

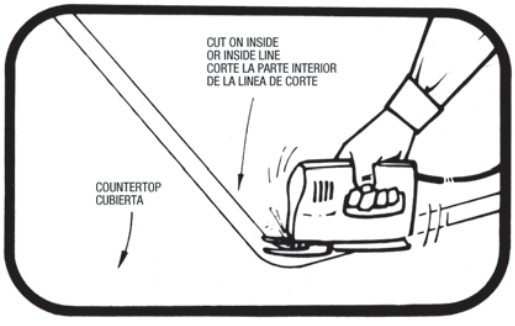
PASO TRES

Verifique las medidas. Asegúrese antes de empezar a cortar, que la linea de corte sea 15.9mm más pequeña que la medida de su fregadero.

EJEMPLOS DE LINEA DE CORTE

Medida de Fregadero	Longitud del Corte	Anchura del Corte
635mm× 558mm	619.1mm	542.9mm
838.2mm× 558mm	822.3mm	542.9mm
939.8× 558mm	923.9mm	542.9mm
965.2× 558mm	949.3mm	542.9mm
1016× 558mm	1000.1mm	542.9mm
1092.2× 558mm	1076.3mm	542.9mm
1219.2× 558mm	1203.3mm	542.9mm
1371.6× 558mm	1355.7mm	542.9mm



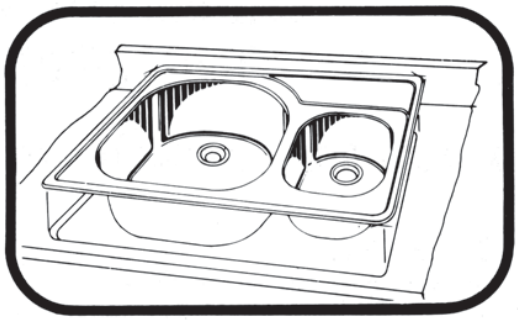


STEP FOUR

Cut hole in counter top.

PASO CUATRO

Haga una perforación con el taladro para empezar el corte en la linea interior. Con una sierra de mano corte a todo lo largo de la linea de corte.

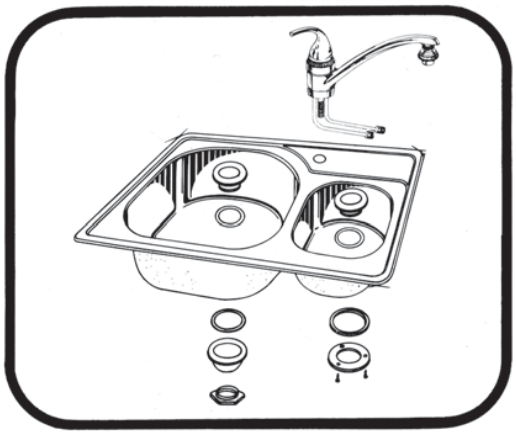


STEP FIVE

Check the countertop cutout opening to be sure it is sized properly. The easiest way to do this is to set the new sink into the opening to see if it fits. The sink rim must set uniformly on the countertop. If the sink does not fit, enlarge the cut-out opening with a sabre saw, or keyhole saw.

PASO CINCO

Verifique el tamaño de la apertura. La manera más sencilla de hacerlo es colocar el fregadero y ver si las dimensiones son las correctas. Si no, hacer los ajustes necesarios con lima o sierra.



STEP SIX

Attach faucet, drain fittings and accessories according to the manufacturer's instructions.

PASO SEIS

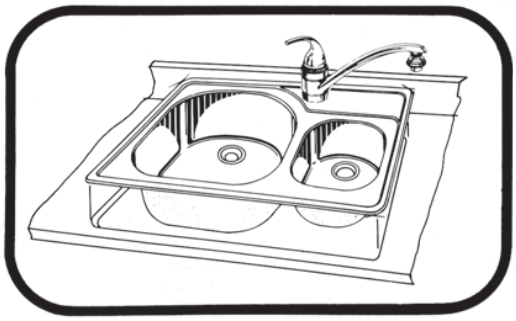
Colocar la llave, tubería de desagüe y accesorios como lo indique el fabricante.

STEP SEVEN

Apply a bead of good quality caulk to the underside of sink flange and position sink into counter top opening.

PASO SIETE

Aplique una capa de empaque o silicón de buena calidad por debajo del marco del fregadero y colocar éste sobre la cubierta.



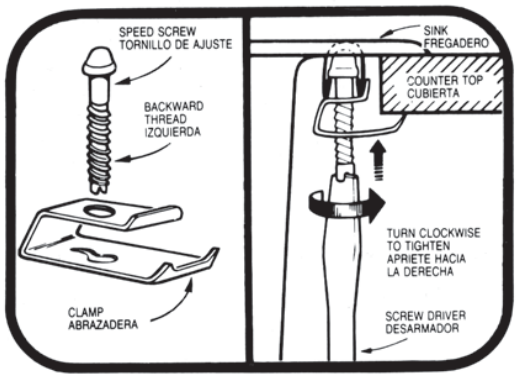
STEP EIGHT

Assemble and Insert Sink Fasteners

Note: Screws and clips contained in this sink package will secure this sink to a countertop not exceeding 7/8″ thickness. For thicker countertop applications, up to 1-1/2″ in thickness, order Model 364 14 pc - Long Screw Only Kit or Model 363 14 pc - Long Screw and Clip Kit.

Assemble the screws into the clamps as shown. (Note: Screws are designed to insert into the clamps with backward threading, so that in mounting, they will turn the normal direction.)

With your screwdriver, tighten the fasteners. Begin with the fasteners located in the middle of each side, tighten the remaining fasteners until the entire rim is sealed with no gaps. It may be necessary to slide a fastener to a different position to compensate for an uneven counter. (**Be careful not to over-tighten.** It is only necessary to draw the rim down snugly to the counter.)

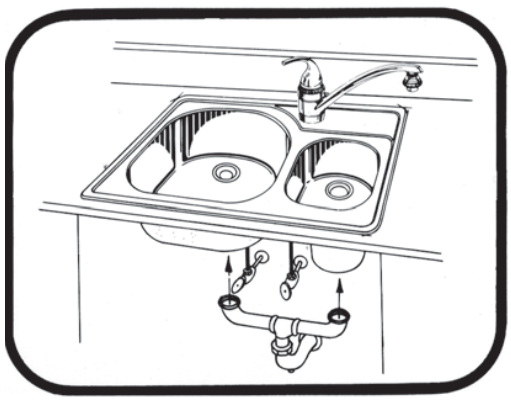


PASO OCHO

Coloque los tornillos de ajuste del fregadero, Nota: las abrazaderas y tornillos que vienen con el fregadero servirán para fijar éste a una cubierta de 22.2mm de espesor. Si la cubierta mide mas de 38.1mm de espesor ordene el modelo 364 de 14 piezas con tornillos largos solamente o el modelo 366 con tornillos largos y juego de abrazaderas.

Coloque las abrazaderas y tornillos como lo indica la ilustración. Los tornillos se colocan a las abrazaderas al revés para voltearlas al momento de instalarlas.

Con un desarmador del gado y largo apriete los tornillos, empezando con los que están en medio de cada lado, posteriormente apriete los demás hasta que no quede ningún espacio sin sellar. Es posible que tenga que mover algun tornillo de lugar para nivelar el fregadero. Tenga cuidado de no apretar demasiado. Solo es necesario unir el borde firmemente a la cubierta.



STEP NINE

Connect Faucet Supplies and Drain Fittings

Connect the faucet supply fittings and the drain trap fittings. Turn on the water supply. Check for possible leaks at these locations: (1) Supply riser tubes to faucet, and (2) Supply riser tubes to shut-off valves (or, lower connections). Next fill the sink bowl with water and check for possible leaks around the drain flange(s). (This would show up as dripping into the cabinet below.) Release water from sink and check for possible leaks at drain connections. Tighten any joints which leak.

PASO NEUVE

Conecte llaverías y tubería de desagüe. Conecte los tubos de desagüe y luego las llaves de paso, abra la llave general del agua. Verifíque que no haya fugas o goteras en los siguientes lugares: 1) En la llavería y las llaves de paso 2) En las conexiones. Llene el fregadero con agua, asegúrese que no gotée en el interior del mueble. Vacíe el fregadero y apriete las conexiones que gotéen.

USE AND CARE HINTS

Congratulations on purchasing your new ELKAY sink. Your sink is made from the best nickel bearing stainless steel and with proper care and maintenance will give you a lifetime of service.

Elkay sinks are designed for the demanding use of today's fast paced kitchen environment. The sink is finished through a series of sophisticated processes to develop its unique satin finish that requires minimal maintenance.

What You Should Know About Elkay's Stainless Steel Finish

An Elkay stainless steel sink is made of the finest nickel-bearing stainless steel available. Its mellow satin surface harmonizes with any color scheme...any decor. Timeless. Elegant. And, like fine silver, its beautiful finish develops an heirloom patina...actually becoming lovelier with use and age. Your Elkay sink is solid stainless steel. There is no coating which will wear off.

Elkay Satin Finish

Elkay's original highlighted satin finish is produced by an abrasive grinding operation which lends a uniform pattern of grain lines to the metal surface. All exposed areas then undergo a series of progressive machine and hand polishing operations. It is this careful polishing that makes an Elkay satin luster finish so beautiful...and so easy to clean and maintain! Please remember that a fine Elkay sink is not self cleaning. It will require a small amount of maintenance to retain its lustrous finish.

Reasons For Cleaning Your Stainless Steel Sink

Your stainless steel sink has been produced of the finest material to provide a quality product for many years of service. Like all quality products it does require some maintenance to assure that the finish will continue to look bright and sanitary.

Easy Cleaning Instructions

Rinsing is the most important part of sink care. An Elkay stainless steel sink finish will retain its original bright appearance if the sink is **rinsed** thoroughly after each use. "Thorough" rinsing can be done by running the water from the spray hose for a few minutes. Typically, a rinse and towel drying after each use takes care of most everyday clean ups. Ideally, once a week the sink should be scoured with a mildly abrasive cleanser, such as Comet. Rubbing back and forth in the direction of the polish or grain lines will not only remove stubborn stains and greasy film buildups, but will blend usage scratches into the satin finish of the sink. After scouring, rinse thoroughly and wipe dry. Your sink will shine like new!

Scratching

Like most metals, your new stainless steel sink will scratch. The feature benefit of the unique satin finish is the ease with which these scratches blend into the uniform finish of the sink. This is accomplished with a periodic scouring with a mildly abrasive kitchen cleanser, such as Comet.

Rubber Mats

The resiliency of stainless steel makes it unnecessary to use rubber mats to protect your sink, dishes and glassware. However, if you do use mats, please remove them after each use. If left in the sink, the water trapped underneath could cause discoloration.

Discoloration, Rust and Possible Pitting

Wet sponges, clothes, cleaning pads and rubber mats left on the sink can lead to discoloration. Steel wool pads should never be used to clean your sink as they leave small iron particles in the grain lines which rust and can damage the sink. Continued usage in this manner may eventually lead to the sink itself rusting and pitting.

Liquid Soap

Do not allow concentrated liquid detergent to dry on your sink. Most brands contain chemical additives which will affect the original high luster finish.

Chlorides

Today, chlorides are found in almost all soaps, detergents, bleaches and cleansers. Chlorides are not friendly to the stainless steel surface. They should not come in contact with the surface of the sink for extended periods. When these chemicals are used in your sink, it should be thoroughly rinsed. This is especially noticed when clothes are soaked in a diluted bleach mixture. This mixture can attack the sink at the water line and cause rusting and pitting.

Knives

Your sink is designed to serve as many things but not as a cutting board or chopping block. This type of use will lead to deep scratches in the sink finish and will dull your knives. Elkay does offer various cutting boards to fit over the compartment of your sink that will give you additional work area.

Spotting

The quality of your water can affect your sink's appearance. In areas with hard water, a brown surface stain can form on the sink giving the appearance of rust. This phenomena also occurs in water with high iron content. Additionally, in areas with a high concentration of minerals, or with over-softened water, a white film may develop on the sink. To combat this problem, we suggest that the sink be towel dried after use.

Foods

Heavy salt concentration or foods containing high levels of salt should not be allowed to dry onto the sink surface. Rinse your sink thoroughly after use.

What To Do If You Have A Problem

Elkay Manufacturing Company is proud of the quality of its stainless steel sinks.

If you feel you have a defective sink, please contact your plumber for the name of your local Elkay factory representative, or contact the Consumer Service Department of Elkay Manufacturing Company. Please provide your sink model number, the date of installation, and description of the problem.

For a full warranty explanation, and limitations, please consult your warranty sheet.

Accessories

Elkay colanders, drain trays and vinyl covered rinsing baskets are not designed as "Dishwasher Safe". These products should be hand washed in mild detergent, rinsed thoroughly and hand dried. Wood cutting boards should never be soaked in water. Rinse after use and then dry. This should be all the care required.

CUIDADO Y LIMPIEZA DE SU FREGADERO

Lo felicitamos por haber comprado un fregadero Elkay, fabricado con el acero inoxidable de más alta calidad, con un alto contenido de niquel. Con el cuidado debido, puede durarle toda la vida.

Los fregaderos Elkay están diseñados para satisfacer las necesidades de las cocinas modernas, y fabricados trás de una serie de sofisticados procesos, que le darán ese terminado satinado que requiere cuidados mínimos.

LO QUE DEBE USTED SABER Á CERCA DE LOS FREGADEROS ELKAY

Cada fregadero Elkay está fabricado con el acero inoxidable de más alta calidad. Su terminado satinado armoniza con cualquier estilo y decoración de cocina, sin que pase de moda, siempre elegante, al igual que la plata fina, embellece con los años.

EL TERMINADO SATINADO DE LOS PRODUCTOS ELKAY

El terminado satinado con reflejos es exclusivo de Elkay y se logra gracias a un sofisticado proceso que incluye pulidos a mano para darle ese acabado brillante y satinado tan sencillo de mantener, pero recuerde que los fregaderos Elkay no son auto limpiantes y requieren un mínimo de cuidado para conservar su brillo.

RAZONES POR LAS QUE USTED DEBE LIMPIAR SU FREGADERO

Aunque los fregaderos de acero inoxidable Elkay han sido fabricados con el material de más alta calidad, requieren, como cualquier producto de primera, de cierto mantenimiento para conservar su brillo.

INSTRUCCIONES FÁCILES PARA SU LIMPIEZA

Enjuagarlos es la parte más importante del cuidado de su fregadero. Si usted lo hace después de usarlo, siempre brillará como nuevo. Enjuague con agua corriente, con la manguera auxiliar o con cualquier recipiente, séquelo con trapo o toalla de cocina. Una vez a la semana se recomienda tallarlo con algún polvo limpiador como ajax, siguiendo la dirección en la que fué pulido. Esto no se hace para quitar manchas o acumulación de grasa si no para desvanecer cualquier rallón que se le haya hecho al fregadero. Después de tallar, enjuague y seque fuertemente. Su fregadero brillará como nuevo!

RALLONES

Como todos los productos de metal, su fregadero puede rallarse con utencilios de cocina, es por eso que se recomienda esta limpieza periódica con polvo limpiador.

PROTECTORES DE HULE

La resistencia de nuestros productos de acero inoxidable, hace innecesario el uso de protectores de hule. Sin embargo, si usted prefiere usarlos, es conveniente que los quite una vez que termine de usar su fregadero, el dejarlos puede causar decoloración en su fregadero.

DECOLORACIÓN, SARRO Y PICADURAS

Esponjas mojadas, trapos húmedos, estropajos, protectores de hule pueden decolorarlo. Fibras metálicas no deberán nunca usarse para limpiarlos, pues dejan partículas pequeñas de metal que se oxidan y pueden a su vez oxidar el fregadero.

JABON LIQUIDO

No deje nunca que los jabones líquidos o de trastes se queden en su fregadero, pues contienen abrasivos y químicos que dañarán su brillo.

CLORO

Casi todos los jabones, detergentes y polvos limpiadores contienen cloro, químico que no se recomienda para limpiar acero inoxidable, por ésta razón insistimos que después de usar cualquier producto de limpieza, enjuague perfectamente su fregadero y enseguida lo seque. Recuerde, no dejar nunca trapos mojados o esponjas con jabón en su fregadero porque puede causar manchas y oxidarlo.

CUCHILLOS

Su fregadero tiene muchos usos, pero no lo utilize como tabla de partir. Los cuchillos pueden hacer rallas profundas en el acero inoxidable, además de que éstos pierden su filo. Elkay le ofrece tablas de cortar que se adaptan perfectamente al compartimiento y le permiten contar con un area más amplia de trabajo en su cocina.

MANCHAS

La calidad del agua puede afectar la apariencia de su fregadero. En lugares con agua dura pueden formarse manchas con aparienca de óxido en el acero inoxidable. Éste fenómeno ocurre también en lugares con agua que tiene un alto contenido en minerales y en fierro, o un agua demasiado blanda. Para combatir ésto le recomendamos secar su fregadero después de usarlo.

COMIDA

No deje por tiempo prolongado en su fregadero comida con alto contenido de sal. Recuerde siempre enjuagarlo después.

QUE HACER ANTE CUALQUIER PROBLEMA

Elkay es una compañía que está orgullosa de la calidad de sus productos.

Si usted piensa que su fregadero tiene algún defecto, póngase en contacto con el representante de Elkay más cercano o diréctamente con el departamento de servicio al cliente, proporciónele el número de modelo de su fregadero y una descripción del problema. Consulte su certificado de garantía que contiene una completa explicación de sus derechos y limitaciones.

ACCESORIOS

Elkay le ofrece coladeras metálicas con cubierta de vinilo, que se adaptan perfectamente al tamaño del compartimiento, éstas no deben lavarse en el lava-trastes, sino a mano con jabon suave, enjuagando y secando después.

CERTIFICADO DE GARANTÍA LIMITADA DE POR VIDA DE FREGADEROS ELKAY

Elkay garantiza al comprador inicial de fregaderos de acero inoxidable Elkay que reemplazará sin cargo todo producto que falle debido a defectos de fabricación durante todo el período normal de uso residencial. El reemplazo del producto no incluye el costo del transporte o de la mano de obra para la instalación. Esta garantía cubre únicamente el fregadero de acero inoxidable y las piezas necesarias para el montaje cuando se instalen fregaderos con borde autoadherente embutidos en sobremuebles comunes o se instale un fregadero de montaje por debajo en un sobremueble con superficie sólida común, únicamente en usos residenciales. Elkay se reserva el derecho de examinar el producto y su instalación antes de efectuar el reemplazo.

NO SE GARANTIZAN LOS ACCESORIOS Y CONEXIONES PARA EL DESAGÜE

OTRAS CONDICIONES EN LA GARANTÍA DE FREGADEROS Y LLAVES MEZCLADORAS

Nuestra garantía no cubre las fallas o daños causados por maltrato o uso indebido, factores ambientales, cuidado o limpieza inadecuados o los daños causados por instalaciones incorrectas o defectuosas. Esta garantía se extiende sólo al comprador inicial del producto. La garantía no cubre los costos de envío de mano de obra y ningún otro costo ocasionado la instalación o reemplazo del fregadero, el diagnóstico o reemplazo de llaves mezcladoras o piezas y ningún otro gasto o pérdida.

Todos los daños incidentales o consecuentes están específicamente excluidos. No se extiende ninguna otra garantía adicional expresa o implícita. Toda garantía implícita e inclusive toda garantía de comerciabilidad o adecuación a un uso en particular, se limita a la duración de esta garantía escrita.

Algunos estados no permiten la exclusión o limitación de los daños consecuentes o incidentales así como tampoco la limitación en la duración de la garantía implícita, quedando invalidada por lo tanto en dichos casos la limitación precedente.

Esta garantía le otorga derechos legales específicos y usted puede tener además otros derechos que dependen del estado en donde resida.

CÓMO HACER EFECTIVA LA GARANTÍA

1. Escriba a: Elkay Manufacturing Company
   Atención: Consumer Services

ELKAY®

LIMITED LIFETIME SINK WARRANTY

Elkay warrants to the original purchaser of an Elkay stainless steel sink, that Elkay will, at its option, replace, without charge, such product if it fails due to a manufacturing defect for a lifetime of normal residential use. Product replacement does not include transportation cost or labor installation cost. This warranty covers only the stainless steel sink and mounting hardware when a self-rimming drop-in sink is installed in a conventional countertop surface or an undermount sink is installed in a conventional solid surface countertop in residential applications only. Elkay reserves the right to examine product in question and its installation prior to replacement.

WASTE FITTINGS AND ACCESSORIES ARE NOT WARRANTED

OTHER WARRANTY CONDITIONS ON SINKS AND FAUCETS

Our warranty does not cover product failure or damage caused by abusive treatment, misuse, environmental factors, improper care and cleaning, or damage due to handling or faulty installations. This warranty is extended only to the original consumer purchaser of the product. This warranty does not cover shipping costs, labor costs, or any other charges for such items as installation or replacement of the sink, diagnosis or replacement of any faucet or component part, or any other expense or loss.

All incidental or consequential damages are specifically excluded. No additional warranties, express or implied are given. Any implied warranty, including one of merchantability or fitness for a particular purpose, is limited to the duration of this written warranty.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

TO OBTAIN SERVICE UNDER WARRANTY

Installation should be in accordance with local plumbing codes. Flush all pipes thoroughly before installation.

La instalación debe ajustarse a los códigos de plomería locales. Lave a fondo todos los tubos antes de la instalación.

L'installation doit se conformer aux normes locales de plomberie. Rincer à fond toute la tuyauterie avant de procéder à l'installation.

Limited Warranty

The CHICAGO FAUCET COMPANY ("Chicago Faucets") extends to the original consumer the following warranties for Genuine Chicago Faucets manufactured products and components, or other components under the Chicago Faucets Warranties, (collectively, the "Products") .

Lifetime Faucet Warranty The "Faucet", defined as any metal cast, forged, stamped of formed portion of the Product, not including electronic or moving parts or water restricting components, or other components covered under the Chicago Faucet warranties, is warranted against defects for the life of the product.

Five Year Cartridge Warranty The "Cartridge", defined as the metal portion of any Product typically referred to by the product numbers containing 1-099X, 1-100X, 217-X, 377-X, 274-X excluding any rubber or plastic components, is warranted against manufacturing defects for a period of five (5) years from the date of Product purchase.

One Year Finish Warranty The finish of the Product is warranted against manufacturing defects for a period of one (1) year from the date of Product purchase.

Garantía Limitada

La CHICAGO FAUCET COMPANY (en adelante «Chicago Faucets») ofrece las siguientes garantías al consumidor comprador original para los productos manufacturados Genuine Chicago Faucets, u otros componentes bajo las garantías de Chicago Faucets, (en adelante colectivamente los «Productos»).

Garantía para toda la vida del Grifo El «Grifo», definido como cualquier parte moldeada, forjada, estampada o formada del Producto, que no sean partes móviles, electrónicas, o de restricción de agua, u otros componentes cubiertos bajo las garantías de Chicago Faucets, goza del respaldo de una garantía contra defectos por la vida del producto.

Garantía de cinco años del cartucho. El «Cartucho», definido como la parte metálica de cualquier Producto, típicamente aludido por los números de producto que contienen 1-099X, 1-100X, 217-X, 377-X, 274-X excluyendo cualesquiera elementos de caucho o plástico, está respaldado por una garantía contra defectos de fabricación por un lapso de cinco (5) años de la fecha de la compra del Producto.

Un año de garantía para el acabado. El acabado del producto está respaldado por una garantía por un lapso de un (1) año de la fecha de la compra del producto.

Garantie limitée

CHICAGO FAUCET COMPANY (« Chicago Faucets ») offre au consommateur original les garanties suivantes sur les produits et les pièces authentiques fabriqués par Chicago Faucets, ou sur toute autre pièce couverte par sa garantie (appelés collectivement les « Produits »).

Garantie à vie du robinet : Le « robinet », défini comme toutes les pièces en métal moulé, les parties forgées, marquées ou ouvrées du produit (excluant les composants électroniques, les pièces mobiles et les pièces susceptibles d'être endommagées par l'eau), ainsi que toutes autres pièces couvertes par la garantie de Chicago Faucets, sont garantis à vie contre les vices de fabrication.

Garantie de cinq (5) ans de la cartouche : La « cartouche », définie comme la partie en métal d'un produit auquel on réfère habituellement par les numéros de produit contenant 1-099X, 1-100X, 217-X, 377-X, 274-X (à l'exclusion des composants de caoutchouc ou de plastique), est garantie contre les vices de fabrication pour une période de cinq (5) ans à compter de la date d'achat du produit.

Garantie d'un (1) an de la finition : La finition du produit est garantie contre les vices de fabrication pour une période d'un (1) an à compter de la date d'achat du produit.

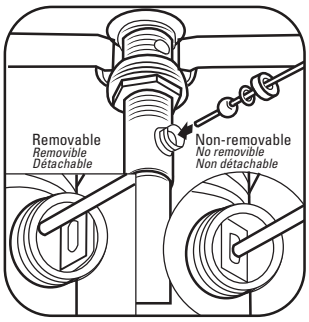
Coloque el tapón en la c vástago del cuerpo, orie estribo para un tapón fij pueda quitar. (Consulte la il

Placer le bouchon dans de l'about du corps de orientant l'étrier de man soit possible ou non, se de retirer le bouchon (vo

5 **Insert pivot ball rod assembly through pivot rod gasket and coupling nut.**

Inserte la ensambladura de la varilla de la bola de pivote a través de la empaquetadura de la varilla de la bola de pivote y de la tuerca de acoplamiento.



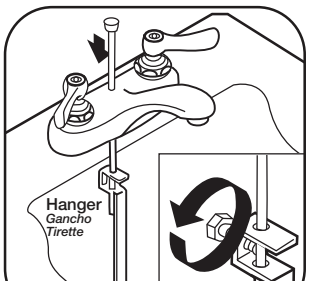
Insérer la tige de la rotule articulée à travers l'écrou de fixation de la tige de la rotule articulé et l'écrou de serrage.

6 **Attach pivot rod assembly to body shank.**

Agregue la ensambladura de la varilla de pivote al vástago del cuerpo.

Attacher la tige de la rotule articulée à l'embout du corps de robinet.

7 **Tighten pivot rod a nut as required to provide smooth op**

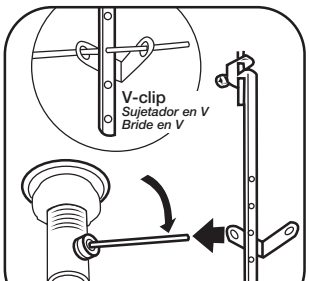


Apriete la tuerca de la en de la varilla de pivote co necesario para sellar y d funcionamiento suave.

Serrer l'écrou de la tige articulée afin de sceller e un bon fonctionnement.

8 **Insert pop up rod through holes in hanger and hand tighten.**

Inserte la varilla del tapón expulsable y apriete con la mano.



Insérer la tige de manoeuvre dans les trous de la tirette et serrer à la main.

9 **Push pivot ball rod to lowest position squeeze v-clip and slide pivot ball rod through v-clip and appropriate hole in hanger.**

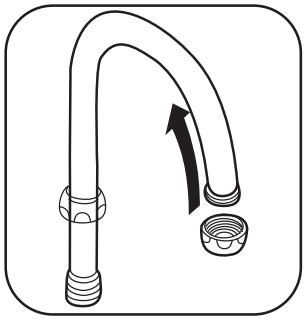
Empuje la varilla de la bola de pivote, apriete el sujetador en V y deslice la varilla de la bola de pivote a través del sujetador en V y el agujero apropiado en el gancho.

Abaisser la tige de la rotule articulée à son plus bas. Pincer ensuite la bride en V et glisser la tige de la rotule articulée dans la bride en V et dans le trou approprié de la tirette.

10 **Test the assembly function and make adjustments as ne Once set, tighten s**

Pruebe el funcionamiento ensambladura y haga los necesarios. Una vez fijad firmemente.

S'assurer que le mécani fonctionne bien et régler Une fois terminé, serrer précautions.



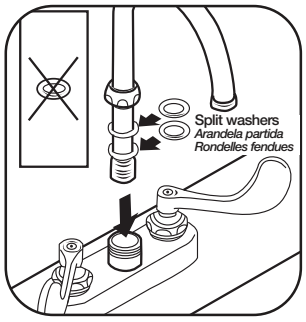
Rigid/Swing Convertible Spout Installation

Instalación de pico convertible; rígido o giratorio /
Installation des becs de robinet rigides ou pivotants col de cygne

1 **Remove outlet and assemble spout nut over outlet end, until it rests on shoulder of spout joint.**

Quite la punta de la salida y meta la tuerca del pico por el extremo de salida, hasta que descanse en el hombro de la junta del pico.

Retirer l'embout et glisser l'écrou au long du bec, jusqu'au joint.

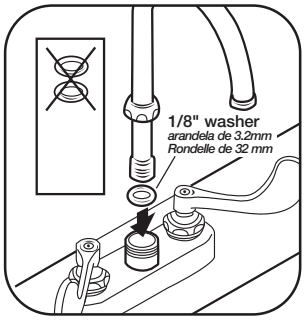


For Swing Spouts/Para Surtidores Giratorios/Becs pivotants

2a **Assemble two plastic split washers to spout joint and discard 1/8" thick plastic washer**

Ensamble dos arandelas de plástico a la junta del pico y deseche la arandela de plástico de 1/8" (3.2mm).

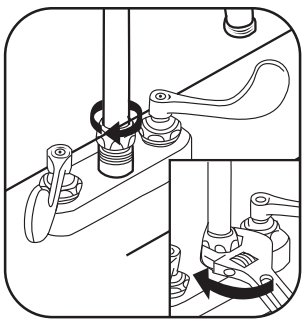
Insérer les deux rondelles fendues en plastique dans le joint du bec. Jeter la rondelle de plastique de 32 mm d'épaisseur (1/8 po).



For Rigid Spouts Only/Sólo para picos rígidos/Becs rigides

2b **Place 1/8" thick plastic washer into spout base bore and discard plastic split washers**

Coloque la arandela de plástico de 1/4" (6.35mm) de espesor sobre el extremo de la base del pico y deseche las arandelas partidas de plástico.



Insérer la rondelle fendue en plastique de 32 mm d'épaisseur (1/8 po) à la base du bec. Jeter les rondelles de plastique.

3 **Assemble spout assembly into spout base and tighten spout nut.**

Monte la ensambladura a la base del pico y apriete la tuerca del pico.

Fixer le bec à sa base et serrer l'écrou du robinet.

RGD1 and RGD

Instalación de pico s
Installation des becs

1 **Apply supplied adh threads of spout ar spout into base. Ba necessary for cente**

Aplique el adhesivo sumi las roscas del pico y apri dentro de la base. Retroc sea necesario para centra

Appliquer un adhésif sur bec et maintenir le bec d Reculer au besoin pour s le bec est bien centré.

2 **Hand tighten sleev until flush with bod**

Apriete a mano el mangu quede parejo con el cuer

Serrer les manchons à la jusqu'à ce qu'ils s'encas corps de robinet.

Timing Adjustment on an MVP Metering Cartridge

Ajuste de temporización en un cartucho MVP de mediciónon /
Réglage de la durée d'écoulement des cartouches MVP

1 **With cartridge and handle installed in body and water supply turned on, purge cartridge of air by pushing handle completely down 4-8 times repeatedly, then check timing cycle.**

Con el cartucho y el mango instalados en el cuerpo y el suministro de agua abierto, purgue el cartucho de aire empujando el mango completamente hacia abajo 4 a 8 veces repetidamente, luego verifique el ciclo de temporización.

Une fois la cartouche et la manette fixées au corps de robinet et les robinets d'arrivée ouverts, purger l'air de la cartouche en enfonçant complètement la manette à plusieurs reprises (de 4 à 8 fois). Vérifier ensuite le cycle d'écoulement.

2 **To change cycle time, remove index button, then handle using a 3/32 hex wrench. (Figure 'A')**

Para cambiar el tiempo de ciclo, quite el botón de tapa de presión, luego ajuste con la llave de de 3/32" (2.38mm) (Ilustración 'A') 3.

Pour changer le temps de cycle, enlever la coiffe indicatrice et se servir d'une clé hexagonale de 3/32 po (Figure « A »).

3 **Using your fingers change height of adjustment nut by 1/4 turn only. Turn adjustment nut clockwise to increase cycle time or counter-clockwise to decrease cycle time. (Figure 'B')**

Con sus dedos cambie la altura de la tuerca de ajuste sólo 1/4" de vuelta. Gire la tuerca de ajuste en la dirección de las manecillas del reloj para aumentar el tiempo del ciclo o en dirección contraria a las manecillas del reloj para disminuir el tiempo del ciclo. (Ilustración 'B')

L'utilisation des doigts changera la hauteur de l'écrou de réglage de 1/4 de tour seulement. Tourner l'écrou de réglage dans le sens horaire pour augmenter le temps de cycle, ou dans le sens antihoraire pour le réduire (Figure « B »).

4 **Replace handle and verify desired cycle time. NOTE: TIMING MUST BE CHECKED WITH HANDLE IN PLACE.**

Coloque el mango nuevamente y verifique el tiempo de ciclo deseado. NOTA: LA TEMPORIZACIÓN DEBE VERIFICARSE CON EL MANGO EN SU LUGAR.

Remettre la manette en place et vérifier que le temps de cycle est celui désiré. NOTE : LA VÉRIFICATION DE LA DURÉE D'ÉCOULEMENT DOIT ÊTRE EFFECTUÉE UNE FOIS LA MANETTE REMISE EN PLACE.

5 **If additional adjustment is necessary, repeat steps 3 and 4 until desired cycle time is achieved.**

Si hace falta ajustes adicionales, repita los pasos 3 y 4 hasta que se logre el tiempo de ciclo deseado.

Si des réglages supplémentaires sont nécessaires, répéter les étapes 3 et 4 jusqu'à ce que le temps de cycle désiré soit atteint.

6 **Instale el mango en el vástago del actuante, luego apriete firmemente el tornillo de ajuste con el mango en la posición inferior. Oprima el botón o tapa de presión hasta que se ajuste en su sitio.**

Instale el mango en el vástago del actuante, luego apriete firmemente el tornillo de ajuste con el mango en la posición inferior. Oprima el botón o tapa de presión hasta que se ajuste en su sitio.

Insérer la manette sur la tige de l'actionneur et serrer la vis de réglage en positionnant la manette vers le bas. Appuyer sur la coiffe indicatrice de la manette jusqu'à ce qu'elle soit assise.

Note: Some new installations might produce a slight closing noise. This is normally the result of air trapped in the cartridge and noise will dissipate over time.

Nota: Algunas instalaciones nuevas podrían producir un ligero ruido al cerrar. Esto es normalmente el resultado de aire atrapado en el cartucho y el ruido disminuirá con el tiempo.

Note : Un appareil neuf peut émettre un léger bruit à la fermeture, à cause de l'air retenu dans la cartouche. Ce bruit disparaîtra avec le temps.

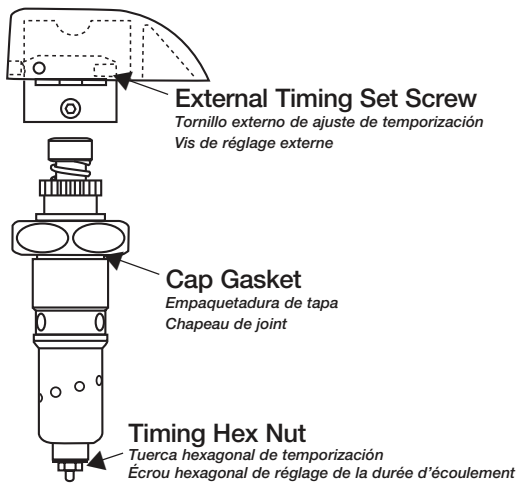
Timing Adjustment on a Push-Tilt Self-Closing Cartridge

Ajuste de la temporización en un cartucho de cierre automático de palanca basculante (push-tilt) /
Réglage de la durée d'écoulement des cartouches à autofermeture à manette basculante

The internal timing adjustment procedure is identical to Push Button Self Closing Cartridges, except for an external timing adjustment feature that is integral to Push-Tilt handles. This adjustment can be used for minor cycle time changes without the need to remove the cartridge from the body.

El procedimiento de ajuste de temporización interna es idéntico al de los cartuchos de cierre automático de pulsador, salvo por una característica externa de ajuste que es integral a las manijas de palanca basculante. Este ajuste puede usarse para cambios menores de ciclos de temporización sin necesidad de sacar el cartucho del cuerpo.



La procédure de réglage interne de la durée d'écoulement est identique à celle des cartouches à bouton-poussoir à autofermeture, à l'exception d'une particularité : le réglage externe de la durée d'écoulement à l'aide d'une manette basculante. Ce mode de réglage peut être utilisé pour effectuer des modifications mineures du cycle de temps sans devoir retirer la cartouche du corps de robinet.

1 **For external adjustment, lift handle slightly to expose 1/16" hex socket set screw (Figure "D"). Turn adjustment set screw clockwise to increase cycle time or counter-clockwise to decrease cycle time.**

Para ajustes externos, levante la manija ligeramente para exponer el tornillo de ajuste con cabeza para llave hexagonal de 1/16" (1,59mm). Gire el tornillo de ajuste en la dirección de las manecillas del reloj para aumentar el tiempo del ciclo o en dirección contraria a las manecillas del reloj para disminuir el tiempo del ciclo.

Pour un réglage externe, soulever légèrement la manette afin d'exposer la douille de la vis de réglage à tête hexagonale (figure « D »). Tourner la vis de réglage dans le sens horaire pour augmenter le temps de cycle, ou dans le sens antihoraire pour le réduire.

Installation should be in accordance with local plumbing codes. Flush all pipes thoroughly before installation.

La instalación se debe hacer solo de acuerdo con los códigos de plomería locales. Nivele bien todas las tuberías antes de instalar.

L'installation doit se faire conformément aux codes de plomberie locaux. Videz tous les tuyaux entièrement avant de commencer l'installation.

Limited Warranty

The CHICAGO FAUCET COMPANY ("Chicago Faucets") extends to the original consumer the following warranties for Genuine Chicago Faucets manufactured products and components, or other components under the Chicago Faucets Warranties, (collectively, the "Products").

Lifetime Faucet Warranty The "Faucet", defined as any metal cast, forged, stamped of formed portion of the Product, not including electronic or moving parts or water restricting components, or other components covered under the Chicago Faucet warranties, is warranted against defects for the life of the product.

Five Year Cartridge Warranty The "Cartridge", defined as the metal portion of any Product typically referred to by the product numbers containing 1-099X, 1-100X, 217-X, 377-X, 274-X excluding any rubber or plastic components, is warranted against manufacturing defects for a period of five (5) years from the date of Product purchase.

One Year Finish Warranty The finish of the Product is warranted against manufacturing defects for a period of one (1) year from the date of Product purchase.

Garantía limitada

CHICAGO FAUCET COMPANY ("Chicago Faucets") extiende al consumidor original las siguientes garantías para los productos y los componentes fabricados de Genuine Chicago Faucets, o cualquier otro componente de las garantías de Chicago Faucets, (en conjunto, los "Productos").

Garantía de por vida del grifo El "Grifo", definido como cualquier porción formada de metal fundido, forjado, estampado del Producto, que no incluye piezas electrónicas o movibles, o componentes limitados por agua, u otro componente que se incluya en las garantías de Chicago Faucet , está garantizada por los defectos de la vida del producto.

Garantía del cartucho de cinco años El "Cartucho", definido como la porción de metal de cualquier Producto generalmente indicado por los números del producto con 1-099X, 1-100X, 217-X, 377-X, 274-X sin contar ningún componente de goma o de plástico, está garantizado por defectos de fabricación durante cinco (5) años a partir de la fecha de compra del Producto.

Garantía para el acabado de un año El acabado del Producto está garantizado por defectos de fabricación durante un (1) año a partir de la fecha de compra del Producto.

Garantie limitée

CHICAGO FAUCET COMPANY (Chicago Faucets) offre au consommateur initial les garanties suivantes pour les produits fabriqués par Genuine Chicago Faucets et leurs composants, ou les autres composants couverts par les garanties de Chicago Faucets (collectivement appelés les « produits »).

Garantie à vie du robinet: Le robinet, défini comme toute partie en métal moulé, forgée, estampée ou formée du produit, mais ne comprenant pas les pièces électroniques ou amovibles ni les composants servant à contenir l'eau, ni les autres composants couverts par les garanties de Chicago Faucet, est garanti contre les défauts pendant la durée de vie du produit.

Garantie de cinq ans de la cartouche : La cartouche est définie comme la portion métallique de tout produit auquel on fait habituellement référence par les numéros de produit contenant 1-099X, 1-100X, 217-X, 377-X, 274-X, à l'exception des composants en caoutchouc ou en plastique, et elle est garantie contre les défauts de fabrication pour une période de cinq (5) ans à compter de la date d'achat du produit.

GGarantie de un an sur le fini : Le fini du produit est garanti contre les défauts de fabrication pour une période de un (1) an à partir de la date d'achat du produit.

CHICAGO FAUCETS®

a Geberit company

Care & Maintenance

All Chicago Faucet fittings are designed and engineered to meet or exceed industry performance standards. Care should be taken cleaning this product. Do not use abrasive cleaners, chemicals or solvents as they can result in surface damage. Use mild soap with warm water for cleaning and protecting the life of Chicago Faucets fittings.

Cuidado y mantenimiento

Todos los accesorios de Chicago Faucet están diseñados para cumplir o superar las normas de rendimiento de la industria. Este producto se debe limpiar con cuidado. No utilice limpiadores abrasivos, productos químicos o solventes ya que pueden dañar la superficie. Para limpiar y proteger la vida útil de los accesorios Chicago Faucet, utilice jabón suave con agua tibia.

Entretien

Tous les accessoires Chicago Faucet sont conçus et élaborés pour respecter et dépasser les normes de rendement de l'industrie. Ce produit doit être nettoyé soigneusement. N'utilisez pas de produits nettoyants abrasifs, de produits chimiques ni de solvants, ils risqueraient d'endommager la surface. Utilisez un savon doux et de l'eau tiède pour nettoyer et assurer la durée de vie des accessoires Chicago Faucets.

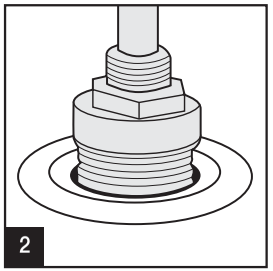
Sealing washer must be placed on mounting suface as indicated. /
La arandela de sellado debe ser colocada en el suface creciente como indicado. /
Sceller la rondelle doit être placée sur monter de suface comme indiqué.

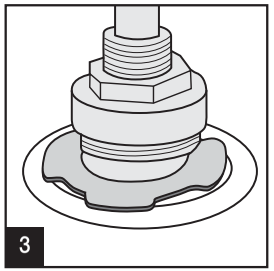
One-Piece Body Installation / De una sola pieza de instalación del Órgano / Installation du corps monopièce



Attach hanger to body and hang faucet from spout hole in sink. Hand tighten mounting nuts.

Coloque la suspensión en el cuerpo y colgar la llave de agua el agujero del surtidor en el fregadero. Apriete a mano las tuercas de montaje.

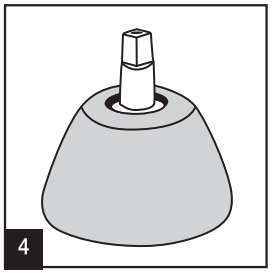
Fixez le support au corps et accrochez le robinet en utilisant le trou du bec dans l'évier. Serrez les écrous de montage à la main.



Place a sealing washer over each handle stem. Be sure to have recessed rim of washer facing up. See Illustration A.

Coloque una arandela de sellado en cada espiga de la manija. Asegúrese de tener a empotrar el borde de la arandela hacia arriba. Vea ilustración A.

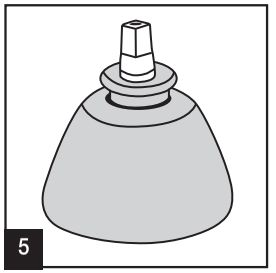
Posez une rondelle d'étanchéité sur la tige de chaque poignée. Assurez-vous que le bord renfoncé de la rondelle est face vers le haut. Voir A d'illustration.



Insert retaining clips firmly into channel on each valve body. Remove hanger from spout hole.

Inserte los clips firmemente en el canal en cada cuerpo de la válvula. Retirar el sostén en la salida del agujero.

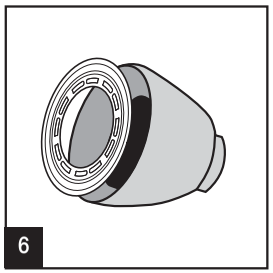
Insérez les attaches de retenue fermement dans la rainure du corps de chaque robinet. Retirez le support du trou du bec.



Place handle escutcheons over handle stems. Handles should cover the sealing washers.

Coloque la manija chapetones sobre manejar los tallos. Maneja debe cubrir las arandelas de sellado.

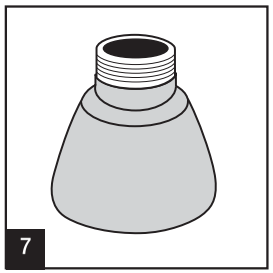
Placez les écussons de la poignée sur les tiges de la poignée. Les poignées devraient couvrir les rondelles d'étanchéité.



Place a hold–down nut onto each handle stem and hand tighten.

Coloque una tuerca de apriete en cada espiga de la manija y apriete la mano.

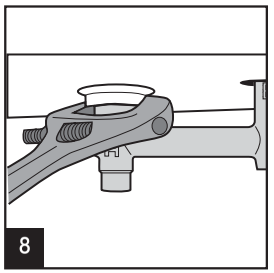
Posez un écrou de retenue sur la tige de chaque poignée et serrez à la main.



Place spout seat washer into spout escutcheon. See illustration A.

Placez le bec rondelle siège en rosace de bec. Vea ilustración A.

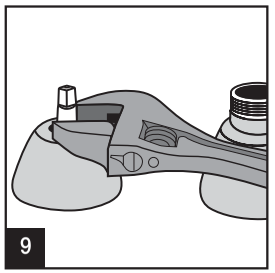
Placez la rondelle de siège du bec sur l'écusson du bec. Voir A d'illustration.



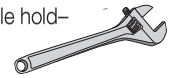
Place spout escutcheon over spout stem until it rests flush to surface.

Coloque el pico chapetón sobre surtidor madre hasta que quede a ras de superficie.

Placez l'écusson du bec sur la tige du bec jusqu'à ce qu'il soit de niveau avec la surface.

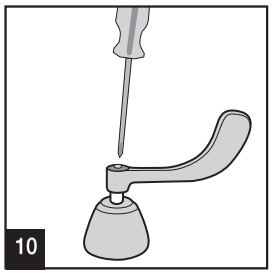


Using adjustable wrench, tighten underbody nuts.

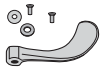


Usando una llave ajustable, apriete las tuercas de la parte de abajo.

À l'aide d'une clé à molette, serrez les écrous de dessous.

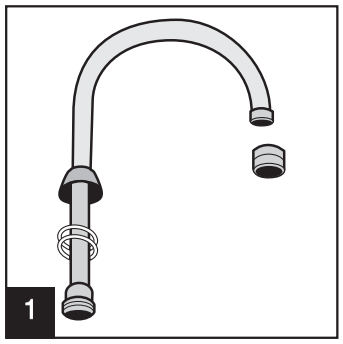


Using adjustable wrench, tighten handle hold–down nuts.



Usando una llave ajustable, apriete las tuercas de manija de sujeción.

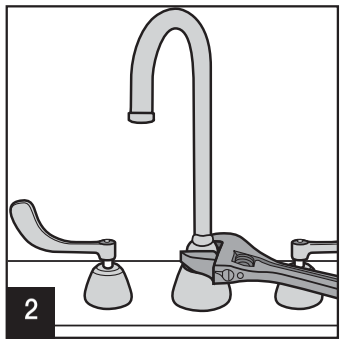
À l'aide d'une clé à molette, serrez les écrous de retenue de la poignée.



Align both handles on stem as desired. Insert index buttons, screws, and tighten.

Alinear las dos asas en el tallo como se desee. Insertar botones de índice, tornillos y apriete.

Alignez les deux poignées sur la tige comme vous le souhaitez. Insérez les capuchons indicateurs, les vis, puis serrez.

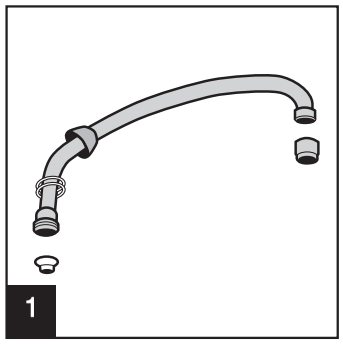


Swing Spout / Boquilla giratoria / Bec pivotant

Remove outlet from spout.
Place two split rings on spout near the base. Slide spout nut onto spout.

Retire la salida de la boquilla. Coloque dos anillos divididos en la boquilla cercana a la base. Deslice la tuerca de la boquilla hasta la boquilla.

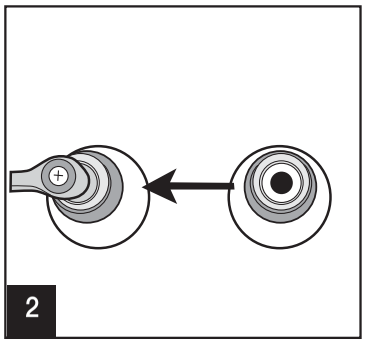
Retirez l'embout de sortie du bec. Posez deux bagues fendues sur le bec près de la base. Glissez l'écrou du bec sur le bec.



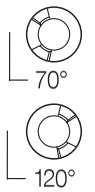
Place spout onto valve body until fully seated. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla sobre el cuerpo de la válvula hasta que esté completamente en su lugar. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

Posez le bec sur le corps du robinet jusqu'à ce qu'il soit bien en place. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.



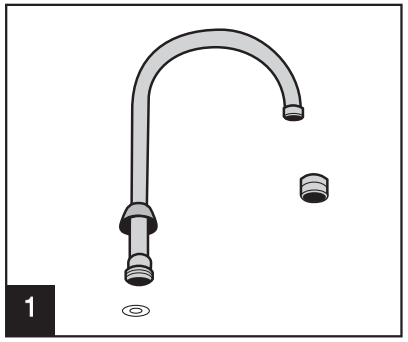
Restricted Swing Spout / Boquilla giratoria con límite / Bec à pivot restreint



Remove outlet from spout. Place two split rings on spout tubing near base. Slide spout nut onto spout.

Retire la salida de la boquilla. Coloque dos anillos divididos en las tuberías de la boquilla cercana a la base. Deslice la tuerca de la boquilla hasta la boquilla.

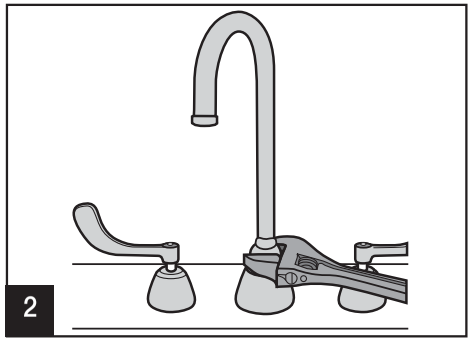
Retirez l'embout de sortie du bec. Posez deux bagues fendues sur la base près du tuyau du bec. Glissez l'écrou du bec sur le bec.



Place restricted swing adaptor into valve body and align with internal valve body tab.
Position small opening (70º) or large opening (120º) toward "hot" side of body.

Coloque el adaptador giratorio con límites en el cuerpo de la válvula y alinee con la ranura del cuerpo de la válvula interna. Coloque la pequeña abertura (70º) o la abertura grande (120º) contra el lado "caliente" del cuerpo.

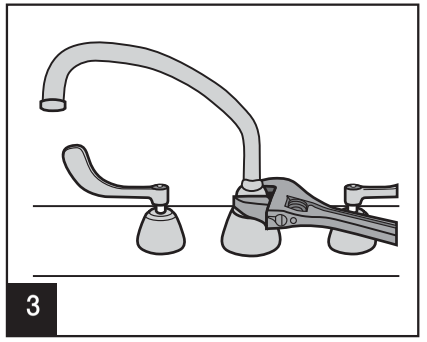
Posez l'adaptateur à pivot restreint sur le corps du robinet et alignez-le sur la languette du corps du robinet interne. Placez la petite ouverture (70 °) ou la grande ouverture (120 °) en direction du côté « eau chaude » du corps.



Rigid Spout / Boquilla rígida / Bec fixe

Remove outlet from spout. Slide spout nut onto spout. Place solid white washer into base outlet.

Retire la salida de la boquilla. Deslice la tuerca de la boquilla hasta la boquilla. Coloque la arandela sólida blanca sobre la salida base.



Retirez l'embout de sortie du bec. Posez deux bagues fendues sur la base près du tuyau du bec. Glissez l'écrou du bec sur le bec.

Place spout onto valve body until fully seated. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla sobre el cuerpo de la válvula hasta que esté completamente en su lugar. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

Posez le bec sur le corps du robinet jusqu'à ce qu'il soit bien en place. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.

Place spout into stem. Tighten spout nut with wrench. Connect water supplies, flush line, and attach outlet.

Coloque la boquilla en la barra. Apriete la tuerca de la boquilla con la llave inglesa. Conecte la tubería de suministro y descarga, y coloque la salida.

Posez le bec sur la tige. Serrez l'écrou du bec à l'aide d'une clé. Raccordez les conduites d'alimentation en eau, rincez la conduite, puis remettez en place l'embout de sortie.

Timing Adjustment on an MVP Metering Cartridge

Ajuste de temporización en un cartucho de medición MVP /
Réglage de la durée de distribution d'une cartouche de dosage MVP

1 With cartridge and handle installed in body and water supply turned on, purge cartridge of air by pushing handle completely down 4-8 times repeatedly, then check timing cycle.

Después de haber instalado el cartucho y la manija en el cuerpo y de haber encendido el suministro de agua, presione la manija por completo hacia abajo 4 a 8 veces seguidas para purgar el cartucho de aire. Luego, verifique el tiempo.

Pendant que la cartouche et la poignée sont installées sur le corps et que l'alimentation en eau est activée, évacuez l'air de la cartouche en poussant la poignée en bas complètement de quatre à huit fois, à répétition, puis vérifiez le cycle de distribution.

2 To change cycle time, remove index button, then handle using a 3/32 hex wrench. (Figure 'A')

Para cambiar el tiempo de ciclo, retire el botón indicador y luego la manija con una llave Allen de 3/32. (Figura 'A')

Pour modifier le cycle de distribution, retirez le capuchon indicateur, puis la poignée à l'aide d'une clé hexagonale de 3/32 po. (Figure A)

3 Using your fingers change height of adjustment nut by 1/4 turn only. Turn adjustment nut clockwise to increase cycle time or counter-clockwise to decrease cycle time. (Figure 'B')

Con los dedos, cambie la altura de la tuerca de ajuste con un solo giro de 1/4. Gire la tuerca de ajuste en dirección de las manecillas del reloj para aumentar el tiempo, o gírela en dirección contraria para disminuirlo. (Figura 'B')

Utilisez vos doigts pour modifier la hauteur de l'écrou de réglage en le tournant de un quart de tour seulement. Tournez l'écrou de réglage dans le sens des aiguilles d'une montre pour augmenter la durée du cycle ou dans le sens contraire des aiguilles d'une montre pour en diminuer la durée. (Figure B)

4 Reinstall handle and verify desired cycle time. NOTE: TIMING MUST BE CHECKED WITH HANDLE IN PLACE.

Vuelva a colocar la manija y verifique que el tiempo sea el deseado. NOTA: EL TIEMPO SE DEBE REVISAR CON LA MANIJA EN SU LUGAR.

Réinstallez la poignée et vérifiez si la durée du cycle est celle que vous souhaitez. REMARQUE : LA DURÉE DOIT ÊTRE VÉRIFIÉE ALORS QUE LA POIGNÉE EST EN PLACE.

5 If additional adjustment is necessary, repeat steps 3 and 4 until desired cycle time is achieved.

Si necesita de un ajuste adicional, repita los pasos 3 y 4 hasta obtener el tiempo deseado.

Si un réglage supplémentaire est nécessaire, répétez les étapes 3 et 4 jusqu'à ce que vous ayez la durée de cycle souhaitée.

6 Attach handle and tighten screw. If index button is included, snap into handle.

Instale el mango en el vástago del actuante, luego apriete firmemente el tornillo de ajuste con el mango en la posición inferior. Oprima el botón o tapa de presión hasta que se ajuste en su sitio.

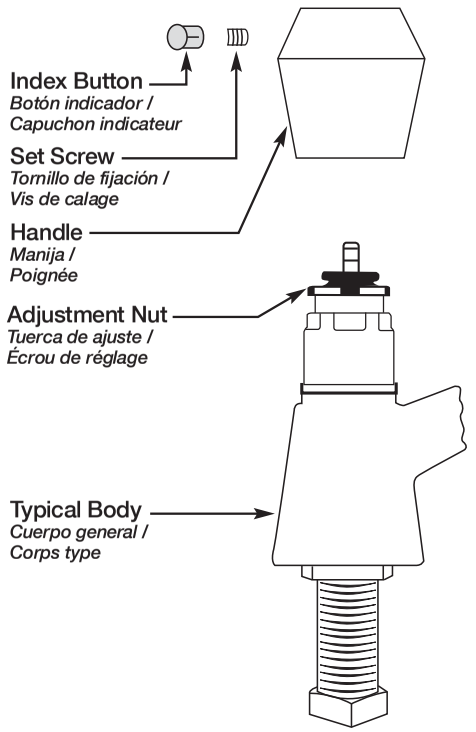
Insérer la manette sur la tige de l'actionneur et serrer la vis de réglage en positionnant la manette vers le bas. Appuyer sur la coiffe indicatrice de la manette jusqu'à ce qu'elle soit assise.

Note: Some new installations might produce a slight closing noise. This is normally the result of air trapped in the cartridge and noise will dissipate over time.

Nota: Algunas instalaciones nuevas podrían generar un leve ruido al cerrar. Generalmente, se produce debido al aire atrapado en el cartucho. El ruido desaparecerá con el tiempo.

Remarque : Certaines nouvelles installations pourraient produire un léger bruit de fermeture. Cela est normalement dû au fait que de l'air est emprisonné dans la cartouche et le bruit cessera au fil du temps.

FIGURE 'A' / ILUSTRACIÓN 'A' / FIGURE « A »



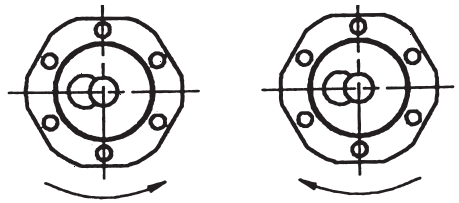


FIGURE 'B' / ILUSTRACIÓN 'B' / FIGURE « B »

MVP Metering Cartridges / *Cartuchos de medición MVP / Cartouches de dosage MVP*

1. **If filter and lower valve cartridge have been removed from fitting, replace them by inserting filter first.**
   Si se retiró el filtro y el cartucho de la válvula inferior del accesorio, para colocarlo nuevamente, ingrese primero el filtro.
   Si le filtre et la cartouche du robinet inférieur ont été retirés du raccord, replacez-les en commençant par le filtre.

2. **If gasket has been removed from the actuator assembly, replace it by inserting into bottom of actuator assembly.**
   Si se retiró la empaquetadura del ensamble del activador, reemplácela e ingrésela en la parte inferior del ensamble del activador.
   Si le joint a été retiré de l'ensemble de l'actionneur, replacez-le en l'insérant au bas de l'ensemble de l' actionneur.

3. **Assemble actuator assembly to body and tighten to 12-15 FT. LBS. torque.**
   Arme el ensamble del activador al cuerpo y apriete a 1,81-2,26 Kgf M.
   Assemblez l'ensemble de l'actionneur au corps et serrez jusqu'à ce que le couple soit de 12 à 15 LB-PI.

4. **Assemble handle and check timing, adjust if necessary.**
   Arme la manija y verifique el tiempo, ajuste de ser necesario.
   Assemblez la poignée et vérifiez la durée de distribution, réglezla au besoin.

5. **Tighten set screw with a 3/32 allen wrench.**
   Apriete el tornillo de fijación con una llave Allen de 3/32.
   errez la vis de calage à l'aide d'une clé hexagonale de 3/32 po.

6. **Insert index button into handle.**
   Coloque el botón indicador en la manija.
   Insérez le capuchon indicateur sur la poignée.

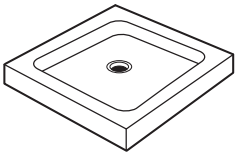
FIAT® PRODUCTS



DO NOT STACK OR STORE TERRAZZO FLAT

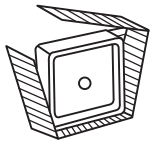
MONTEREY

SIERRA

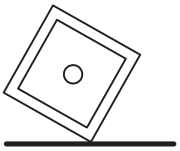
GIBRALTAR

ADAT, ADAW, WTR WHEELCHAIR ACCESS

MOP SERVICE BASIN



1. REMOVE CRATE AT INSTALLATION POINT. DO NOT ROCK TERRAZZO ON EDGES IN ORDER TO PREVENT DAMAGES TO CORNERS.
2. CHECK ALL SIDES OF PRODUCT FOR TRANSPORTATION DAMAGES.



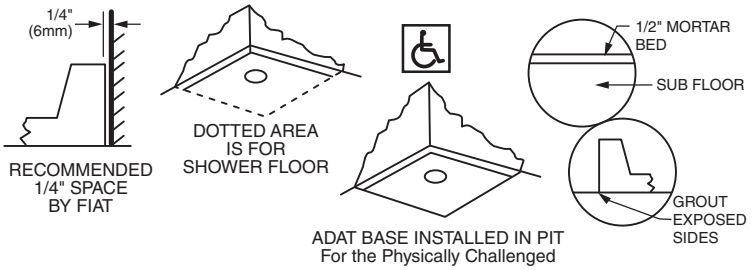
A: WIPE FACE OF THE TERRAZZO WITH A WATERED CLOTH.

B: AFTER WATER EVAPORATES, CHECK FOR CRACKS OR DAMAGE.

NOTE: FIAT PRODUCTS IS NOT RESPONSIBLE FOR SHOWER INSTALLATIONS ADHERING TO A.D.A. GUIDELINES. CHECK LOCAL AUTHORITY FOR CODE AND INSTALLATION REQUIREMENTS.

DO NOT LIFT SHOWER BY FLANGE

REMOVE CRATE WITH CARE



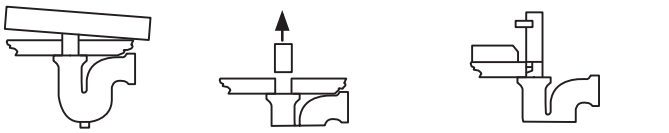
DO NOT STAND ON END

LEVEL PRODUCT CAREFULLY

2A. ESTABLISH PROPER CLEARANCE BETWEEN UNIT AND WALL. PLACE A 1/2" LAYER OF MORTAR WHERE THE SHOWER FLOOR IS TO BE INSTALLED. THIS PROCEDURE IS REQUIRED BY FIAT TO PROVIDE SUPPORT OF THE UNIT IN CASE THE SUB FLOOR IS UNEVEN. LAYER OF GROUT SHOULD BE AT LEAST 1/4" THICK AND COVER ENTIRE AREA UNDER THE UNIT.

2B. ADAT AND ADAW SHOWERS ARE FOR A.D.A. OR PHYSICALLY CHALLENGED USE. THE SHOWER ENTRY SHOULD BE NO MORE THAN 1/4" HIGHER THAN THE FINISHED FLOOR OF THE ROOM. THE ADAT SHOWER SHOULD BE INSTALLED INTO A RECESSED PIT 2 INCHES DEEP TO MEET CODE REQUIREMENTS.

2C. IT IS RECOMMENDED THAT A FLOOR DRAIN AT OR NEAR THE ENTRANCE TO ALL ADAT, ADAW AND WTR SHOWER FLOORS BE INCLUDED.

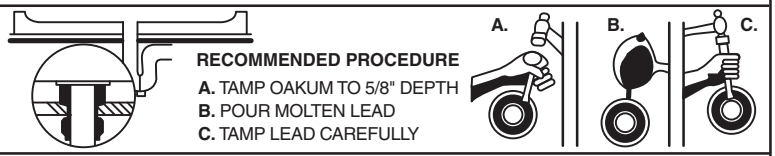


FAILURE TO INSTALL TERRAZZO ON A 1/2" MORTAR BED WILL VOID WARRANTY.

WARNING

3. DO NOT DROP UNIT OVER EXPOSED PIPE. IT IS ADVISABLE TO REMOVE DRAIN PIPE AND SET UNIT IN PLACE. INSERT PIPE THROUGH DRAIN IN FLOOR BACK INTO "P" TRAP.

TIGHTEN METAL CONNECTIONS WITH AN INTERNAL PIPE WRENCH.

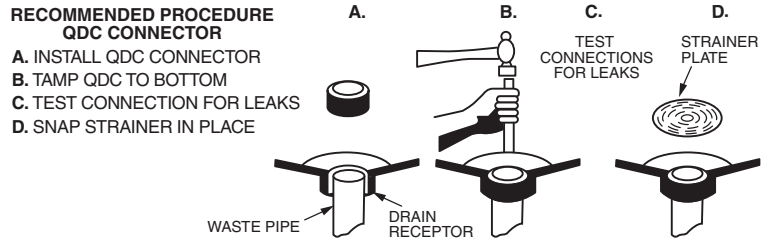


IF USING PLASTIC WASTE PIPE, FIT AND SOLVENT WELD.

4A. METHOD OF DRAIN CONNECTION: METAL WASTE PIPE

USE OAKAM AND MOLTEN LEAD.

THIS LEAD CAULKED JOINT PERMITS LIMITED MOVEMENTS SUCH AS NORMAL STRUCTURAL SETTLEMENT WITHOUT LEAKAGE.



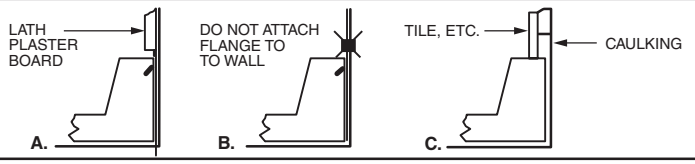
4B. METHOD OF DRAIN CONNECTION: PLASTIC WASTE PIPE

WHEN USING PLASTIC WASTE PIPE , IT IS NECESSARY TO USE THE QDC QUICK DRAIN CONNECTOR.

INSTALL PIPE THROUGH RECEPTOR.

LUBRICATE QDC CONNECTOR WITH SOAP, STRETCH QDC CONNECTOR OVER PIPE WITH LETTERS FACING UP.

TAMP CONNECTOR WITH A HAMMER AND PIECE OF WOOD. WORK AROUND CONNECTOR WITH A SERIES OF BLOWS UNTIL IT BOTTOMS. TOP OF PIPE SHOULD BE EVEN WITH TOP OF CONNECTOR.



WARNING: MODELS WITH TILING FLANGE OPTIONS

5A. DO NOT LET ROUGH WALL MATERIAL OVERLAP FLANGE.

5B. DO NOT ATTACH FLANGE TO BUILDING.

5C. LET FINISHED WALL (TILE, ETC) OVERLAP AND REST ON SHOULDER.

Sealers - New Installations

Immediately following installation of a new floor or thorough cleaning of an older floor, the floor can be sealed with a penetrating sealer. Such sealers are available at paint or tile stores and **must** state that they are approved for use on Terrazzo products. Sealers are not permanent and can be reapplied (after a thorough cleaning) approximately once a year, or as recommended by the manufacturer of the sealer.

RECOMMENDED CLEANING & MAINTENANCE PROCEDURES FOR TERRAZZO PRECAST SHOWER FLOORS AND MOP SERVICE BASINS

Regular Cleaning
To maintain the original terrazzo surface appearance, clean regularly with a liquid detergent such as Joy, Liquid Ajax, or Spic n Span (for the latter, prepare a solution containing 1/2 cup of Spic n Span in a gallon of water). Scrub with a stiff bristled, non-metallic scrub brush and then rinse thoroughly.

NOTE: Do *not* use any acid (ie, muratic) or cleaning agents that contain acid.

Special or Unusual Conditions

A. Scum on Surface caused by soap, makeup, etc.:	Use a cleaning powder, such as Ajax, plus lots of elbow grease.
B. Surface cleaning:	Heel marks, plaster, etc. may require abrasive removal. This can be done with a wet emery cloth. If emery cloth is ineffective, use an 80 to 100 grit aluminum oxide coated paper. Abrasive cloth or paper will result in a very faint grinding away of the floor surface.
C. Penetrated stains:	Stains such as caused by oil, putty, etc., may be removed by scouring with a cleanser and then soaking floor overnight, if need be, with a commercial bleach such as Linco, etc.

FIAT PRODUCTS®
LIMITED ONE YEAR WARRANTY

AS America, Inc. offers a limited warranty on Fiat Products to the original Purchaser consumer, both residential and commercial, that products of its own manufacture shall be free of defects in material and workmanship for a period of One Year.

Under this warranty Fiat Products will, at its sole discretion, upon receipt of a written claim and proof of purchase, either (1) repair the product, (2) replace the product or any part therein with a Fiat Product of equal or similar type and size, or (3) refund to the consumer the wholesale price of the product received by Fiat Products. If Fiat Products elects to refund the wholesale price to the consumer, Fiat Products shall have no further obligation to its wholesale customer, or any contractor with respect to such product. Goods proven to be defective will be replaced after proper inspection, but no claims for damages incurred or for work done thereon will be allowed. Replacements when supplied will be shipped at no cost to the consumer.

This warranty **does not apply** to local building code compliance. Since local building codes vary considerably, the purchaser of the product should check with a local building or plumbing contractor to ensure local code compliance before installation.

This warranty **will be void** if:
1) the product has been moved from its initial place of installation; 2) if it has been subjected to faulty maintenance, abuse, misuse, accident or other damage; 3) if it was not installed in accordance with Fiat Products instructions; or 4) if it has been modified in a manner inconsistent with the product as shipped by Fiat Products.

This warranty **DOES NOT COVER** any damages caused by the use of non-approved cleaners, improper installations or excessive abuse.

Fiat Products' right to repair or exchange the product under this warranty does not cover any labor or other costs of removal or installation including any costs of any surround material such as tile or marble.

Fiat Products is not responsible for any other incidental or consequential damages attributed to a product defect or to the repair or exchange of a defective product, all of which are expressly excluded from this warranty. (Some states or provinces do not allow the exclusion or limitation of implied warranties, so this exclusion may not apply to you.)

This warranty gives you specific rights. You may have other statutory rights that may vary from state to state or province to province, in which case this warranty does not affect such statutory rights.

SYMMONS® Symmetrix™

Service Sink Faucet S-2490, S-2490-CHKS

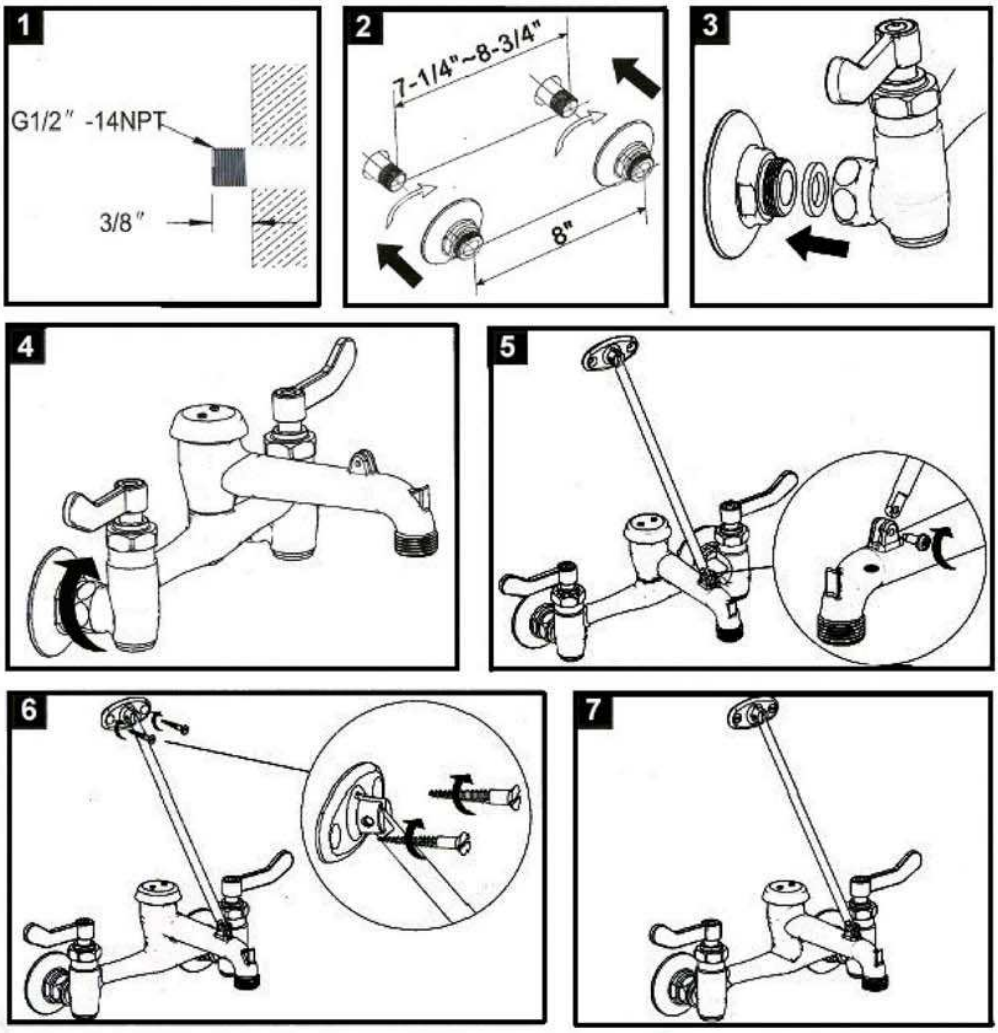
Installation Brief

Model Numbers

S-2490	Service sink faucet
S-2490-CHKS	Service sink faucet with integral checks

Tools & Materials

Caution - For installation with atmospheric vacuum breakers



Faucet should never be used in installations that are under continuous pressure when installed with spouts having atmospheric vacuum breakers (AVB'S). Therefore, never place a self closing, shut-off valve down stream of an AVB.

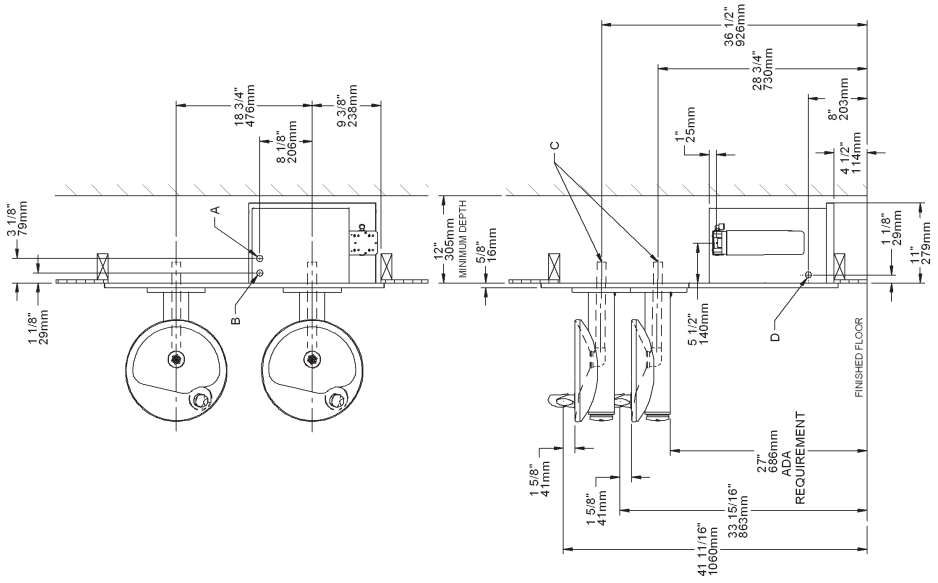
INSTALLER

⚠ CAUTION: Review these instructions before beginning installation. Be sure that installation conforms to all plumbing, electrical and other applicable codes.

⚠ WARNING: When installation is complete, ensure these instructions are left in the plastic bag provided inside the installed unit for future reference.



⚠ WARNING: Service to be performed by authorized service personnel only.

NOTE: It is common practice to ground electrical hardware such as telephones, computers and other devices to available water lines. This can, however, cause electrical feedback in the plumbing circuit, which results in an “electrolysis” effect occurring in the fountain. This may result in water which has a metallic taste to it or has a noticeable increase in the metallic content of the water.

When inspecting plumbing circuit, remember the line may be grounded some distance from the installation, and may occur outside the building or area in which the unit is being installed.

This condition can be avoided (in most cases) by using recommended materials during installation. Any drain fittings provided by the installer should be made of ***plastic*** which will *electronically isolate* the fountain from the remainder of the building’s plumbing circuits.

Model LRPB2-8RAC

Model LRPB2-8C

REQUIRED TOOLS AND MATERIALS

These tables show special tools and/or additional materials (not provided) which are necessary to complete installation of these units:

Special Tools

Item	Description	Quantity
	NONE	

Additional Materials

Item	Description	Quantity
1	Unplated copper inlet pipe	
2	Service Stop	

1. **Install chiller:** Remove front panel of chiller. **Remove and discard cardboard inner pack from between compressor and side panel.** Slide chiller onto the shelf and position it to the left as per dimensions in Figure 1.

   Note: Building construction must allow for adequate air flow on both sides, top and back of chiller. A minimum of 4" (102mm) on both sides and top is required. See chiller installation for additional instructions.

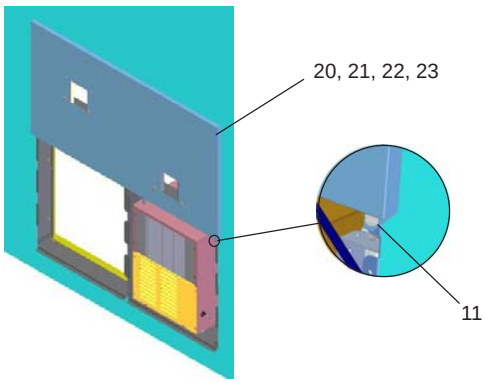
2. **Make** water supply connections. Install a shut-off valve and union connection to building water supply (valve and union not provided). Turn on water supply and flush the line thoroughly.

3. **ERPB Models:** Make connection between remote chiller and building supply line. Inlet port is marked on the chiller (1/4" O.D. copper tube). Bend the copper tube (provided) at an appropriate length from chiller to opening in frame. Install the in-line strainer (provided with chiller) by pushing it until it reaches a positive stop, approximately 3/4" (19mm) on the marked chiller inlet port. Connect building supply line to strainer. (See Figure 3)

   Caution: DO NOT SOLDER tubes inserted into the strainer as damage to o-rings may result.

4. **LRPB Models:** Mount filter head assembly to side of chiller (See Figure 4). Make connections between filter and building supply line (3/8" O.D. tube not provided). Inlet port is marked on the chiller (1/4" O. D. copper tube). Install a 1/4" x 1/4" union (provided) on the marked chiller inlet port. Insert the 1/4" poly tubing (provided) into the fitting on filter and connect the union to the chiller. (See Figure 4)

   Caution: DO NOT SOLDER tubes inserted into the strainer as damage to o-rings may result.



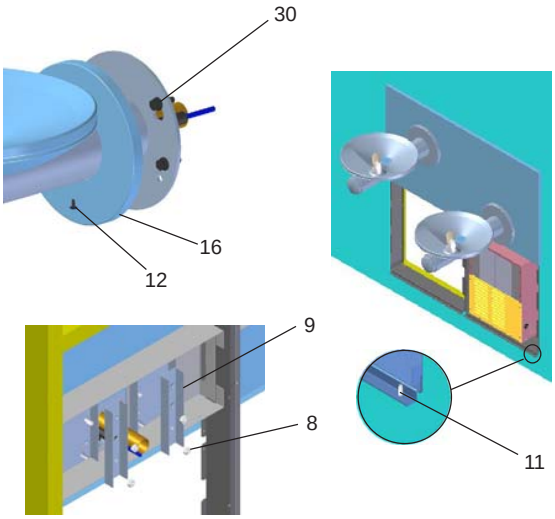


Figure 5 - Upper Panel Installation

View From Rear

Figure 6 - Fountain Installation

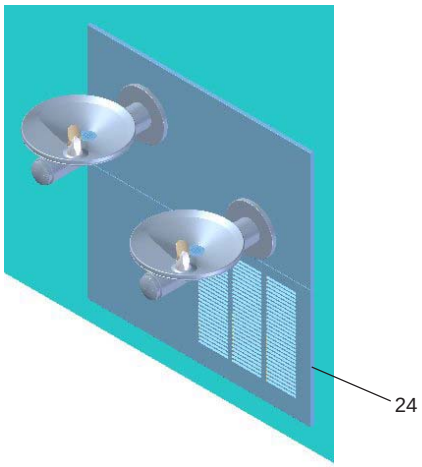

Figure 7 - Lower Panel Installation

5. **Hang** the upper panel on the mounting frame hanger. Be sure that the panel is engaged with hanger at the top of frame before releasing it. Align holes in the panel with holes in the mounting frame. Install two (2) #10-24 x 5/8" (16mm) screws (Item 11 - Figure 5) in holes and tighten securely.

6. **Install** the fountain. Remove the screw (Item 12) from cover plate and slide cover plate (Item 16) toward basin. Mount the fountain to the upper panel and frame with (4) 5/16" x 1" (25mm) bolts (Item 27), brackets (Item 9) and nuts (Item 8) provided. Tighten securely. **Brackets (Item 9) must be installed as shown to properly support fountains.** (See Figure 6)

7. **Attach waste tube** (1-1/4" O.D.) to 1-1/4" O.D. slip trap (provided by others).

8. **ERPB Models:** Make connections between remote chiller outlet tube and fountain. Outlet port is marked on the chiller (1/4" O.D. copper tube). Install a 1/4" x 1/4" tee (provided) on the marked chiller outlet port. Insert the 1/4" poly tubing coming from the fountain into the union. Turn on the water supply and check for leaks.

   CAUTION: DO NOT SOLDER tubes inserted into the strainer as damage to o-rings may result.

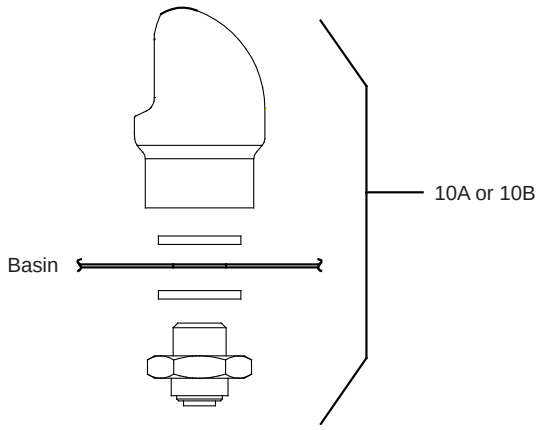
   LRPB Models: Make connections between remote chiller outlet tube and fountain. Outlet port is marked on the chiller (1/4" O.D. copper tube). Install a 1/4" x 1/4" tee (provided) on the marked chiller outlet port. Insert the 1/4" poly tubing coming from the fountain into the union.

   CAUTION: DO NOT SOLDER tubes inserted into the strainer as damage to o-rings may result.

9. **These products are designed to operate on 20-105 PSI supply line pressure.** If inlet pressure is above 105 PSI, a pressure regulator must be installed in the supply line.

   CAUTION: Any damage caused by connecting these products to a supply line with pressure lower than 20 PSI or higher than 105 PSI IS NOT covered under warranty.

10. **Make electrical connections to the chiller.** See chiller instructions.



11. **Check stream height from bubbler.** Stream height is factory set at 35 PSI. If supply pressure varies greatly from this, remove push button (Item 3 - Figure 11) and adjust the screw on the regulator (Item 4 - Figure 11). To remove push button, remove set screw from bottom of sleeve (Item 6). Insert a small punch in screw hole and push up while grasping the push button and pull forward removing the push button. Clockwise adjustment will raise stream height and counterclockwise movement will lower stream height. For best adjustment stream should hit basin approximately 6-1/2" from the bubbler. Reassemble push button by pushing in on button until the push button catches in the sleeve. Reinstall the setscrew (Item 6) in the sleeve (Item 17).

12. **Mount lower panel.** Loosen the three (3) #10-24 x 5/8" (16mm) screws (Item 11 - Figure 6) at frame bottom lip. Slide upper tongue of lower panel under lower edge of already installed upper panel. Tighten previously loosened screws securely. (See Figure 7)

ERPB2-8C, ERPB2-8RAC, ERPBV2-8C, ERPBV2-8RAC, LRPB2-8C, LRPB2-8RAC, ERPB2-8C*2C, ERPB2-8C*3C

30	75560C	Screw - 5/16-18 x 1.00 HHMS

Installation Package

The components for installation are packed in three separate boxes, regardless of the type of unit being installed. The boxes contain the following:

Box No. 1: Wall Frame(s)
Box No. 2: Remote Chiller, ECH8
Box No. 3: Fountain Arm and Panels

Additional materials, as noted in the Parts List, are also shipped in these boxes.

TROUBLESHOOTING & MAINTENANCE

Orifice Assembly: Mineral deposits on orifice can cause water flow to spurt or not regulate. Mineral deposits may be removed from the orifice by poking with a small round file not over 1/8" diameter, or using a small diameter wire.

CAUTION: DO NOT file or cut orifice material.

Stream Regulator: If orifice is clean, regulate flow as in Step 11 of the installation instructions. If replacement is necessary, see parts list for correct regulator part number.

Actuation of Quick Connect Water Fittings:
Cooler is provided with lead-free connectors which utilize an o-ring water seal. To remove tubing from the fitting, relieve water pressure, push in on the gray collar while pulling on the tubing. (See Figure 13) To insert tubing, push tube straight into fitting until it reaches a positive stop approximately 3/4").

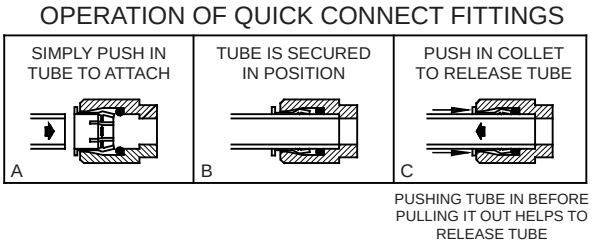

Figure 13 – Quick Connect Fittings

WEIL VERTICAL WASTEWATER PUMP
INSTALLATION OPERATION MAINTENANCE

INTRODUCTION

This manual contains instruction for installation, operation and maintenance of your vertical wastewater pump. Read and study this manual before using the equipment. The pump is a well designed and sturdily constructed machine. When properly installed and given reasonable care and maintenance, it will give many years of service.

SAFETY PRECAUTIONS

Always disconnect the electrical power supply to the motor before working on the unit. **Failure to do so can cause severe electrical shock or death.** If the floor is wet or flooded, do not walk on floor until the electrical power has been disconnected. Exercise caution when working in the exposed areas of rotating parts.

RECEIVING

Immediately upon arrival, the equipment should be checked for any shortages and/or damage. Any shortages or damage should be noted on the bill of lading and freight bill and promptly reported to the transportation company. Claims for shortages or damage must be made in writing to Weil Pump Company Inc., Cedarburg, Wisconsin within 14 days of receipt of equipment.

STORAGE

Pumping equipment should be installed and put into operation as soon as possible. If it is necessary to store the equipment for extended periods, precautions should be taken to prevent corrosion or oxidation. It is recommended that the equipment be stored indoors. The storage area should be dry and have a relatively constant temperature. Exposed machined surfaces should be coated with a rust preventative. The entire unit should be sealed in heavy plastic bag. A desiccant should be placed in the bag before it is sealed.

During storage, the plastic bag should be opened at least once a month, and the rotating assembly of the pump turned several times by hand. This helps prevent point of contact corrosion and maintains rotational integrity. Add desiccant before the bag is resealed. For additional information regarding rust prevention, refer to the American Society for Metals Handbook, under **"Rust Prevention Compounds."**

INSTALLATION

Clean wet well thoroughly before installing pump. Sand, mud, cinders, etc. are abrasives which will damage the sleeve bearings.

The pump is ready for installation as shipped. Except as noted above, no lubrication or adjustment is required before initial operation.

Raise and lower pump with steel chain or lifting strap connected to the motor pedestal. **Do not use the motor for this purpose.** Set the pump in its final location before installing motor and connecting the electrical power. Provide adequate headroom above the wet well for future maintenance of the pump. Install the associated level controls so that the pump is properly immersed. For **intermittent service**, the minimum liquid level must be at least 1" above the pump case.

MOUNTING MOTOR

(Refer to Figures 1 & 2)

The pump and motor are shipped from the factory with the flexible coupling halves mounted on the pump and motor shafts as shown in figure 1. Before proceeding, make certain that the mounting parts are clean and free of debris and foreign matter.

1. Place the rubber spider between the jaws on the pump coupling half.
2. Set the motor in place on the motor pedestal, ensuring that the motor coupling jaws line up with the slots in the rubber spider. Be sure that the motor male register fits properly into the motor pedestal female register and that the fastening holes are aligned. Bolt the motor to motor pedestal.

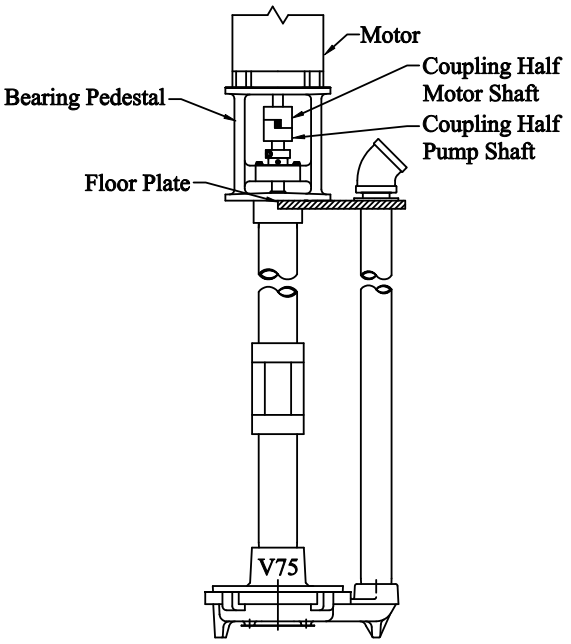

Figure 1

3. Position the coupling bodies equal distance ontheir respective shafts, leaving 1/16" between each jaw and the body.
4. Check for angular and parallel coupling alignment at 2 points, 90° apart as shown in Figure 2. If misalignment occurs, reposition motor as required.

WARNING

UNDER NO CIRCUMSTANCES SHOULD THE EQUIPMENT BE OPERATED WITH MISALIGNMENT. DAMAGE MAY RESULT TO THE MOTOR AND PUMP BEARINGS. DOING SO WILL VOID THE WARRANTY.

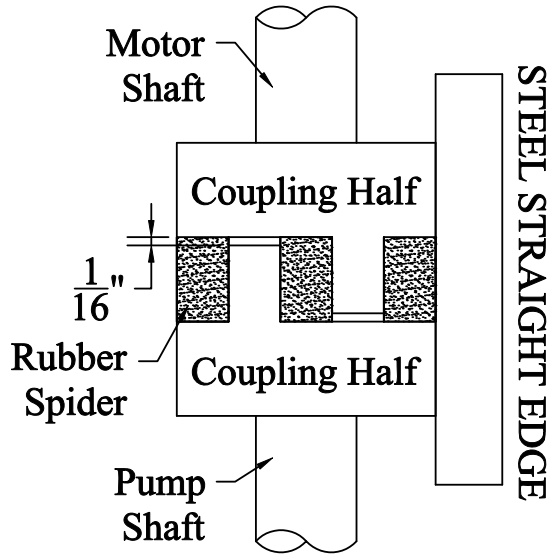

Figure 2

PIPING

(Refer to Figure 1)

1. Piping should be as short as possible using a minimum number of fittings to avoid excessive friction loss.
2. Pipes should line up "naturally" with the pump discharge and should never be forced together.
3. Discharge piping must be supported by appropriate supports.
4. In a duplex installation, each pump must have its own check valve.

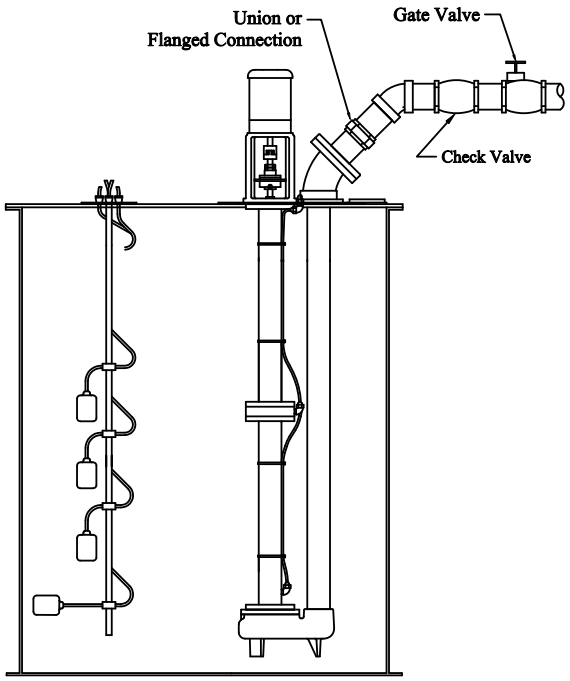

Figure 3

CAUTION

Piping not properly aligned and supported can cause the shaft to bind, resulting in bearing wear, vibration and can cause damage to the impeller and casing.

After piping is completed, turn shaft by hand to check that shaft turns freely. If shaft binds, recheck coupling alignment and piping connections.

START-UP PROCEDURE

Before placing pump into general operation, check the following items to insure that no damage will occur to pump motor.

1. Turn shaft manually to ensure it is turning freely.
2. Check voltage, phase, and frequency of the motor, making sure that the same is supplied to unit.
3. Make sure there is proper motor circuit protection.
4. Review piping installation, per "Piping" instructions.
5. Recheck basin to make sure it is free of debris.
6. With pump laying down on its side, apply momentary power to confirm proper impeller rotation.

7. Verify proper operation in a "wet" test startup: check GPM, pressure, amps, volts, audible noise and vibration.
8. Check measured parameters to design conditions.

SAFETY PRECAUTIONS

1. Disconnect and lockout the electrical supply to the motor before working on the unit, or if maintenance is to be performed on the pump in a flooded area.
2. Exercise caution when working in the exposed areas of the rotating parts.
3. In case of severe vibration or unusual noise, shut off pump at once and determine the cause.
4. If frequent tripping of the overload protection occurs, troubleshoot the pump to correct the problem.

TROUBLESHOOTING PUMP

Problem	Probable Cause
Insufficient or No Water Flow	1. Blown fuses or open circuit breakers 2. Poor switch contact 3. Discharge head too high 4. Clogged or damaged impeller 5. Binding shaft 6. Check or gate valve closed 7. Water level below casing
Insufficient Pressure	1. Low voltage 2. Clogged or damaged impeller 3. Motor incorrectly wired 4. Pump may be air-bound
Noisy or Vibrating Pump	1. Misaligned or bent shaft 2. Worn bearings 3. Lack of lubrication 4. Water level below casing 5. Impeller rubbing or damaged 6. Clogged impeller

LUBRICATION

Proper pump lubrication is a primary factor in satisfactory pump operation. Follow lubrication instructions carefully.
The sleeve bearings are lubricated by means of alemite grease fittings. These bearings should be serviced once per month or as needed, depending on operational conditions.
The motor has sealed bearings and requires no lubrication unless otherwise specified on the nameplate.

Recommended Lubricants - The use of a high grade multipurpose lithium No. 1 or a calcium complex No.1 soap grease is recommended. Both greases mentioned have excellent water resistant qualities, and have good mechanical and chemical stability.

PERIODIC INSPECTION

Periodic inspection of the pump should be performed at six month intervals. The pump should be cleaned of accumulated abrasive particles and debris. The wet well should also be cleaned of accumulated abrasive particles.

Check the motor housing and the seal chamber for moisture in the following manner:

1. Loosen set screws in pump or motor couplings.
2. Check voltage, phase, and frequency of the motor, making sure that the same is supplied to the unit.

Also check the following items:

1. See that the motor comes up to speed and maintains a constant rotation rate.
2. If pump has been idle for a long time, momentarily actuate motor manually to insure pump is running satisfactorily.
3. Wipe off any moisture, dirt or oil from motor and switch.
4. See that pump empties basin to predetermined level.

IMPORTANT NOTICE
For warranty consideration contact your local Weil representative before disassembly or repair.

NOTE
See separate instructions for pump assembly and disassembly.

KF

Impeller Adjustment

The impeller has been adjusted at the factory to provide a 0.040" to 0.060" clearance between it and the case. Do not change this clearance unless rubbing takes place or a drop in pump performance is observed. To make adjustments, proceed as follows:

1. Remove coupling guard.
2. Hold thrust collar (72A) stationary while loosening locking nut (66).
3. Loosen set screw in thrust collar and in lower half of coupling (44).
4. While holding the shaft (6) stationary with the coupling, turn the thrust collar clockwise to raise and counter clockwise to lower the rotating assembly. One quarter turn equals approximately 0.020". One of the set screw holes in the thrust collar must line up with the slot in the shaft.
5. Tighten set screw in thrust collar and in lower coupling half (44) when proper clearance has been set.
6. Rotate shaft by hand after tightening set screws to make sure that rotating parts are running free.
7. Tighten locking nut while holding thrust collar stationary.
8. Reinstall coupling guard.

Disassembly

Disassemble only what is required for inspection or maintenance of pump. When ordering replacement parts, give the Weil representative in your area the pump model number and the manufactures number found under "OWNER'S INFORMATION" on page 1 of this manual or on the pump name plate. To disassemble, proceed as follows:

1. Pump down liquid level in basin and close gate valve in discharge line of pump.
2. Disconnect and lockout electrical supply to motor.

Caution
Make certain that electrical power supply cannot be accidentally turned on while pump is being serviced.

3. Remove coupling guard.
4. Remove motor (4) but do not remove motor half coupling (42). Remove spider coupling (42A). Loosen set screws in pump half of coupling (44) and remove coupling and key (46).
5. Disconnect piping at flange nearest to pump discharge elbow (105).
6. Remove floor plate mounting screws and lift pump out of basin. Lay pump across saw horses or similar support to facilitate dismantling.
7. Loosen and remove lubrication tubing (L) from case (1) and intermediate bearing housing(s) (193). DO NOT disconnect tubing at upper fitting or remove cable tie. If pump has intermediate bearings, mark legs (101) at intermediate bearing housing to assure proper alignment of lubrication lines (L) during re-assembly.
8. Remove locking nut (66) (this thread is right hand) and snap ring holding ball bearing (18). Loosen set screw and remove thrust collar and ball bearing.
9. Remove screws holding suction cover (9) to case (1).
10. Remove shaft (6) and impeller (2) from bottom of pump.
11. Remove impeller locknut (24). Place a wooden block on back shroud of impeller and tap gently until impeller is free.

Important
Protect threads if shaft is to be reused. Also file off all burrs on shaft made by set screws.

12. Remove screws holding case to lower leg.
13. Remove Packing Gland (17) and Packing (13).
14. If pump has intermediate bearing housing, remove screws and disassemble lower bearing housing.
15. Press sleeve bearing (193B) out of intermediate bearing housing. Press sleeve bearing (1B) out of case.

Reassembly

Reverse the above procedure with the following additions:

1. Flush out bearing bore with an EPA approved degreaser removing old grease and any abrasives.
2. Be certain that all parts that have been removed are clean and that all burrs are removed.
3. Replace O-rings (47).
4. Assemble sleeve bearings as follows:
   a. Thoroughly clean bores of bearing housings (71) & (193). Avoid abrasives.
   b. Remove all burrs from bearing bores and registers for tongue and groove connections.
   c. Press sleeve bearings (71B) & (193B) into their respective housings (71) & (193). Lubrication grooves must face up and holes in sleeve bearings must line up with lubrication holes in intermediate bearing housing (193) and lower bearing housing (71).
5. When assembly is complete, rotate shaft (6) manually to check for binding and check impeller to suction cover clearance. If adjustment is needed, refer to paragraph entitled "IMPELLER ADJUSTMENT".
6. Locate all grease fittings and lubricate per lubrication paragraph before placing pump into service.

Note
See separate Vertical Sump Pump instructions for general Installation Operation and Maintenance.

ESP-1 / ESP-2 ELEVATOR SUMP PUMP

W1411OSS	WEIL	ONE (1) WEIL 1411-OSS ELEVATOR PUMP SYSTEM. THE SYSTEM WILL CONSIST OF A 2” SUBMERSIBLE PUMP, ON/OFF PUMP SWITCH, AND ALARM SYSTEM. THE PUMP WILL BE POWERED BY A 1/2HP, 1750RPM, 115/1 MOTOR WITH 15’ 3 CONDUCTOR CABLE AND A GROUNDED PLUG.

INTRODUCTION

This manual contains instruction for installation, operation and maintenance of your pump equipment. Read and study this manual before using the equipment. The pump is a well designed and sturdily constructed machine. When properly installed and given reasonable care and maintenance, it will give many years of service.

SAFETY PRECAUTIONS

Always disconnect the electrical power supply to the motor before working on the unit. **Failure to do so can cause severe electrical shock or death.** If the basement floor is wet or flooded, do not walk on floor until the electrical power has been disconnected. Exercise caution when working in the exposed areas of rotating parts.

RECEIVING

Immediately upon arrival, the equipment should be checked for any shortages and/or damage. Any shortages or damage should be noted on the bill of lading and freight bill, and promptly reported to the Transportation Company. Claims for shortages or damage must be made in writing to Weil Pump Company Inc., Cedarburg, Wisconsin within 14 days of receipt of equipment.

STORAGE

Pumping equipment should be installed and put into operation as soon as possible. If it is necessary to store the equipment for extended periods, precautions should be taken to prevent corrosion or oxidation. It is recommended that the equipment be stored indoors. The storage area should be dry and have a relatively constant temperature. Exposed machined surfaces should be coated with a rust preventative. The entire unit should be sealed in heavy plastic bag. A desiccant should be placed in the bag before it is sealed. Before sealing the bag, arrange the power cable, and moisture/temperature sensor cable, (if so equipped) in gently curved loops to prevent cables from taking a permanent set.

During storage, the plastic bag should be opened at least once a month, and the rotating assembly of the pump turned several times by hand. This helps prevent point of contact corrosion and maintains rotational integrity. Add desiccant before the bag is resealed. For additional information regarding rust prevention, refer to the American Society for Metals Handbook, under **"Rust Prevention Compounds."**

INSTALLATION

Clean wet well thoroughly before installing pump. Sand, mud, cinders, etc. are abrasives which will damage the mechanical seals.

The pump is ready for installation as shipped. Except as noted above, no lubrication or adjustment is required before initial operation.

Raise and lower the unit by means of a chain or steel cable fastened to the lifting handle provided. **Do not raise, lower, or support the unit by means of the electrical power cable or the moisture sensor cable.** When moving the pump, avoid putting strain on the electrical cables. Set the pump in its final location before connecting the cable(s). Provide adequate headroom above the wet well for future maintenance of the equipment. Install the associated level controls so that the pump is properly immersed. for **intermittent service**, the minimum liquid level must be at least 1" above the pump case.

POWER CABLE

The electrical characteristics shown on the pump nameplate describes the power supply required to operate the pump motor. The user is responsible for providing appropriate branch circuit, motor starter, and overload protection in accordance with local code requirements.

Electrical connections made in the pit, even though above the highest water level, must be sealed to prevent moisture penetration into power or sensor cables through junction boxes or other. Wiring diagrams for the pump motor are provided. It is important to make connections according to the diagram provided. Incorrect electrical connections will void the warranty.

PIPING

(Refer to Figure 1)

1. Piping should be as short as possible using a minimum number of fittings to avoid excessive friction loss.
2. Pipes should line up "naturally" with the pump discharge and should never be forced together.
3. Discharge piping must be supported by appropriate supports.
4. In a duplex installation, each pump must have its own check valve.

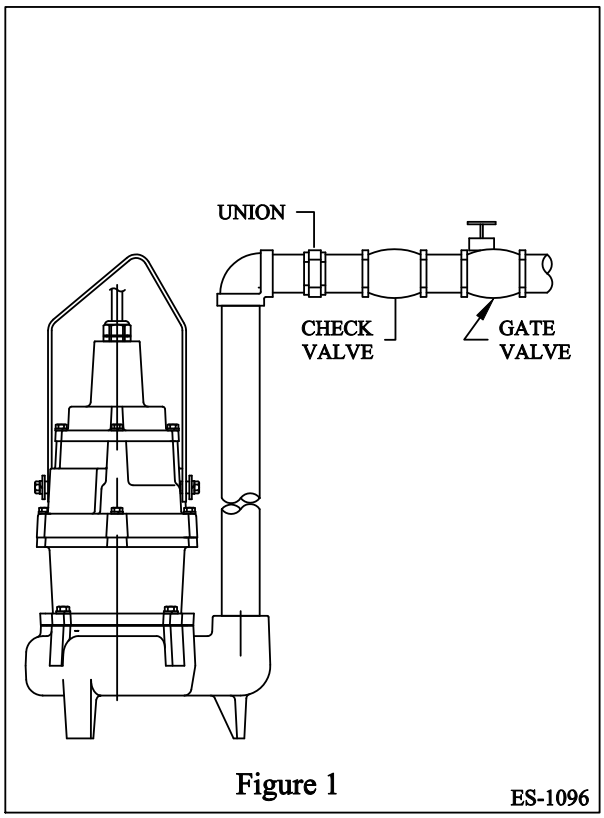

Figure 1

ES-1096

MOISTURE SENSOR OPTION

(Refer to Figure 2)

The pump is equipped with a moisture sensor when this option is ordered. Connect the moisture sensor to the Weil Alarm-Test Panel as shown in Figure 2. Power supplied to the Alarm-Test Panel must be 115 volts, regardless of the voltage supplied to the pump motor.

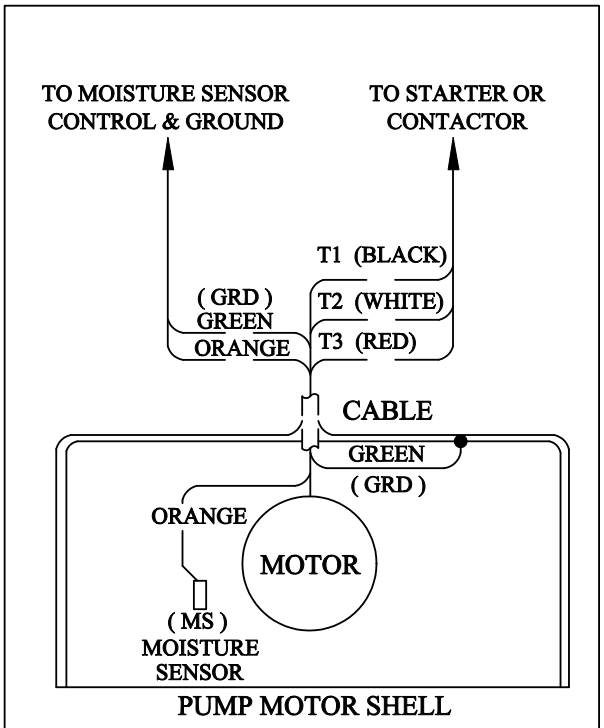

Figure 2

START-UP PROCEDURE

Before placing pump into general operation, check the following items to insure that no damage will occur to pump motor.

1. Turn shaft manually to ensure it is turning freely.
2. Check voltage, phase, and frequency of the motor, making sure that the same is supplied to unit.
3. Make sure there is proper motor circuit protection.
4. Review piping installation, per "Piping" instructions.
5. Recheck basin to make sure it is free of debris.
6. With pump laying down on its side, apply momentary power to confirm proper impeller rotation.
7. Verify proper operation in a "wet" test startup: check GPM, Pressure, amps, volts, audible noise and vibration.
8. Check measured parameters to design conditions.

SAFETY PRECAUTIONS

1. Disconnect and lockout the electrical supply to the motor before working on the unit, or if maintenance is to be performed on the pump in a flooded area.
2. Exercise caution when working in the exposed areas of the rotating parts.
3. In case of severe vibration or unusual noise, shut off pump at once and determine the case.
4. If frequent tripping of the overload protection occurs, troubleshoot the pump to correct the problem.

TROUBLESHOOTING PUMP

Problem	Probable Cause
Insufficient or No Water Flow	1. Blown fuses or open circuit breakers 2. Poor switch contact 3. Discharge head too high 4. Clogged or damaged impeller 5. Binding shaft 6. Check or gate valve closed 7. Water level below casing
Insufficient pressure	1. Low voltage 2. Clogged or damaged impeller 3. Motor incorrectly wired 4. Pump maybe air-bound
Noisy or Vibrating Pump	1. Misaligned or bent shaft 2. Worn bearings 3. Lack of lubrication 4. Water level below casing 5. Impeller rubbing or damaged 6. Clogged impeller

NOTE

Submersible motors have an air relief slot on the lower mounting flange area. This slot is to prevent air lock. Under normal operation water will spray out of the air relief slot. The normal water level should be above the slot at shut off.

PERIODIC INSPECTION

Periodic inspection of the pump should be performed at six month intervals. The pump should be cleaned of accumulated abrasive particles and debris. The wet well should also be cleaned of accumulated abrasive particles.

Check the motor housing and the seal chamber for moisture in the following manner:

1. Place the pump in a horizontal position in a V-block with the seal chamber plugs facing downward.
2. Remove the plugs and drain the contents of the seal chamber in a transparent container and allow the drained liquid to settle.
3. If no water settles to the bottom of the container, the chamber can be refilled with clean oil and the plugs replaced.
4. If water settles in the container, the source of the liquid must be determined and worn and/or damaged seals, O-rings, etc., must be replaced.
5. Turn the pump over, remove the motor shell plug, drain the motor housing into a transparent container.
6. If no liquid is present, replace the plug.
7. If oil or oil and water are present, the upper seal must be inspected.
8. If only water is present the leakage source is most likely in the motor housing and the condition of the O-rings should be inspected.

REPLACEMENT PUMPS

Single phase units have starting modules built into the motor. When replacing existing pumps, check for any existing external modules, control panel mounted or separately mounted. These must be removed or bypassed for proper operation of the pumping unit.

IMPORTANT NOTICE

For warranty consideration contact your local Weil representative before disassembly or repair.

NOTE

See seperate instructions for pump assembly and disassembly.

WEIL SUBMERSIBLE WASTEWATER PUMP
INSTALLATION OPERATION MAINTENANCE

INTRODUCTION

This manual contains instruction for installation, operation and maintenance of your pump equipment. Read and study this manual before using the equipment. The pump is a well designed and sturdily constructed machine. When properly installed and given reasonable care and maintenance, it will give many years of service.

SAFETY PRECAUTIONS

Always disconnect the electrical power supply to the motor before working on the unit. **Failure to do so can cause severe electrical shock or death.** If the basement floor is wet or flooded, do not walk on floor until the electrical power has been disconnected. Exercise caution when working in the exposed areas of rotating parts.

RECEIVING

Immediately upon arrival, the equipment should be checked for any shortages and/or damage. Any shortages or damage should be noted on the bill of lading and freight bill, and promptly reported to the Transportation Company. Claims for shortages or damage must be made in writing to Weil Pump Company Inc., Cedarburg, Wisconsin within 14 days of receipt of equipment.

STORAGE

Pumping equipment should be installed and put into operation as soon as possible. If it is necessary to store the equipment for extended periods, precautions should be taken to prevent corrosion or oxidation. It is recommended that the equipment be stored indoors. The storage area should be dry and have a relatively constant temperature. Exposed machined surfaces should be coated with a rust preventative. The entire unit should be sealed in heavy plastic bag. A desiccant should be placed in the bag before it is sealed. Before sealing the bag, arrange the power cable, and moisture/temperature sensor cable, (if so equipped) in gently curved loops to prevent cables from taking a permanent set.

During storage, the plastic bag should be opened at least once a month, and the rotating assembly of the pump turned several times by hand. This helps prevent point of contact corrosion and maintains rotational integrity. Add desiccant before the bag is resealed. For additional information regarding rust prevention, refer to the American Society for Metals Handbook, under **"Rust Prevention Compounds."**

EQUIPMENT NOT YET ORDERED.

INSTALLATION

Clean wet well thoroughly before installing pump. Sand, mud, cinders, etc. are abrasives which will damage the mechanical seals.

The pump is ready for installation as shipped. Except as noted above, no lubrication or adjustment is required before initial operation.

Raise and lower the unit by means of a chain or steel cable fastened to the lifting handle provided. **Do not raise, lower, or support the unit by means of the electrical power cable or the moisture sensor cable.** When moving the pump, avoid putting strain on the electrical cables. Set the pump in its final location before connecting the cable(s). Provide adequate headroom above the wet well for future maintenance of the equipment. Install the associated level controls so that the pump is properly immersed. for **intermittent service**, the minimum liquid level must be at least 1" above the pump case.

POWER CABLE

The electrical characteristics shown on the pump nameplate describes the power supply required to operate the pump motor. The user is responsible for providing appropriate branch circuit, motor starter, and overload protection in accordance with local code requirements.

Electrical connections made in the pit, even though above the highest water level, must be sealed to prevent moisture penetration into power or sensor cables through junction boxes or other. Wiring diagrams for the pump motor are provided. It is important to make connections according to the diagram provided. Incorrect electrical connections will void the warranty.

PIPING

(Refer to Figure 1)

1. Piping should be as short as possible using a minimum number of fittings to avoid excessive friction loss.
2. Pipes should line up "naturally" with the pump discharge and should never be forced together.
3. Discharge piping must be supported by appropriate supports.
4. In a duplex installation, each pump must have its own check valve.

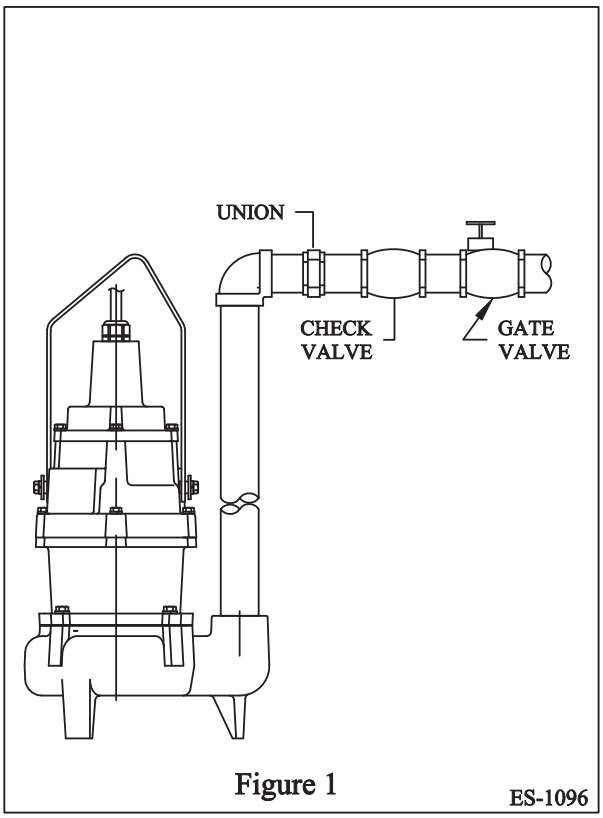

Figure 1

ES-1096

MOISTURE SENSOR OPTION

(Refer to Figure 2)

The pump is equipped with a moisture sensor when this option is ordered. Connect the moisture sensor to the Weil Alarm-Test Panel as shown in Figure 2. Power supplied to the Alarm-Test Panel must be 115 volts, regardless of the voltage supplied to the pump motor.

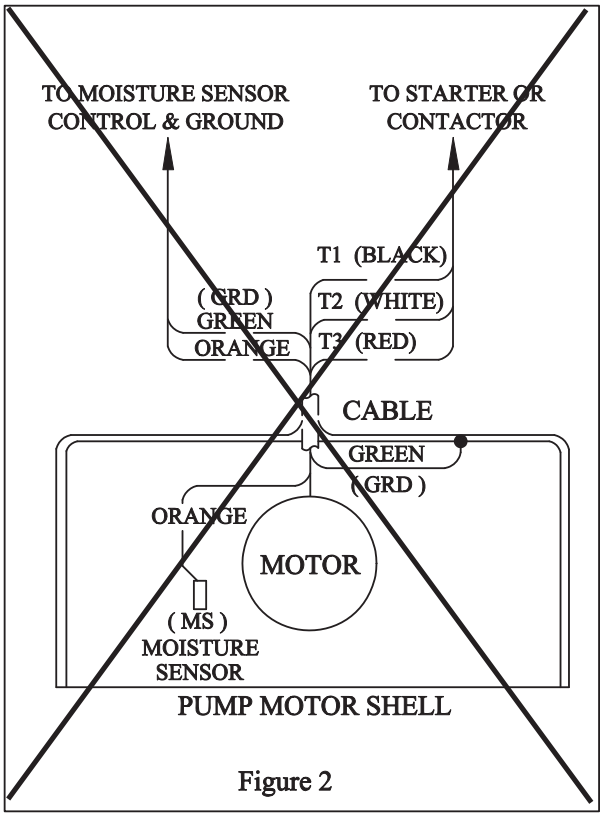

Figure 2

START-UP PROCEDURE

Before placing pump into general operation, check the following items to insure that no damage will occur to pump motor.

1. Turn shaft manually to ensure it is turning freely.
2. Check voltage, phase, and frequency of the motor, making sure that the same is supplied to unit.
3. Make sure there is proper motor circuit protection.
4. Review piping installation, per "Piping" instructions.
5. Recheck basin to make sure it is free of debris.
6. With pump laying down on its side, apply momentary power to confirm proper impeller rotation.
7. Verify proper operation in a "wet" test startup: check GPM, Pressure, amps, volts, audible noise and vibration.
8. Check measured parameters to design conditions.

FOR SUBMITTAL PURPOSES ONLY.
EQUIPMENT NOT YET ORDERED.

SAFETY PRECAUTIONS

1. Disconnect and lockout the electrical supply to the motor before working on the unit, or if maintenance is to be performed on the pump in a flooded area.
2. Exercise caution when working in the exposed areas of the rotating parts.
3. In case of severe vibration or unusual noise, shut off pump at once and determine the case.
4. If frequent tripping of the overload protection occurs, troubleshoot the pump to correct the problem.

TROUBLESHOOTING PUMP

Problem	Probable Cause
Insufficient or No Water Flow	1. Blown fuses or open circuit breakers 2. Poor switch contact 3. Discharge head too high 4. Clogged or damaged impeller 5. Binding shaft 6. Check or gate valve closed 7. Water level below casing
Insufficient pressure	1. Low voltage 2. Clogged or damaged impeller 3. Motor incorrectly wired 4. Pump maybe air-bound
Noisy or Vibrating Pump	1. Misaligned or bent shaft 2. Worn bearings 3. Lack of lubrication 4. Water level below casing 5. Impeller rubbing or damaged 6. Clogged impeller

NOTE

Submersible motors have an air relief slot on the lower mounting flange area. This slot is to prevent air lock. Under normal operation water will spray out of the air relief slot. The normal water level should be above the slot at shut off.

PERIODIC INSPECTION

Periodic inspection of the pump should be performed at six month intervals. The pump should be cleaned of accumulated abrasive particles and debris. The wet well should also be cleaned of accumulated abrasive particles.

Check the motor housing and the seal chamber for moisture in the following manner:

1. Place the pump in a horizontal position in a V-block with the seal chamber plugs facing downward.
2. Remove the plugs and drain the contents of the seal chamber in a transparent container and allow the drained liquid to settle.
3. If no water settles to the bottom of the container, the chamber can be refilled with clean oil and the plugs replaced.
4. If water settles in the container, the source of the liquid must be determined and worn and/or damaged seals, O-rings, etc., must be replaced.
5. Turn the pump over, remove the motor shell plug, drain the motor housing into a transparent container.
6. If no liquid is present, replace the plug.
7. If oil or oil and water are present, the upper seal must be inspected.
8. If only water is present the leakage source is most likely in the motor housing and the condition of the O-rings should be inspected.

REPLACEMENT PUMPS

Single phase units have starting modules built into the motor. When replacing existing pumps, check for any existing external modules, control panel mounted or separately mounted. These must be removed or bypassed for proper operation of the pumping unit.

209		Strainer (1400 Models Only)
		Lift Handle

Items marked with (•) are included in repair kit 206.706.001 for pumps with motor W-9724.

FOR SUBMITTAL PURPOSES ONLY.
EQUIPMENT NOT YET ORDERED.

ASSEMBLY AND DISASSEMBLY INSTRUCTIONS

1. Disconnect and lock out the electrical supply to the motor before working on the unit.
2. Lift the pump from the pit with a steel cable or chain attached to the lifting handle at the top of the pump. DO NOT USE THE POWER CABLE FOR THIS PURPOSE.
3. Move the pump to a clean and dry location.

LUBRICATION

The Weil submersible pump is equipped with double sealed prelubricated bearings which require no further lubrication.

CLEANING OR REPLACEMENT OF IMPELLER

1. With the pump standing vertically, remove the screws holding the motor (4) to the case (1).
2. Carefully lift the motor assembly out of the case.
3. Lay the unit on its side in V-blocks with the impeller (2) overhanging.
4. Remove the impeller retaining screw (26) and washer (25) with a socket wrench.
5. Tap the impeller hub with a soft hammer to loosen and pry the impeller off the shaft using opposed pry bars. Set aside the impeller key (32). Do not remove the mechanical seal parts above the impeller.
6. Scrape off any deposits on the impeller and inspect it for any breaks, cracks, or wear.
7. To reassemble the impeller on the shaft, insert the impeller key in its seat and coat exposed areas of shaft with anti-seize compound. Align the impeller keyway with the key and carefully push the impeller onto the shaft, tapping gently with a soft hammer. Be sure that the mechanical seal spring fits over the shoulder on the back of the impeller.
8. When the impeller is seated on the shaft, place washer over the end of the shaft and install and tighten the impeller retaining screw. Rotate the impeller by hand to ensure that it turns freely.
9. Set the motor assembly into the case and insert and tighten the screw.

REPLACEMENT OF MECHANICAL SEAL

1. Disassemble case and remove impeller as described in "CLEANING OR REPLACEMENT OF IMPELLER".
2. Pry the mechanical seal off the shaft with opposed straight bladed screwdrivers. TAKE CARE NOT TO SCORE THE SHAFT.
3. Clean the shaft and the seat for the stationary ring of any adhering particles or deposits before installing the replacement seal.
4. Check the replacement seal to ensure that it is the same type, shaft size and [illegible] the original seal.
5. Apply a thin coating of lubricating oil or glycerin to the stationary ring. TAKE CARE NOT TO MAR OR DAMAGE THE SEAL FACE.
6. Position the stationary ring with its face toward the end of the shaft. Using a seal pusher, gently press the seal ring into its seat until it is fully seated. APPLY EVEN PRESSURE TO SEAL FACE.
7. Install the rotating ring with spring and bellows over the shaft until seal faces touch.
8. Assemble the impeller and case as described under "CLEANING OR REPLACEMENT OF IMPELLER."

DISASSEMBLY - BALL BEARINGS

1. Disassemble case and remove impeller as described in "REPLACEMENT OF IMPELLER".
2. Remove mechanical seal as described in "REPLACEMENT OF MECHANICAL SEAL."
3. Match mark motor cover and motor.
4. Remove motor cover and place it in an upside down position, but do not disconnect any wiring between motor cover and motor. Do not disconnect wiring to stator.
5. Locate wave spring inside bearing bore. Be sure that motor cover is adequately supported to avoid placing undue strain on the wiring.
6. Lift rotor assembly out of motor housing.
7. Using a bearing puller, remove small upper bearing (18), and larger lower bearing (16).

ASSEMBLY - BALL BEARINGS

1. Clean shaft of any dirt and deposits, making sure that it is free of any burrs.
2. Check replacement bearings to ensure that they are the same type and size as the originals.
3. Press on new bearings until seated. APPLY NO FORCE TO OUTER RACE OF EITHER BEARING. PRESS ONLY ON INNER RACE.
4. Insert rotor into motor shell until lower bearing is seated.
5. Place new o-ring into position at top of motor housing and place wave spring into bearing bore using a small dab of grease to hold it in position. Tabs on wave spring must face toward bearing.
6. Align match marks on motor cover and motor and carefully lower motor cover over upper bearing while keeping the wiring to the stator taut.
7. When mating surfaces of motor cover and motor touch, insert and tighten the hex head cap screw.
8. Assemble mechanical seal and impeller as previously described.

NOTE

See separate Submersible Sump Pump sheet for general Installation Operation and Maintenance instructions.

INTRODUCTION

This manual contains instructions for installation, operation and maintenance of your liquid level control switches. Read and study this manual before using the equipment.

These switches are well designed and sturdily constructed. When properly installed and given reasonable care and maintenance, it will give many years of service.

SAFETY PRECAUTIONS

Always disconnect the electrical power supply before working on the unit. **Failure to do so can cause severe electrical shock or death.**

RECEIVING

Immediately upon arrival, the equipment should be checked for any shortages and/or damage. Any shortages or damage should be noted on the bill of lading and freight bill, and promptly reported to the transportation company. Claims for shortages or damage must be made in writing to Weil Pump Company Inc. Cedarburg, Wisconsin within 14 days of receipt of equipment.

STORAGE

The equipment should be installed and put into operation as soon as possible. If it is necessary to store the equipment for extended periods, precautions should be taken to prevent damage due to corrosion or oxidation. It is recommended that the equipment be stored indoors. The storage area should be dry and have a relatively constant temperature. The entire unit should be sealed in a heavy plastic bag. A desiccant should be placed in the bag before it is sealed.

INSTALLATION

1. The Level Control equipment should be installed in an easily accesible location.
2. Allow adequate headroom for installation and removal of Level Control equipment.
3. Do not install the Level Control equipment at the inlet to the wet-well to avoid turbulence of the in-flow.

PERIODIC INSPECTION

A periodic inspection of the Level Control equipment should be conducted to determine that it is operating properly. This inspection can be conducted at the same time the pump is inspected for proper operation.

Check for debris or grease in the wet-well which could cause erratic operation of the switches.

The switches should be cleaned of any adhering deposits.

FOR SUBMITTAL PURPOSES ONLY.
EQUIPMENT NOT YET ORDERED.

OPERATION

Pressure Diaphragm Level Control - 8223

The 8223 level control senses liquid by means of a pressure actuated micro switch. Rising water applies pressure to the diaphragm and diaphragm plate causing actuation of the switch. The switch is normally open, closing on liquid rise.

The switch cord has a breather tube for equalization to atmospheric pressure. Keep the breather tube open when connecting the cord to a control panel. The cord should be free of any sharp kinks, which could close the breather tube.

Tethered Level Control - 8233, 8234 & 8235

The 8233, 8234 & 8235 level controls sense liquid by means of change of angle and elevation. As water rises, the tethered float rises and actuates the switch inside the float housing. The switches are normally open, closing on liquid rise.

MOUNTING

The switch housing is fastened to a mounting pipe. The mounting pipe may be suspended from either a mounting plate fastened to the wet-well cover or a bracket fastened to the wall. The mounting plate fits most Weil wet-well covers and has holes to fit the cord grips supplied with the switch.

SYSTEM OPERATION

Simplex

- The pump starts when the liquid level activates the Start switch.
- The pump will run until the liquid level deactivates the Stop switch.
- If the liquid level activates the High Water switch, the HWA circuit will turn on.

Duplex

- The lead pump starts when the liquid level activates the Lead/Start switch. The lead pump will run until the liquid level deactivates the Stop switch.
- The lag pump will start if the liquid level activates the Lag/Standby switch. Both pumps continue to run until the liquid level deactivates the Stop switch.
- If the liquid level activates the High Water switch, the HWA circuit will turn on.

Typical Configuration	Switch Qty.
Simplex	2
Simplex with High Water	3
Duplex	3
Duplex with High Water	4

WEIL WARRANTY

Weil Pump Company Inc., Limited Warranty Statement:

Manufacturer shall warrant the product being supplied to the owner against defects in workmanship and material for a period of (see below) , under normal use, operation and service.
The obligation of this warranty statutory or otherwise, is limited to the replacement or repair at our factory, or at a point designated by the factory, of such part shall appear to us, upon inspection at such point to have been defective in material or workmanship.

This warranty does not obligate seller to bear the cost of labor or transportation charges in connection with the replacement or repair of defective parts, nor shall it apply to a machine upon which repairs or alterations have been made unless authorized by us. Seller shall not be liable, under any circumstances, for any special, consequential or incidental damages including, but not limited to personal injuries or labor costs, temporary operating equipment, or removal and installation of equipment.

WARRANTY DISCLAIMERS: THE LIMITED WARRANTY NOTED ABOVE SHALL BE IN LIEU OF ANY OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICLULAR PURPOSE.

Returned goods: Written permission must be obtained before returning any material. Material returned for credit will be subject to factory inspection. Returns must be shipped with transportation charges pre-paid. Credit for returned freight will be issued if products are covered by warranty. Special, non-catalog items cannot be returned.

FOR SUBMITTAL PURPOSES ONLY.

WARNING

Flush the water supply lines before beginning installation and after installation is complete. Test the unit for leaks and adequate water flow. Main water supply to the eyewash should be "ON" at all times. Provisions shall be made to prevent unauthorized shutoff.

CAUTION

Emergency equipment must be supplied with tepid water (60°F to 100°F/15.6°C to 37.8°C). Any prolonged exposure to near freezing water affects the body's ability to maintain body temperature, increasing the risk of hypothermia.

NOTICE

Before installing this product, ensure that there are adequate clearances around the product and activation of the product does not interfere with other products or obstructions.

Avoid cleaners containing organic solvents, alcohols and hydrocarbons. Rinse with water after cleaning.

IMPORTANT

The installation and location of all safety drench showers, eye and eye/face washes must comply with the requirements of ANSI/ISEA Z358.1.

Read this installation manual completely to ensure proper installation, then file it with the owner or maintenance department. Compliance and conformity to drain requirements and other local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding any packaging material. If any parts are missing, do not begin installation until you obtain the missing parts.

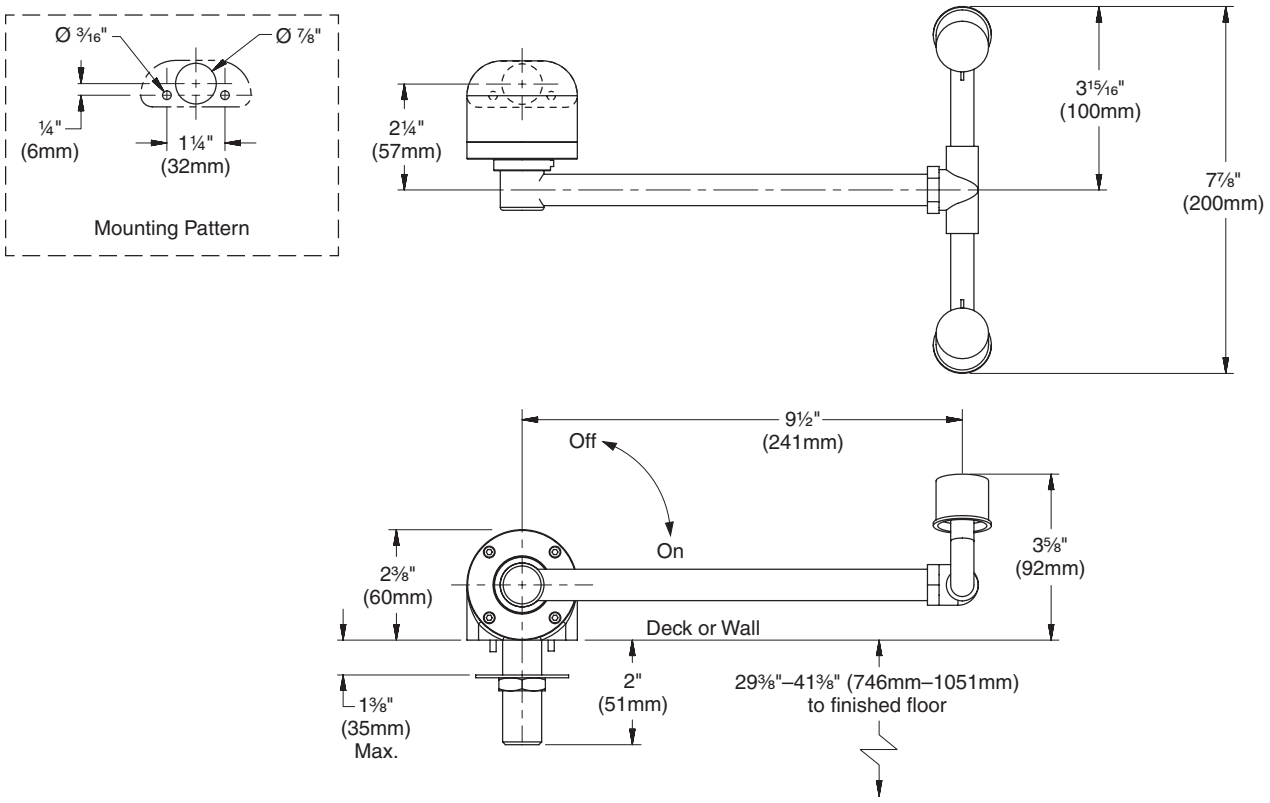
The ANSI/ISEA Z358.1 standard requires an uninterrupted supply of flushing fluid. Bradley plumbed emergency fixtures require a minimum of 30 PSI (0.21MPa) flowing pressure.

Self-closing spring-loaded valves are not UL classified to ANSI/ISEA Z358.1.

Weekly activation must be conducted on all plumbed emergency equipment to ensure a suitable flushing fluid supply is present and any sediment build-up in the supply line is cleared. Emergency equipment should be inspected monthly to address any maintenance issues ensuring the equipment is in good operating condition and that there are no signs of wear.

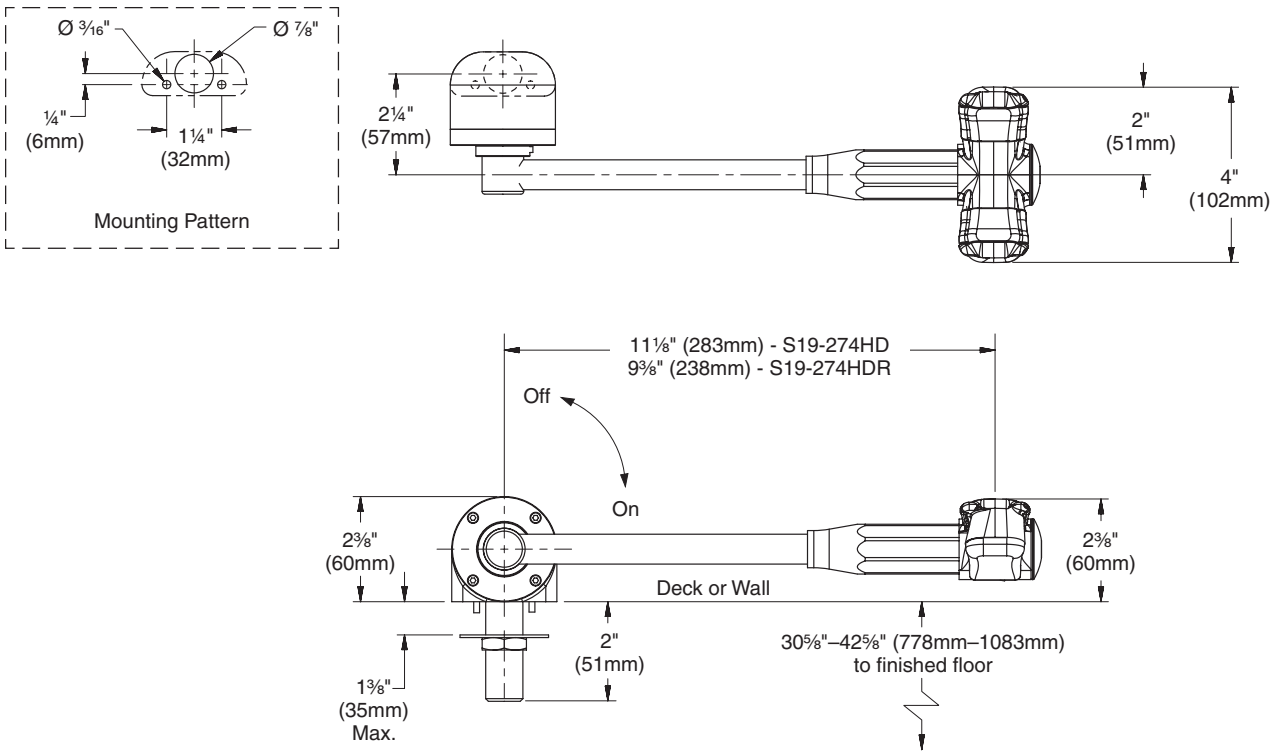
Workers who may come in contact with potentially hazardous materials should be trained regarding the placement and proper operation of emergency equipment per ANSI/ISEA Z358.1.

For questions regarding the operation or installation of this product, visit www.bradleycorp.com or call 800-BRADLEY (272.3539).



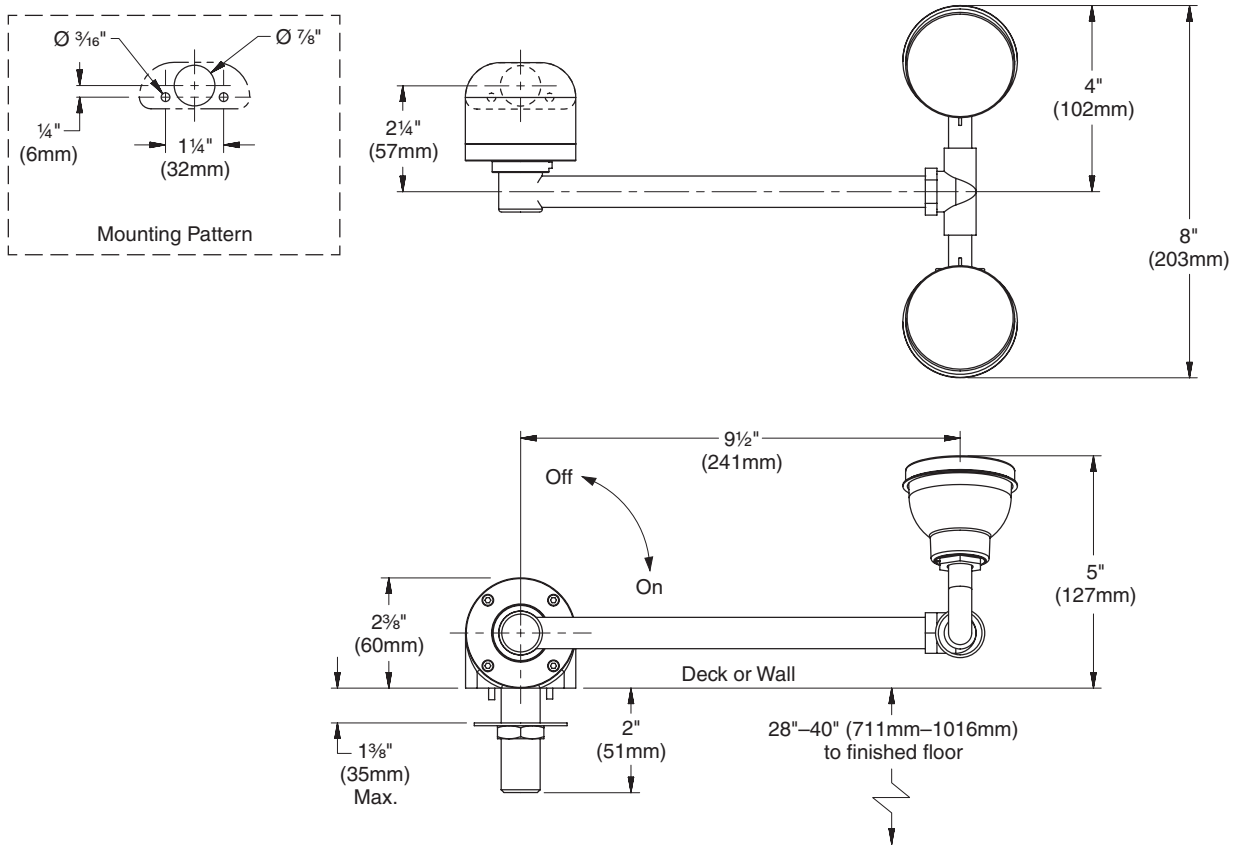
Product warranties and parts information may also be found under "Products" on our web site at bradleycorp.com.

Supplies Required:

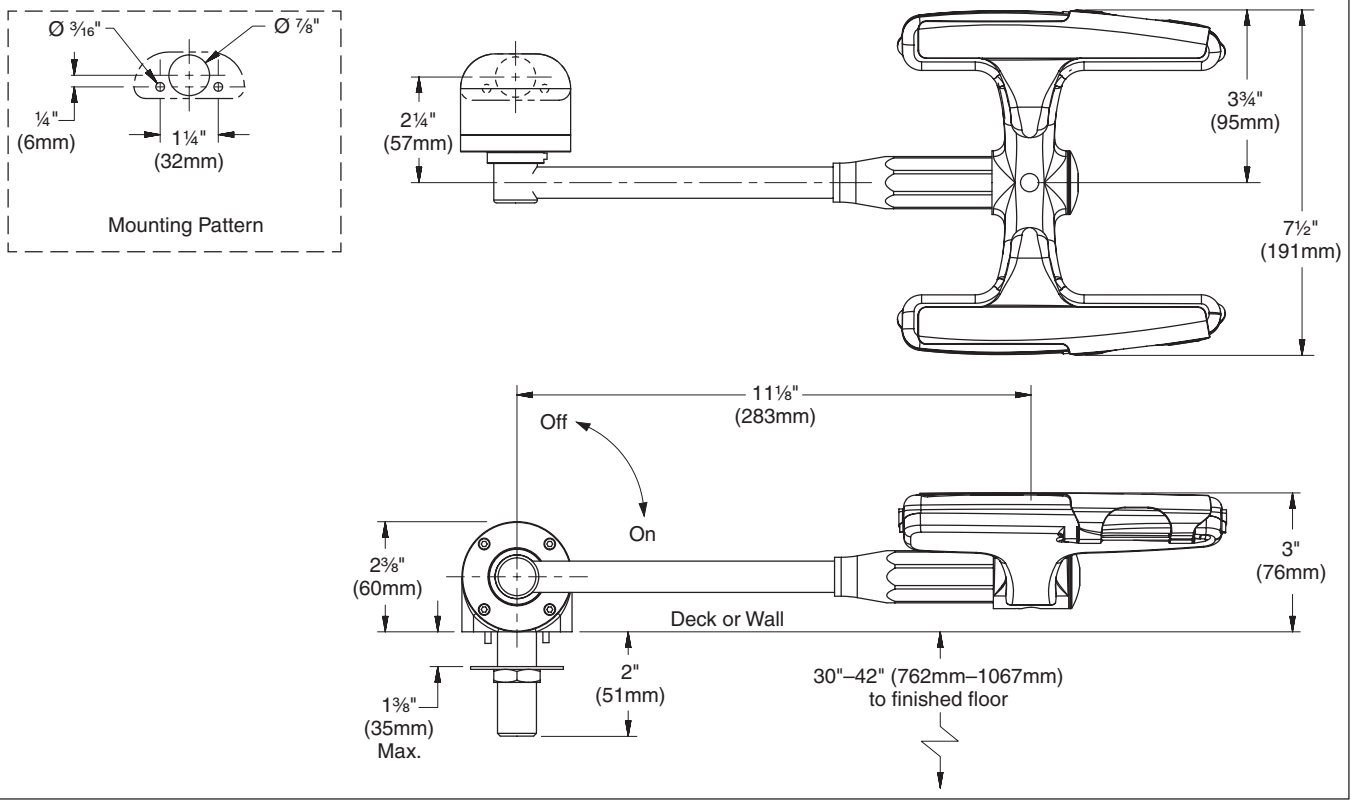


- Piping to ½" NPT water supply inlet on unit
- Pipe sealant
- Sign-mounting hardware

Local codes may require the installation of a backflow prevention valve to complete proper installation. Compliance with local codes is the responsibility of the installer. Valve must be tested annually to verify that it is functioning properly. Backflow prevention valves are not included with the fixture and may be supplied by the contractor or purchased from Bradley Corporation.

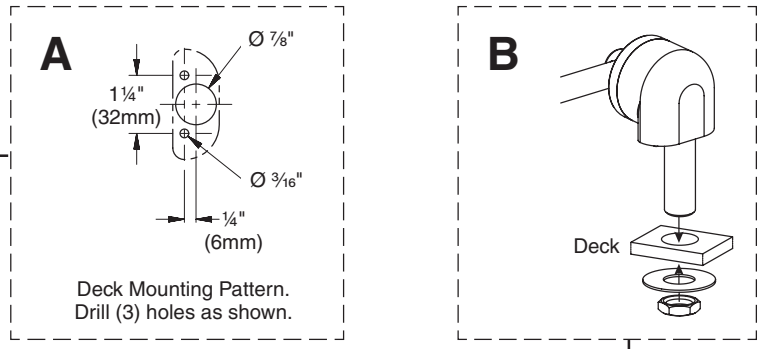


Dimensions — S19-270HD, S19-270HW (deck-mounted unit shown)

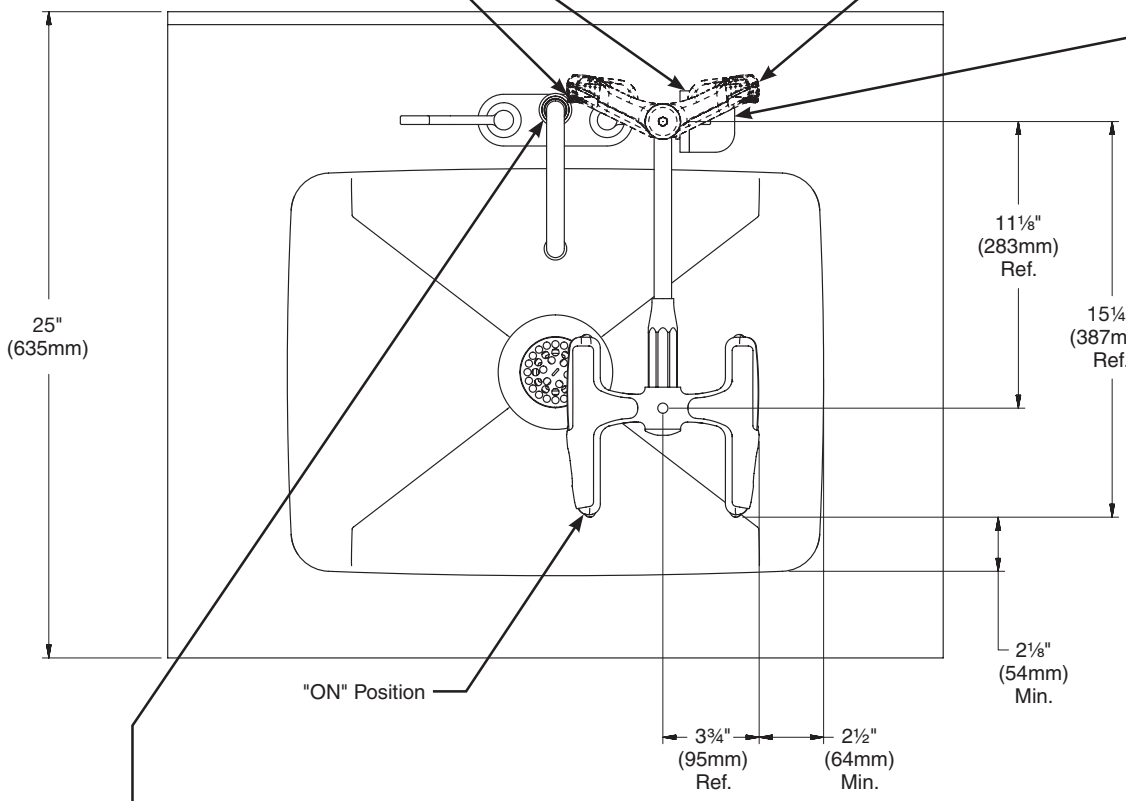


Dimensions — S19274HD, S19274HDR, S19274HW (deck-mounted unit shown)

Dimensions — S19-270JD, S19-270JW (deck-mounted unit shown)

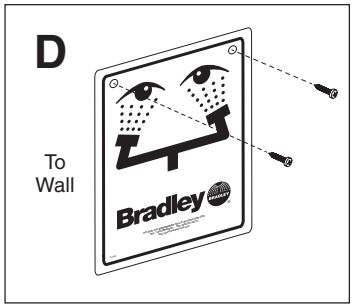


Dimensions — S19274JD, S19274JW (deck-mounted unit shown)

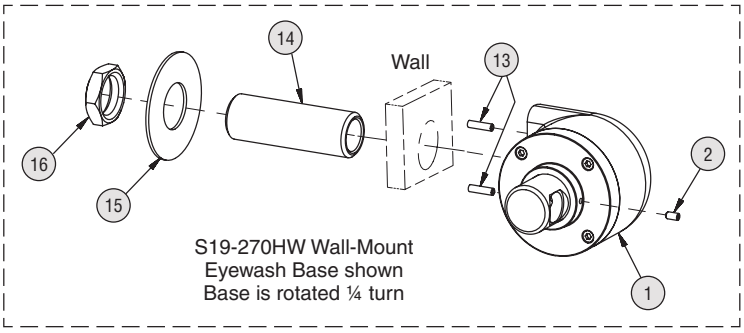


Installation

- ☑ *Halo eye/face wash unit is shown on a sample 25" (635mm) deck. Other units are similar.*
- ☑ *Minimum dimensions necessary to contain splashing from Halo units are shown.*
- ☑ *Apply pipe sealant (supplied by installer) to all male-threaded pipe joints. The top of the eyewash heads should be positioned a minimum of 33" (838mm) and a maximum of 45" (1143mm) from the floor and 6" (152mm) from the nearest obstruction.*



☑ *Proper faucet shank/handle clearance and recommended minimum splash containment dimensions must be considered when selecting the desired location for mounting.*



C Connect the water supply using piping (supplied by installer) with ½" NPT female threaded end.

E Slowly open the water supply lines to relieve air and pressurize the valve. Test the unit for leaks and adequate flow.

AVERTISSEMENT

Rincez la conduite d'alimentation avant et apres l'installation. Assurez-vous que le débit d'eau est adéquat et qu'il n'y a pas de fuites. L'alimentation principale en eau doit être toujours OUVERTE. On devra prévoir des dispositions pour empêcher tout arrêt non autorisé.

ATTENTION

Le matériel d'urgence doit être alimenté en eau tiède (15,6 °C à 37,8 °C/60 °F à 100 °F). Toute exposition prolongée à de l'eau proche de la température de congélation peut altérer la capacité de l'organisme à maintenir la température corporelle, ce qui accroît le risque d'hypothermie.

AVIS

Avant d'installer ce produit, vérifier qu'il y a des dégagements suffisants autour du produit et que l'activation du produit n'est pas entravée par d'autres produits ou obstructions.

Éviter les produits nettoyants qui contiennent des solvants organiques, des alcools et des hydrocarbures. Rincer à l'eau après nettoyage.

IMPORTANT

L'installation et l'emplacement de toutes les douches d'urgence, oculaires et oculaires-faciales doivent être conformes aux exigences d'ANSI/ISEA Z358.1.

Lire ce manuel d'installation dans son intégralité pour garantir une installation appropriée. Une fois celle-ci terminée, classer ce manuel auprès du service à la clientèle ou d'entretien. L'installateur est responsable de la conformité de l'installation aux codes pour des drain et codes et règlements en vigueur.

Assurez-vous que toutes les pièces sont incluses dans l'emballage et qu'il n'en manque aucune avant de jeter l'emballage. Ne commencez pas l'assemblage avant de recevoir les pièces manquantes.

La norme ANSI/ISEA Z358.1 prévoit une alimentation ininterrompue du liquide de rinçage. Les appareils d'urgence Bradley raccordés au réseau nécessitent une pression d'écoulement d'au moins 30 PSI (0,21 MPa).

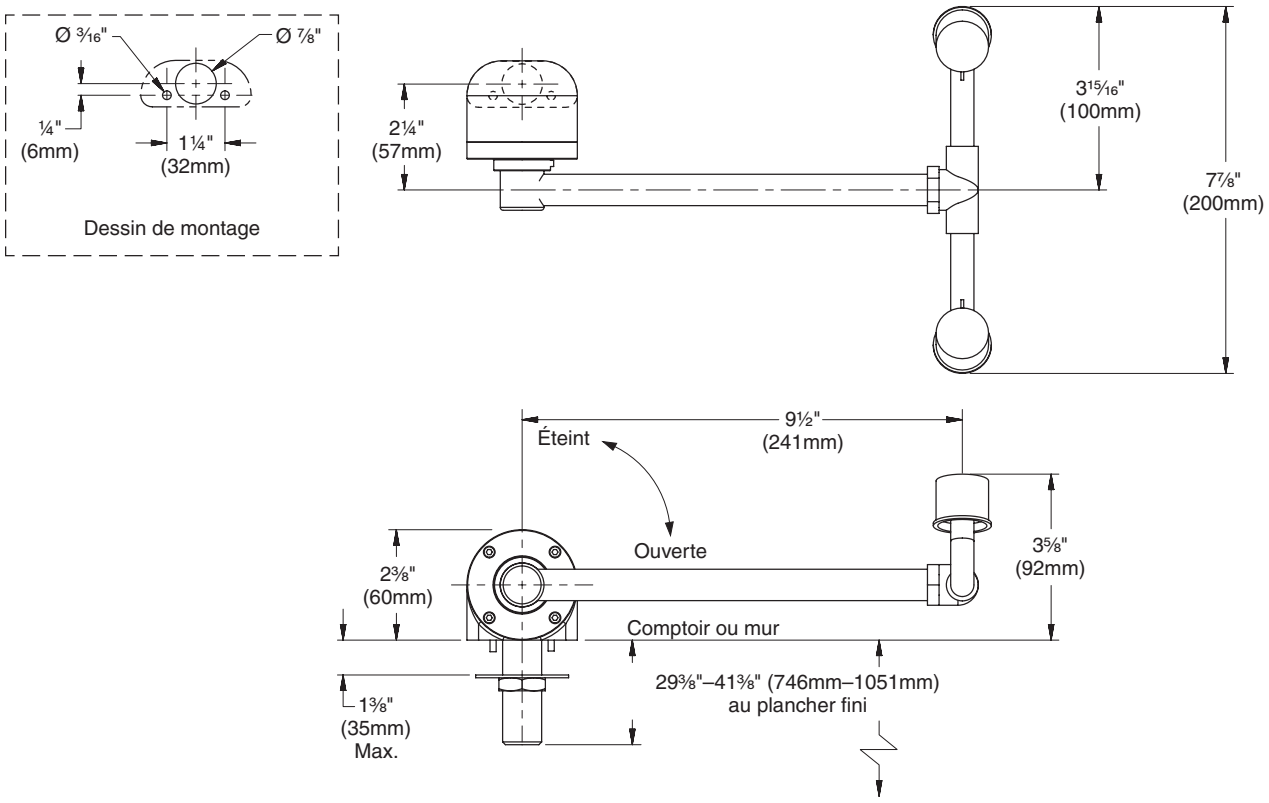
Les soupapes à ressort à fermeture automatique ne sont pas classifiées UL selon ANSI/ISEA Z358.1.

Une activation hebdomadaire doit être effectuée sur tout le matériel d'urgence à tuyauterie d'alimentation pour vérifier que l'arrivée de liquide de rinçage est suffisante et éliminer tout dépôt de sédiment de la conduite d'alimentation. Le matériel d'urgence doit être contrôlé chaque mois pour régler tout problème d'entretien éventuel et s'assurer que le matériel est en bon état de marche et ne présente aucun signe d'usure.

Les ouvriers susceptibles d'entrer en contact avec des matières potentiellement dangereuses doivent recevoir une formation sur la mise en place et le bon fonctionnement du matériel d'urgence conformément à la norme ANSI/ISEA Z358.1.

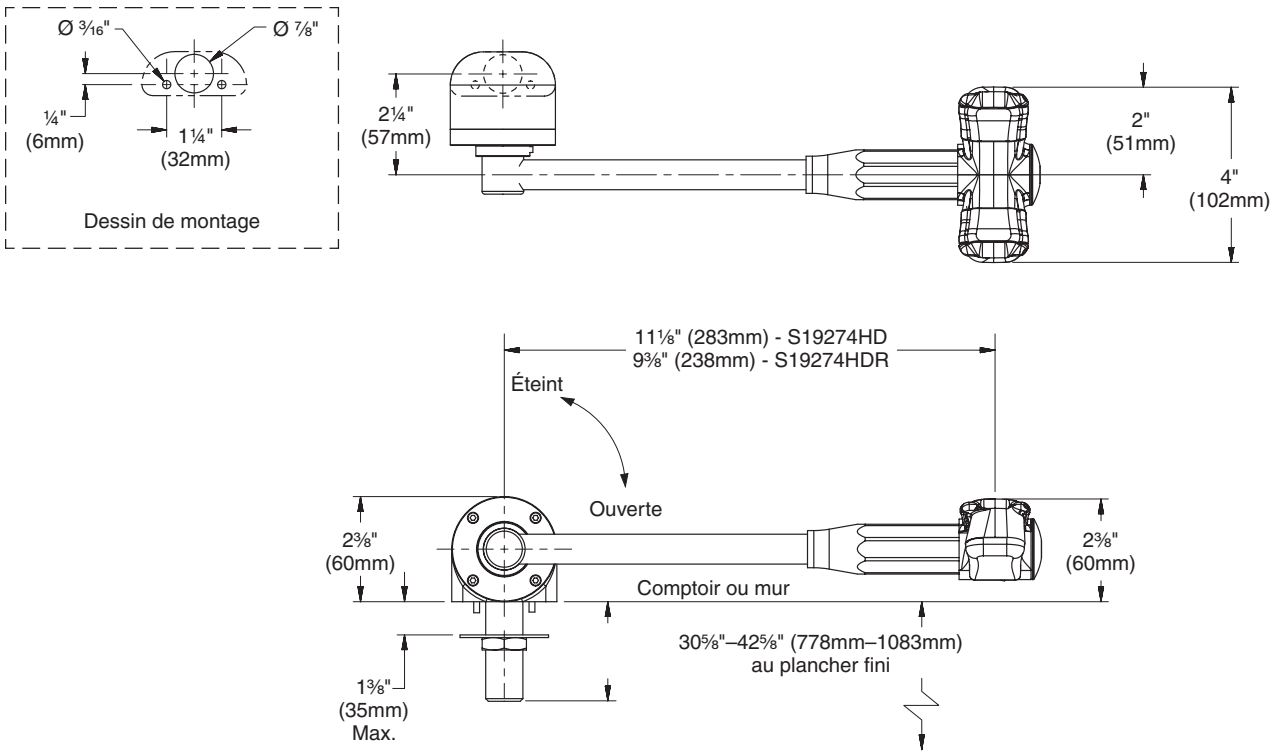
Pour toute question concernant le fonctionnement ou l'installation de ce produit, consulter le site www.bradleycorp.com ou appeler le 1-800-BRADLEY.

Les garanties de produits figurent sous la rubrique « Informations techniques » sur notre site Internet à www.bradleycorp.com.

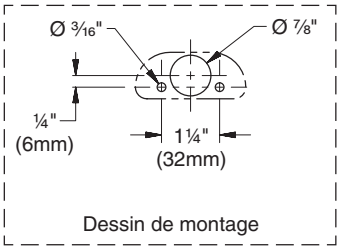


Equipements nécessaires :

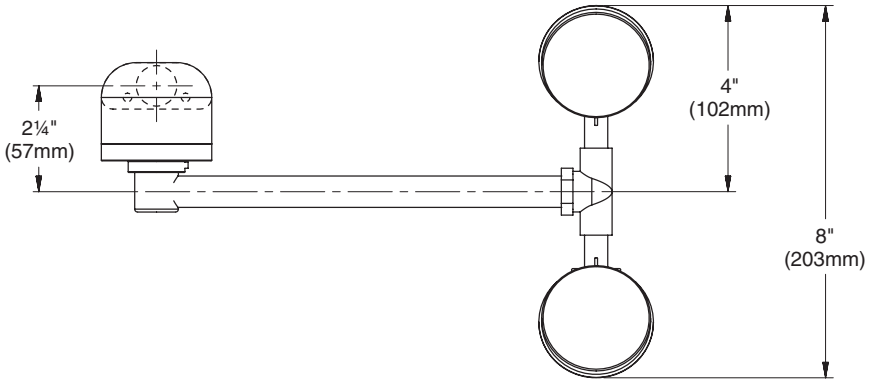
- Amener la tuyauterie à l'entrée ½" NPT d'approvisionnement en eau de la douche oculaire
- Produit d'étanchéité pour tuyau
- Quincaillerie pour l'installation de l'enseigne

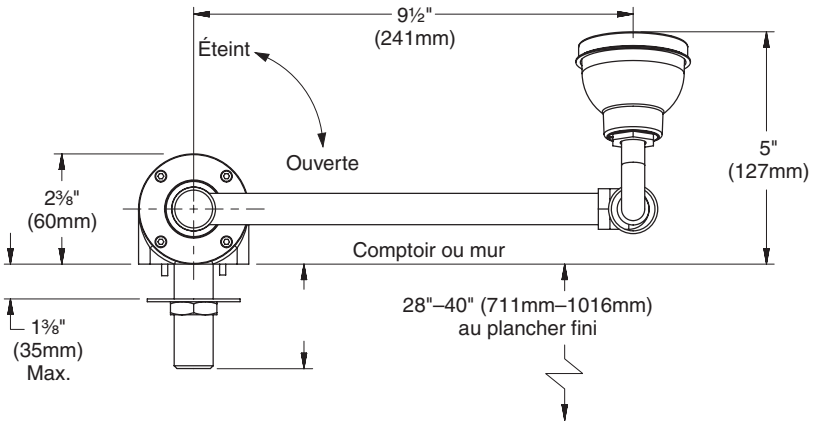


Les codes locaux peuvent exiger l' installation d'une soupape de prévention d'écoulement de retour pour réaliser une installation appropriée. L'installateur est responsable de la conformité aux codes locaux. La soupape doit être testée une fois par an pour vérifier qu'elle fonctionne correctement. Les soupapes de prévention d'écoulement de retour ne sont pas fournies avec l'appareil et peuvent être fournies par l'entrepreneur ou achetées auprès de Bradley Corporation.

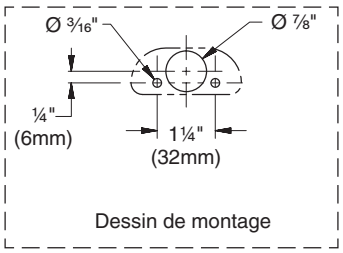


Dimensions — S19-270HD, S19-270HW (une douche oculaire qui est montée au comptoir est montrée)

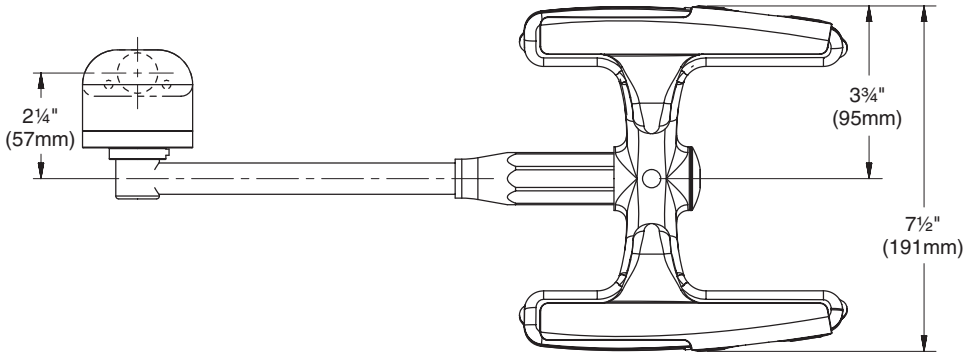


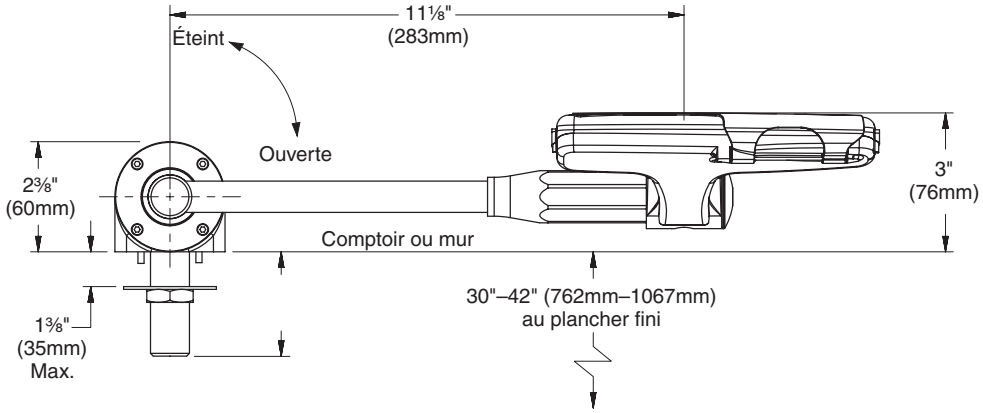


Dimensions — S19274HD, S19274HDR, S19274HW (une douche oculaire qui est montée au comptoir est montrée)

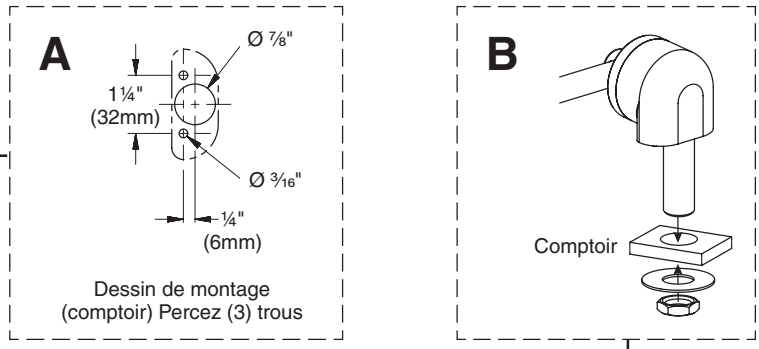


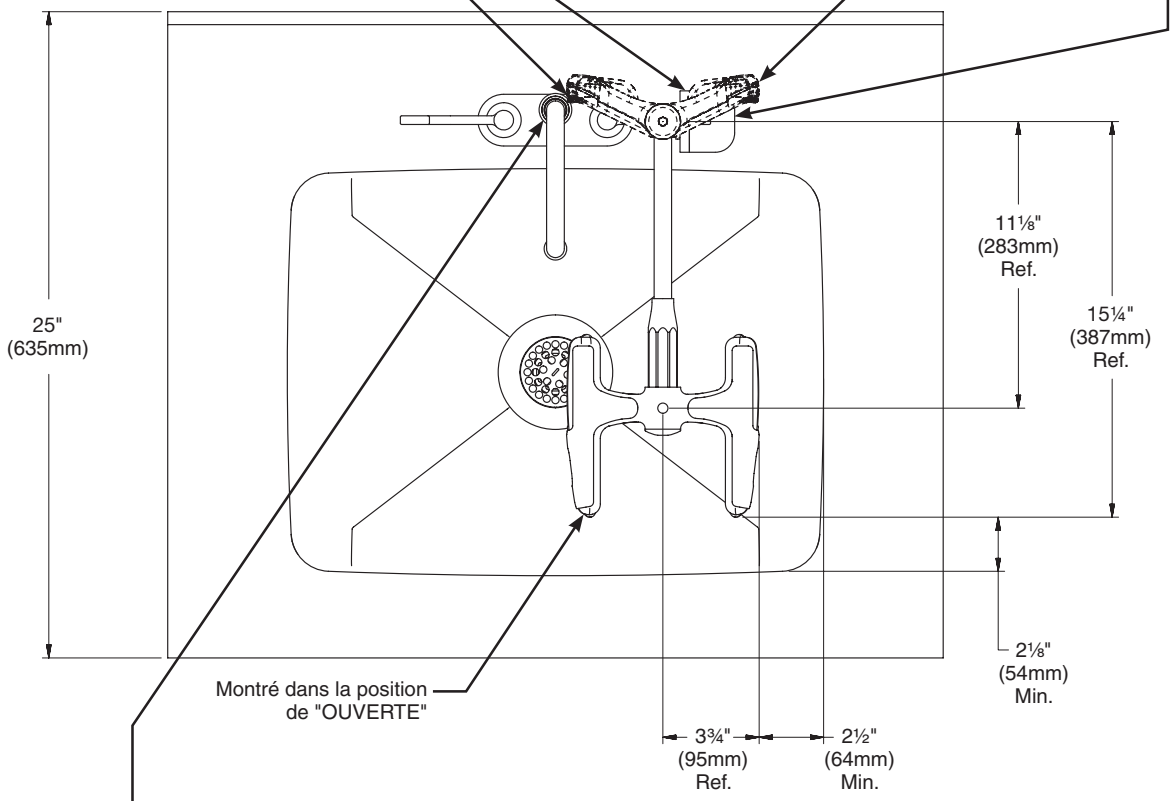
Dimensions — S19-270JD, S19-270JW (une douche oculaire qui est montée au comptoir est montrée)





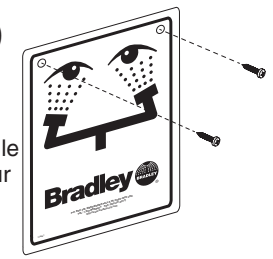
Dimensions — S19274JD, S19274JW (une douche oculaire qui est montée au comptoir est montrée)





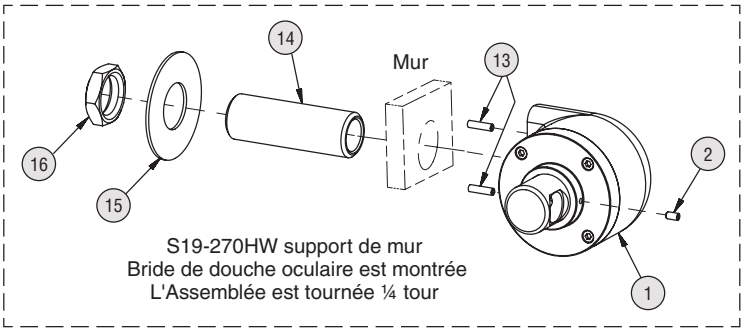
Installation

- ☑ *La douche oculaire/faciale Halo est montrée sur un exemple de comptoir de 25" (635 mm). Les autres unités sont similaires.*
- ☑ *Les dimensions minimales nécessaires pour contenir les éclaboussures des unités Halo sont indiquées.*
- ☑ *Mettez du produit d'étanchéité (non fourni) sur tous les filetages mâles. Le dessus des érogateurs de la douche oculaire doit être situé à une taille minimum de 83cm (33 po) et à une hauteur maximum de 115 cm (45 po) du plancher et de 15 cm (6 po) de l'obstruction la plus proche.*

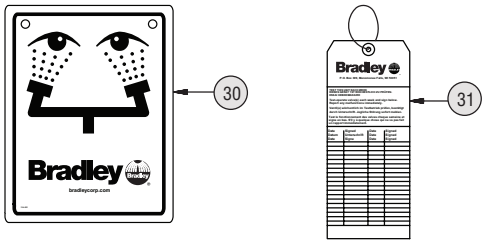


☑ *Le dégagement pour les poignées et le tube montant du robinet et les dimensions minimales pour contenir les éclaboussures doivent être pris en compte lors du choix de l'emplacement de pose.*

C Un boyau flexible fileté femelle ½" NPT (fourni par l'installateur) peut également être utilisé.



D



E Ouvrir les arrivées d'eau lentement pour libérer l'air et mettre le robinet sous pression. Vérifier s'il y a des fuites et si le débit d'eau est adéquat.

ADVERTENCIA

Aclarar el conducto del suministro de agua antes y después de la instalación. Verificar que no haya fugas y que el flujo de agua sea adecuado. El suministro principal de agua a la unidad debe estar siempre en posición "ON" (abierto). Se deben tomar medidas a fin de evitar el corte no autorizado del suministro.

ATTENCIÓN

Los equipos de emergencia deben contar con agua tibia (entre 15,6 °C y 37,8 °C). Cualquier exposición prolongada a aguas bajo cero afecta la capacidad del cuerpo para mantener su temperatura, lo que incrementa el riesgo de hipotermia.

AVISO

Antes de instalar este producto, asegúrese de que haya espacio adecuado alrededor del producto y de que su activación no interfiera con otros productos u obstrucciones.

Evite los limpiadores que contengan solventes orgánicos, alcoholes e hidrocarburos. Enjuague con agua después de limpiar.

IMPORTANTE

La instalación y ubicación de todas las duchas, lavaojos y lavaojos/lavacara de seguridad deben cumplir con los requisitos de ANSI/ISEA Z358.1.

Lea en su totalidad este manual de instalación para garantizar una instalación adecuada. Una vez que termine la instalación, entregue este manual al propietario o al Departamento de Mantenimiento. Es responsabilidad de quien instale el equipo cumplir con los códigos para desagüe y otra códigos y ordenanzas locales.

Separar todas las piezas del material de embalaje y asegurarse que todas las piezas estén incluídas antes de desechar cualquier material de embalaje.

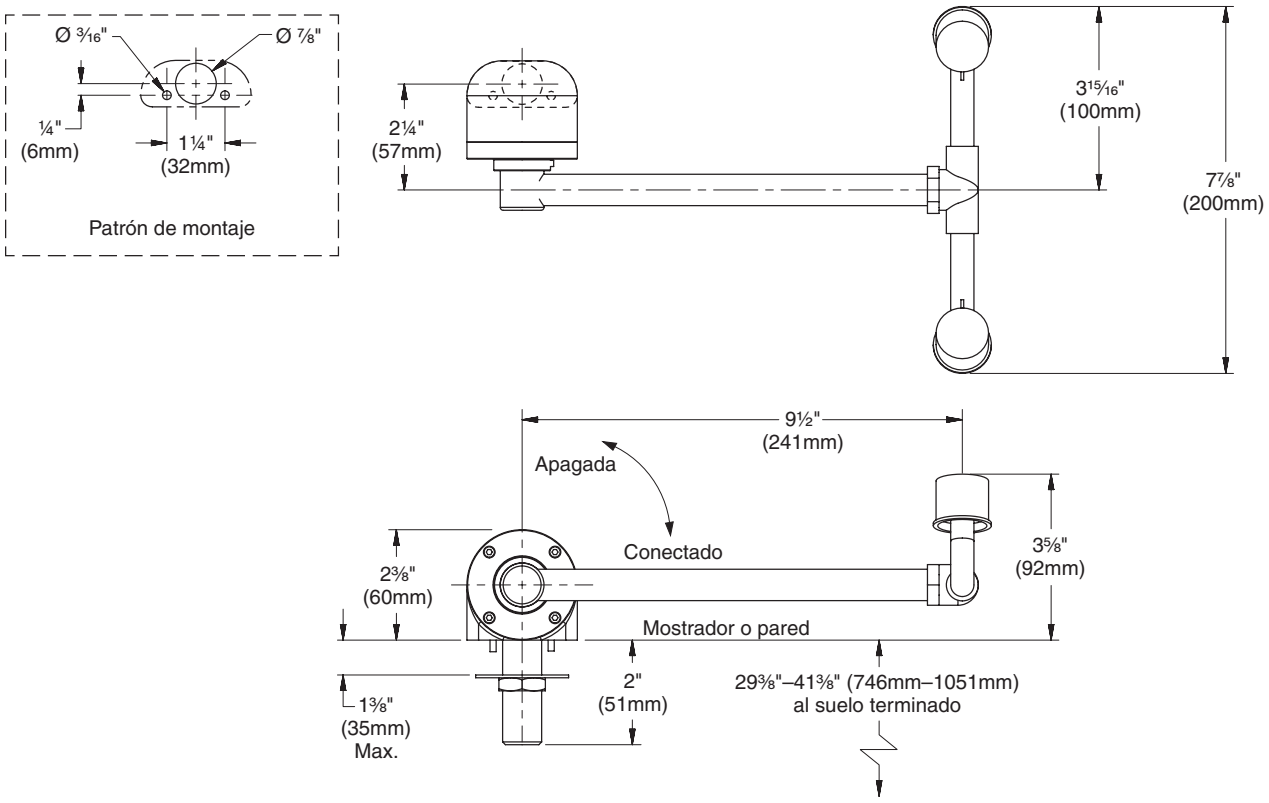
La norma ANSI/ISEA Z358.1 exige un suministro ininterrumpido de líquido de limpieza. Los equipos de emergencia con tuberías de Bradley requieren una presión de flujo mínima de 0,21 MPa (30 PSI).

Las válvulas con funcionamiento a resorte de autocerrado no cuentan con clasificación UL para ANSI/ISEA Z358.1.

Se deben llevar a cabo activaciones semanales de todos los equipos de emergencia conectados a la plomería para garantizar que hay un suministro de líquido de limpieza adecuado presente y liberar la tubería de suministro de cualquier acumulación de sedimento. Los equipos de emergencia se deben inspeccionar mensualmente para solucionar cualquier problema de mantenimiento; esto garantizará que los equipos están en buenas condiciones de funcionamiento y que no hay señales de desgaste.

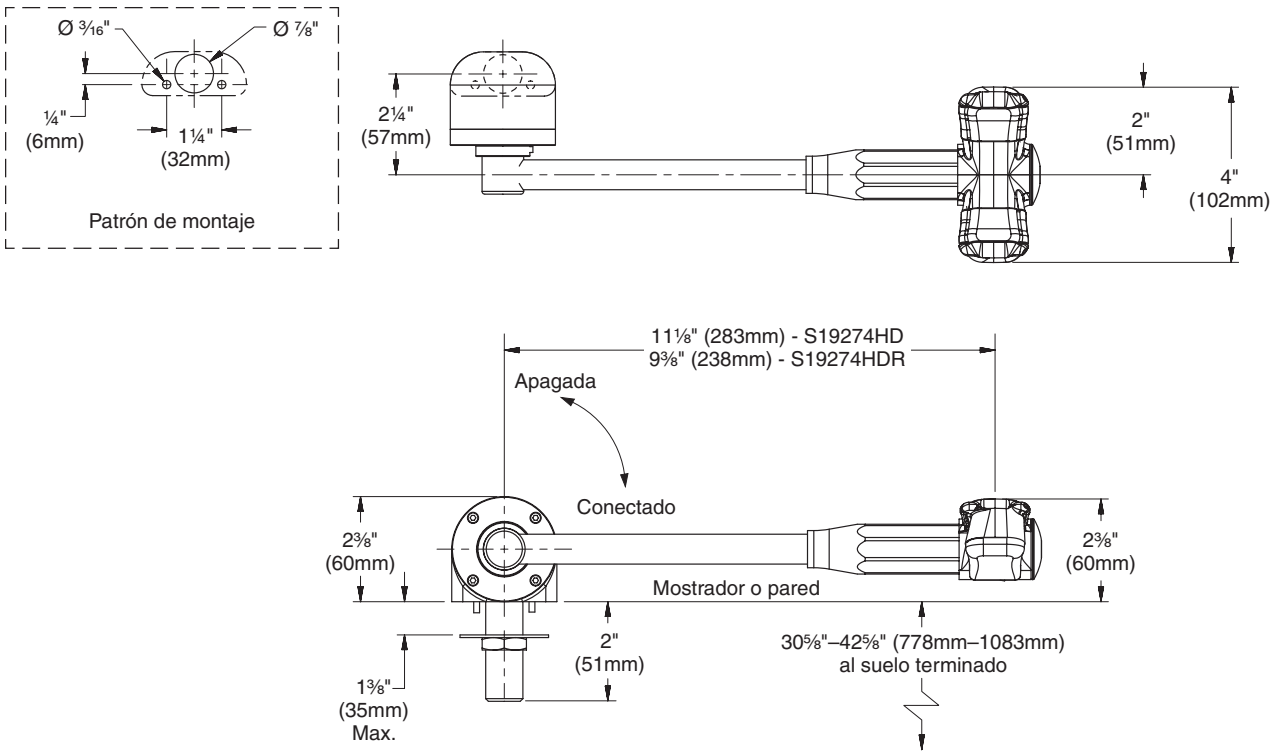
Los trabajadores que puedan tener contacto con materiales potencialmente peligrosos deben recibir capacitación sobre la ubicación y operación adecuada de los equipos de emergencia en conformidad con la norma ANSI/ISEA Z358.1.

Para consultas sobre la operación o instalación de este producto, visite www.bradleycorp.com o llame al 1-800-BRADLEY.



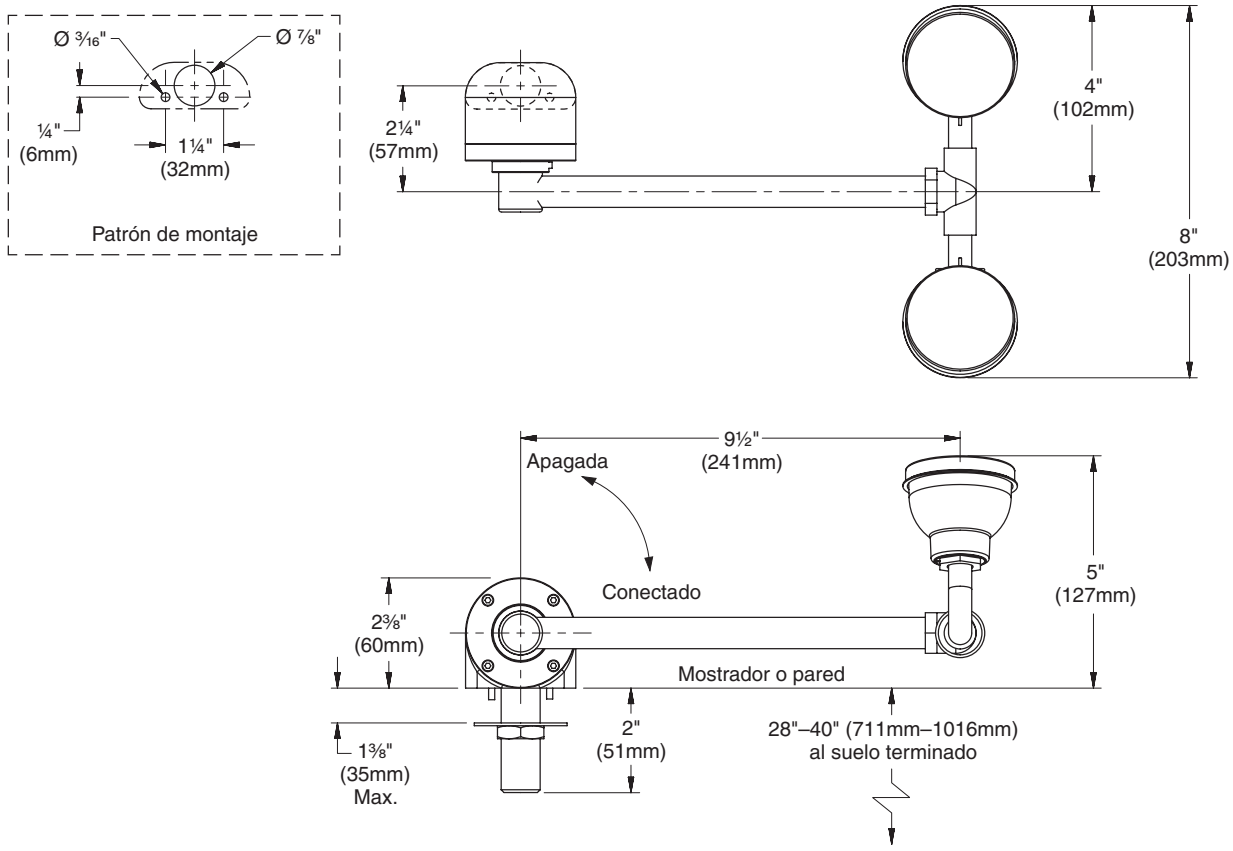
Las garantías del producto se pueden encontrar en "Información del producto" o en nuestro sitio Web, www.bradleycorp.com.

Materiales necesarios:

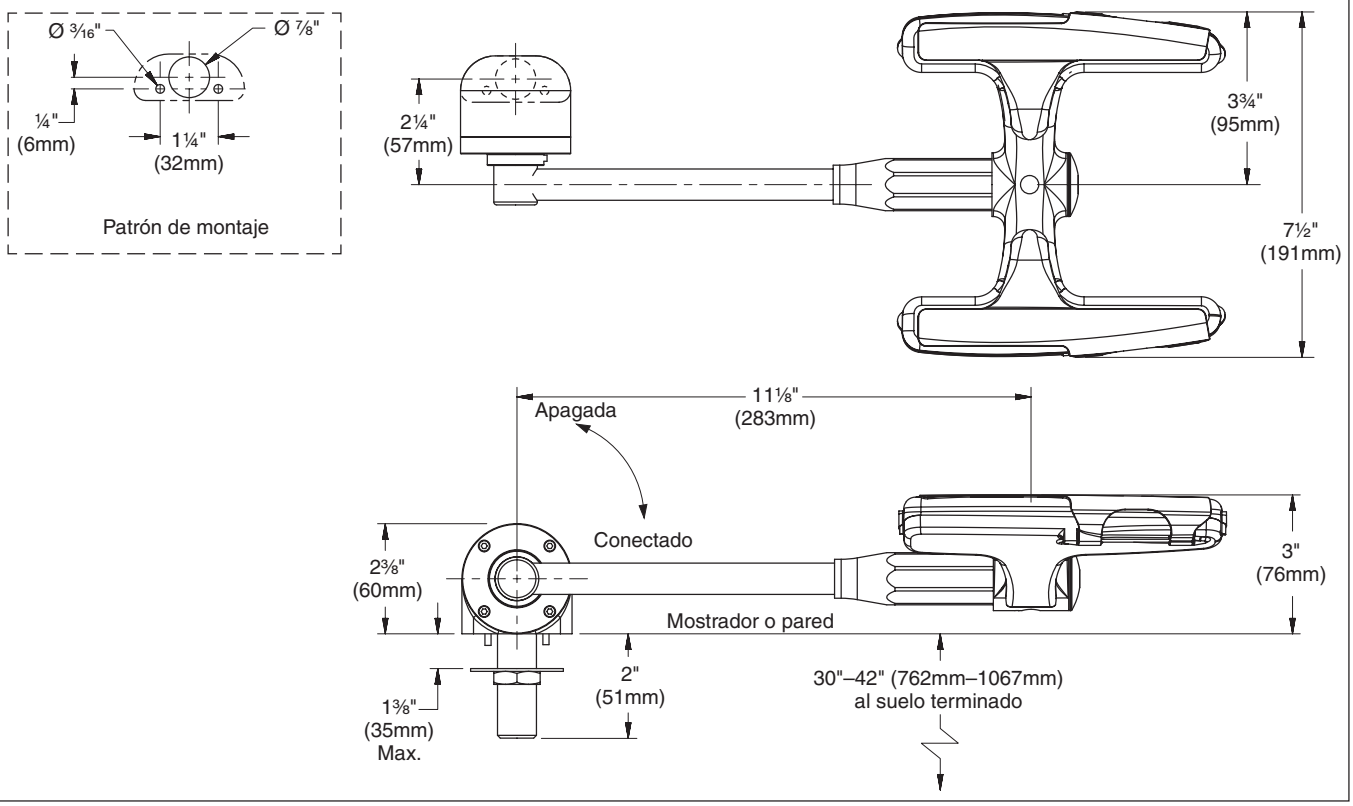


- Proporcione la tubería a la toma de ½" NPT del suministro de agua del lavador de ojos
- Sellador de tubería
- Tornillería para montar el aviso de seguridad

☑ *Los códigos locales pueden exigir la instalación de una válvula de prevención de contraflujo para completar la instalación correcta. La conformidad con los códigos locales es de responsabilidad del instalador. La válvula se debe probar anualmente para verificar que funcione de manera correcta. Las válvulas de prevención de contraflujo no se incluyen con el accesorio y las puede proporcionar el contratista o las puede comprar en Bradley Corporation.*

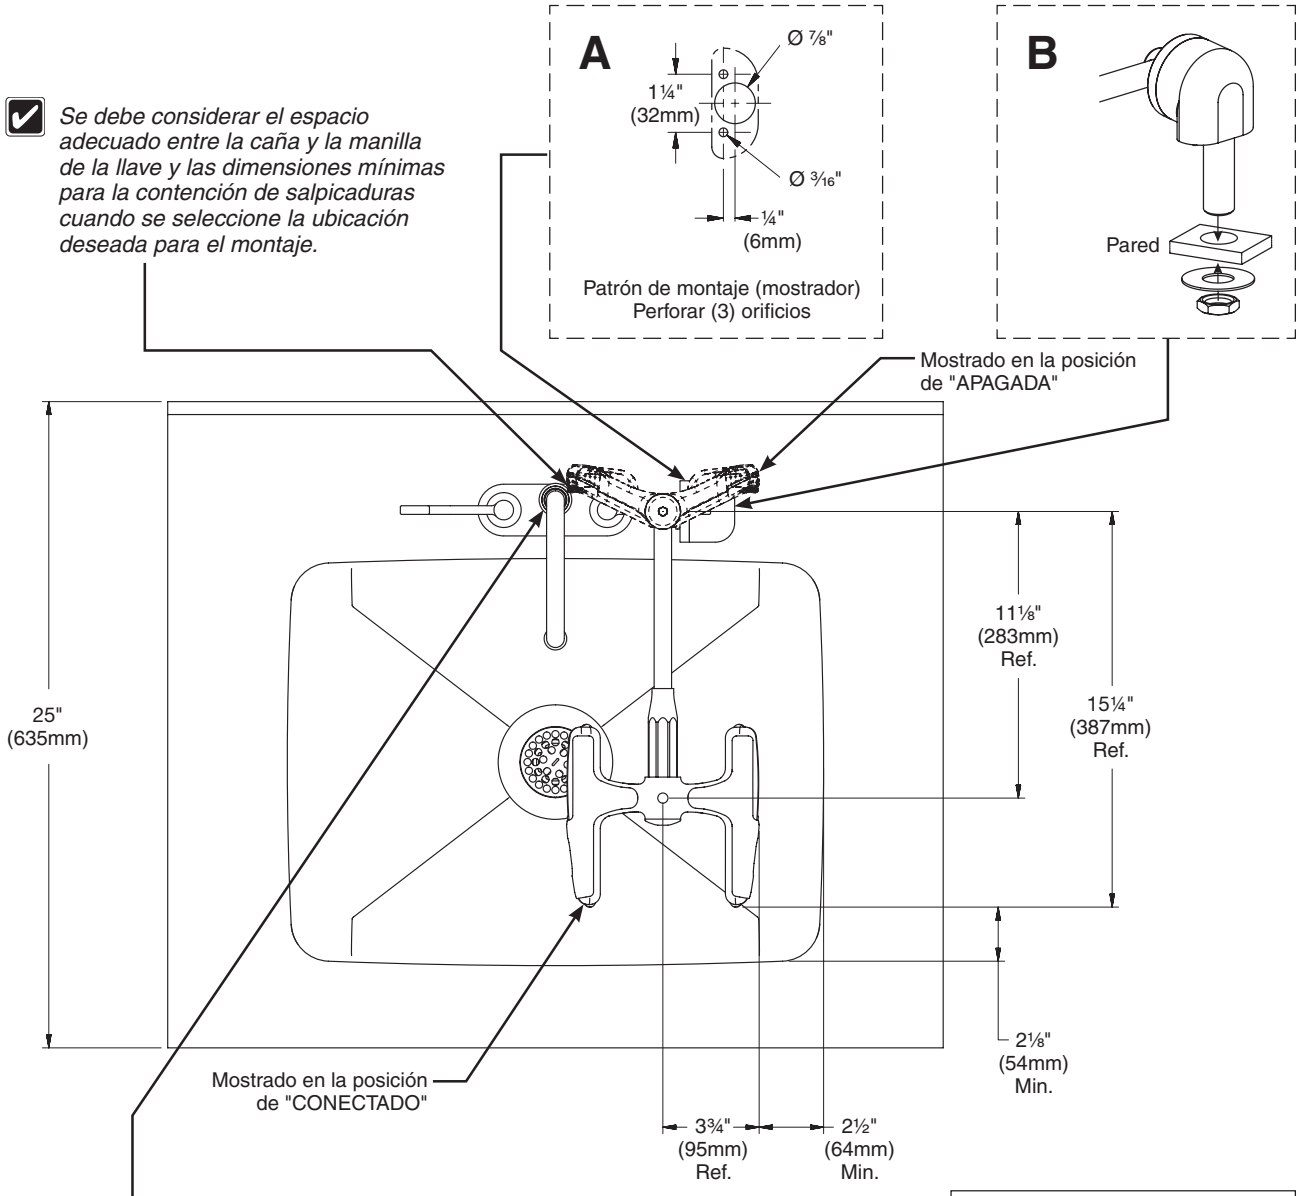


Dimensiones — S19-270HD, S19-270HW (se muestra una unidad que se monta a la mostrador)



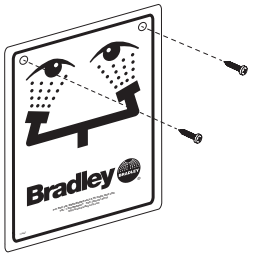
Dimensiones — S19274HD, S19274HDR, S19274HW (se muestra una unidad que se monta a la mostrador)

Dimensiones — S19-270JD, S19-270JW (se muestra una unidad que se monta a la mostrador)



Dimensiones — S19274JD, S19274JW (se muestra una unidad que se monta a la mostrador)

Instalación

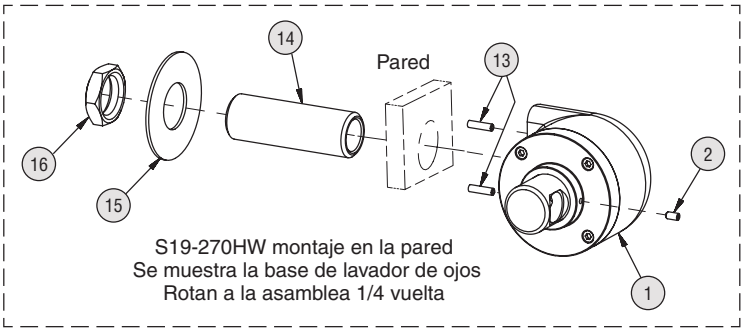


- ☑ *Se observa la unidad de lavado ocular y facial Halo en una cubierta de muestra de 25" (635 mm). Las otras unidades son similares.*
- ☑ *Se muestran las dimensiones mínimas necesarias para contener las salpicaduras de las unidades Halo.*
- ☑ *Aplicar sellador de tubería o cinta (suministrados por el instalador) a las juntas de tubería de rosca macho. La parte superior de los rociadores del lavador de ojos debe colocarse a una altura máxima de 33 pulgadas (83 cm) y a una altura mínimo de 45 pulg. (115 cm) del piso y 6 pulg. (15 cm) de la obstrucción más cercana.*

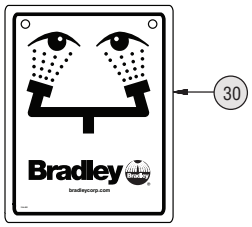
☑ *Se debe considerar el espacio adecuado entre la caña y la manilla de la llave y las dimensiones mínimas para la contención de salpicaduras cuando se seleccione la ubicación deseada para el montaje.*

C Se puede usar también una manguera flexible (provista por el instalador) con terminación de rosca hembra de ½" (12,8 mm) NPT.

D



a la pared



E Abra lentamente las tuberías de suministro de agua para liberar el aire y presurizar la válvula. Revise si existen fugas y verifique si el flujo de agua es adecuado.

Guardian

Terms and Conditions of Sale

GENERAL. This price list supersedes all prior price lists or quotations for like merchandise. The prices shown herein are not intended to represent actual resale prices in any particular market. No obligation is assumed by Guardian Equipment Inc. (the Company) to sell the goods listed herein or in its catalog to any person, at any price. All orders are subject to credit approval and acceptance by the Company at its home office in Chicago, Illinois.

PRICES, TAXES AND MINIMUM CHARGE. Prices are subject to change without notice and all orders are accepted at the prices prevailing at time of shipment. All prices listed herein will be increased by any tax imposed by any governmental body. All orders for goods with a total invoice price of less than $25.00 net will be billed at $25.00.

DELIVERY. The Company's responsibility ceases upon delivery of the material in good order to the carrier. Delivery to the carrier shall constitute delivery to the Buyer.

The Company is not responsible for delays in deliveries which are due to unavailability of raw materials, fire, flood, accident, strike, embargo, war, labor stoppage, inadequate transportation, delay or default by vendors, government regulations or any other causes beyond its control.

All delivery dates are subject to credit approval and account status at time shipment is to be made. No shipment will be made if the Buyer's account is in arrears or if shipment would cause any applicable credit limit to be exceeded.

In the event that a performance or supply bond is in effect, the Buyer must give the Company thirty days' prior written notice before submitting any claim under any such bond.

TERMS. Net 30 days from date of invoice. 2% cash discount is allowed from date of invoice, as follows: Invoices dated the 1st to 15th of the month may be discounted on or before the 25th of the same month. Invoices dated the 16th to 31st of the month may be discounted on or before the 10th day of the following month. Cash discount is calculated on the invoice before any charge for freight and before addition of any applicable taxes. All unearned discounts will be charged back to Buyer. A service charge of 1-1/2% per month (18% per annum) will be added to all past due invoices. No shipments will be made to accounts which are in arrears.

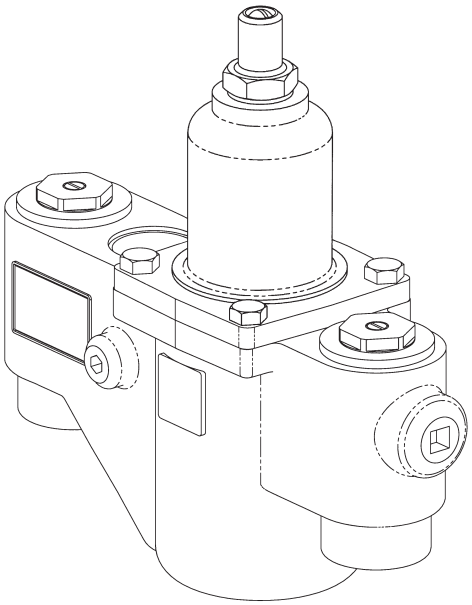
FREIGHT. All prices are FOB Chicago, Illinois.

WARRANTY. All products are carefully manufactured, tested, inspected and packed. The Company unconditionally warrants all products against manufacturing defects. If any item, within two years after purchase, proves defective due to faulty workmanship or material, the Company will, at its option, repair the defective item or furnish a new item of the same type. No labor, transportation or other consequential damages will be allowed in any such case. Any modification, alteration or repair to an item manufactured by the Company by other than an authorized representative of the Company will nullify this warranty.

As the installation and use of the Company's products is beyond its control, no warranty of any kind is made by the Company as to the effects of such use or the results to be obtained therefrom. It is the Buyer's responsibility to select the appropriate product for the use which is intended and which will satisfy any applicable governmental codes, rules and regulations. The Company is not responsible for any losses which may result from selection and/or installation of products which are unsuitable or improper for a particular application, or which do not satisfy governmental codes, rules or regulations.

SHORTAGES. If shipment of material is not received within 10 days after receipt of invoice, the Company must be notified at once. Otherwise, no claim will be honored for failure to receive shipment. No claim for shortage will be honored unless the Company is notified in writing within 5 days after receipt of shipment.

RETURNED GOODS. No material may be returned without prior written authorization. All returns are subject to a 25% or $50.00 minimum handling charge and any expense necessary to put material in saleable condition. Special fixtures and coated products are not subject to return.



PRODUCT CHANGES. Due to the continuing improvement of products and other factors, the Company reserves the right to substitute material and/or to make changes in design, rough-in dimensions or other specifications shown and described in any of our printed literature. Such changes may be made without notice to the Buyer.

The above terms and conditions and any terms and conditions contained in the Company's printed acknowledgment or invoice apply regardless of any printed terms on the Buyer's order.

TMV-1 **TMV-1 THERMOSTATIC MIXING VALVE**

BS593130BP	BRADLEY	HL130 HIGH-LOW MIXING VALVE CONSIST OF A LIQUID FILLED THERMOSTAT AND A STAINLESS STEEL PISTON AND LINER WITH POSITIVE SHUT-OFF HOT WATER WHEN COLD WATER SUPPLY IS LOST, INTEGRAL STRAINER CHECK STOPS ON INLETS, ADJUSTABLE SET POINT WITHIN TEMPERATURE

Installation

ASSE 1017 & UPC Certified

IMPORTANT

WARNING! Make sure that all water supply lines have been flushed and then completely turned off before beginning installation. Debris in supply lines can cause valves to malfunction.

WARNING! Failure to comply with proper installation and maintenance instructions could contribute to a valve failure resulting in severe bodily injury including scalding, chilling and/or death depending upon system water pressure changes and/or supply water temperature changes.

This thermostatic mixing valve is designed to be installed at or near the boiler or water heater. It is not designed to compensate for system pressure fluctuations and should not be used where ASSE standard 1016, 1069 or 1070 devices are required. These valves should never be used to provide "anti-scald" or "anti-chill" service. This valve does not provide protection from pipe freezing.

Consult local building and plumbing codes prior to installation. Should these codes differ from the information in the manual, follow the local codes. Inquire with governing authorities for additional local requirements.

Regular checking and cleaning of the valve's internal components and check stops is necessary for maximum life and proper product function. Periodic inspection and yearly maintenance by a licensed contractor is required. Corrosive water conditions and/or unauthorized adjustments or repairs could render the valve ineffective for it's intended service. Frequency of cleaning and inspection depends upon local water conditions.

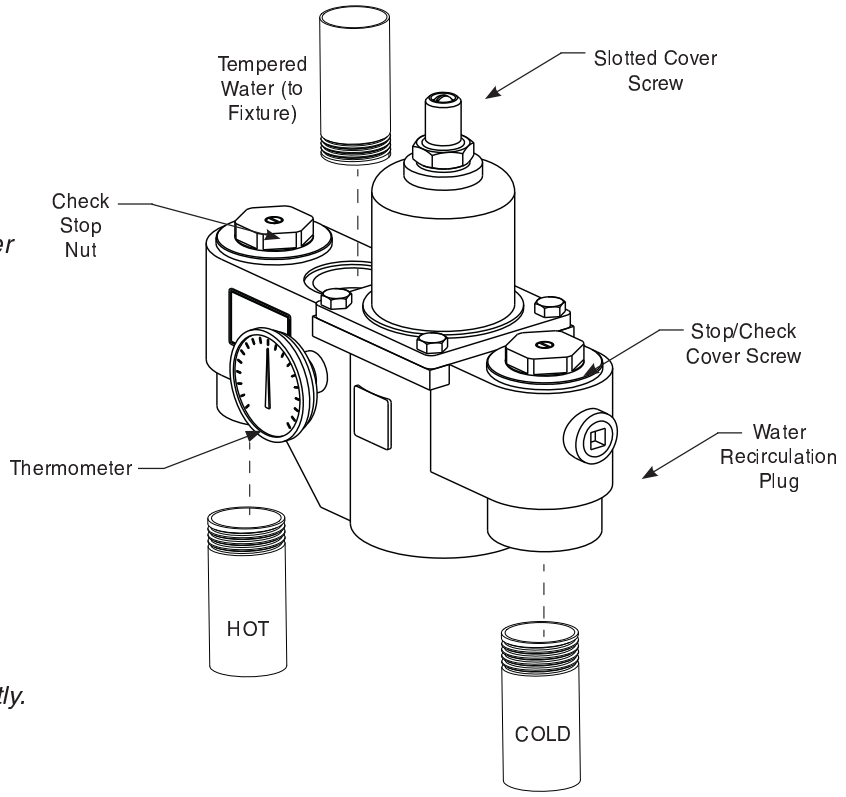
Output temperature of the valve must be checked and adjusted at initial installation and on a quarterly basis.

Read this entire installation manual to ensure proper installation. When finished with the installation, file this manual with the owner or maintenance department. Compliance and conformity to local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding packaging material. If any parts are missing, do not begin installation until you obtain the missing parts.

Product warranties may be found under “Products” on our web site at bradleycorp.com.

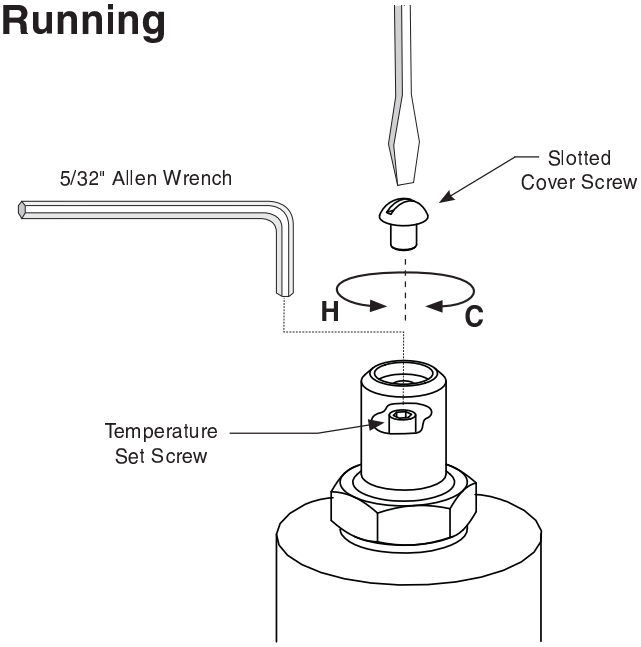
Supplies recommended for installation



- Lockable shut-off on the outlet if tempered water is supplied to one or more remote fixtures
- Lockable shut-off on the inlets/supplies
- (6) 3/8" wall anchors and fasteners for surface-mounted cabinet
- (4) 1/4" and (2) 3/8" fasteners (and wall anchors, if necessary) for recess-mounted cabinet
- Unions on all connections to facilitate removal of valve

Tools required for temperature adjustment

- 5/32" Allen wrench
- Blade screwdriver



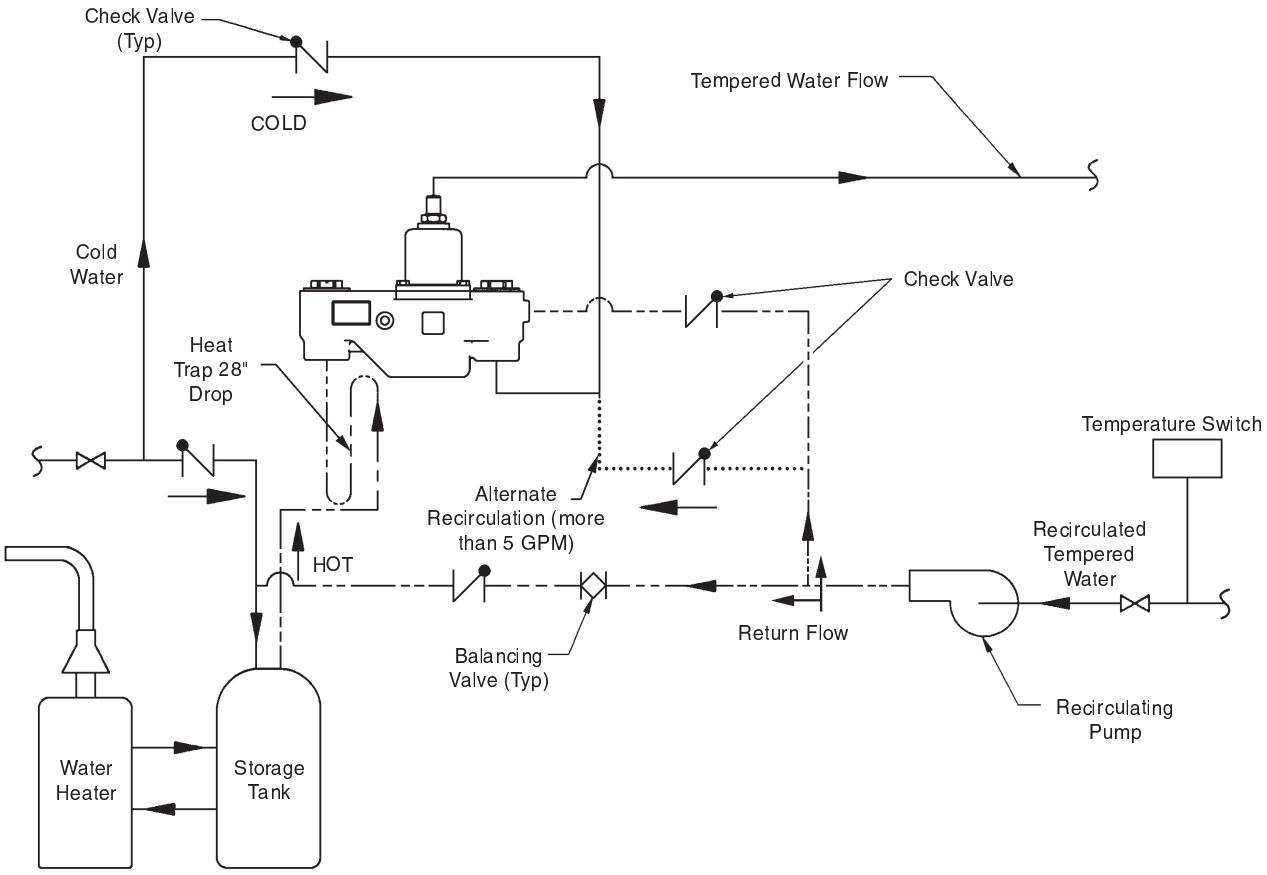
1 Connect Supply Lines and Install Thermometer

- ☑ *Flush the supply lines before beginning installation.*
- ☑ *When the check valves are in the open (operating) position, the cover screw for the stop/check stem will be flush with the valve cap.*
- ☑ *Install Optional Thermometer using pipe sealant or teflon tape.*
- ☑ *Check for leaks by pressurizing unit SLOWLY.*
- ☑ *Valve appearance may differ slightly.*

2 Adjust Temperature with Water Running

- ☑ *Check the temperature when approximately 10 GPM water flow is reached (equivalent to four standard showers).*
- ☑ *This device must be checked for final temperature and adjusted as necessary. The standard preset factory temperature setting is 105°F (40°C).* [the range of the valve is 90°F – 120°F (32°C – 49°C)]. *Consult proper medical and/or safety authorities for the optimum temperature recommended for your particular application.*

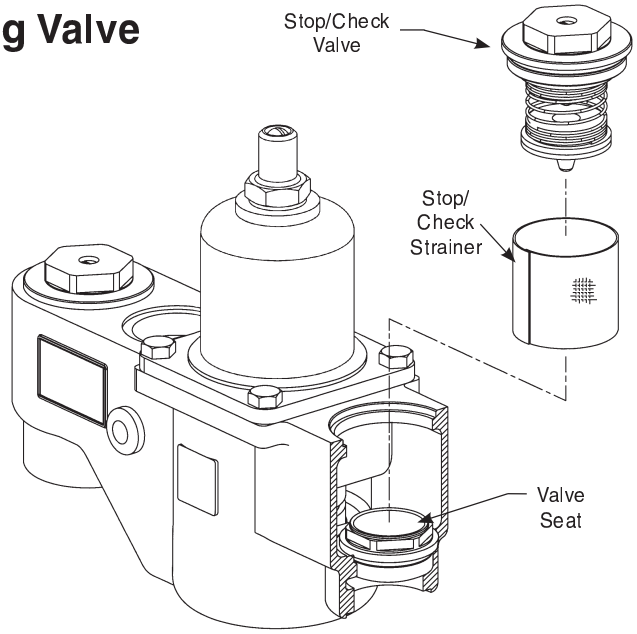
3 Test Unit



DO NOT SKIP THIS STEP!!!

Shut the hot water supply off by closing hot water inlet valve or supply check valve. While the hot water supply is turned off, check to make sure the cold water is significantly reduced. If the cold water is reduced properly, reopen the hot water supply.

Shut the cold water supply off by closing the cold water inlet valve or supply check valve. While the cold water supply is off, check to make sure that the hot water flow has shut down. If hot water is shut down, reopen cold water supply. Test unit weekly for proper function and desired set temperature.



4 Optional Water Recirculation Setup

Recirculating the water in the system provides constant regulation of the water temperature. Flush the supply lines thoroughly after completing installation. Close off all fixtures and label them as not available for use during the recirculating process.

1. Turn off the recirculating pump and turn on the water supply (a water flow rate of 10-15 GPM is required).
2. Let the water run through the system until a consistent temperature is obtained. If you do not obtain the required temperature, refer to step #2 on previous page for temperature readjustment.
3. As soon as the water reaches the proper temperature, turn on the recirculating pump (make certain the proper system temperature has been achieved before proceeding).
4. Check the water temperature at the return pump. If the temperature exceeds the appropriate level by 2°F, adjust the temperature high-limit switch (this will turn off the pump). Wait until the return water temperature is 5°F below the appropriate level and adjust the low-limit switch (this will turn the pump back on).
5. Open the balancing valve completely.
6. Turn off all fixtures and make sure there is no water running through the system (the cold inlet pipe should feel warm to the touch).
7. Let the system run for 30 minutes or longer without water. If, after 30 minutes, the water temperature increases, you may readjust the temperature by slowly closing the balancing valve until the appropriate temperature is reached.

Troubleshooting Thermostatic Mixing Valve

Before attempting to troubleshoot the valve or disassemble the components, check for the following:

- Stop/check valves are fully open (the slotted stem must be flush with the stop/check cap) and that all inlet and outlet shut-off valves are open
- Hot and cold inlet pipes are connected properly, and that there are no cross-connections or leaking stop/check valves
- Water heater output is at least 15° F above the set temperature.

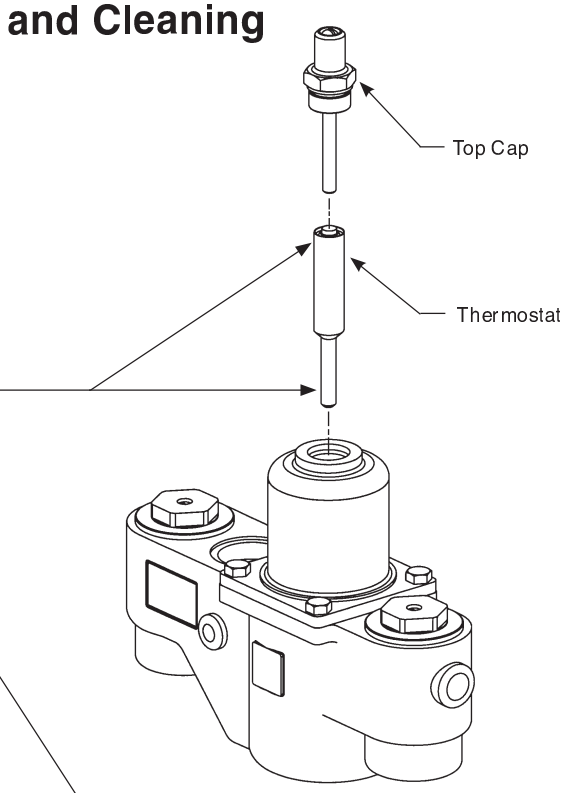
Be sure to close the appropriate shut-off valves prior to disassembly of the valve and reopen the valves after inspection and repair is complete.

Valve appearance may differ slightly.

Problem	Cause	Solution
External leaks in the system	Either the NPT joints or the o-rings have been damaged.	Replace the NPT joints and/or o-rings where necessary. For replacement of o-rings, contact your Bradley representative and ask for O-Ring Seal Kit (S65-215).
No hot water flow (cold water flow only)	The thermostat has failed and, subsequently, the safety shut-off has engaged.	**Inspect Thermostat:** 1. Remove the top cap and pull out the push rod and thermostat. 2. Insert a 7/16" dia. rod into the thermostat bellows. 3. Mark the length of the thermostat bellows (at room temperature, with 10 lb. of force, the bellows length should be approx. 2-25/35" to 3-1/4"). 4. If the thermostat bellows length is not in the proper range, the thermostat must be replaced (it cannot be repaired). Contact your Bradley representative and ask for Thermostat Kit (S65-194).
Limited water flow	The inlet shut-off valve may be partially closed or there has been a significant decrease in water pressure.	
	Dirt and debris have collected on the check screen or seat, limiting the movement of the stop and checks.	**Clean Stop and Check Valves:** Remove the stop and checks, clean the screen and seat and reassemble the valve. Do not remove the seat. The components may be scraped with a screwdriver to remove debris. A pair of tweezers works well for pulling debris out from the seat. If the stop and checks need to be replaced, contact your Bradley representative and ask for Check/Stop Kit (S65-212).
Temperature fluctuation or improper Temperature	The stop and check sections of the valve do not move freely.	Clean Stop and Check Valves as described above.
	Thermostat is slowly failing.	Check Thermostat as described above, or replace.
	Inlet supply line to the mixing valve is being shared by other pieces of equipment that are used only periodically, such as laundry appliances or washdown stations. It may reduce the inlet pressure to the mixing valve to less than 10 PSI. The supply line size may not be large enough to supply both the valve and the other appliances.	Enlarge the supply line size, reconfigure the supply line or regulate the supply usage.
	Recirculation is not balanced.	Review recirculation set up on page 5.
	Piston does not move freely and must be cleaned.	See next page for piston disassembly and cleaning directions.

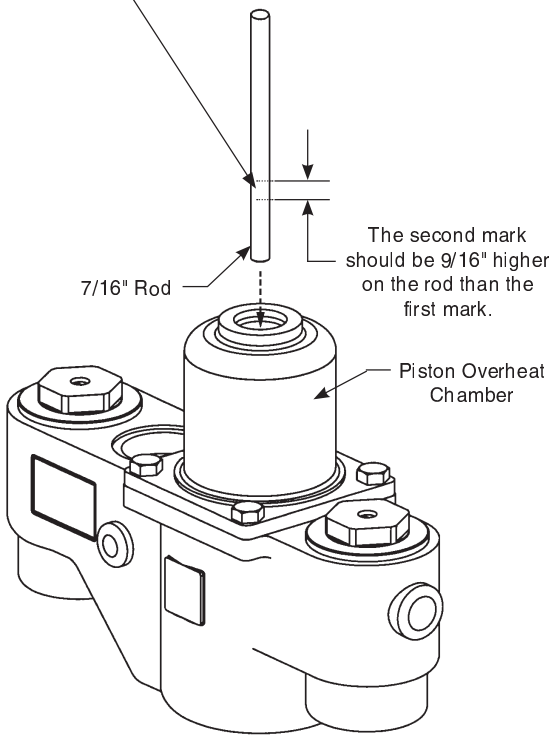
Troubleshooting: Piston Disassembly and Cleaning

WARNING! To prevent injuries, use proper protective equipment for eyes and skin when using a propane torch.



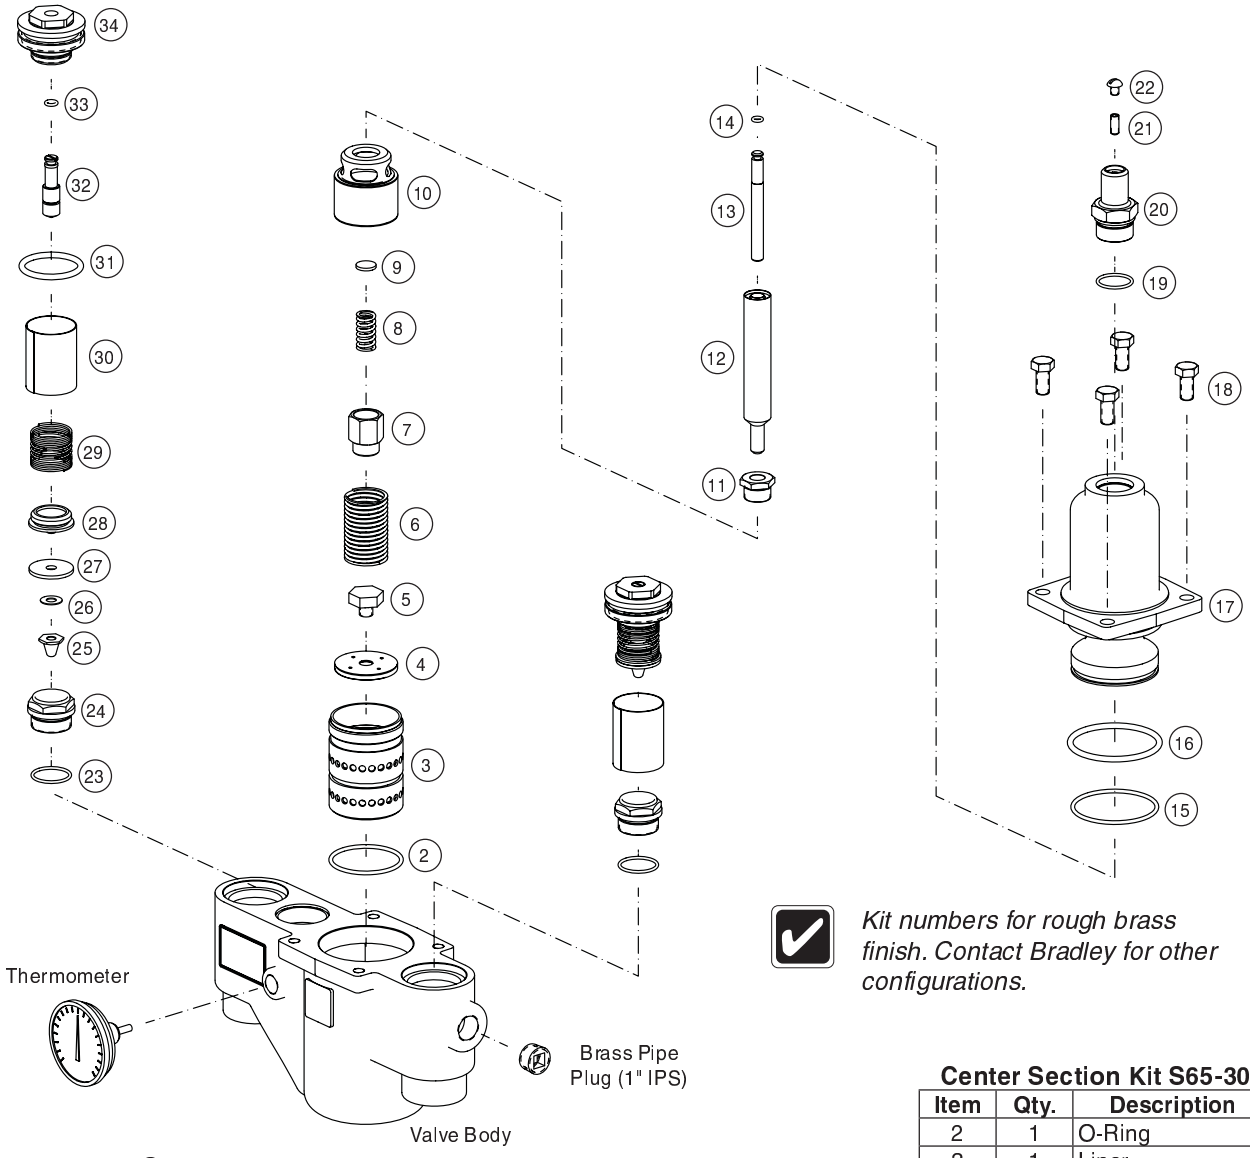
A Remove the valve's top cap and pull out the thermostat and push rod. You may use a needle-nose pliers to remove the thermostat from the valve body if desired.

B Insert a 7/16" dia. rod into the valve and into the piston overheat chamber. Mark the length of the rod inside the valve. Push the rod until the piston stops and mark the new length.



C If the rod travels less than 9/16", the piston is not moving freely within the liner and they must be cleaned:

1. Remove the control section assembly, top cap and thermostat.
2. Unthread the liner from the cap (it is glued together; the o-rings must be removed and heat should be applied to melt the glue and loosen the liner).
3. Clean the piston and liner with any cleaner suitable for brass and stainless steel (400-grit sandpaper may be used to polish and hone the piston and liner).



D Push the mechanism up and down several times to make sure the piston moves smoothly and consistently. If it is not consistent, repeat Procedure C until it moves freely, or replace. Contact your Bradley representative and ask for Piston/Liner Kit (part number S65-216).

Valve appearance may differ slightly.

Parts Breakdown

⚠ IMPORTANT! ⚠

Read this entire installation manual to ensure proper installation. When finished with the installation, file this manual with the owner or maintenance department. Compliance and conformity to local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding packaging material. If any parts are missing, do not begin installation until you obtain the missing parts.

Make sure that all water supply lines have been flushed and then completely turned off before beginning installation. Debris in supply lines can cause valves to malfunction.

Product warranties may be found under “Products" on our web site at bradleycorp.com.

Supplies recommended for installation

- Lockable shut-off on the outlet if tempered water is supplied to one or more emergency fixtures
- Lockable shut-off on the inlets/supplies
- (6) 3/8" wall anchors and fasteners for surface-mounted cabinet
- (4) 1/4" fasteners (and wall anchors, if necessary) for recess-mounted cabinet
- Unions on all connections to facilitate removal of valve

Tools required for temperature adjustment

- 5/32" Allen wrench
- Blade screwdriver

1 Install Optional Cabinet (If not installing cabinet, skip to Step 2)

Recessed Cabinet:

1. Rough-in wall opening 24-1/2" W x 24-1/2".

2. Insert the cabinet and secure to wall with four 1/4" fasteners properly anchored (supplied by installer.)

3. Install two anchors and screws through the valve bracket in back of the cabinet into a secure brace (supplied by installer) or into wall. This will support the valve.

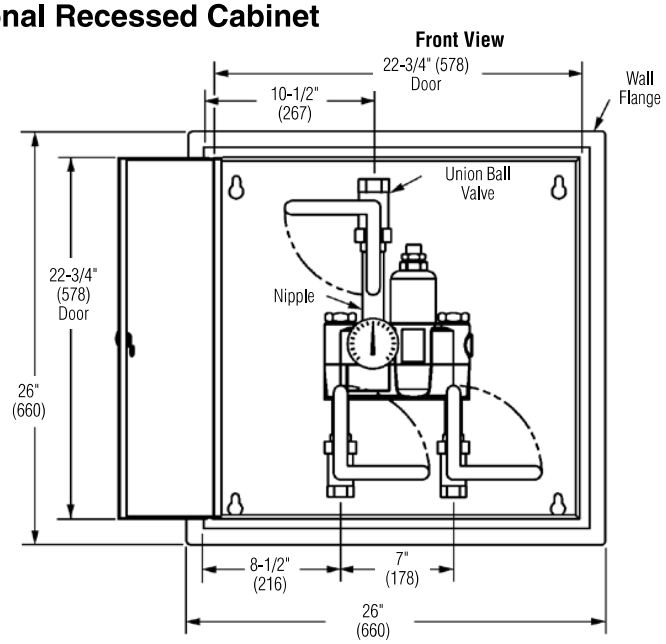
4. Install the valve nipples and one-half of the union ball valve using pipe sealant or teflon tape. Install the other half of the union ball valve onto inlet and outlet pipe.

5. Insert the valve into the bracket in the cabinet (right side goes in first). Continue with the valve installation procedure.

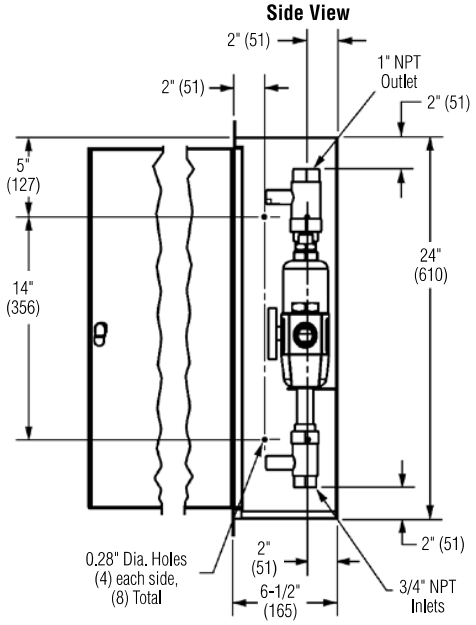
6. Position the wall flange tight to the wall and caulk in place.

Surface-Mounted Cabinet:

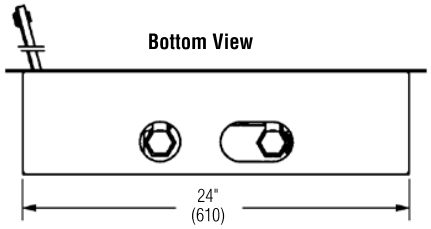
1. Measure and mark the cabinet mounting hole locations at the dimensions shown on next page. Install six 3/8" wall anchors (supplied by installer).



2. Position the cabinet onto the wall and secure into place with six 3/8" wall fasteners (supplied by installer).



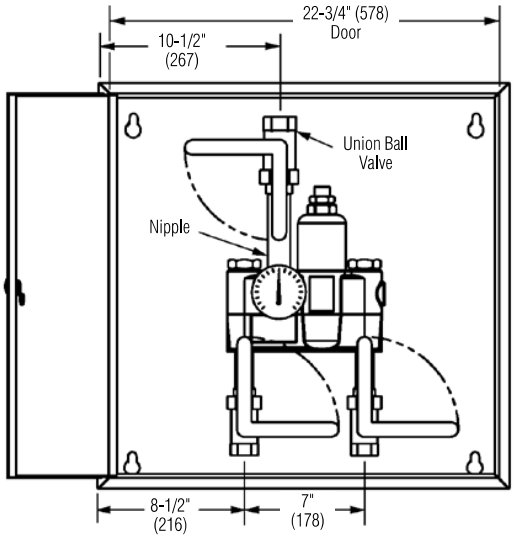
3. Install the valve nipples and one-half of the union ball valve using pipe sealant or teflon tape. Then install the other half of the union ball valve onto the inlet and outlet piping.

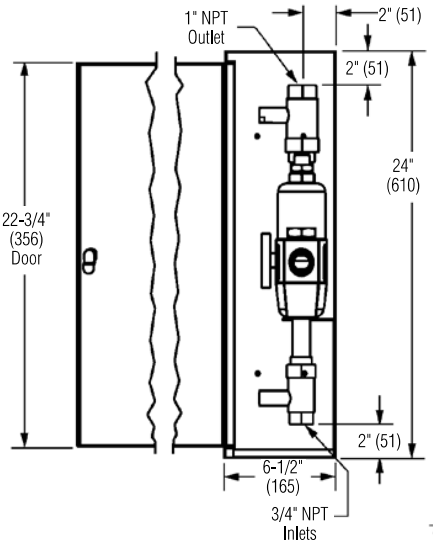


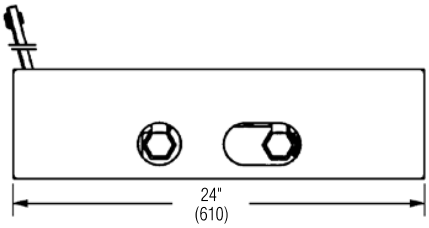
4. Insert the valve into the bracket in the cabinet (right side of the valve goes in first). Continue with the valve installation procedure.

Optional Recessed Cabinet

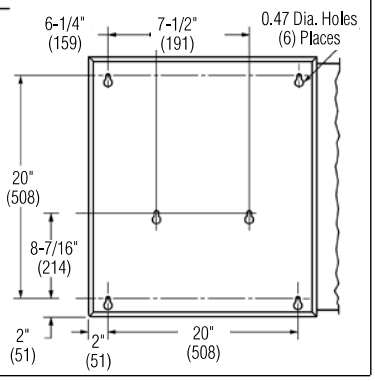
(mm)



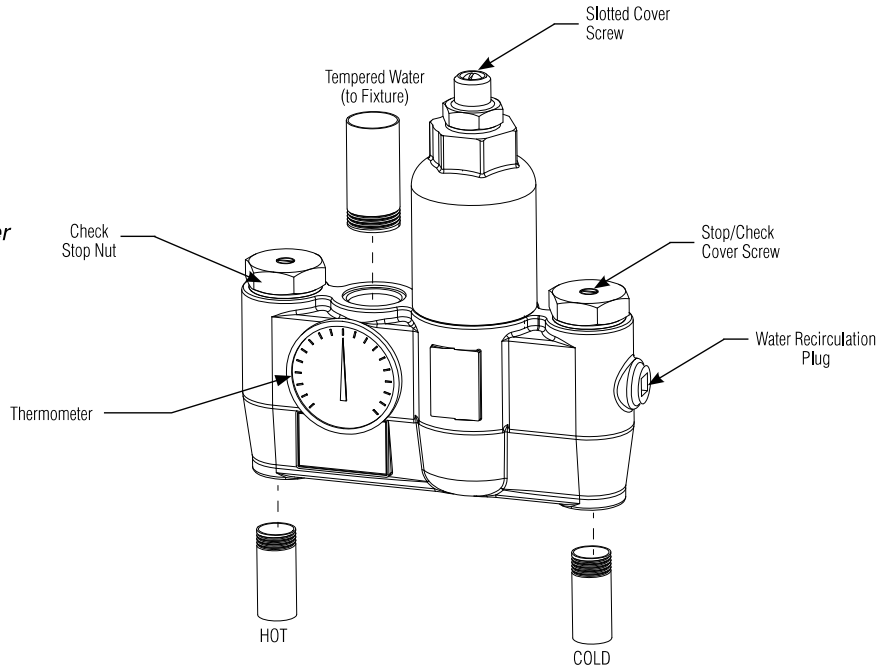




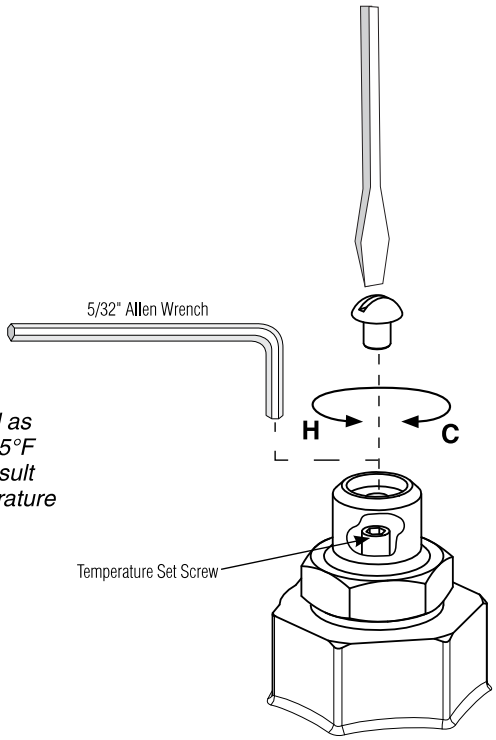
Wall Opening:
24-1/2" W x 24-1/2" H



Optional Surface-Mounted Cabinet



Mounting Hole Locations



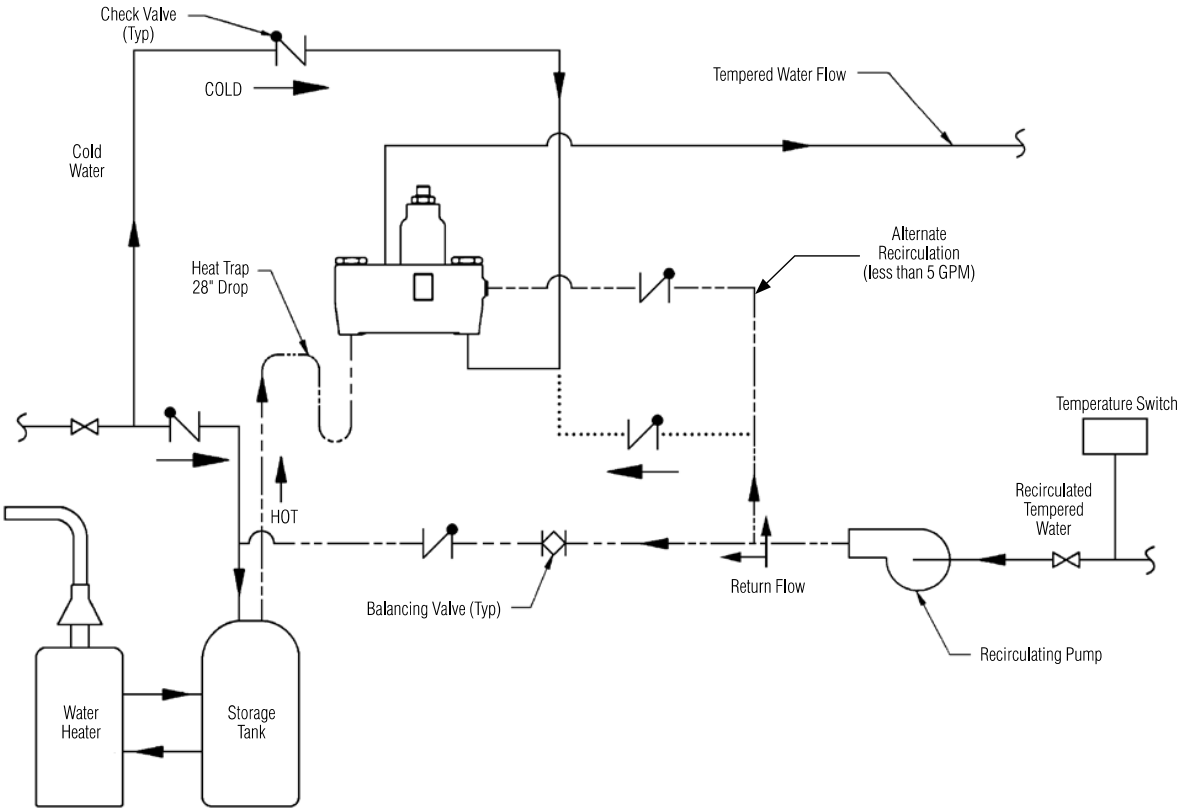
2 Connect Supply Lines and Install Thermometer

- ☑ *When the check valves are in the open (operating) position, the cover screw for the stop/check stem will be flush with the valve cap.*
- ☑ *Install Thermometer using pipe sealant or teflon tape.*
- ☑ *Check for leaks by pressurizing unit SLOWLY.*

3 Adjust Temperature with Water Running

- ☑ *Check the temperature when approximately 10 GPM water flow is reached (equivalent to two face washes)*
- ☑ *No single emergency fixture supplied by this device has a minimum flow rate less than 1.5 GPM (5.7 L/m).*
- ☑ *This device must be checked for final temperature and adjusted as necessary. The standard preset factory temperature setting is 85°F (29°C). [the range of the valve is 65°F–95°F (18°C–35°C)]. Consult proper medical and/or safety authorities for the optimum temperature recommended for your particular application.*

4 Test Unit



⚠ **DO NOT SKIP THIS STEP!!!**

Shut the hot water supply off by closing hot water inlet valve or supply check valve. While the hot water supply is turned off, check to make sure the cold water continues to flow. If the cold water is flowing properly, reopen the hot water supply.

Shut the cold water supply off by closing the cold water inlet valve or supply check valve. While the cold water supply is off, check to make sure that the hot water flow has shut down. If hot water is shut down, reopen cold water supply. Test unit weekly for proper function and desired set temperature.

5 Optional Water Recirculation Setup

Recirculating the water in the system provides constant regulation of the water temperature. Flush the supply lines thoroughly after completing installation. Close off all fixtures and label them as not available for use during the recirculating process.

1. Turn off the recirculating pump and turn on the water supply at emergency fixture (a water flow rate of 10-15 GPM is required).

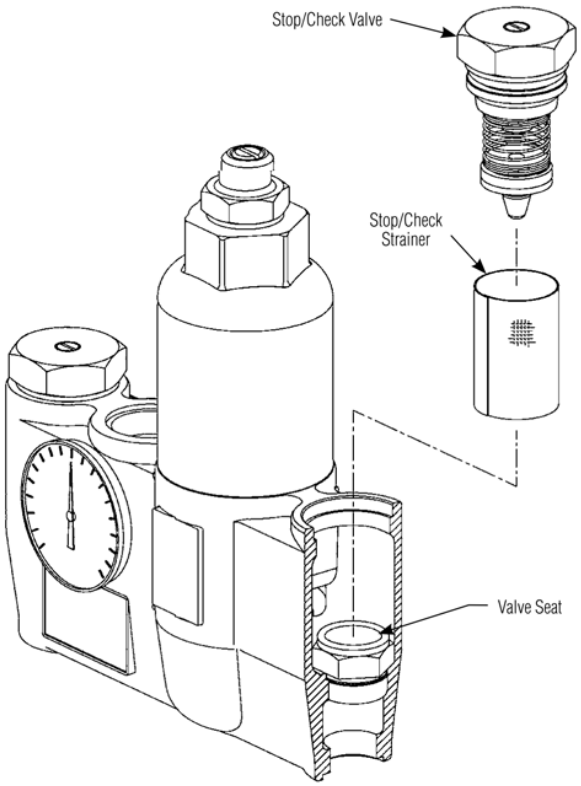
2. Let the water run through the system until a consistent temperature is obtained. If you do not obtain the required temperature, refer to step #3 on previous page for temperature readjustment.

3. As soon as the water reaches the proper temperature, turn on the recirculating pump (make certain the proper system temperature has been achieved before proceeding).

4. Check the water temperature at the return pump. If the temperature exceeds the appropriate level by 2°F, adjust the temperature high-limit switch (this will turn off the pump). Wait until the return water temperature is 5°F below the appropriate level and adjust the low-limit switch (this will turn the pump back on).

5. Open the balancing valve completely.

6. Turn off all fixtures and make sure there is no water running through the system (the cold inlet pipe should feel warm to the touch).



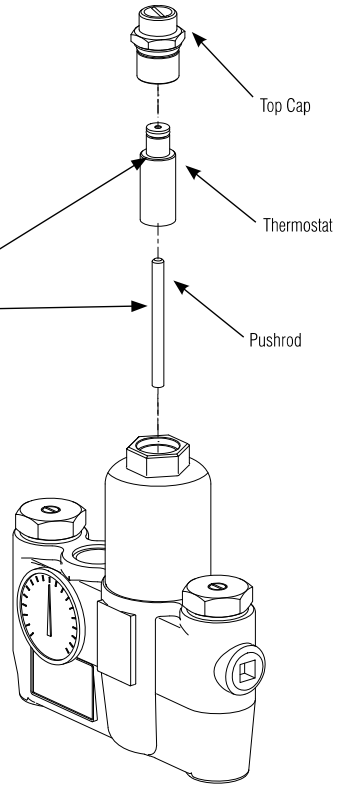
7. Let the system run for 30 minutes or longer without water. If, after thirty minutes, the water temperature increases, you may readjust the temperature by slowly closing the balancing valve until the appropriate temperature is reached.

Troubleshooting Thermostatic Mixing Valve

Before attempting to troubleshoot the valve or disassemble the components, check for the following:

- *Stop/check valves are fully open (the slotted stem must be flush with the stop/check cap) and that all inlet and outlet shut-off valves are open*
- *Hot and cold inlet pipes are connected properly, and that there are no cross-connections or leaking stop/check valves*
- *Water heater output is at least 15° F above the set temperature.*

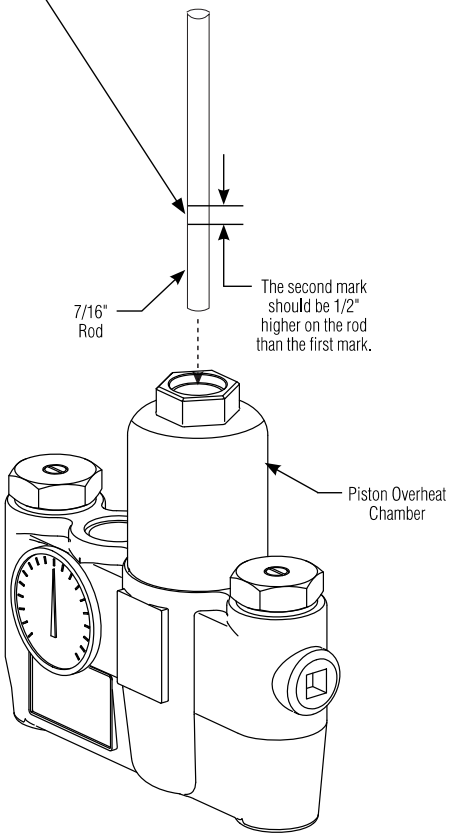
Be sure to close the appropriate shut-off valves prior to disassembly of the valve and reopen the valves after inspection and repair is complete.



Problem	Cause	Solution
External leaks in the system	Either the NPT joints or the o-rings have been damaged.	Replace the NPT joints and/or o-rings where necessary. For replacement of o-rings, contact your Bradley representative and ask for O-Ring Seal Kit (S65-173).
No hot water flow (cold water flow only)	The thermostat has failed and, subsequently, the safety shut-off has engaged.	**Inspect Thermostat:** 1. Remove the top cap and pull out the push rod and thermostat. 2. Insert a 7/16" dia. rod into the thermostat bellows. 3. Mark the length of the thermostat bellows (at room temperature, with 10 lb. of force, the bellows length should be approx. 1-3/16"—1-1/2"). 4. If the thermostat bellows length is not in the proper range, the thermostat must be replaced (it cannot be repaired). Contact your Bradley representative and ask for Thermostat Kit (S65-174).
Limited water flow	The inlet shut-off valve may be partially closed or there has been a significant decrease in water pressure.	
	Dirt and debris have collected on the check screen or seat, limiting the movement of the stop and checks.	**Clean Stop and check Valves:** Remove the stop and checks, clean the screen and seat and reassemble the valve. Do not remove the seat. The components may be scraped with a screwdriver to remove debris. A pair of tweezers works well for pulling debris out from the seat. If the stop and checks need to be replaced, contact your Bradley representative and ask for Check/Stop Kit (S65-337).
Temperature fluctuation or improper Temperature	The stop and check sections of the valve do not move freely.	Clean Stop and Check Valves as described above.
	Thermostat is slowly failing.	Check Thermostat as described above, or replace.
	Inlet supply line to the mixing valve is being shared by other pieces of equipment that are used only periodically, such as laundry appliances or washdown stations. It may reduce the inlet pressure to the mixing valve to less than 10 PSI. The supply line size may not be large enough to supply both the valve and the other appliances.	Enlarge the supply line size, reconfigure the supply line or regulate the supply usage.
	Recirculation is not balanced.	Review recirculation set up on page 5.
	Piston does not move freely and must be cleaned.	See next page for piston disassembly and cleaning directions.

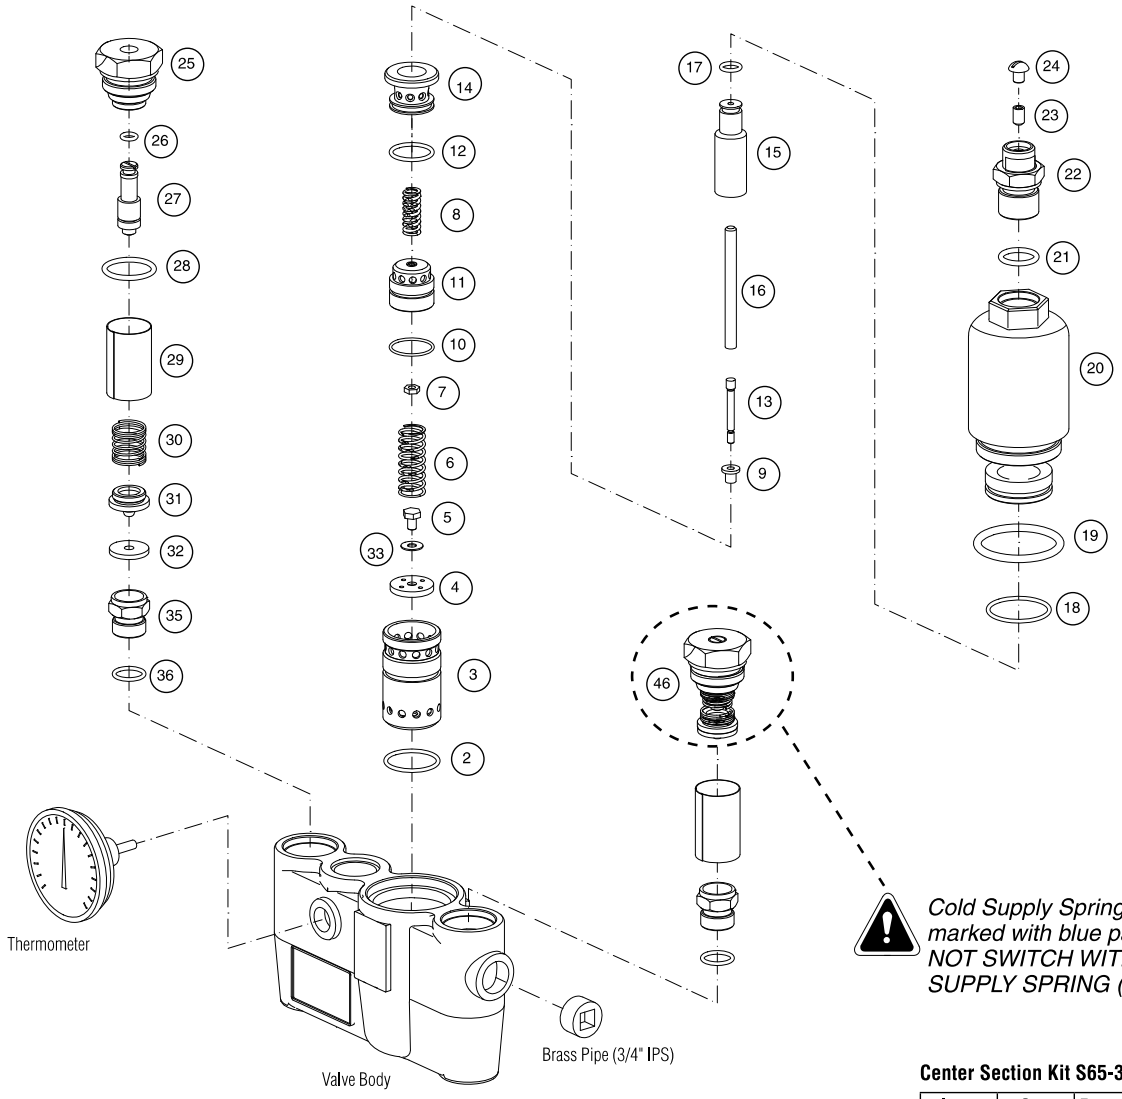
Troubleshooting: Piston Disassembly and Cleaning

To prevent injuries, use proper protective equipment for eyes and skin when using a propane torch.



A Remove the valve's top cap and pull out the push rod and then the thermostat. You may use a needle-nose pliers to remove the thermostat from the valve body if desired.

B Insert a 7/16" dia. rod into the valve and into the piston overheat chamber. Mark the length of the rod inside the valve. Push the rod until the piston stops and mark the new length.



C If the rod travels less than1/2", the piston is not moving freely within the liner and they must be cleaned:

1. Remove the control section assembly, top cap and thermostat.
2. Unthread the liner from the cap (it is glued together; the o-rings must be removed and heat should be applied to melt the glue and loosen the liner).
3. Clean the piston and liner with any cleaner suitable for brass and stainless steel (400-grit sandpaper may be used to polish and hone the piston and liner).

D Push the mechanism up and down several times to make sure the piston moves smoothly and consistently. If it is not consistent, repeat Procedure C until it moves freely, or replace. Contact your Bradley representative and ask for Piston/Liner Kit (part number S65-175).

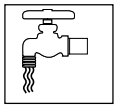
IMPORTANT!



Read this entire installation manual to ensure proper installation. When finished with the installation, file this manual with the owner or maintenance department. Compliance and conformity to local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding packaging material. If any parts are missing, do not begin installation until you obtain the missing parts.

Valve shall be accessible for testing, adjusting and maintenance in the installed position.

Make sure that all water supply lines have been flushed and then completely turned off before beginning installation. Debris in supply lines can cause valves to malfunction.

Product warranties may be found under "Products" on our web site at bradleycorp.com.

Supplies recommended for installation

- Lockable shut-off on the outlet if tempered water is supplied to one or more emergency fixtures
- Lockable shut-off on the inlets/supplies
- (6) 1/4" wall anchors and fasteners for surface-mounted cabinet
- (4) 1/4" fasteners (and wall anchors, if necessary) for recess-mounted cabinet
- Unions on all connections to facilitate removal of valve

Tools required for temperature adjustment

- 5/64" Allen wrench
- Blade screwdriver

1 Install Optional Cabinet (If not installing cabinet, skip to Step 2)

If installing S19-2000EFX into Dropdown Eyewash Cabinet S19-292, please see mounting instructions supplied with cabinet.

Recessed Cabinet:

1. Rough-in wall opening 11-1/2" W x 13" H.

2. Insert the cabinet and secure to wall with four 1/4" fasteners properly anchored (supplied by installer.)

3. Install two anchors and screws through the valve bracket in back of the cabinet into a secure brace (supplied by installer) or into wall. This will support the valve.

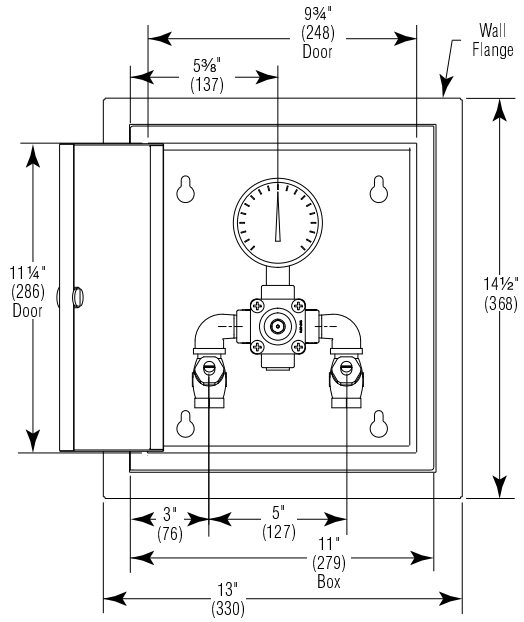
4. Install the valve nipples and one-half of the union ball valve using pipe sealant or teflon tape. Install the other half of the union ball valve onto inlet and outlet pipe.

5. Insert the valve into the bracket in the cabinet (right side goes in first). Continue with the valve installation procedure.

6. Position the wall flange tight to the wall and caulk in place.

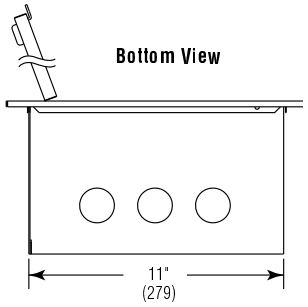
Surface-Mounted Cabinet:

1. Measure and mark the cabinet mounting hole locations at the dimensions shown on next page. Install six 3/8" wall anchors (supplied by installer).



2. Position the cabinet onto the wall and secure into place with six 3/8" wall fasteners (supplied by installer).

3. Install the valve nipples and one-half of the union ball valve using pipe sealant or teflon tape. Then install the other half of the union ball valve onto the inlet and outlet piping.



4. Insert the valve into the bracket in the cabinet (right side of the valve goes in first). Continue with the valve installation procedure.

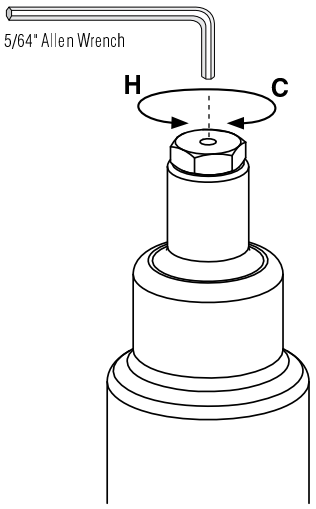
2 Connect Supply Lines and Fixture



- ☑ *Check for leaks by pressurizing unit SLOWLY.*
- ☑ *Check the temperature when approx. 3-5 gpm water flow is reached (equivalent to one eye wash or face wash) and adjust if necessary.*
- ☑ *When the check stops are in the fully open (operating) position, the stem will extend approximately 1/2" (13mm) from the stem nut.*

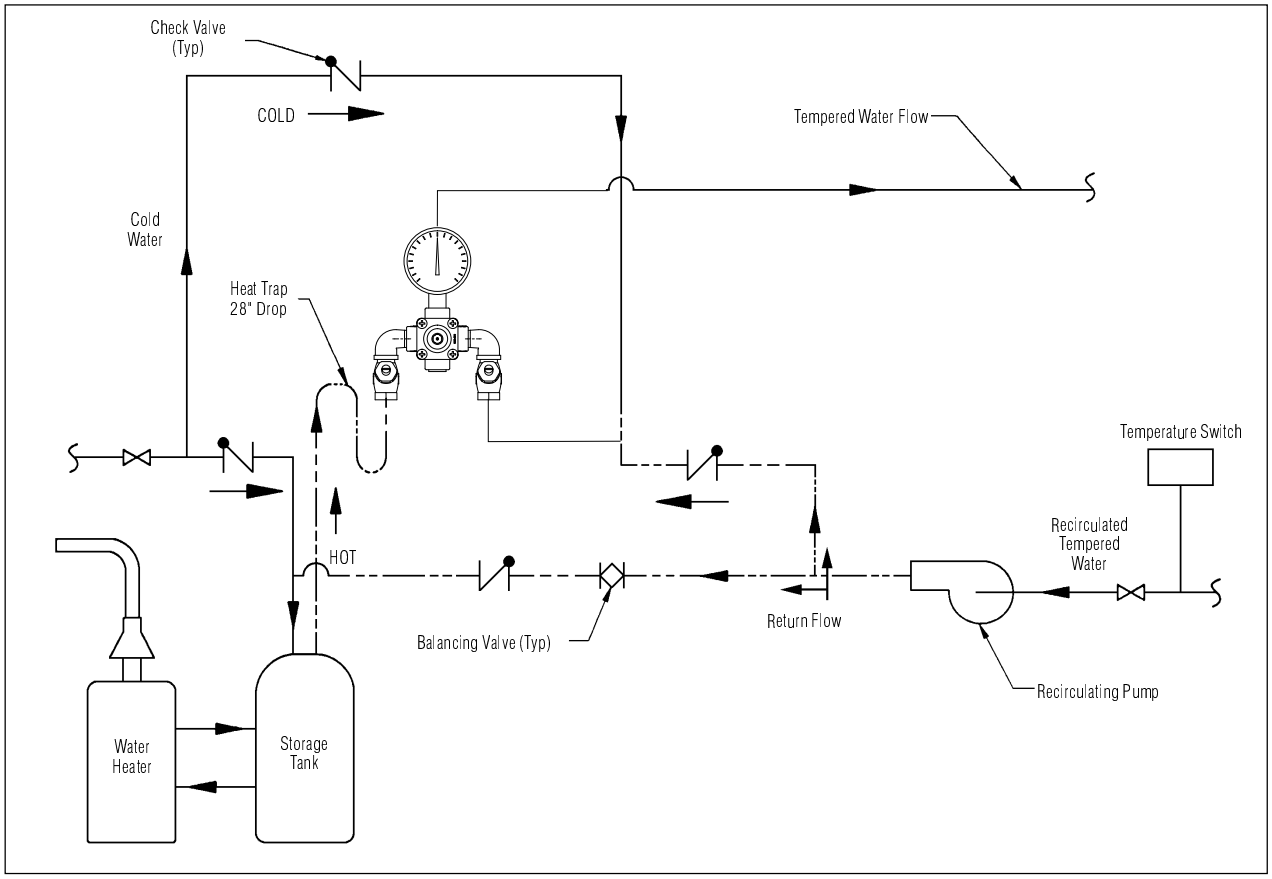
S19-2000 Shown

3 Adjust Temperature with Water Running

- ☑ *Check the temperature when approximately 3 – 5 gpm water flow is reached (equivalent to one eye wash).*
- ☑ *No single emergency fixture supplied by this device shall have a minimum flow rate less then 1.5 gpm.*
- ☑ *This device must be checked for final temperature and adjusted as necessary. The standard preset factory temperature setting is 85°F (29°C) [the range of the valve is 65°F–90°F (18°C–32°C)]. Insert Allen Wrench through the hole in the cap and into the set screw to adjust. Consult proper medical and/or safety authorities for the optimum temperature recommended for your particular application.*

4 Test Unit

⚠ **DO NOT SKIP THIS STEP!!!**



Shut the hot water supply off by closing hot water inlet valve or supply check valve. While the hot water supply is turned off, check to make sure the cold water continues to flow. If the cold water is flowing properly, reopen the hot water supply.

Shut the cold water supply off by closing the cold water inlet valve or supply check valve. While the cold water supply is off, check to make sure that the hot water flow has shut down to less then 0.5 gpm. If hot water is shut down, fully reopen cold water supply.

- ☑ ***Test the system weekly (turn on the water supply and check for constant control of the desired set temperature).***

5 Optional Water Recirculation Setup

Recirculating the water in the system provides constant regulation of the water temperature. Flush the supply lines thoroughly after completing installation. Close off all fixtures and label them as not available for use during the recirculating process.

1. Turn off the recirculating pump and turn on the water supply at emergency fixture (a water flow rate of 3 – 5 gpm is required).

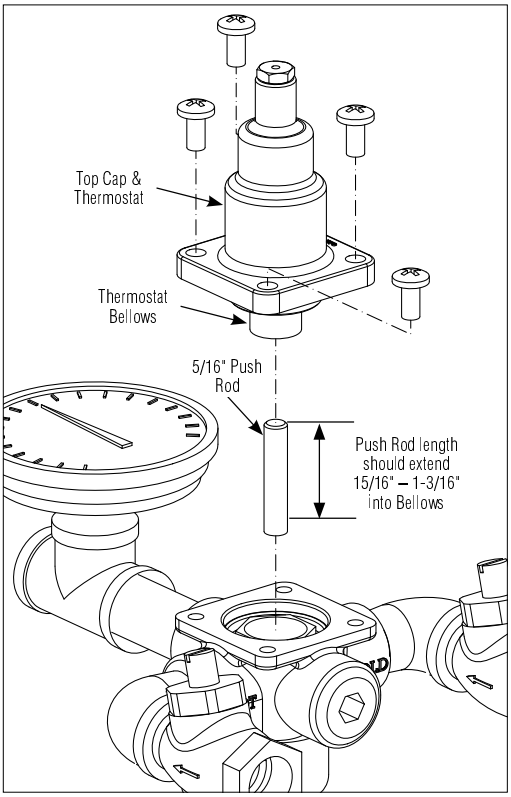
2. Let the water run through the system until a consistent temperature is obtained. If you do not obtain the required temperature, refer to step #3 on previous page for temperature readjustment.

3. As soon as the water reaches the proper temperature, turn on the recirculating pump (make certain the proper system temperature has been achieved before proceeding).

4. Check the water temperature at the return pump. If the temperature exceeds the appropriate level by 2°F, adjust the temperature high-limit switch (this will turn off the pump). Wait until the return water temperature is 5°F below the appropriate level and adjust the low-limit switch (this will turn the pump back on).

5. Open the balancing valve completely.

6. Turn off all fixtures and make sure there is no water running through the system (the cold inlet pipe should feel warm to the touch).



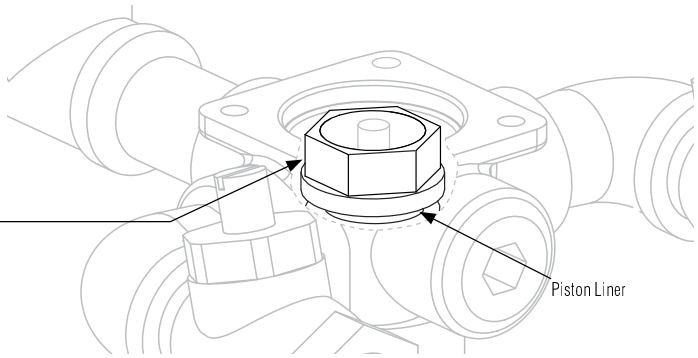
7. Let the system run for 30 minutes or longer without water. If, after thirty minutes, the water temperature increases, you may readjust the temperature by slowly closing the balancing valve until the appropriate temperature is reached.

Troubleshooting Thermostatic Mixing Valve

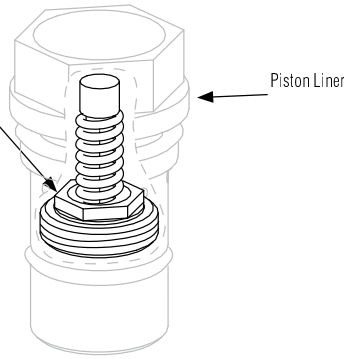
Before attempting to troubleshoot the valve or disassemble the components, check for the following:

- *Stop/check valves are fully open (the slotted stem extends approximately 1/2" from the stem nut) and that all inlet and outlet shut-off valves are open.*
- *Hot and cold inlet pipes are connected properly, and that there are no cross-connections or leaking stop/check valves.*
- *Water heater output is at least 20° F above the set temperature.*

Be sure to close the appropriate shut-off valves prior to disassembly of the valve and reopen the valves after inspection and repair is complete.

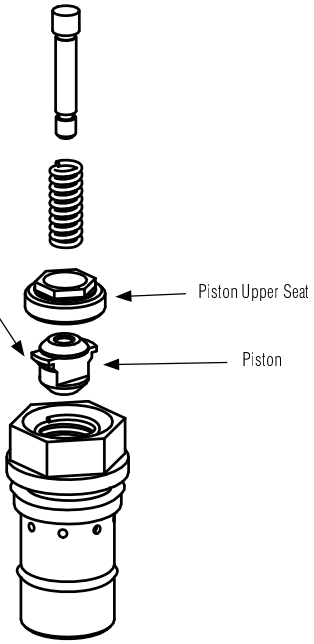


Problem	Cause	Solution
External leaks in the system	Either the NPT joints or the o-rings have been damaged.	Replace the NPT joints and/or o-rings where necessary. For replacement of o-rings, contact your Bradley representative and ask for O-Ring Seal Kit (S65-170).
No hot water flow (cold water flow only)	The thermostat has failed and, subsequently, the safety shut-off has engaged.	**Inspect Thermostat:** 1. Remove the top cap and thermostat. 2. Insert the 5/16" dia. push rod into the thermostat bellows. 3. Mark the length the push rod extends into the bellows (at room temperature, with 10 lb. of force. the length should be approx. 15/16" – 1-3/16"). 4. If the push rod length is not in the proper range, the thermostat must be replaced (it cannot be repaired). Contact your Bradley representative and ask for Thermostat Kit (S65-171).
Limited water flow	The inlet shut-off valve may be partially closed or there has been a significant decrease in water pressure.	
	Dirt and debris have collected on the check screen or seat, limiting the movement of the stop and checks.	**Clean Stop and check Valves:** Remove the stop and checks, clean the seat and reassemble the valve. Do not remove the seat. The components may be brushed with a small wire brush to remove debris. A pair of tweezers works well for pulling debris out from the seat. If the stop and checks need to be replaced, contact your Bradley representative and ask for Check/Stop Kit (S27-102-Rough Brass, or S27-292A-Chrome).
Temperature fluctuation or improper Temperature	The stop and check sections of the valve do not move freely.	Clean Stop and Check Valves as described above.
	Thermostat is slowly failing.	Check Thermostat as described above, or replace.
	Inlet supply line to the mixing valve is being shared by other pieces of equipment that are used only periodically, such as laundry appliances or washdown stations. It may reduce the inlet pressure to the mixing valve to less than 3 PSI. The supply line size may not be large enough to supply both the valve and the other appliances.	Enlarge the supply line size, reconfigure the supply line or regulate the supply usage.
	Recirculation is not balanced.	Review recirculation set up on page 5.
	Piston does not move freely and must be cleaned.	See next page for piston disassembly and cleaning directions.



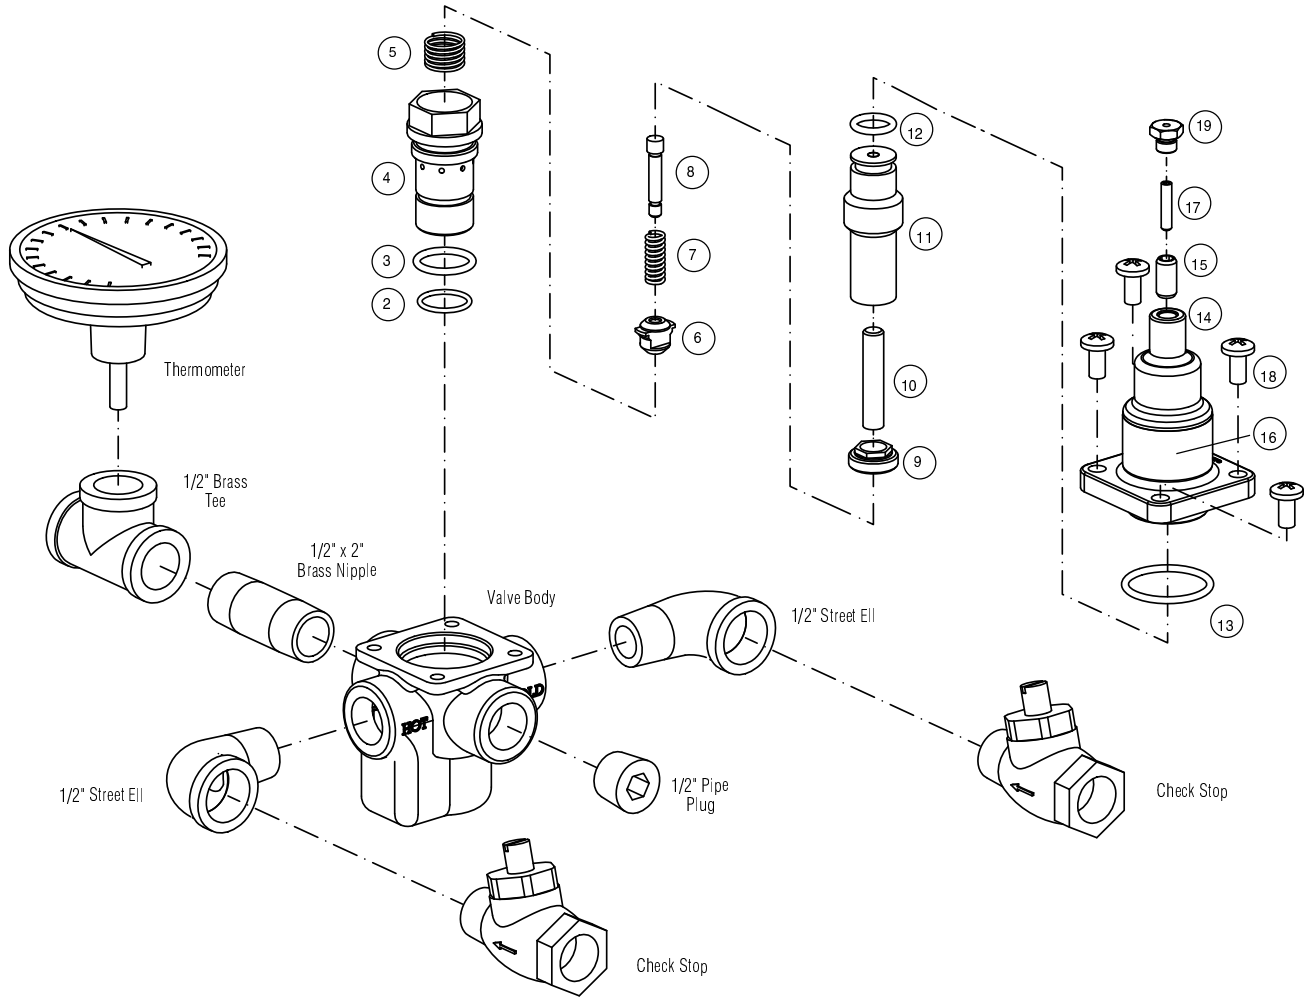
Troubleshooting: Piston Disassembly and Cleaning

A Remove the Top Cap and Thermostat Assembly as shown on Page 6. Set the 5/8" Push Rod aside.



B Using a 15/16" socket wrench, loosen the piston liner from the valve body and lift out with a needle-nose pliers.

C Using a 1/2 deep socket wrench, loosen the piston upper seat from the piston liner and lift out parts with a needle-nose pliers.



D Dissamble and clean the piston assembly parts with any cleaner suitable for brass and stainless steel. (if necessary, use a 400-grit sandpaper to polish and hone the piston and liner.)

E Re-assemble the piston assembly. Push the mechanism up and down several times to make sure the piston moves smoothly and consistently. If it is not consistent, repeat Procedure D until it moves freely, or replace. Contact your Bradley representative and ask for Piston/Liner Kit (part number S65-172).

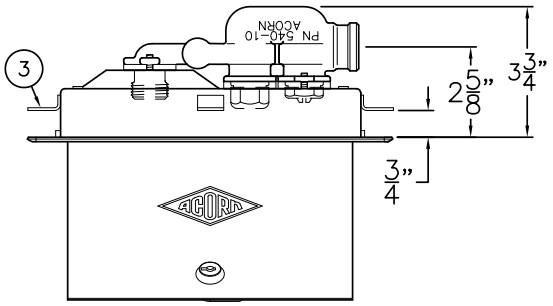
Flexible Connection Lines for S19-2000EFX

When used with S19-292, order Part No. 269-653 (3 supplied with unit).

Kit numbers for rough brass finish. Contact Bradley for other configurations.

As of November 2001, the piston (Item 7) has replaced the seal holder and seal as a direct replacement.



As of June 2008, the brass control cap (item 15) has been replaced by a plastic cap. All internal components are identical.

As of July 2012, the Temperature Adjustment Control (items 15, 17 and 19) have been updated and are compatible with all units using the plastic Control Cap (June 2008 to present).

- b REMOVABLE WHEEL LOOSE KEY HANDLE 1/4"-5/16" SQUARE TAPER.
- c LOCKSHIELD SCREWDRIVER STOPS.
- d STAINLESS STEEL #10-32 UNF x 1" LONG WALL FLANGE / DOOR ANCHORING SCREWS.
- e HOSE END VACUUM BREAKER INCLUDED ON MODELS 8146 & 8156.
- f GRAY FOAM WEATHERSTRIPPING TAPE.

WALL FLANGE (MODELS 8145, 8146)
DOOR FRAME SHOWN (MODELS 8155, 8156)

INSTALLATION INSTRUCTIONS:

A- REMOVE THE WALL FLANGE OR DOOR FRAME ① SHOWN FROM THE BOX ②.

B- SELECT RECESSED MOUNTING LOCATION AND BLOCK OUT AND/OR PROVIDE ADEQUATE WALL BACKING OR FRAMING BY OTHERS.

C- USING MOUNTING TABS ③, POSITION AND SECURE THE BOX TO THE STUD FRAMING OR WALL BACKING WITH THE BOX OPENING FLUSH WITH THE FINISHED WALL. PLUMB AND LEVEL AS REQUIRED.

D- MAKE UP SUPPLY CONNECTIONS (HOT AND COLD) TO VALVE INLET ④ 3/4" NPTI AND TEST FIXTURE FOR LEAKS AND OPERATION.

E- INSTALL WALL FLANGE OR DOOR FRAME ① TO THE RECESSED BOX ② TO COMPLETE THE INSTALLATION.

NOTE: THE BOX CAN BE MOUNTED SO THE SUPPLY CONNECTION IS ORIENTATED TO ACCEPT THE INCOMING SUPPLY LINE.

NOTE: MAXIMUM RECOMMENDED WORKING WATER PRESSURE IS 100 PSI; MAXIMUM TEMPERATURE IS 130° F.

WARNING: PRIOR TO MAKING INSTALLATION, SUPPLY LINES MUST BE FLUSHED OF ALL FOREIGN MATERIAL SUCH AS PIPE DOPE, CHIPS, SOLDER, ETC. VALVE MUST BE DRAINED PRIOR TO BEING SUBJECTED TO FREEZING TEMPERATURES.

PLEASE READ THE FOLLOWING INSTRUCTIONS CAREFULLY

WARNING **READ CAREFULLY THE PRODUCT INSTALLATION, OPERATING AND MAINTENANCE MANUAL. FAILURE TO FOLLOW THE INSTRUCTIONS AND WARNINGS IN THE MANUAL MAY RESULT IN SERIOUS OR FATAL INJURY AND/OR PROPERTY DAMAGE, AND WILL VOID THE PRODUCT WARRANTY. THIS PRODUCT MUST BE INSTALLED BY A QUALIFIED PROFESSIONAL. FOLLOW ALL APPLICABLE LOCAL AND STATE CODES AND REGULATIONS, IN THE ABSENCE OF SUCH CODES, FOLLOW THE CURRENT EDITIONS OF THE NATIONAL PLUMBING CODE AND NATIONAL ELECTRIC CODE, AS APPLICABLE.**

WARNING This product must be installed by a qualified professional.

WARNING **EXPLOSION HAZARD.** Failure to follow the instructions in the accompanying product manual can cause a rupture or explosion; possibly causing serious or fatal injury, leaking or flooding and/or property damage.

WARNING Use only with potable water system. Do not operate in a setting with freezing temperatures or where the temperature can exceed 200°F and do not exceed the maximum working pressure specified for this Product in the Manual. Mount vertically only.

WARNING This Product, like most Products under pressure, may over time corrode. weaken and burst or explode, causing serious or fatal injury, leaking or flooding and/or property damage. To minimize risk, a licensed professional must install and periodically inspect and service the Product. A drip pan connected to an adequate drain must be installed if leaking or flooding could cause property damage. Do not locate in an area where leakage of the tank or connections could cause property damage to the area adjacent to the appliance or to lower floors of the structure.

WARNING **Chlorine & Aggressive Water:** The water quality can significantly influence the life of this Product. You should test for corrosive elements, acidity, total solids and other relevant contaminants, including chlorine and treat your water appropriately to insure satisfactory performance and prevent premature failure.

WARNING **CALIFORNIA PROPOSITION 65 WARNING:** This product contains a chemical known by the State of California to cause cancer and to cause birth defects or other reproductive harm. (California Installer/Contractor - California law requires that this notice be given to consumer/end user of this product.) For more information: www.amtrol.com/prop65/htm.

THIS IS THE SAFETY ALERT SYMBOL. IT IS USED TO ALERT YOU TO POTENTIAL PERSONAL INJURY AND OTHER HAZARDS. OBEY ALL SAFETY MESSAGES THAT FOLLOW THIS SYMBOL TO REDUCE THE RISK OF PERSONAL INJURY AS WELL AS PROPERTY DAMAGE.

WARNING **EXPLOSION OR RUPTURE HAZARD** A relief valve must be installed to prevent pressure in excess of local code requirement or maximum working pressure designated in the Product Manual, whichever is less. Do not expose Product to freezing temperatures or temperatures in excess of 200° F. Do not adjust the pre-charge or re-pressure this Product except for any adjustments required at the time of initial installation, especially if Product corroded, damaged or with diminished integrity. Adjustments to pre-charge must be done at ambient temperature only. Failure to properly size the Product or follow these instructions may result in excessive strain on the system and lead to Product failure, serious or fatal personal injury, leakage and/or property damage.

NOTE: Inspect for shipping damage and notify freight carrier or store where purchased immediately if damage is present. To avoid risk of personal injury and property damage, if the product appears to be malfunctioning or shows signs of corrosion, call a qualified professional immediately. Current copies of the Product manual can be viewed at www.amtrol.com. Use proper safety equipment when installing.

WARNING **FAILURE TO PROPERLY SEAL WILL RESULT IN LOSS OF PRECHARGE CAUSING PRODUCT TO FAIL.**

IMPORTANT **GENERAL SAFETY INFORMATION - ADDITIONAL SPECIFIC SAFETY ALERTS APPEAR IN THE FOLLOWING INSTRUCTIONS.**

* All ST-C Series models come with a 1 year warranty. See reverse side for warranty information. **MARK OF THE ORIGINATOR**

Part #: 9017-091 (04/11)

Pre-Installation

1. Visually inspect THERM-X-TROL® for any damage. If damage exists return product for replacement.
2. Adjust pre-charge to equal incoming pressure.

   IMPORTANT **If increasing the pre-charge pressure above 55 psig, the following steps must be followed:**

   a. Tank must be connected to the system with isolation valve open.
   b. System must be pressurized to 55-60 psi or slightly higher than the pre-charge setting of the tank.
   c. Isolation valve then needs to be closed.
   d. The pre-charge pressure of the tank can now be increased to the recommended high pressure setting.
   e. Bring system up to pressure, and then open the isolation valve to the tank.

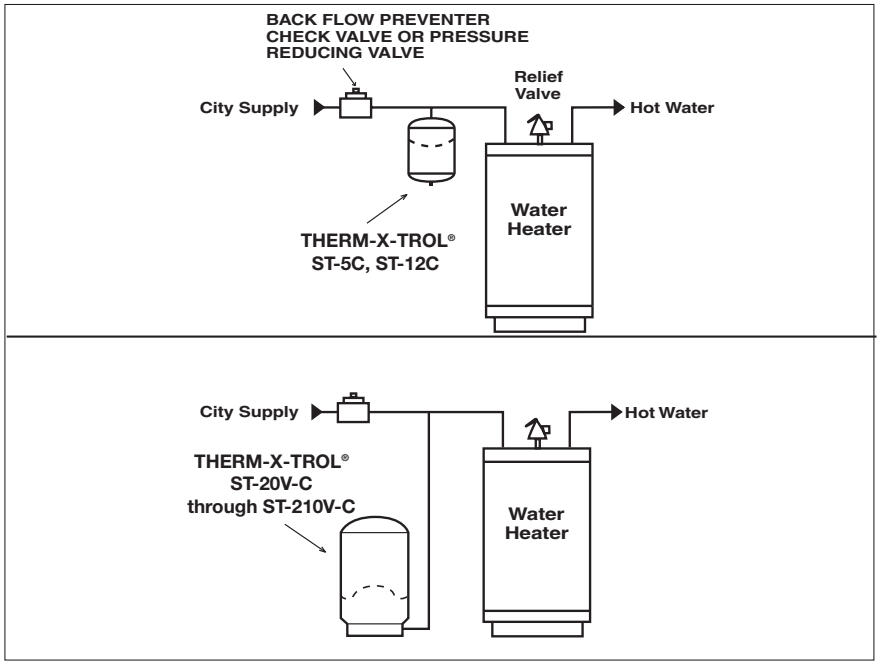
   Failure to follow these instructions could result in damage to the bladder or diaphragm and void all warranties.
3. Replace and tighten plastic cap on air fitting.

   For commercial water heater installations, contact AMTROL for information.

Installation

1. Install the THERM-X-TROL® on the city supply line to the water heater at a point between the water heater and backflow preventer, check valve or pressure reducing valve (see Figure 1).
2. Once the THERM-X-TROL® is installed, check the city supply line for any leakage. Make repairs if necessary.
3. Before the initial firing of the water heater, open any hot water fixture and draw water until all air is removed from the system. Turn the water heater temperature control to desired ending temperature level, (see water heater instructions).
4. To relieve initial thermal expansion, slightly open a hot water faucet. Continue until water heater aquastat temperature is satisfied. Once heater is at its operating range, no further bleeding of expanded water is required.
5. The system water heater and THERM-X-TROL® will now be operational. The THERM-X-TROL® will control temperature and pressure increases caused by thermal expansion to a level well below the water heater relief valve setting.

Maintenance



1. A professional plumber should check the complete heating system, including the THERM-X-TROL®, yearly and more frequently as the system ages.

Operation

1. The THERM-X-TROL® is installed in the supply line between the backflow preventer and the water heater. Its sealed-in air pre-charge prevents water from entering it until the system pressure exceeds the pre-charge pressure.
2. As the water temperature rises, expanded water enters the THERM-X-TROL®'s non-corrosive water reservoir. The pre-charged air chamber absorbs the pressure increase, keeping system pressures below the relief valve setting.
3. As hot water is used, the pressure in the air chamber forces water back into the system until the THERM-X-TROL® is empty. At this point, the pressure in the air chamber once again equals the supply pressure.
4. Water treatment is not to exceed 200° F or fall below 35° F.

NOTE: Models are listed (ST-5-C thru ST-210V-C) under ANSI/NSF Std 61 and City of Los Angeles.

Figure 1.

AMTROL INC. LIMITED PRODUCT WARRANTY

Products covered: all Products manufactured by AMTROL Inc. ("AMTROL") .

This warranty cannot be transferred – it is extended only to the original Purchaser or First User of the Product. By accepting and keeping this Product you agree to all of the warranty terms and limitations of liability described below.

IMPORTANT WARNING – READ CAREFULLY THE INSTALLATION, OPERATING AND MAINTENANCE INSTRUCTIONS MANUAL ("MANUAL") to avoid serious personal injury and/or property damage and to ensure safe use and proper care of this product

Who Receives AMTROL's Product Warranty
All purchasers or first users of the new Product. The Warranty is non-transferable.

What is covered by this Warranty
AMTROL warrants to the purchaser or first user of the new Product that at the time of manufacture, the Product is free from defects in material and workmanship. **Any warranty claim must be made within one (1) year unless another time period is set forth in the Manual, measured from the time the Product was purchased.**

What AMTROL Will Do If You Have a Covered Warranty Claim
In the event of a breach of the foregoing warranty, AMTROL will at its option either make repairs to correct any defect in material or workmanship or supply and ship either new or used replacement parts or products. AMTROL will not accept any claims for labor or other costs.

What This Warranty Does Not Cover - Exclusions and Limitations
This Warranty does not cover any failure or problem unless it was caused by a defect in material or workmanship. In addition, this Warranty shall not apply:

- if the Product is not correctly installed, operated, repaired or maintained as described in the Manual provided with the Product;
- to any failure or malfunction resulting from abuse (including freezing); improper or negligent: handling, shipping (by anyone other than AMTROL), storage, use, operation, accident; or alteration, lightning, flood or any other environmental condition;
- to any failure or problem resulting from the use of the Product for any purpose other than those specified in the accompanying Manual or alteration of any part of the product;
- this Warranty does not cover labor costs, shipping charges, service charges, delivery expenses, administrative fees or any costs incurred in removing or reinstalling the Product;
- this Warranty does not cover any claims submitted to AMTROL or an AMTROL-authorized distributor or retailer more than 30 days after expiration of the applicable warranty time period described in this Warranty;
- this Warranty also does not cover repair or replacement costs not authorized in advance by AMTROL.

Additional Warranty Limitations
ALL IMPLIED WARRANTIES, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE SPECIFICALLY DISCLAIMED.

Limitations of Remedies
THE REMEDIES CONTAINED IN THIS WARRANTY ARE THE PURCHASER'S OR FIRST USER'S EXCLUSIVE REMEDIES. IN NO CIRCUMSTANCES WILL AMTROL BE LIABLE FOR MORE THAN, AND PURCHASER-FIRST USER'S REMEDIES SHALL NOT EXCEED, THE PRICE PAID FOR THE PRODUCT. IN NO CASE SHALL AMTROL BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, WHETHER RESULTING FROM NON-DELIVERY OR FROM THE USE, MISUSE, OR INABILITY TO USE THE PRODUCT OR FROM DEFECTS IN THE PRODUCT OR FROM AMTROL'S OWN NEGLIGENCE OR OTHER TORT. This exclusion applies regardless of whether such damages are sought for breach of warranty, breach of contract, negligence, strict liability, in tort or under any other legal theory. Such damages include, but are not limited to, inconvenience, loss or damage to property, mold, loss of profits, loss of savings or revenue, loss of use of the Products or any associated equipment, facilities, buildings or services, downtime, and the claims of third parties including customers.

What To Do If You Have a Problem Covered By This Warranty
Any covered Warranty service must be authorized by AMTROL. Contact the person from whom you purchased the Product, who must receive authorization from an AMTROL distributor or AMTROL. If you do not receive a prompt response, call AMTROL directly at 877-517-9673. Notice of a Warranty claim should be submitted by the authorized distributor to AMTROL at the following address:

AMTROL Inc., Warranty Claim Dept.
1400 Division Road, West Warwick, RI 02893

Before AMTROL determines to provide any replacement part or Product, it may as a pre-condition to making such a determination require that the warranty claimant ship the Product, postage prepaid to an authorized AMTROL distributor, or to AMTROL and provide proof of purchase evidenced by the original sales receipt or Product registration.

Replacement Product Warranty
In case of replacement of a Product or any component part, AMTROL reserves the right to make changes in the design, construction, or material of the substitute components or products, which shall be subject to all of the terms and limitations of this Warranty, except that the applicable warranty periods shall be reduced by the amount of time the warranty claimant owned the product prior to submitting notification of the warranty claim.

Revised 01/11

HWP-1 HOT WATER CIRCULATING PUMP

B103418LF	B&G	LF 1/25HP BRZ NBF25 CIRC PUMP 115V

Bell & Gossett
a xylem brand

INSTRUCTION MANUAL
P58671H

RED FOX®

BRONZE FOX

c UL us LISTED

NRF/NBF/SSF Circulator

INSTALLER: PLEASE LEAVE THIS MANUAL FOR THE OWNER'S USE.

NOTE: Bell & Gossett recommends Bronze or Stainless Steel Booster Pumps be used for pumping potable water.

This pump is for indoor use only.

SAFETY INSTRUCTIONS

This safety alert symbol will be used in this manual and on the pump Safety Instruction decal to draw attention to safety related instructions. When used, the safety alert symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED! FAILURE TO FOLLOW THE INSTRUCTIONS MAY RESULT IN A SAFETY HAZARD.

Your NRF/NBF/SSF Booster Pump should have the warning/caution label and nonsubmersible warning label displayed to the right (Fig. 1) on the pump conduit box. If this warning and caution label is missing or illegible, contact your local B&G Representative for a replacement.

FIG. 1

DESCRIPTION

The Model NRF/NBF/SSF Circulator Pump features system liquid lubricated bearings, non-overloading permanent split capacitor motor with impedance protection and quiet operation.

PUMP APPLICATION

The Model NRF/NBF/SSF Booster Pump may be used for water circulating applications in hydronic and solar systems. This pump is nonsubmersible, for indoor use only. It has not been investigated for use in swimming pool and marine areas.

OPERATIONAL LIMITS

These pumps are designed to pump liquids compatible with their iron, bronze or stainless steel body constructions.

Maximum Operating Pressure: 150 PSI (10 bars)
Maximum Operating Temperature:
NRF-22 & NRF-9F/LW, 240°F (115° C)
NBF Pumps (except NBF-33), 230°F (110°C)
NRF-33 & NBF-33, 225°F (107°C)
SSF Pumps, 230°F (110°C)

Electrical Rating: 115V, 60Hz, 1Ø; 220V, 60Hz, 1Ø;
220V, 50Hz, 1Ø; 230V, 60Hz, 1Ø

If your NBF pump is equipped with a sweat connected pump body, the maximum operating pressure is limited to 150 PSI (10 bars) or a lower value determined by the type of solder used and pressure/temperature limitations listed below:

Do not exceed these values.
(Solder type limits per ASTM STD. B16.18-1978)

PUMP BODY	TYPE OF SOLDER	MAXIMUM LIMITATIONS	
		PRESSURE PSI	TEMPERATURE °F
SWEAT	95-5 TIN-ANTIMONY	300	200
		250	225
		200	250

WARNING:
Damage to the pump or failure of solder sealing joints may occur if these operational limits are exceeded. This can result in water leakage. Failure to follow this instruction could cause serious personal injury and/or property damage.

SAFETY REQUIREMENTS

MECHANICAL SAFETY

WARNING: EXCESSIVE SYSTEM PRESSURE HAZARD
The maximum working pressure of the pump is listed on the nameplate – DO NOT EXCEED THIS PRESSURE. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING: EXCESSIVE PRESSURE HAZARD VOLUMETRIC EXPANSION
The heating of water and other fluids causes volumetric expansion. The associated forces may cause failure of system components and the release of high temperature fluids. This can be prevented by installing properly sized and located compression tanks and pressure relief valves. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

THERMAL SAFETY

WARNING: EXTREME TEMPERATURE HAZARD
If the pump, motor or piping are operating at extremely high or low temperature, guarding or insulation is required. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

ELECTRICAL SAFETY

WARNING: ELECTRICAL SHOCK HAZARD
Electrical connections are to be made by a qualified electrician in accordance with all applicable codes, ordinances and good practices. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING: ELECTRICAL GROUNDING HAZARD
Adequate electrical grounding is required for the safe operation of B&G Pumps. The use of grounded metal conduit assures this requirement. If the means of connection to the supply – connection box (wiring compartment) is other than grounded metal conduit, ground the pump back to the service. Use a copper conductor at least the size of the circuit connectors supplying the pump. Connect the ground wire to the green grounding screw in the wiring compartment. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING: RISK OF ELECTRIC SHOCK
Do not install this pump in swimming pool or marine areas. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING:
California Proposition 65 warning! This product contains chemicals known to the state of California to cause cancer and birth defects of other reproductive harm.

REMOVAL OF PUMP FROM EXISTING SYSTEM FOR REPLACEMENT

WARNING: ELECTRICAL SHOCK HAZARD
Disconnect and lockout the power before servicing. Failure to follow these instructions could result in serious personal injury or death.

1. Close the valves on the suction and discharge sides of the pump. (If no valves have been installed, it may be necessary to drain the system.)

WARNING: HOT WATER HAZARD
Before draining the system, allow water to cool to at least 100°F, open the drain valve (take precautions against water damage) and leave the drain valve open until servicing is complete. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING: ELECTRICAL SHOCK HAZARD
Be certain the electrical power is not present at the motor leads before continuing. Failure to follow these instructions could result in serious personal injury or death

2. Loosen the conduit box cover screw and remove the cover.
3. Disconnect the electrical supply lines to the pump.

WARNING: HIGH PRESSURE HAZARD
Pressure may be present in the pump body. This pressure can be relieved by loosening the flange bolts and shifting the pump assembly slightly to allow the pressurized water to escape. Failure to follow these instructions could result in serious personal injury or death.

4. Remove the flange nuts and bolts or loosen the union ring nuts. Then remove the pump from the piping.

PUMP INSTALLATION

CAUTION: PROPERTY DAMAGE HAZARD
It is not advisable to install circulators in an attic or upper floor over finished living space. If the circulator must be installed over head, or over expensive equipment, provide adequate drainage in the event of leakage. Failure to follow these instructions could result in property damage.

Locate the pump so there is sufficient room for inspection, maintenance and service. Bell & Gossett recommends the installation of service valves on the suction and discharge of all circulators to facilitate servicing or replacement of the circulator without draining the system.

CAUTION: The use of PTFE impregnated pipe compound and PTFE tape on pipe threads provides lubricity which can lead to overtightening and breakage. Do not overtighten. Failure to follow this instruction can result in moderate personal injury from hot water and/or property damage.

Install suction and discharge flanges or union connectors on the pipe ends. The use of PTFE tape sealer or a high quality thread sealant is recommended.

Be sure to minimize any pipe-strain on the pump. Support the suction and discharge piping by the use of pipe hangers near the pump. Line up the vertical and horizontal piping so that the bolt-holes in the pump flanges match the bolt-holes in the pipe flanges. If union connections are used, line up the pump threads with union tail pieces. DO NOT ATTEMPT TO SPRING THE SUCTION OR DISCHARGE LINES IN POSITION. THIS MAY RESULT IN UNWANTED STRESS IN THE PUMP BODY, FLANGE CONNECTIONS AND PIPING. The code for Pressure Piping (ANSI B31.1) lists many types of supports available for various applications.

Bell & Gossett flange/union gaskets must be installed between the NRF/NBF/SSF pump body flanges and the suction and discharge pipe flanges/union tail pieces. Use $^{7}/_{16}$" diameter x $1^{1}/_{2}$" long cap screw and matching nut to connect the pump to the flanges.

WARNING: HOT WATER HAZARD
When disassembling a gasketed joint, always use a new gasket upon reassembly. NEVER RE-USE OLD GASKETS. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING: HOT WATER HAZARD
Make sure that each flange gasket remains seated in the flange groove during and after installation. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

Apply torque in even increments to both flange bolts until a value of 115 in-lbs. is reached. Both the suction and discharge flange bolts must be torqued in this manner.

If your NBF pump is equipped with a sweat connected pump body, see the following instructions:

1. Use a torch with a sharp pointed flame.
2. Clean tube ends and pump connections thoroughly.
3. Use 95-5 (Tin-Antimony); and a good grade of flux.

CAUTION:
Heat associated with the use of silver solder may damage a pump voiding the warranty. Do not use silver solder. Failure to follow these instructions could result in property damage and/or moderate personal injury.

CAUTION:
Excessive use of solder in a vertical installation may result in damage to the pump impeller. Do not use excessive flux. Failure to follow these instructions could result in property damage and/or moderate personal injury.

4. When sweating the joints, first wrap the pump body with a cool wet rag, then direct the flame with care to avoid subjecting the pump to excessive heat.
5. Check soldered connections for leaks. If resoldering is required, take care to avoid subjecting the pump to excessive heat.

WARNING: WATER LEAKAGE HAZARD
To prevent leakage, make certain that the flange bolts or ring nuts have been adequately tightened and that the solder connections do not leak. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

MODE OF DISCHARGE

The Model NRF/NBF/SSF Circulator can be installed to discharge up or down, horizontally, left or right, but the motor shaft must remain in the horizontal position, the arrow on the body must point in the direction of the flow, the conduit box must be positioned on the top or to the side of the motor housing (see figure 2). If the conduit box position must be changed, it is best to do so before installation. However, if the pump is already installed, see the section titled "REMOVAL OF PUMP FROM EXISTING SYSTEM FOR REPLACEMENT" before proceeding.

CAUTION:
Make sure the power is turned off before placing anything inside the discharge opening to move the impeller.

TO CHANGE THE CONDUIT POSITION

1. Remove the four (4) $^{1}/_{4}$-20 Allen screws ($^{3}/_{16}$ wrench) while supporting the motor assembly.
2. Remove the motor assembly from the pump body and rotate it to the desired position (see figure 2).
3. Replace the Allen screws and tighten evenly in a diagonal method to 60 in-lbs.
4. Check to see that the impeller turns freely. Insert your finger in the discharge port of the pump body (the arrow on the pump body points in the direction of the discharge) until you can feel the impeller and rotate it with your fingertip. If the impeller does not turn easily, repeat the disassembly/reassembly process.

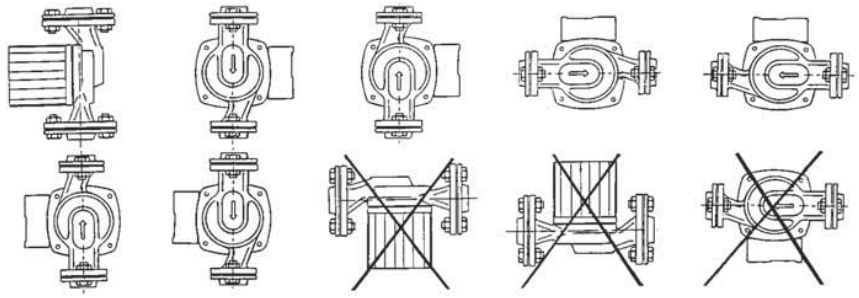

FIG. 2

WARNING: ELECTRICAL SHOCK HAZARD
Disconnect and lock out the power befor e making electrical connections. Failur e to follow these instructions could result in serious personal injury or death.

WARNING: ELECTRICAL SHOCK HAZARD
Be certain that all connections ar e secure and the conduit box cover is closed befor e electrical power is connected. Failure to follow these instructions could r esult in serious personal injury, death and/or property damage.

WIRING INSTRUCTIONS

A. Loosen the scr ew securing the conduit box cover (wiring compartment), and remove the screw & cover.

B. Attach the appropriate size connector to the hole in the side of the conduit box.

C. Using a minimum size of 14 AWG copper electrical wire (refer to your local code for wiring restrictions), wire the motor to a single phase power sour ce that matches the electrical rating on the pump nameplate. See Fig. 3. Use the size of electrical wire as dictated by local code.

D. Connect the gr ound wire to the inside of the conduit box with one of the gr een screws provided inside the box. See Fig. 4.

NOTE: Electrical supply and gr ounding wires must be suitable for at least 90°C (194°F).

NOTE: Model NRF/NBF/SSF Cir culators are impedance protected and do not require external overload protection.

TYPICAL WIRING INSTALLATION SCHEMATIC
1Ø POWER SOURCE

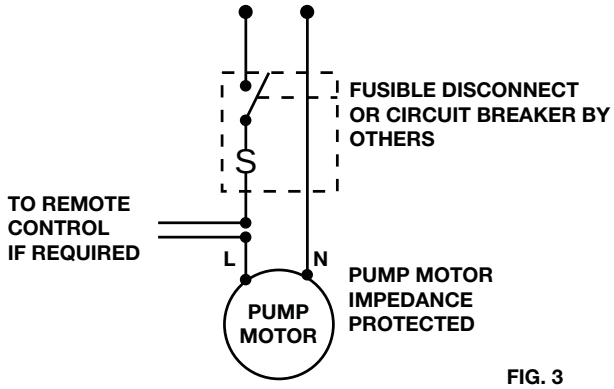

FIG. 3

CONDUIT BOX WIRING DETAIL

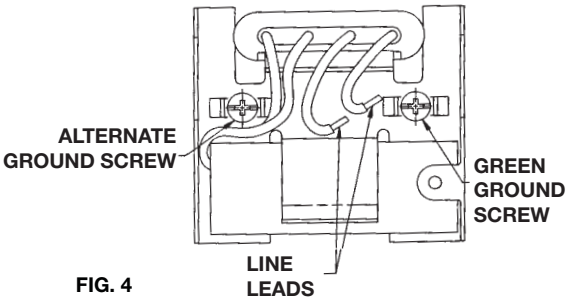

FIG. 4

SYSTEM PREPARATION

Prior to pump start-up, closed heating and cooling systems should be cleaned, drained, and refilled with clean water. The system fluid pH must be maintained between 7 and 9.

START-UP

Do not start pump until the system has been filled and vented. Air should be vented fr om the system by means of an air vent located at a high point in the system. The system must be completely vented prior to pump operation. Do not run NRF/NBF/SSF circulators dry. Pump operation without water cir culation could result in pump and motor damage.

WARNING: HOT WATER LEAKAGE HAZARD
Pressurize the body slowly while checking for leaks at all joints with gaskets or solder connections. Failur e to follow these instructions could r esult in serious personal injury and/or property damage.

PERIODIC INSPECTION

Bell & Gossett NRF/NBF/SSF Cir culators are designed to provide years of trouble free service. It is recommended that periodic inspections be made to check for potential pr oblems with the pump. If any leakage or evidence of leakage is pr esent, repair or replace the unit.

❑ Installation ❑ Testing ❑ Maintenance Instructions

INSTALLATION INSTRUCTIONS

CAUTION: Installation of Backflow Preventers must be performed by qualified, licensed personnel. The installer should be sure the proper device has been selected for the particular installation. Faulty installation could result in an improperly functioning device.

ZURN WILKINS Model 375/475 Series Assemblies are for use on potable water lines where a health hazard exists in the event of a backflow situation.

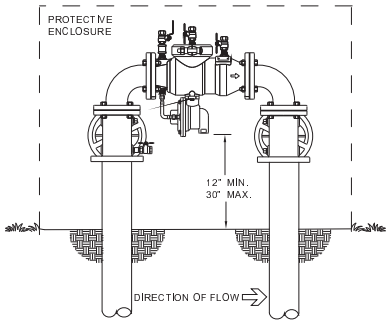
Damage to the device could result wherever water hammer and/or water thermal expansion could create excessive line pressure. Where this could occur, shock arrestors, check valves and/or pressure relief valves should be installed downstream of the device.

If installation is in a pit or vault, the Backflow Preventer must never be submerged in water because this could cause a cross-connection. Make sure that the pit or vault always remains dry by providing ample drainage. (Consult local codes.)

1. Before installing a Model 375/475 Series Backflow Preventer, flush the line thoroughly to remove all debris, chips and other foreign matter. If required, a strainer should be placed upstream of the Backflow Preventer. **CAUTION**: Do not use a strainer in seldom used emergency waterlines such as fire lines.
2. Provide adequate space around the installed unit so that the test cocks will be accessible for testing and servicing.
3. Install valve at least 12 inches above surrounding flood level.
4. The Model 375 series has been tested and approved in the horizontal position. Contact factory before installing in other orientations.
5. Always consult local codes for installation methods, approvals and guidance.

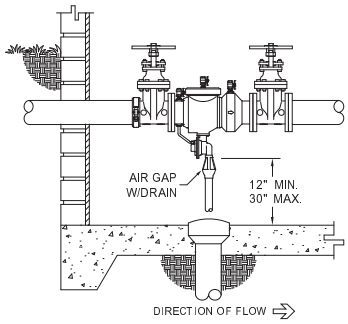
OUTDOOR INSTALLATION

The Model 375/475 Series Backflow Preventer may be installed outdoors only if the device is protected against freezing conditions. Exposure to freezing conditions will result in improper function or damage to the device. The installation location must be kept above 32°F. All the basic installation instructions apply.



INDOOR INSTALLATION

Indoor installation is preferred in areas that are subject to freezing conditions. All the basic installation instructions apply to such installations. **CAUTION: An adequately sized drain is required to prevent possible water damage due to relief valve discharge.**



PLACING THE DEVICE IN SERVICE

1. Start with both shut-off valves closed. Slowly open the inlet shut-off valve until the backflow preventer is completely pressurized. A brief discharge from the relief valve may occur while the device is pressurizing. The discharge should cease by the time the shut-off valve is fully open. If the discharge does not stop, refer to "MAINTENANCE INSTRUCTIONS" for repair procedures.
2. After the device has been pressurized, vent all trapped air by slightly opening each of the four test cocks.
3. Slowly open the downstream shut-off valve. The Model 375/475 Series Backflow Preventer is now in service.
4. If spitting or intermittent discharges from the relief valve are noted, it could be a result of pressure fluctuation and/or a water hammer condition in the system. If such conditions exist, install water pressure reducing valves or water hammer shock arrestors in compliance with industry standards as needed.
5. After the Model 375/475 Series has been properly installed, test the device (see "TEST PROCEDURES"). If the device fails the test, remove the first and second check valves and thoroughly flush the device. If the relief valve fails to operate properly, inspect the sensing passage for clogging (see "MAINTENANCE INSTRUCTIONS"). Clean rubber seals of all debris and place unit back in service.

Testing Procedures

MODEL 375/475 SERIES ASSEMBLY

Equipment Required: Differential pressure gauge test kit.

TEST NO. 1 - RELIEF VALVE OPENING POINT

REQUIREMENT:

The differential pressure relief valve must operate to maintain the zone between the two check valves at least 2 psi less than the supply pressure.

PROCEDURE:

1. Flush water through test cocks #1, #2 (open #2 slowly), #3 and #4 by opening and closing each test cock one at a time, to eliminate foreign material.
2. Install appropriate fittings to test cocks. Attach hose from the high side of the differential pressure gauge to the #2 test cock then attach hose from the low side of the gauge to the #3 test cock. Open test cock #3 slowly and then bleed all air from the hose and gauge by opening the low side bleed needle valve.
3. Maintain the low side bleed needle valve in the open position while test cock #2 is opened slowly. Open the high side bleed needle valve to bleed all air from the hose and gauge. Close the high side bleed needle valve, then close the low side bleed needle valve after the gauge reading has reached the upper end of the scale.
4. Close the #2 shut-off valve. If the gauge reading drops to the low end of the gauge scale and the differential pressure relief valve discharges continuously, then the #1 check valve is leaking. If this occurs, Tests #1, #2 and #3 cannot be completed (See USC Maintenance Guide). However, should the gauge reading remain above the differential pressure relief valve opening point, then observe the gauge reading. This is the apparent pressure drop across the #1 check valve.
5. Open the high side control needle valve approximately one turn, and then open the low side control needle valve no more than 1/4 turn to by-pass water from the #2 test cock to the #3 test cock. Observe the differential pressure reading as it slowly drops to the relief valve opening point. Record this opening point value when the first discharge of water is detected. Close the low side needle valve.

TEST NO. 2 - TIGHTNESS OF #2 CHECK VALVE

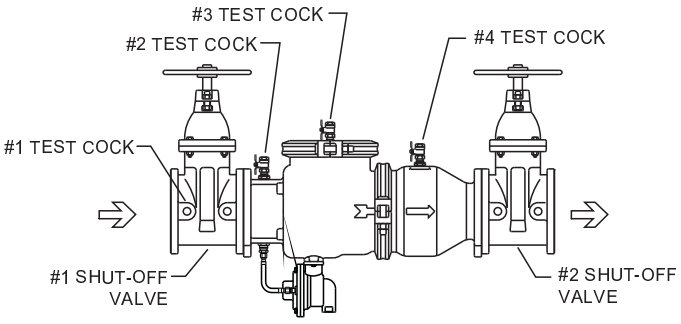
REQUIREMENT:

The #2 check valve shall be tight against backpressure.

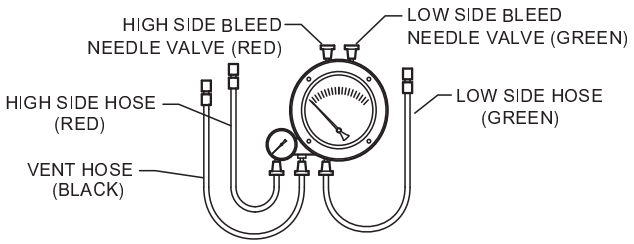
PROCEDURE:

1. Maintain the #2 shut-off valve in the closed position (from Test #1). Vent all air through the vent hose by opening the vent needle valve. Close the vent needle valve only (The high side control needle valve is to remain open).
2. Attach the vent hose from the gauge to the #4 test cock, then open the #4 test cock. Bleed water from the zone by opening the low side bleed needle valve on the gauge in order to re-establish the normal reduced pressure within the zone. Once the gauge reading reaches a value above the #1 check valve pressure drop, close the low side bleed needle valve.
3. Open the vent needle valve. If the indicated differential pressure reading remains steady then the #2 check valve is reported as "closed tight." Go to Test #3. If the differential pressure reading falls to the relief valve opening point, bleed water through the low side bleed needle valve until the gauge reading reaches a value above the #1 check valve pressure drop. If the gauge reading settles above the relief valve opening point, record the #2 check valve as "closed tight," and proceed to Test #3. If the differential pressure reading falls to the relief valve opening point again, then the #2 check valve is noted as "leaking," and Test #3 cannot be completed. If the differential pressure reading drops, but stabilizes above the relief valve opening point, the #2 check valve can still be reported as "closed tight."

   Note: Due to disc compression, you may need to bleed off water through low side bleed needle valve several times before the gauge reading will settle above relief valve opening point.



TEST NO.3 - TIGHTNESS OF #1 CHECK VALVE



REQUIREMENT:

The static pressure drop across #1 check valve shall be greater than the relief valve opening point (test #1), and at least 5.0 psid.

PROCEDURE:

1. With the vent hose connected to test cock #4 as in step 3 of Test #2, bleed water from the zone through the low side bleed needle valve on the gauge until the reading exceeds the #1 check valve pressure drop. Close the low side bleed needle valve. After the gauge reading settles, the steady state differential pressure reading indicated (reading is not falling on the gauge) is the actual static (i.e., no flow) pressure drop across check valve #1 and is to be recorded as such.
2. Close all test cocks, slowly open shutoff valve #2 and remove equipment.

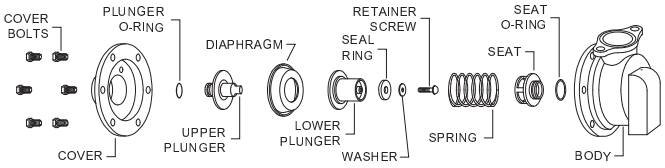
Maintenance Instructions

All Model 375/475 Series Backflow Preventers must be inspected and maintained by licensed personnel at least once a year or more frequently as specified by local codes. Replacement of worn or damaged parts must only be made with genuine "ZURN WILKINS" parts.

GENERAL MAINTENANCE



1. Clean all parts thoroughly with water after disassembly.
2. Carefully inspect rubber seal rings and o-rings for damage.
3. Test unit after reassembly for proper operation (refer to "TESTING PROCEDURES").

SERVICING RELIEF VALVE

1. Remove relief valve cover bolts and cover. Gently pull on diaphragm to remove the cartridge assembly.
2. Inspect seal ring for cuts and embedded debris. Turn over or replace if required.
3. Disassemble cartridge by unscrewing relief valve retaining screw.
4. Inspect diaphragm and o-rings for damage. Replace required parts and apply a light coat of lubricant to plunger o-ring.
5. Carefully reassemble cartridge assembly. Tighten retainer screw to 13 -17 in/lbs.
6. Inspect relief valve seat for wear on seating surface. If damaged, replace seat and seat o-ring. Install spring over seat guides.
7. Insert cartridge assembly into relief valve body.
8. Replace relief valve cover and cover bolts.
9. Place the device in service and test per "TESTING PROCEDURES" on page 2.

NOTE: Disassembly of the seat assembly is not recommended. If the seat assembly needs repair, please contact factory.

RELIEF VALVE ASSEMBLY

SERVICING CHECK VALVES

1. Close the outlet and then the inlet shut-off valves.
2. Open No. 2, 3 and 4 test cocks to release internal pressure. Leave them open during check removal and reinstallation.
3. Loosen and remove the two nuts, bolts and seal from the grooved coupling around the access cover.
4. If the valve has a wire retainer on the #1 check assembly, pinch together the exposed ends, pull toward the #2 check and remove from valve.
5. If the valve has a plastic retainer on the #1 check, grasp one of the exposed ends, push down and then pull toward the #2 check. The retainer should "spiral" out of the groove around the check.
6. (2-1/2 – 3" 375/375DA Models) Remove the #2 retainer and check in the same manner as the #1.
7. (4 – 6" 375A/375ADA Models) Remove the #2 check by locating one of the two spring-loaded plate retainers around the face of the check. Pinch the sides of the spring together and rotate the plates out of the body groove one at a time. Remove the 2nd retainer the same way.
8. **Always service the checks one at a time to avoid mixing parts**. Start by removing the hardware and o-rings from the back of the check assembly (See "Check Assembly" illustration). Separate the seal retainer from the assembly to expose the seal ring.
9. Inspect the seal ring for cuts or embedded debris. If the reverse side of the seal is unused, the seal ring can be inverted and used temporarily until a new seal is obtained. Inspect seat o-ring and replace if cut or damaged in any way.
10. Inspect valve cavity and seating areas. Flush with water to remove any debris.
11. (Reassembly, 2-1/2 – 3" 375/375DAModels) Lubricate the #2 check o-ring, install in the body and close the #4 test cock to hold it in place. Install the plastic retainer by inserting one end into the body groove and then sliding your hand around the face of the retainer, pushing it into the groove as you go. The retainer will "snap" into place when fully seated. Install #1 check and retainer in the same way.
12. (Reassembly, 4 – 6" 375A/375ADA Models) Lubricate the #2 check o-ring, install in the body and close the #4 test cock. Install the #2 check retainers into the body groove one plate at a time, squeezing the spring ends together to clear the stops on the face of the seat. Lubricate and install the #1 check, close the #2 test cock and install:
    (A) wire retainer by pinching the ends together, placing the lower edge of the ring into the body groove below the check and rotating the top of the ring into the notch above the check.
    (B) plastic retainer as described above in the 2-1/2 – 3" 375/375DA Models Reassembly section.
13. Lubricate the outside surface of the grooved coupling gasket. Reassemble access cover and grooved coupling, making sure the ends of the coupling touch each other. Close any remaining open test cocks and place valve back in service.

Troubleshooting

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
1. SUDDEN OR RAPID SPITTING	1. Drop in inlet pressure.	1. Install an in-line spring loaded check valve or pressure reducing valve upstream of Backflow Preventer.
	2. Sudden increase in downstream pressure due to waterhammer from quick closing shut-off valve installed downstream.	2. Install an in-line spring loaded check valve or pressure reducing valve downstream of Backflow Preventer.
2. LIGHT INTERMITTENT DRIP	1. Slightly fouled #1 check.	1. Clean #1 check and/or turn check valve seal ring over or replace.
	2. Slightly fouled relief valve seat.	2. Clean relief valve seat and/or turn relief valve seal ring over or replace.
3. CONTINUOS DISCHARGE	1. Fouled #1 check and/or #2 check.	1. Clean check valves and/or turn check valve seal ring over or replace.
	2. Fouled relief valve seat.	2. Clean relief valve seat and/or turn relief valve seal ring over or replace.

Proper performance is dependent upon licensed, qualified personnel performing regular, periodic testing according to ZURN WILKINS' specifications and prevailing governmental & industry standards and codes and upon following these installation instructions. Failure to do so releases ZURN WILKINS of any liability that it might otherwise have with respect to that device. Such failure could also result in an improperly functioning device.

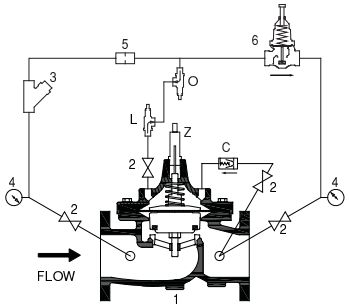
❑ Installation ❑ Troubleshooting ❑ Maintenance Instructions

Installation / Start-up



NOTE: Flushing of all pipe lines is to be performed to remove all debris prior to installing valve.

NOTE: If installation is subject to very low flow or potentially static conditions it is recommended a pressure relief valve (1/2" minimum) be installed downstream of the pressure reducing valve for additional system protection.

1. For making adjustments and servicing allow for adequate space around the valve before installing valve.
2. When installing a ZW209 or ZW209BP, gate valves installed on both inlet and outlet are recommended for maintenance allowing for isolation of valve.
3. Position the valve in line matching the direction of flow as indicated on the valve model tag with the proper direction of flow in the system. Once attached to line, double check all fasteners/ bolts in the pilot system and on main valve are tight and there is no damage prior to pressurizing system.

NOTE: Pressure in some applications can be very high so be thorough in checking and inspecting for proper installation and makeup.

4. Zurn Wilkins valves are designed to operate in both the vertical and horizontal positions. However, it is recommended that ZW209 6" and larger, be installation in the horizontal position. The horizontal positioning of the larger valves avoids premature wear due to the mass of plunger assemblies as well as allows for greater accessibility during annual inspections, and maintenance.

ZW209 SCHEMATIC

STANDARD COMPONENTS
1 Main Valve
2 850MXL Isolation Valve
3 SXL Wye Type Strainer
4 Pressure Gauge
5 Restriction Tube Fitting
6 NR3XLHRSC PRV (15-150 psi)

OPTIONAL FEATURES
C 40XL Hydraulic Check w/ Isolation Valve
L SC1 Closing Speed Control
O SC1 Opening Speed Control
Z ZPI Valve Position Indicator
6 PV-PRD (20-200 psi)

START-UP

CAUTION: To prevent personnel injury and damage to equipment check that downstream venting is adequate prior to start-up and test procedures. **All adjustments under pressure should be made slowly while under flowing conditions.** If the main valve closes too fast it may cause surging in upstream piping.

1. Open isolation valves (2) in the pilot system (see ZW209 or ZW209BP schematic).
2. Then slowly open the upstream shutoff valve only enough to fill main valve assembly and pilot system. Prior to pressurizing the valve assembly it is also recommended that a ZPI valve position indicator be installed to aid in verifying proper valve movement.
3. As the valve is filling with water, it is necessary to bleed the main valve and pilot system of air. To vent air, partially open or loosen the highest plugs or fittings in the system. The ZPI valve position indicator is a great location, as it has a test cock at the top to vent air pressure. It may be necessary to bleed system more than once. After removal of air in the system tighten all loose fittings.
4. Before setting valve, if valve is equipped with SC1 Flow controls (O or L on ZW209 schematic) it is necessary to back out the set screw a minimum of 3 turns from initial set point.
5. At this point with the upstream shutoff valve partially open, slowly open the downstream shut off valve. Flow will begin to occur and pressure should build up in valve and eventually stabilize.
6. Next it is advisable to flow water through the valve to ensure all air has been escaped from system. With water flowing through the valve the Zurn Wilkins PRV pilot can be set to the desired pressure. To adjust the pilot, loosen jam nut on adjustment screw and either turn adjustment screw in (to increase pressure) or out (to decrease pressure). Tighten jam nut on pilot when the desired setting has been made. For ZW209BP the low flow by-pass control must be set 5 psi greater than main Pilot PRV.
7. To verify proper operation of ZW209 & ZW209BP close and open downstream shut off valve several times to ensure downstream pressure is stable at set pressure. To verify by-pass operation, close isolation valves on main pilot slowly. Then check the downstream pressure. It should be regulating 5 psi higher than normal Pilot PRV.
8. After pilot system has been adjusted and the valve is properly regulating the main valve opening and closing speed controls (O or L) can be adjusted as needed.
9. When setting speed controls, turning the adjustment screw into the speed control will restrict the amount of flow through the needle valve. Depending on whether the control is for opening or closing (refer to ZW209 schematic) the control will either slow the opening or closing of the main valve when the adjustment screw is turned into the speed control. Adjust as needed and tighten jam nut. In general a closing speed control on a ZW209 and ZW209BP should be at least 3 turns in from the furthest open position to prevent high pressure surges downstream.

Troubleshooting

The following troubleshooting information in Tables 1 & 2 deals strictly with the ZW209 and ZW209BP valve and pilot systems. It is recommended to verify that the pilot system is properly functioning before troubleshooting the main valve. All troubleshooting can be performed without removing the cover. It is also recommended to permanently install a model ZPI valve position indicator and an additional gauge in one of the cover connections.

Troubleshooting

PILOT SYSTEM FUNCTION CHECK

1. To verify if the Pilot PRV is properly regulating pressure, first slowly close the outlet ball valves in the pilot systems. Then allow the cover to fill and the main valve to close. If installed, verify the valve position indicator (model ZPI) is closed.
2. When the main valve is closed, close the cover ball valve to keep the main valve closed.
3. Proceed with venting outlet downstream pressure by opening a source downstream. When opening the downstream source if there is continuous flow, the main valve is not sealing properly. It is recommended that the main valve be disassembled and inspected (Refer to “Disassembly” section).
4. When downstream pressure is relieved, proceed with slowly closing the inlet isolation valve. It may be necessary to reopen the outlet ball valve to relieve pressure on the downstream gauge.
5. With the main valve closed and the system pressure relieved slowly re-open the inlet isolation valve and re-pressurize the pilot system leaving outlet isolation valve open and downstream source open to allow flow. Monitor the inlet and outlet pressures and compare to the desired system settings. If the outlet pressure is the same as the inlet or climbs more than 10 psi above the flowing set point, the Pilot PRV is not properly regulating (refer to the pilot troubleshooting Table 1. Corrective Action section).
6. If the pressure is regulating to the desired system pressures proceed with diagnosis checks for the main valve.

TABLE 1. PILOT SYSTEM TROUBLESHOOTING

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
1. Pilot Valve (Pilot PRV) not opening)	1. No spring compression	1. Tighten adjusting screw
	2. Damaged spring	2. Disassemble and replace
	3. Clogged "Wye" Strainer	3. (see plugged “Wye” strainer remedy)
	4. Closed ball valve	4. Open ball valve
2. "Wye" Strainer plugged	1. Clogged with debris or mineral deposits	1. Disassemble and remove obstruction
3. Fails to Regulate	1. Air in main valve cover and/or tubing	1. Loosen top cover plug and fitting and bleed air out of the system
	2. Mechanical obstruction	2. Disassemble and remove obstruction, replace parts as necessary
	3. Worn disc (regulating>10 psi of flow set point)	3. Disassemble and replace disc
4. Pressure gauge fails to operate	1. Damage pressure gauge	1. Replace pressure gauge
	2. Closed ball valve	2. Open ball valve

TABLE 2. MAIN VALVE TROUBLESHOOTING

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
1. Main Valve fails to open	1. No pressure at valve Inlet	1. Check Inlet pressure
	2. Main valve diaphragm assembly inoperative	2. Disassemble, clean, and polish stem, replace defective parts
	3. Pilot Valve (Pilot PRV) not opening	
	1) No spring compression	1. Tighten adjusting screw.
	2) Damaged spring	2. Disassemble and replace
2. Main Valve fails to close	1. Foreign matter between disc and seat or worn disc	1. Disassemble the main valve, remove debris, clean parts, and replaced defective parts
	2. Scale on stem or diaphragm ruptured	2. Clean parts, and replace defective parts
	3. "Wye" Strainer plugged	3. Remove, clean, and/or replace
	4. 38-850XL(ball valves) closed	4. Open ball valves
	5. Pilot Valve (Pilot PRV) remains open:	
	1. Spring compressed solid	1. Back off adjusting screw
	2. Mechanical obstruction	2. Disassemble and remove obstruction
	3. Worn seal ring	3. Replace seal ring
3. Fails to Regulate	1. Air in main valve cover and/or tubing	1. Loosen top cover plug and fitting and bleed air out of the system

When performing troubleshooting and diagnosis checks it is recommended that the following steps be performed in sequential order for best results.

DIAGNOSIS CHECKS

CAUTION: Do not service valve while under pressure. When performing diagnosis checks on the ZW209 & ZW209BP when the valve is fully open, high flow rates and high downstream pressures can occur. In order to prevent harm to personnel, equipment, and downstream piping be sure that there are no blocked valves in the system before performing checks.

DIAPHRAGM CHECK

1. Slowly close upstream shut off valve and relieve all pressure downstream.
2. With all pressure relieved in the main valve, close both inlet and outlet isolation valves and remove side plug on cover and leave off.
3. Then open upstream shut off valve partially, allowing water to flow through the valve. While flowing water monitor the opening on the cover. If fluid begins to flow out of the open hole in the cover, then there is most likely damage to the diaphragm or fluid is leaking past the diaphragm assembly due to loose assembly. It is recommended that the valve cover be removed to investigate the leakage (To remove cover see “Maintenance” section for procedures). If no water flows out of cover then the diaphragm is good and you may proceed to the diaphragm movement check.

DIAPHRAGM MOVEMENT CHECK

1. The diaphragm movement check can be determined during the diaphragm check or it can It can also be performed with the use of a valve position indicator model ZPI.
2. Replace cover plug and open pilot ball valves on inlet and cover.
3. Closing the outlet isolation ball valves will direct the flow to the cover causing it to close. **NOTE: Slow or delayed closing of main valve is normal and is due to the time requirements to fill, pressurize cover, and stretch the diaphragm into the closed position. This normal delay is not mechanical binding of the valve assembly.**
4. Using the valve position indicator, make note of the closed position on the indicator. Compare distance of the open mark to the close mark and compare to Table 3.
5. Verify that the main valve is closed, by opening a downstream source (not the outlet isolation ball valve on the main body). If water continuously flows, then the main valve is not sealing properly. Double check the valve movement matches the values in Table 3 and refer to the disassembly procedures section if it does not. This is an indication that the main valve is not sealing due to an obstruction between the seat and the seal or a damaged seal. If water does stop flowing and the measured valve movement does not match Table 3, then there is possible damage under the cover. Remove cover to identify obstruction and replace parts as necessary

TABLE 3. VALVE STEM TRAVEL

VALVE SIZE (in)	VALVE SIZE (mm)	STEM TRAVEL (in)	STEM TRAVEL (mm)
1-1/4" - 1-1/2"	38	0.4	10.2
2"	50	0.7	18.0
2-1/2"	65	0.8	21.3
3"	80	0.9	23.4
4"	100	1.1	28.8
6"	150	1.7	43.4
8"	200	2.4	59.7
10"	250	2.8	71.1

6. For smaller valves (6” and below) diaphragm checks can be performed by hand with the use of a valve stem tool. The valve stem tool can be made using Table 4 to create a “T” bar handle with the appropriate threads on the opposite end of the “T” handle.

TABLE 4. VALVE STEM THREAD SIZE

VALVE SIZE (in)	THREAD SIZE UNF INTERNAL
1-1/4" - 1-1/2"	10-32
2"	10 - 32
2-1/2"	10 - 32
3"	1/4 - 20
4"	1/4 - 20
6"	1/4 - 20
8"	3/8 -16
10"	3/8-16

7. To perform the diaphragm check using the vale stem tool, first remove all pressure in the system and vent the cover. Then remove the center plug on the cover and insert tool into the top of the stem threads. Once the tool is inserted, the valve can be lifted up and the valve movement can be measured by creating marks on the tool in the opened and closed positions. The distance between marks is the valve stem travel. Replace or repair any parts as necessary.

SEAL CHECK

1. To check the seal of the valve disc, an additional pressure gauge will be needed downstream of main valve.
2. With the valve flowing, slowly, close pilot outlet ball valves to apply pressure to cover and allow to close.
3. Open downstream source and monitor the pressure on the inlet and installed outlet gauge, for one min. The pressure on the outlet side should remain zero. If the pressure matches inlet pressure or increases, the main valve is leaking or the outlet ball valve on the pilot system is allowing pressure to creep by. Either way it is recommended that the valve be disassembled and inspected (refer to “Disassembly” section).

Maintenance Instructions

PREVENTATIVE MAINTENANCE

The Zurn Wilkins ZW200 models require minimal maintenance. However, it is highly recommended to schedule annual inspections and to have a repair kit on hand before work begins.

DISASSEMBLY

Warning: Because of the ability to perform inspections and maintenance without removal from the system, it is very important that all shut off valves be closed and all pressure relieved in the valve before beginning disassembly. Failure to do so can result in personnel injury or equipment damage.

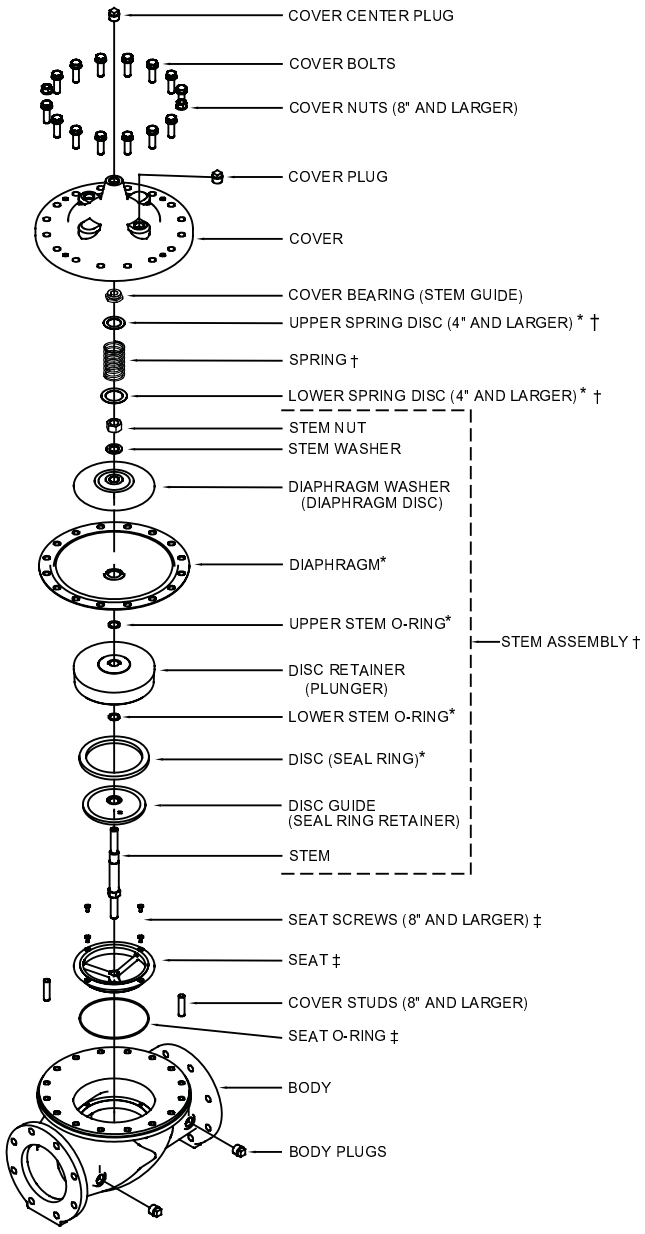
1. Verify that all pressure sources are closed up and downstream of valve.
2. Remove pressure in pilot system by loosening the tube fittings to the valve body and cover. When all pressure has been vented, continue to disassemble the pilot control valve and cover tubing. NOTE: Taking a picture before tear down can help with re-assembly of pilot system.
3. Next remove the cover by loosening and removing the cover bolts. If the cover does not come off easily it may be necessary to loosen the cover using a brass chisel and rubber mallet. Apply the chisel under the cover pointing upward away from valve body and tap bottom of cover with the chisel and mallet to loosen the cover. Once the cover is loose, pull cover straight up to avoid damaging the stem and stem bearing in the cover. On larger valves 8” and up, eye bolts and a hoist are recommended due to the weight of these larger covers.
4. With the cover removed the diaphragm assembly can be removed. To avoid damaging the seat bushing, grab the stem and lift straight up. For larger valves 8” and up it is recommended that an eye bolt with the proper stem threads be used with a hoist to lift the assembly out of the valve (see Table 4 for appropriate stem threads).
5. Next it is recommended that the diaphragm assembly be placed in a vise with the bottom hex nut secured. Once secured remove the spring and stem nut. While removing the nut inspect the stem threads. Clean stem with a wire brush if mineral deposits or corrosion are present.
6. After inspecting the stem and removing the nut the diaphragm assembly can be dismantled. If the valve has not been serviced in awhile it is possible that the assembly will require the use of a rubber mallet or pry bars to dismantle the assembly. If this is the case gently tap or pry the components until the components are free to move. When disassembling be sure to clean, inspect, and save all components. Replace any damaged components as necessary.
7. The last component to inspect is the seat which is in the body of the main valve. During inspection of the seat, clean and polish as necessary with fine grit wet/dry sandpaper (400 grit or higher). Typically, if after cleaning there is no visual damage or excessive wear the seat should not require removal. If damage is present or the seat is excessively worn the seat should be replaced.

8. To remove the seat, on valves 6” and smaller the seat is threaded into the body and will require a seat removal tool. Care should be taken when removing the seat to avoid damaging. On 8” and larger valves, the seat is held in place with flat head hex screws. For larger valves a seat puller may be required to remove the seat from the body.

INSPECTION OF COMPONENTS

Cleaning of components is required for proper inspection. Lime deposits are common in systems that use water. To remove deposits, fine grit wet/dry sandpaper (400 grit or higher) can be used. If deposits cannot be removed, off the shelf lime deposit remover can be used. Prepare a solution following the lime deposit remover instructions and soak components (excluding rubber components) until lime deposits are removed.

CAUTION: When handling chemicals (acids) be sure to use proper safety equipment (gloves and eye protection) and practices. After soaking components, be sure to thoroughly rinse all components before handling and re-assembling valve.



Once all valve components have been cleaned, inspect each component looking for damage, abnormal wear & corrosion, and replace all components that look questionable. Replace all rubber components including the diaphragm, o-rings and disc each time the vale is serviced or inspected (rubber components are standard in ZW200 repair kits.

REASSEMBLY

1. First reinstall seat into body. Be sure to use lube around seat o-ring before tightening. Tighten seat according to torque values in Table 5 using seat tool.
2. Next place valve stem in a vise clamping on the hex portion of the stem. Then assemble the diaphragm assembly as shown in Figure. When assembling be sure that the diaphragm is centered on the raised step of the disc retainer. It is also recommended to apply lube to stem threads and o-rings before tightening. Then tighten the stem nut according to Table 5 for torque values.
3. Lower diaphragm assembly carefully into the seat bushing Be careful not to damage the seat or stem while installing assembly. Rotate the assembly as needed until the bolt holes on the diaphragm line up with the body bolt holes.
4. Place lower spring disc on the diaphragm disc and place spring on top of the assembly. Then install cover, aligning the bolt holes and insuring that the cover is not pinching the diaphragm between the bolt holes. Position cover so plug holes are in original position.
5. Install cover bolts and tighten in a star pattern to the torque values in Table 5.
6. Before installing center cover plug manually check that assembly has full operating travel before installing the pilot assembly (refer to “Diaphragm Movement” in the diagnosis checks section).
7. Once full operation range of the main valve is verified, begin reinstalling pilot system.
8. After installing pilot system double check that all plugs, bolts, and fittings are sealed and tight before applying pressure.
9. Slowly open upstream isolation valve to pressurize the system and check for any leaks.
10. Stop leaks as needed and proceed to “Start-Up” and “Diagnosis Check” sections for returning valve to proper system operations.

TABLE 5. VALVE TORQUE SETTINGS

FLOW CHARACTERISTICS

BODY MINIMUM FRICTION LOSS

PRESSURE REDUCTION LIMIT

*** Notes for Body Minimum Friction Loss Chart:**
Minimum inlet pressure is 10 psi higher than set point or the additional body friction loss at intended flow, whichever is higher. (friction loss may be important at flows above 20 ft/s)
Example: A 6" valve intended to flow 2000 GPM at 150 psi has a friction loss of 20 psi at 2000 GPM. The minimum inlet pressure would be 150 + 20 = 170 psi. When inlet pressure is below set point, the outlet pressure will be the pressure at the inlet minus the friction loss.

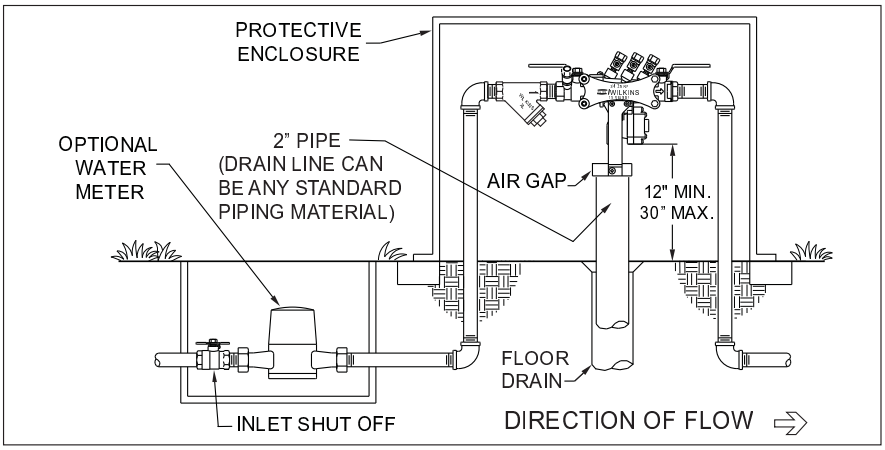
W375XLSF	WILKINS	3/4" LF RPP ASSEMBLY COMP VES FNPT STR



Model 375XL, 375XLB, 375ST LEAD-FREE*

Reduced Pressure Principle Assembly (1/2", 3/4" & 1")

*This product contains a weighted average lead content less than 0.25% for wetted surfaces.

*Certified to NSF/ANSI 61-G

375XLSF ❑ Installation ❑ Testing ❑ Maintenance Instructions

CAUTION: Installation of Backflow Preventers must be performed by qualified, licensed personnel. The installer should be sure the proper device has been selected for the particular installation. Faulty installation could result in an improperly functioning device.

ZURN WILKINS Model 375 Reduced Pressure Principle Backflow Preventers are for use on potable water lines where a health hazard could exist if a backflow situation were to occur.

Proper performance is dependent upon following these installation instructions and prevailing governmental and industry standards and codes. Failure to do so, according to ZURN WILKINS Limited Warranty "... releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

Damage to the device could result wherever water hammer and/or water thermal expansion could create excessive line pressure. Where this could occur, shock arresters and/or pressure relief valves should be installed downstream of the device.

1. Before installing a Model 375 Backflow Preventer, flush the line thoroughly to remove all debris, chips and other foreign matter. If required, a strainer should be placed upstream of the Backflow Preventer.

CAUTION: Do not use a strainer in seldom used emergency waterlines such as fire lines.

2. Provide adequate space around the installed unit so that the test cocks will be accessible for testing and servicing.

3. **WARNING: If installation of a Model 375 is in a building, a suitable drain arrangement MUST be provided to drain off spillage from the relief valve. An air gap at least two times the pipe diameter must be provided between the relief valve and the drain piping to prevent a cross-connection. Air Gap AG-11 not intended to support weight of drain pipe.**

CAUTION: Do not pipe the relief valve solidly to a floor drain, sewer or sump.

CAUTION: An adequately sized drain is required to prevent possible water damage due to relief valve discharge.

4. Install valve at least 12 inches above surrounding flood level.

5. Always consult local codes for installation methods, approvals and guidance.

OUTDOOR INSTALLATION

Model 375 Backflow Preventers may be installed outdoors only if the device is protected against freezing conditions. Exposure to freezing conditions will result in improper function or damage to the device. The installation location must be kept above 32°F. All the basic installation instructions apply.

If installation is in a pit or vault, the Backflow Preventer must never be submerged in water because this will cause a cross-connection. Make sure that the pit or vault always remains dry by providing ample drainage.

INDOOR INSTALLATION

Indoor installation is preferred in areas that are subject to freezing conditions. All the basic installation instructions apply to such installations.

PARALLEL INSTALLATION

Where uninterrupted service from a single meter connection must be maintained, two or more Backflow Preventers may be connected in parallel. All the basic installation instructions apply to parallel installation. Be sure to allow adequate room between the units for testing and repair.

PLACING THE DEVICE IN SERVICE

After the installation of a Model 375 has been completed, place the unit in service as follows:

375 REDUCED PRESSURE PRINCIPLE

1. Start with both shut-off valves closed. Slowly open the inlet shut-off valve until the backflow preventer is completely pressurized. A brief discharge from the relief valve may occur while the device is pressurizing. The discharge should cease by the time the shut-off valve is fully open. Device should function properly. If the discharge does not stop, refer to "MAINTENANCE INSTRUCTIONS" for repair procedures.

2. After the device has been pressurized, vent all trapped air from both check valves by slightly opening each of the four test cocks.

3. Slowly open the downstream shut-off valve. The Model 375 Reduced Pressure Principle Backflow Preventer is now in service.

4. If "spitting" or intermittent discharges from the relief valve are noted, it could be a result of pressure fluctuation and/or a water hammer condition in the system. If such conditions exist, install a ZURN WILKINS water pressure reducing valve, a ZURN WILKINS Model 40XL check valve, or a ZURN WILKINS Model 1250XL water hammer shock arresters in compliance with industry standards as needed.

5. After the Model 375 has been properly installed, test the device (see "TEST PROCEDURES"). If the device fails the test, remove the first and second check valves and thoroughly flush the device. If the relief valve fails to operate properly, inspect the sensing passage for clogging (see "MAINTENANCE INSTRUCTIONS"). Clean rubber seals of all debris and place unit back in service.

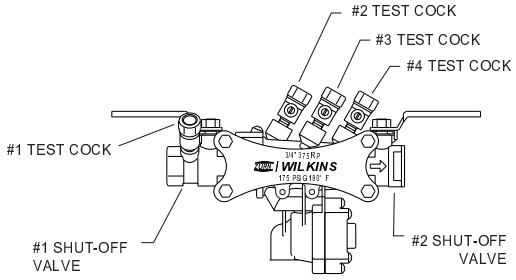
Testing Procedures

MODEL 375 REDUCED PRESSURE PRINCIPLE ASSEMBLY

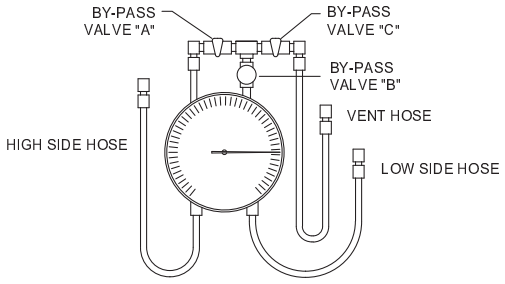
Equipment Required: Differential pressure gauge test kit.

TEST NO. 1
Purpose:
Test #2 check valve for tightness against reverse flow.
Requirement:
The valve must close tight against reverse flow under all pressure differentials.
Procedure:

1. Attach the "HIGH" hose to test cock #2 and the "LOW" hose to test cock #3.
2. Close #2 shut-off valve.
3. Open test cocks #2 and #3.
4. Open by-pass valves "C" and "A" and bleed to atmosphere until all air is expelled.
5. Close by-pass valve "A". Open by-pass valve "B" and bleed to atmosphere until all air is expelled. Close by-pass valves "B" and "C".
6. Attach the "VENT" hose to test cock #4.
7. Slowly open by-pass valves "A" and "C" and keep by-pass valve "B" closed.
8. Open test cock #4.
9. Indicated pressure differential will drop slightly. If pressure differential does not continue to decrease, the #2 check valve is considered tight.



TEST NO. 2
Purpose:
Test #1 check valve for tightness and record pressure drop across #1 check valve.
Requirement:
The static pressure drop across #1 check valve shall be greater than the relief valve opening point (test #3), and at least 5.0 psid.
Procedure:



1. Close by-pass valve "A"
2. Close test cock #4, and disconnect "VENT" hose from test cock #4.
3. Open by-pass valves "B" and "C" bleeding to atmosphere, then close by-pass valve "B" restoring the system to normal static condition.
4. Observe the pressure differential gauge and note this as the #1 check valve psid.

TEST NO. 3
Purpose:
To test operation of the differential relief valve.
Requirement:
The pressure differential relief valve must operate to maintain the "ZONE" between the two check valves at least 2 PSID less than the supply pressure.

Procedure:

1. Close by-pass valve "C" and open by-pass valve "A".
2. Open by-pass valve "B" very slowly until differential gauge needle starts to drop. Hold the valve at this position and observe the gauge reading at the moment the first discharge is noted from the relief valve. Record this as the opening differential pressure of the relief valve.

WARRANTY: ZURN WILKINS Valves are guaranteed against defects of material or workmanship when used for the services recommended. If in any recommended service, a defect develops due to material or workmanship, and the device is returned, freight prepaid, to ZURN WILKINS within 12 months from date of purchase, it will be repaired or replaced free of charge. ZURN WILKINS liability shall be limited to our agreement to repair or replace the valve only.

Maintenance Instructions

All Model 375 Reduced Pressure Principle Backflow Preventers must be inspected and maintained by licensed personnel at least once a year or more frequently as specified by local codes. Replacement of worn or damaged parts must only be made with genuine "ZURN WILKINS" parts. The ZURN WILKINS Certificate of Limited Warranty provides that failure to do so "...releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

The Model 375 Reduced Pressure Principle Assemblies should be thoroughly flushed after backflow conditions occur to prevent any type of corrosive deterioration to its components. Failure to do so could result in malfunction of the device.

GENERAL MAINTENANCE

1. Clean all parts thoroughly with water after disassembly.
2. Carefully inspect rubber seal rings, diaphragms and o-rings for damage.
3. Test unit after reassembly for proper operation (see "Testing Procedures").

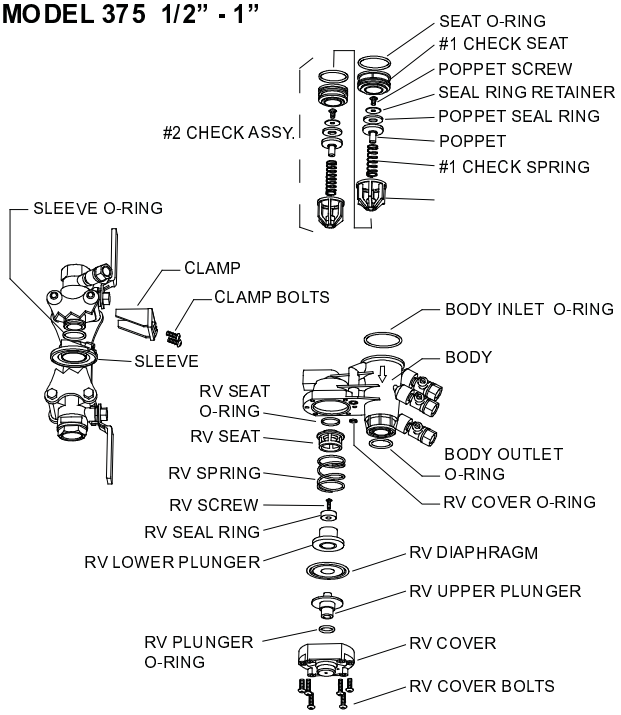
SERVICING CHECK VALVES

1. Close inlet and outlet shut-off valves.
2. Open No. 2, No. 3 and No. 4 test cocks to release pressure from valve.
3. Unscrew clamp screws, and remove clamp. (inserting screw in center hole can remove stuck clamp). Slide sleeve toward inlet pipe. Slide valve body toward inlet and lift upward.
4. Using finger or blunt object, push in outlet end of body, both checks should slide out the body inlet. (A phillips screw driver will work in a 1/2"-3/4" valve. The closed ball valve handle will work in a 1" valve).

ZURN WILKINS
1747 Commerce Way, Paso Robles, CA 93446 Phone:855-663-9876 Fax:805-238-5766
www.zurn.com

Maintenance Instructions

5. Twist spring retainers counter-clockwise to remove from seat and access poppets.
6. Inspect the rubber seal ring for cuts or embedded debris.



To remove seal ring, remove screw and seal ring retainer. If the reverse side of the seal ring is unused, it is possible to invert the seal ring. This would be considered a temporary solution to fixing a fouled check and should be replaced with a new seal ring as soon as possible.

7. Inspect seat surface for nicks or dings and replace if necessary. Use fingernail to check for dings. Re-grease seat o-rings.
8. Inspect seat o-ring sealing areas in body and wipe clean.
9. Reverse the above procedures to reinstall check valve assembly. (Drop #2 check assembly in body. Then drop #1 check assembly in and turn until #1 spring retainer lines up with #2 seat. Then push both assemblies into body.) Care should be taken to make sure the heavy spring is installed in the No. 1 check valve. **Do not overtighten** clamp screws as this can cause leak at the sleeve o-ring.

SERVICING RELIEF VALVE

1. Remove relief valve cover screws and cover. Gently pull on diaphragm to remove the cartridge assembly.
2. Inspect seal ring for cuts and embedded debris. Turn over or replace if required.
3. Disassemble cartridge by unscrewing relief valve retaining screw.
4. Inspect diaphragm and o-ring for damage. Replace required parts and apply a light coat of grease to plunger o-ring, and place on plunger.
5. Carefully reassemble cartridge assembly.
6. Inspect relief valve seat for wear on seating surface. If damaged, replace seat and seat o-ring. (Twist seat and o-ring while inserting to keep it from popping out.
7. Insert cartridge assembly into relief valve cover.
8. Check cover o-ring in groove on body. Clean or replace as necessary.
9. Replace relief valve cover and cover screws.
10. Place device in service and test per "TESTING PROCEDURES".

MODEL 375 1/2" - 1"

Troubleshooting

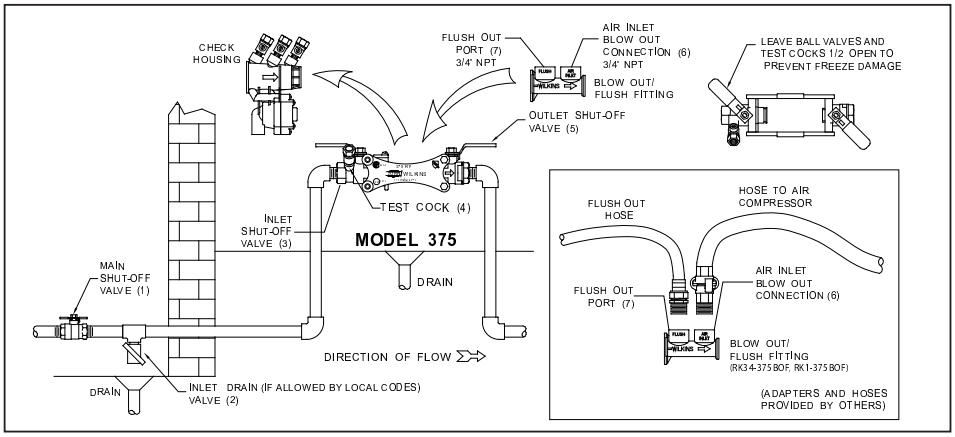
When the relief valve discharges intermittently it can be almost always assumed that the device is functioning correctly and that the discharge is caused by systems problem such as inlet pressure fluctuations or water hammer due to quick closing valves.

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
1. **SUDDEN OR RAPID SPITTING**	1. Drop in inlet pressure. 2. Sudden increase in downstream pressure due to water hammer from quick closing shut-off valve installed downstream.	A. Install an in-line spring loaded check valve upstream of backflow. (ZURN WILKINS Model 40XL2) B. Install pressure reducing valve upstream of backflow unit. (ZURN WILKINS Model NR3XL) C. Install in-line spring loaded check valve downstream of backflow as close to source as possible, but not closer than 4 feet. (ZURN WILKINS Model 40XL2)
2. LIGHT INTERMITTENT DRIP	1. Slightly fouled #1 check	A. Clean #1 check and turn check valve seal ring over or replace.

Continuous discharge of the relief valve signifies a failure of some part of the device. To help determine the specific area of failure, close the #2 shut-off valve. If the discharge stops, the #2 check requires service. If the discharge continues, the #1 check requires service.

1. CONTINUOUS DISCHARGE	1. Fouled #1 check. 2. Fouled relief valve seat. 3. Fouled #2 check.	A. Clean check valves and turn check valve seal rings over or replace. B. Clean relief valve seat and turn relief valve seal ring over or replace.

In summation, the amount of discharge is proportional to degree of fouling. Most problems occur in the #1 check which is where debris enters the backflow preventer first.



Proper performance is dependent upon licensed, qualified personnel performing regular, periodic testing according to ZURN WILKINS' specifications and prevailing governmental & industry standards and codes and upon following these installation instructions. Failure to do so releases ZURN WILKINS of any liability that it might otherwise have with respect to that device. Such failure could also result in an improperly functioning device.

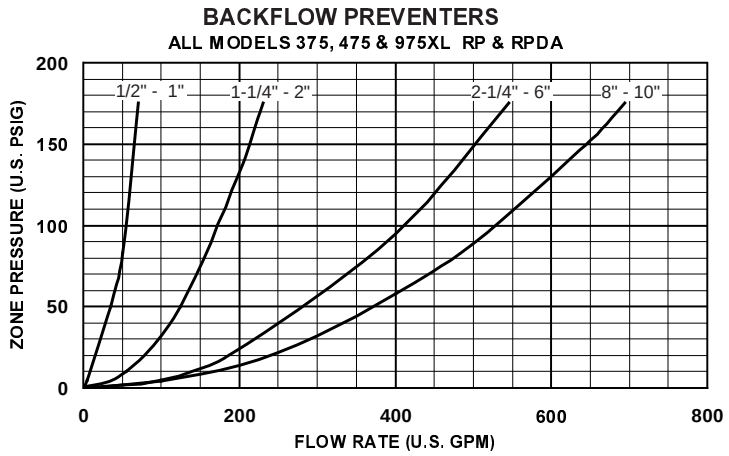
Blow Out / Flush Procedure for Freeze Protection

To Blow Out System for freeze protection, use the following procedure:

1. Turn off main shut-off valve (1) that supplies water to the system.
2. Open inlet drain valve in the system (2). Open inlet and outlet shut-off valves on the backflow preventer (3 & 5) and all of the test cocks (4). Leave all valves and test cocks in the half open/half closed (45°) position to allow full drainage of the ball valves and test cocks.
3. Remove black backflow preventer housing. Replace with orange Blow Out / Flush fitting. Store backflow preventer housing in a safe location for winter. Orange Blow Out / Flush fitting may remain in valve body during winter. Place plugs in ports to keep debris from entering housing.
4. A hose and adapter can be connected to flush out port (7) to drain water to a safe drain.
5. Connect an air hose and adapter to the air inlet connection (6). Inject an adequate volume of air to remove all water from the downstream portion of the system. Do not allow the fitting to overheat.
6. Leave drain valve (2), shut-off valves (3 & 5) and test cocks (4) in the half open/half closed position (45°) for the duration of the winter to prevent freezing.
7. Store valve housing/check assemblies, clamp/sleeve and o-rings in sealed plastic bag during winter to prevent weathering.

To Flush System during installation, use the following procedures:



1. Install backflow device in pipe system, leave water off.
2. Remove the black backflow preventer housing from the bronze body.
3. Install the orange Blow Out / Flush fitting into the bronze body.
4. Thread a garden hose adapter into Flush-Out port (7). Connect a hose to the adapter and run to a safe drain. Shut-off valves (3) and (4) should be open.
5. Turn on water supply at main shut-off valve (1) to flush out any debris in the pipe. Turn water off.
6. Remove orange Blow-Out / Flush fitting and replace black check housing back into the line. Close shut-off valves (3) and (4). Turn water on at main shut-off (1).
7. Slowly open shut-off valve (3) to pressurize backflow preventer. Once fully open, pressurize system by slowly opening shut-off valve (4).

CAUTION: For freeze protection be certain that main shut-off valve (1) remains tightly closed to prevent refilling of the system. Also, the main shut-off valve must be resilient seated to insure no leakage of water into the system.

❑ Installation ❑ Testing ❑ Maintenance Instructions

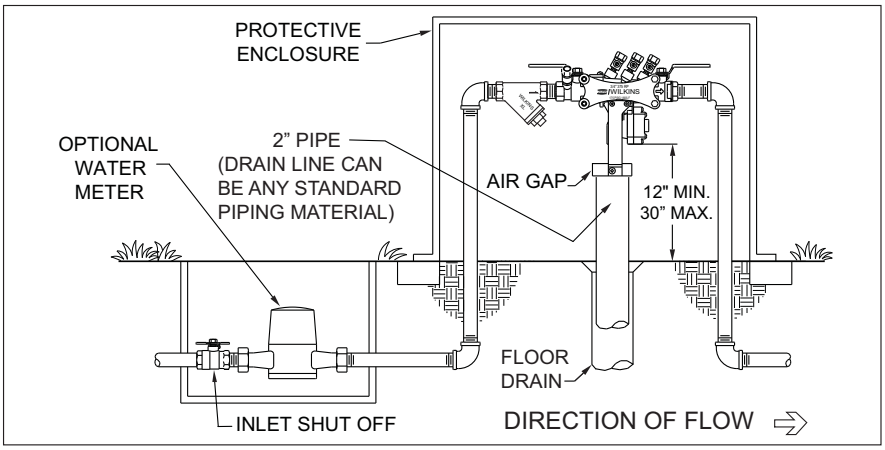
CAUTION: Installation of Backflow Preventers must be performed by qualified, licensed personnel. The installer should be sure the proper device has been selected for the particular installation. Faulty installation could result in an improperly functioning device.

ZURN WILKINS Model 375 Reduced Pressure Principle Backflow Preventers are for use on potable water lines where a health hazard could exist if a backflow situation were to occur.

Proper performance is dependent upon following these installation instructions and prevailing governmental and industry standards and codes. Failure to do so, according to ZURN WILKINS Limited Warranty "... releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

Damage to the device could result wherever water hammer and/or water thermal expansion could create excessive line pressure. Where this could occur, shock arresters and/or pressure relief valves should be installed downstream of the device.

1. Before installing a Model 375 Backflow Preventer, flush the line thoroughly to remove all debris, chips and other foreign matter. If required, a strainer should be placed upstream of the Backflow Preventer.



CAUTION: Do not use a strainer in seldom used emergency waterlines such as fire lines.

2. Provide adequate space around the installed unit so that the test cocks will be accessible for testing and servicing.

3. **WARNING: If installation of a Model 375 is in a building, a suitable drain arrangement MUST be provided to drain off spillage from the relief valve. An air gap at least two times the pipe diameter must be provided between the relief valve and the drain piping to prevent a cross-connection. Air Gap AG-11 not intended to support weight of drain pipe.**

CAUTION: Do not pipe the relief valve solidly to a floor drain, sewer or sump.

CAUTION: An adequately sized drain is required to prevent possible water damage due to relief valve discharge.

4. Install valve at least 12 inches above surrounding flood level.

5. Always consult local codes for installation methods, approvals and guidance.

OUTDOOR INSTALLATION

Model 375 Backflow Preventers may be installed outdoors only if the device is protected against freezing conditions. Exposure to freezing conditions will result in improper function or damage to the device. The installation location must be kept above 32°F. All the basic installation instructions apply.

If installation is in a pit or vault, the Backflow Preventer must never be submerged in water because this will cause a cross-connection. Make sure that the pit or vault always remains dry by providing ample drainage.

INDOOR INSTALLATION

Indoor installation is preferred in areas that are subject to freezing conditions. All the basic installation instructions apply to such installations.

PARALLEL INSTALLATION

Where uninterrupted service from a single meter connection must be maintained, two or more Backflow Preventers may be connected in parallel. All the basic installation instructions apply to parallel installation. Be sure to allow adequate room between the units for testing and repair.

PLACING THE DEVICE IN SERVICE

After the installation of a Model 375 has been completed, place the unit in service as follows:

375 REDUCED PRESSURE PRINCIPLE

1. Start with both shut-off valves closed. Slowly open the inlet shut-off valve until the backflow preventer is completely pressurized. A brief discharge from the relief valve may occur while the device is pressurizing. The discharge should cease by the time the shut-off valve is fully open. Device should function properly. If the discharge does not stop, refer to "MAINTENANCE INSTRUCTIONS" for repair procedures.

2. After the device has been pressurized, vent all trapped air from both check valves by slightly opening each of the four test cocks.

3. Slowly open the downstream shut-off valve. The Model 375 Reduced Pressure Principle Backflow Preventer is now in service.

4. If "spitting" or intermittent discharges from the relief valve are noted, it could be a result of pressure fluctuation and/or a water hammer condition in the system. If such conditions exist, install a ZURN WILKINS water pressure reducing valve, a ZURN WILKINS Model 40XL check valve, or a ZURN WILKINS Model 1250XL water hammer shock arresters in compliance with industry standards as needed.

5. After the Model 375 has been properly installed, test the device (see "TEST PROCEDURES"). If the device fails the test, remove the first and second check valves and thoroughly flush the device. If the relief valve fails to operate properly, inspect the sensing passage for clogging (see "MAINTENANCE INSTRUCTIONS"). Clean rubber seals of all debris and place unit back in service.

Testing Procedures

MODEL 375 REDUCED PRESSURE PRINCIPLE ASSEMBLY

Equipment Required: Differential pressure gauge test kit.

TEST NO. 1

Purpose:

Test #2 check valve for tightness against reverse flow.

Requirement:

The valve must close tight against reverse flow under all pressure differentials.

Procedure:

1. Attach the "HIGH" hose to test cock #2 and the "LOW" hose to test cock #3.
2. Close #2 shut-off valve.
3. Open test cocks #2 and #3.
4. Open by-pass valves "C" and "A" and bleed to atmosphere until all air is expelled.
5. Close by-pass valve "A". Open by-pass valve "B" and bleed to atmosphere until all air is expelled. Close by-pass valves "B" and "C".
6. Attach the "VENT" hose to test cock #4.
7. Slowly open by-pass valves "A" and "C" and keep by-pass valve "B" closed.
8. Open test cock #4.
9. Indicated pressure differential will drop slightly. If pressure differential does not continue to decrease, the #2 check valve is considered tight.

TEST NO. 2

Purpose:

Test #1 check valve for tightness and record pressure drop across #1 check valve.

Requirement:

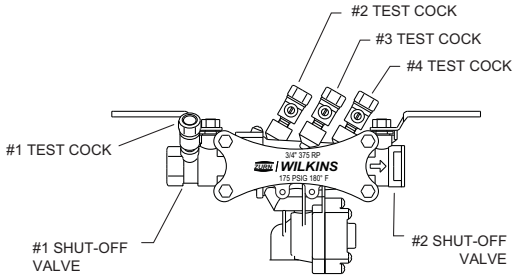
The static pressure drop across #1 check valve shall be greater than the relief valve opening point (test #3), and at least 5.0 psid.

Procedure:

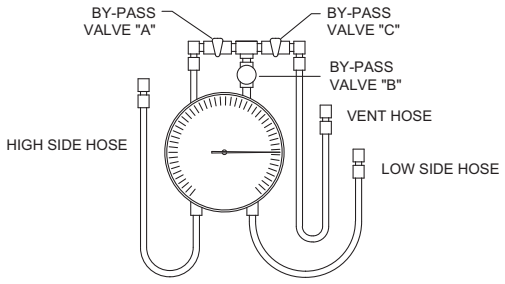
1. Close by-pass valve "A"
2. Close test cock #4, and disconnect "VENT" hose from test cock #4.
3. Open by-pass valves "B" and "C" bleeding to atmosphere, then close by-pass valve "B" restoring the system to normal static condition.
4. Observe the pressure differential gauge and note this as the #1 check valve psid.

TEST NO. 3

Purpose:



To test operation of the differential relief valve.



Requirement:

The pressure differential relief valve must operate to maintain the "ZONE" between the two check valves at least 2 PSID less than the supply pressure.

Procedure:

1. Close by-pass valve "C" and open by-pass valve "A".
2. Open by-pass valve "B" very slowly until differential gauge needle starts to drop. Hold the valve at this position and observe the gauge reading at the moment the first discharge is noted from the relief valve. Record this as the opening differential pressure of the relief valve.

WARRANTY: ZURN WILKINS Valves are guaranteed against defects of material or workmanship when used for the services recommended. If in any recommended service, a defect develops due to material or workmanship, and the device is returned, freight prepaid, to ZURN WILKINS within 12 months from date of purchase, it will be repaired or replaced free of charge. ZURN WILKINS liability shall be limited to our agreement to repair or replace the valve only.

Maintenance Instructions

All Model 375 Reduced Pressure Principle Backflow Preventers must be inspected and maintained by licensed personnel at least once a year or more frequently as specified by local codes. Replacement of worn or damaged parts must only be made with genuine "ZURN WILKINS" parts. The ZURN WILKINS Certificate of Limited Warranty provides that failure to do so "...releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

The Model 375 Reduced Pressure Principle Assemblies should be thoroughly flushed after backflow conditions occur to prevent any type of corrosive deterioration to its components. Failure to do so could result in malfunction of the device.

GENERAL MAINTENANCE

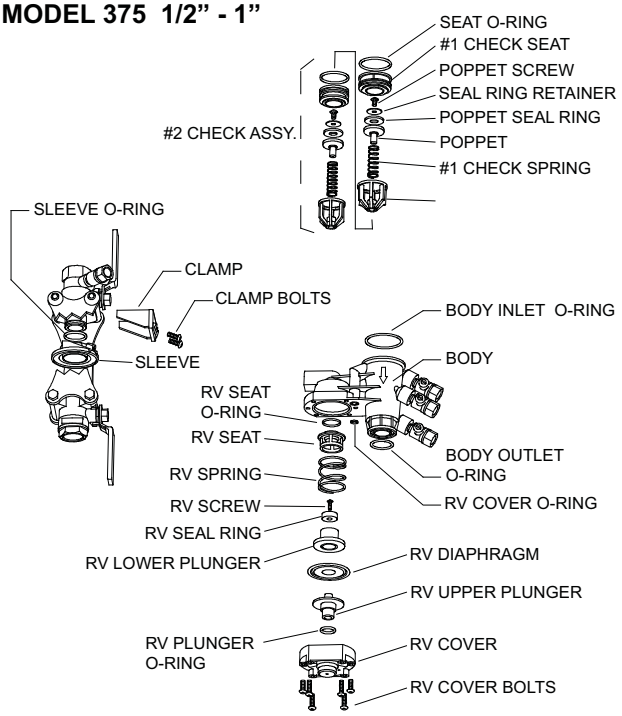
1. Clean all parts thoroughly with water after disassembly.
2. Carefully inspect rubber seal rings, diaphragms and o-rings for damage.
3. Test unit after reassembly for proper operation (see "Testing Procedures").

SERVICING CHECK VALVES

1. Close inlet and outlet shut-off valves.
2. Open No. 2, No. 3 and No. 4 test cocks to release pressure from valve.
3. Unscrew clamp screws, and remove clamp. (inserting screw in center hole can remove stuck clamp). Slide sleeve toward inlet pipe. Slide valve body toward inlet and lift upward.
4. Using finger or blunt object, push in outlet end of body, both checks should slide out the body inlet. (A phillips screw driver will work in a 1/2"-3/4" valve. The closed ball valve handle will work in a 1" valve).

Maintenance Instructions

5. Twist spring retainers counter-clockwise to remove from seat and access poppets.
6. Inspect the rubber seal ring for cuts or embedded debris.



To remove seal ring, remove screw and seal ring retainer. If the reverse side of the seal ring is unused, it is possible to invert the seal ring. This would be considered a temporary solution to fixing a fouled check and should be replaced with a new seal ring as soon as possible.

7. Inspect seat surface for nicks or dings and replace if necessary. Use fingernail to check for dings. Re-grease seat o-rings.
8. Inspect seat o-ring sealing areas in body and wipe clean.
9. Reverse the above procedures to reinstall check valve assembly. (Drop #2 check assembly in body. Then drop #1 check assembly in and turn until #1 spring retainer lines up with #2 seat. Then push both assemblies into body.) Care should be taken to make sure the heavy spring is installed in the No. 1 check valve. **Do not overtighten** clamp screws as this can cause leak at the sleeve o-ring.

SERVICING RELIEF VALVE

1. Remove relief valve cover screws and cover. Gently pull on diaphragm to remove the cartridge assembly.
2. Inspect seal ring for cuts and embedded debris. Turn over or replace if required.
3. Disassemble cartridge by unscrewing relief valve retaining screw.
4. Inspect diaphragm and o-ring for damage. Replace required parts and apply a light coat of grease to plunger o-ring, and place on plunger.
5. Carefully reassemble cartridge assembly.
6. Inspect relief valve seat for wear on seating surface. If damaged, replace seat and seat o-ring. (Twist seat and o-ring while inserting to keep it from popping out.
7. Insert cartridge assembly into relief valve cover.
8. Check cover o-ring in groove on body. Clean or replace as necessary.
9. Replace relief valve cover and cover screws.
10. Place device in service and test per "TESTING PROCEDURES".

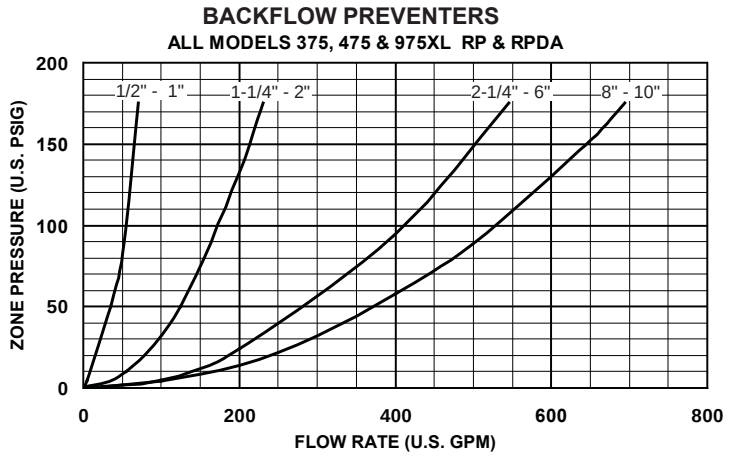
Blow Out / Flush Procedure for Freeze Protection

To Blow Out System for freeze protection, use the following procedure:

1. Turn off main shut-off valve (1) that supplies water to the system.
2. Open inlet drain valve in the system (2). Open inlet and outlet shut-off valves on the backflow preventer (3 & 5) and all of the test cocks (4). Leave all valves and test cocks in the half open/half closed (45°) position to allow full drainage of the ball valves and test cocks.
3. Remove black backflow preventer housing. Replace with orange Blow Out / Flush fitting. Store backflow preventer housing in a safe location for winter. Orange Blow Out / Flush fitting may remain in valve body during winter. Place plugs in ports to keep debris from entering housing.
4. A hose and adapter can be connected to flush out port (7) to drain water to a safe drain.
5. Connect an air hose and adapter to the air inlet connection (6). Inject an adequate volume of air to remove all water from the downstream portion of the system. Do not allow the fitting to overheat.
6. Leave drain valve (2), shut-off valves (3 & 5) and test cocks (4) in the half open/half closed position (45°) for the duration of the winter to prevent freezing.
7. Store valve housing/check assemblies, clamp/sleeve and o-rings in sealed plastic bag during winter to prevent weathering.

To Flush System during installation, use the following procedures:



1. Install backflow device in pipe system, leave water off.
2. Remove the black backflow preventer housing from the bronze body.
3. Install the orange Blow Out / Flush fitting into the bronze body.
4. Thread a garden hose adapter into Flush-Out port (7). Connect a hose to the adapter and run to a safe drain. Shut-off valves (3) and (4) should be open.
5. Turn on water supply at main shut-off valve (1) to flush out any debris in the pipe. Turn water off.
6. Remove orange Blow-Out / Flush fitting and replace black check housing back into the line. Close shut-off valves (3) and (4). Turn water on at main shut-off (1).
7. Slowly open shut-off valve (3) to pressurize backflow preventer. Once fully open, pressurize system by slowly opening shut-off valve (4).

CAUTION: For freeze protection be certain that main shut-off valve (1) remains tightly closed to prevent refilling of the system. Also, the main shut-off valve must be resilient seated to insure no leakage of water into the system.

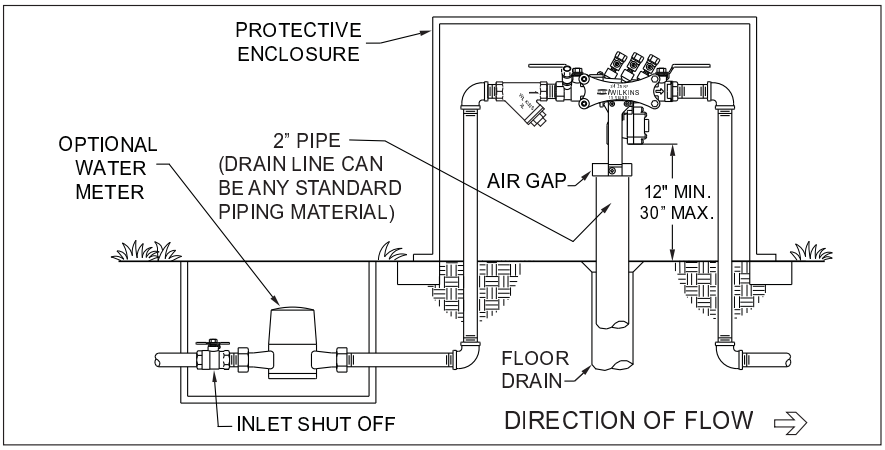
W375XLSH WILKINS 1-1/4" LF RPP ASSEMBLY COMP VES FNPT STR

Model 375XL, 375XLB, 375ST LEAD-FREE*



Reduced Pressure Principle Assembly (1/2", 3/4" & 1")

*This product contains a weighted average lead content less than 0.25% for wetted surfaces.

*Certified to NSF/ANSI 61-G

375XLSH

❑ Installation ❑ Testing ❑ Maintenance Instructions

CAUTION: Installation of Backflow Preventers must be performed by qualified, licensed personnel. The installer should be sure the proper device has been selected for the particular installation. Faulty installation could result in an improperly functioning device.

ZURN WILKINS Model 375 Reduced Pressure Principle Backflow Preventers are for use on potable water lines where a health hazard could exist if a backflow situation were to occur.

Proper performance is dependent upon following these installation instructions and prevailing governmental and industry standards and codes. Failure to do so, according to ZURN WILKINS Limited Warranty "... releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

Damage to the device could result wherever water hammer and/or water thermal expansion could create excessive line pressure. Where this could occur, shock arresters and/or pressure relief valves should be installed downstream of the device.

1. Before installing a Model 375 Backflow Preventer, flush the line thoroughly to remove all debris, chips and other foreign matter. If required, a strainer should be placed upstream of the Backflow Preventer.

CAUTION: Do not use a strainer in seldom used emergency waterlines such as fire lines.

2. Provide adequate space around the installed unit so that the test cocks will be accessible for testing and servicing.

3. **WARNING: If installation of a Model 375 is in a building, a suitable drain arrangement MUST be provided to drain off spillage from the relief valve. An air gap at least two times the pipe diameter must be provided between the relief valve and the drain piping to prevent a cross-connection. Air Gap AG-11 not intended to support weight of drain pipe.**

CAUTION: Do not pipe the relief valve solidly to a floor drain, sewer or sump.

CAUTION: An adequately sized drain is required to prevent possible water damage due to relief valve discharge.

4. Install valve at least 12 inches above surrounding flood level.

5. Always consult local codes for installation methods, approvals and guidance.

OUTDOOR INSTALLATION

Model 375 Backflow Preventers may be installed outdoors only if the device is protected against freezing conditions. Exposure to freezing conditions will result in improper function or damage to the device. The installation location must be kept above 32°F. All the basic installation instructions apply.

If installation is in a pit or vault, the Backflow Preventer must never be submerged in water because this will cause a cross-connection. Make sure that the pit or vault always remains dry by providing ample drainage.

INDOOR INSTALLATION

Indoor installation is preferred in areas that are subject to freezing conditions. All the basic installation instructions apply to such installations.

PARALLEL INSTALLATION

Where uninterrupted service from a single meter connection must be maintained, two or more Backflow Preventers may be connected in parallel. All the basic installation instructions apply to parallel installation. Be sure to allow adequate room between the units for testing and repair.

PLACING THE DEVICE IN SERVICE

After the installation of a Model 375 has been completed, place the unit in service as follows:

375 REDUCED PRESSURE PRINCIPLE

1. Start with both shut-off valves closed. Slowly open the inlet shut-off valve until the backflow preventer is completely pressurized. A brief discharge from the relief valve may occur while the device is pressurizing. The discharge should cease by the time the shut-off valve is fully open. Device should function properly. If the discharge does not stop, refer to "MAINTENANCE INSTRUCTIONS" for repair procedures.

2. After the device has been pressurized, vent all trapped air from both check valves by slightly opening each of the four test cocks.

3. Slowly open the downstream shut-off valve. The Model 375 Reduced Pressure Principle Backflow Preventer is now in service.

4. If "spitting" or intermittent discharges from the relief valve are noted, it could be a result of pressure fluctuation and/or a water hammer condition in the system. If such conditions exist, install a ZURN WILKINS water pressure reducing valve, a ZURN WILKINS Model 40XL check valve, or a ZURN WILKINS Model 1250XL water hammer shock arresters in compliance with industry standards as needed.

5. After the Model 375 has been properly installed, test the device (see "TEST PROCEDURES"). If the device fails the test, remove the first and second check valves and thoroughly flush the device. If the relief valve fails to operate properly, inspect the sensing passage for clogging (see "MAINTENANCE INSTRUCTIONS"). Clean rubber seals of all debris and place unit back in service.

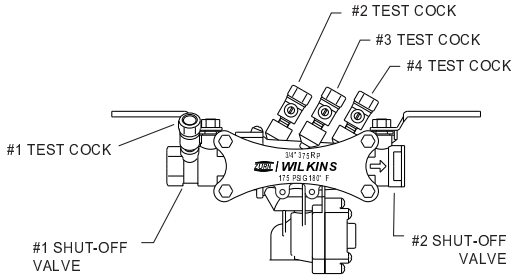
Testing Procedures

MODEL 375 REDUCED PRESSURE PRINCIPLE ASSEMBLY

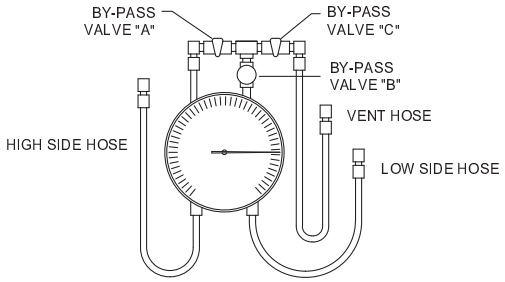
Equipment Required: Differential pressure gauge test kit.

TEST NO. 1
Purpose:
Test #2 check valve for tightness against reverse flow.
Requirement:
The valve must close tight against reverse flow under all pressure differentials.
Procedure:

1. Attach the "HIGH" hose to test cock #2 and the "LOW" hose to test cock #3.
2. Close #2 shut-off valve.
3. Open test cocks #2 and #3.
4. Open by-pass valves "C" and "A" and bleed to atmosphere until all air is expelled.
5. Close by-pass valve "A". Open by-pass valve "B" and bleed to atmosphere until all air is expelled. Close by-pass valves "B" and "C".
6. Attach the "VENT" hose to test cock #4.
7. Slowly open by-pass valves "A" and "C" and keep by-pass valve "B" closed.
8. Open test cock #4.
9. Indicated pressure differential will drop slightly. If pressure differential does not continue to decrease, the #2 check valve is considered tight.



TEST NO. 2
Purpose:
Test #1 check valve for tightness and record pressure drop across #1 check valve.
Requirement:
The static pressure drop across #1 check valve shall be greater than the relief valve opening point (test #3), and at least 5.0 psid.
Procedure:



1. Close by-pass valve "A"
2. Close test cock #4, and disconnect "VENT" hose from test cock #4.
3. Open by-pass valves "B" and "C" bleeding to atmosphere, then close by-pass valve "B" restoring the system to normal static condition.
4. Observe the pressure differential gauge and note this as the #1 check valve psid.

TEST NO. 3
Purpose:
To test operation of the differential relief valve.
Requirement:
The pressure differential relief valve must operate to maintain the "ZONE" between the two check valves at least 2 PSID less than the supply pressure.

Procedure:

1. Close by-pass valve "C" and open by-pass valve "A".
2. Open by-pass valve "B" very slowly until differential gauge needle starts to drop. Hold the valve at this position and observe the gauge reading at the moment the first discharge is noted from the relief valve. Record this as the opening differential pressure of the relief valve.

WARRANTY: ZURN WILKINS Valves are guaranteed against defects of material or workmanship when used for the services recommended. If in any recommended service, a defect develops due to material or workmanship, and the device is returned, freight prepaid, to ZURN WILKINS within 12 months from date of purchase, it will be repaired or replaced free of charge. ZURN WILKINS liability shall be limited to our agreement to repair or replace the valve only.

Maintenance Instructions

All Model 375 Reduced Pressure Principle Backflow Preventers must be inspected and maintained by licensed personnel at least once a year or more frequently as specified by local codes. Replacement of worn or damaged parts must only be made with genuine "ZURN WILKINS" parts. The ZURN WILKINS Certificate of Limited Warranty provides that failure to do so "...releases ZURN WILKINS of any liability that it might otherwise have with respect to that device." Such failure could also result in an improperly functioning device.

The Model 375 Reduced Pressure Principle Assemblies should be thoroughly flushed after backflow conditions occur to prevent any type of corrosive deterioration to its components. Failure to do so could result in malfunction of the device.

GENERAL MAINTENANCE

1. Clean all parts thoroughly with water after disassembly.
2. Carefully inspect rubber seal rings, diaphragms and o-rings for damage.
3. Test unit after reassembly for proper operation (see "Testing Procedures").

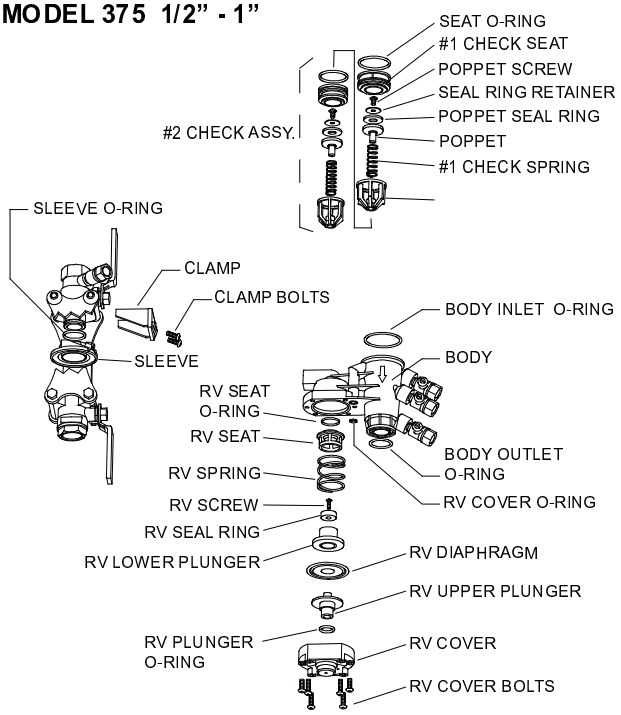
SERVICING CHECK VALVES

1. Close inlet and outlet shut-off valves.
2. Open No. 2, No. 3 and No. 4 test cocks to release pressure from valve.
3. Unscrew clamp screws, and remove clamp. (inserting screw in center hole can remove stuck clamp). Slide sleeve toward inlet pipe. Slide valve body toward inlet and lift upward.
4. Using finger or blunt object, push in outlet end of body, both checks should slide out the body inlet. (A phillips screw driver will work in a 1/2"-3/4" valve. The closed ball valve handle will work in a 1" valve).

ZURN WILKINS
1747 Commerce Way, Paso Robles, CA 93446 Phone:855-663-9876 Fax:805-238-5766
www.zurn.com

Maintenance Instructions

5. Twist spring retainers counter-clockwise to remove from seat and access poppets.
6. Inspect the rubber seal ring for cuts or embedded debris.



To remove seal ring, remove screw and seal ring retainer. If the reverse side of the seal ring is unused, it is possible to invert the seal ring. This would be considered a temporary solution to fixing a fouled check and should be replaced with a new seal ring as soon as possible.

7. Inspect seat surface for nicks or dings and replace if necessary. Use fingernail to check for dings. Re-grease seat o-rings.
8. Inspect seat o-ring sealing areas in body and wipe clean.
9. Reverse the above procedures to reinstall check valve assembly. (Drop #2 check assembly in body. Then drop #1 check assembly in and turn until #1 spring retainer lines up with #2 seat. Then push both assemblies into body.) Care should be taken to make sure the heavy spring is installed in the No. 1 check valve. **Do not overtighten** clamp screws as this can cause leak at the sleeve o-ring.

SERVICING RELIEF VALVE

1. Remove relief valve cover screws and cover. Gently pull on diaphragm to remove the cartridge assembly.
2. Inspect seal ring for cuts and embedded debris. Turn over or replace if required.
3. Disassemble cartridge by unscrewing relief valve retaining screw.
4. Inspect diaphragm and o-ring for damage. Replace required parts and apply a light coat of grease to plunger o-ring, and place on plunger.
5. Carefully reassemble cartridge assembly.
6. Inspect relief valve seat for wear on seating surface. If damaged, replace seat and seat o-ring. (Twist seat and o-ring while inserting to keep it from popping out.
7. Insert cartridge assembly into relief valve cover.
8. Check cover o-ring in groove on body. Clean or replace as necessary.
9. Replace relief valve cover and cover screws.
10. Place device in service and test per "TESTING PROCEDURES".

MODEL 375 1/2" - 1"

Troubleshooting

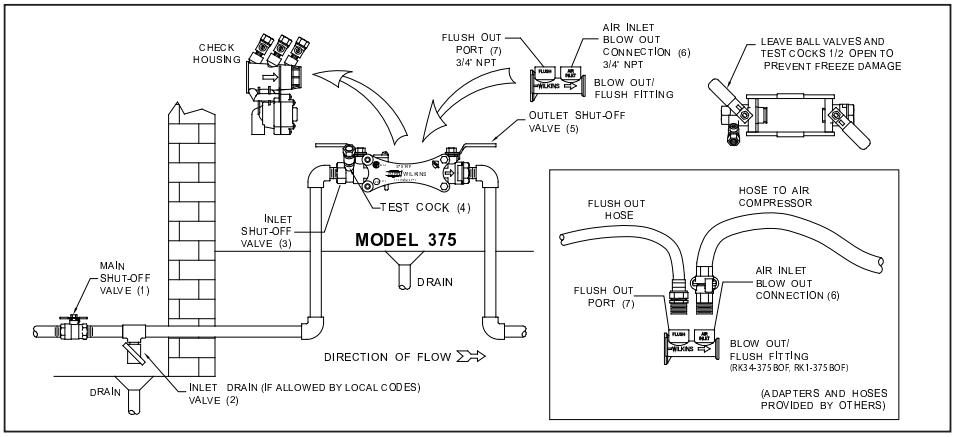
When the relief valve discharges intermittently it can be almost always assumed that the device is functioning correctly and that the discharge is caused by systems problem such as inlet pressure fluctuations or water hammer due to quick closing valves.

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
1. **SUDDEN OR RAPID SPITTING**	1. Drop in inlet pressure. 2. Sudden increase in downstream pressure due to water hammer from quick closing shut-off valve installed downstream.	A. Install an in-line spring loaded check valve upstream of backflow. (ZURN WILKINS Model 40XL2) B. Install pressure reducing valve upstream of backflow unit. (ZURN WILKINS Model NR3XL) C. Install in-line spring loaded check valve downstream of backflow as close to source as possible, but not closer than 4 feet. (ZURN WILKINS Model 40XL2)
2. LIGHT INTERMITTENT DRIP	1. Slightly fouled #1 check	A. Clean #1 check and turn check valve seal ring over or replace.

Continuous discharge of the relief valve signifies a failure of some part of the device. To help determine the specific area of failure, close the #2 shut-off valve. If the discharge stops, the #2 check requires service. If the discharge continues, the #1 check requires service.

1. CONTINUOUS DISCHARGE	1. Fouled #1 check. 2. Fouled relief valve seat. 3. Fouled #2 check.	A. Clean check valves and turn check valve seal rings over or replace. B. Clean relief valve seat and turn relief valve seal ring over or replace.

In summation, the amount of discharge is proportional to degree of fouling. Most problems occur in the #1 check which is where debris enters the backflow preventer first.



Proper performance is dependent upon licensed, qualified personnel performing regular, periodic testing according to ZURN WILKINS' specifications and prevailing governmental & industry standards and codes and upon following these installation instructions. Failure to do so releases ZURN WILKINS of any liability that it might otherwise have with respect to that device. Such failure could also result in an improperly functioning device.

SPECIFICATIONS

Maximum working water pressure	175 PSI
Maximum working water temp.	180°F
Hydrostatic	350 PSI
End connections	Threaded NPT ANSI B1.20.1

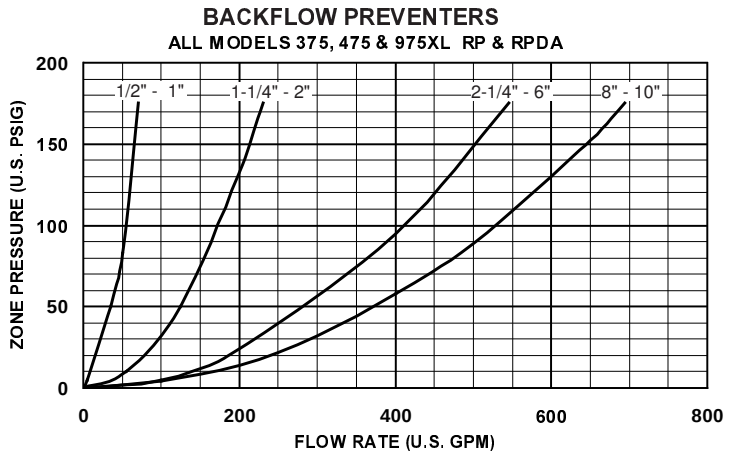
Proposition 65 Warning This product contains chemicals known to the State of California to cause cancer or birth defects or other reproductive harm.

Blow Out / Flush Procedure for Freeze Protection

To Blow Out System for freeze protection, use the following procedure:

1. Turn off main shut-off valve (1) that supplies water to the system.
2. Open inlet drain valve in the system (2). Open inlet and outlet shut-off valves on the backflow preventer (3 & 5) and all of the test cocks (4). Leave all valves and test cocks in the half open/half closed (45°) position to allow full drainage of the ball valves and test cocks.
3. Remove black backflow preventer housing. Replace with orange Blow Out / Flush fitting. Store backflow preventer housing in a safe location for winter. Orange Blow Out / Flush fitting may remain in valve body during winter. Place plugs in ports to keep debris from entering housing.
4. A hose and adapter can be connected to flush out port (7) to drain water to a safe drain.
5. Connect an air hose and adapter to the air inlet connection (6). Inject an adequate volume of air to remove all water from the downstream portion of the system. Do not allow the fitting to overheat.
6. Leave drain valve (2), shut-off valves (3 & 5) and test cocks (4) in the half open/half closed position (45°) for the duration of the winter to prevent freezing.
7. Store valve housing/check assemblies, clamp/sleeve and o-rings in sealed plastic bag during winter to prevent weathering.

To Flush System during installation, use the following procedures:



1. Install backflow device in pipe system, leave water off.
2. Remove the black backflow preventer housing from the bronze body.
3. Install the orange Blow Out / Flush fitting into the bronze body.
4. Thread a garden hose adapter into Flush-Out port (7). Connect a hose to the adapter and run to a safe drain. Shut-off valves (3) and (4) should be open.
5. Turn on water supply at main shut-off valve (1) to flush out any debris in the pipe. Turn water off.
6. Remove orange Blow-Out / Flush fitting and replace black check housing back into the line. Close shut-off valves (3) and (4). Turn water on at main shut-off (1).
7. Slowly open shut-off valve (3) to pressurize backflow preventer. Once fully open, pressurize system by slowly opening shut-off valve (4).

CAUTION: For freeze protection be certain that main shut-off valve (1) remains tightly closed to prevent refilling of the system. Also, the main shut-off valve must be resilient seated to insure no leakage of water into the system.

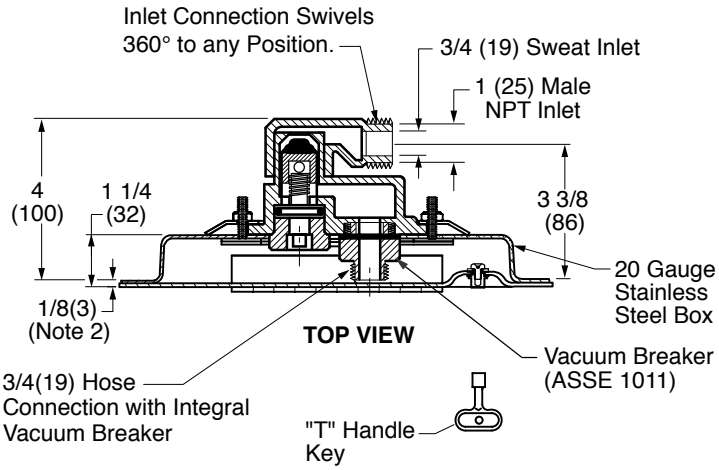
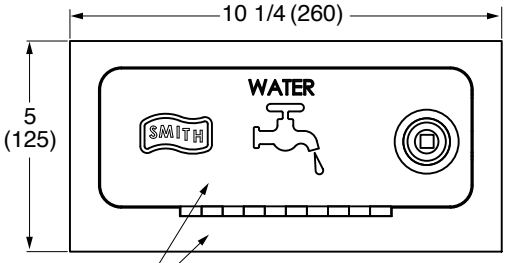
NARROW WALL WARM CLIMATE HYDRANT



BOX TYPE WITH CONCEALED HOSE CONNECTION



FUNCTION: For installation in interior or exterior wall of building where a concealed hose connection is desired and there is no danger of freezing. Hydrant features an integral type vacuum breaker. The locking cover prevents unauthorized use.

The hydrant contained within the box assembly is the 5618 Warm Climate Hydrant which complies with the Lead Free Plumbing Law. Certified by the IAPMO R & T, File No. 6127 (NSF/ANSI 372)

FRONT VIEW with COVER OPEN

NOTES:
1. Recommended wall opening is 3 3/16 (83) x 8 1/2 (215).
2. Add 3/8 (10) when optional box face material is specified.
3. All Jay R. Smith hydrants are manufactured with "NO LEAD" brazing rings and USDA approved lubricants.
4. Dimensions shown in parentheses are in millimeters.
5. The AB1953, California Lead Law, and NSF/ANSI Standard 61-2008 - Drinking Water System Components are not applicable to Jay R. Smith hydrants as they do not convey/dispense water for human consumption through drinking or cooking.
6. **FOR IRRIGATION PURPOSES ONLY.**

☐ **FIG. 5518**

A small amount of water seepage may occur from the vacuum breaker and operating screw upon initial opening and closing of the hydrant. This is normal operation.

REGULARLY FURNISHED:
All Bronze Warm Climate Hydrant with Chrome Plated Face, Hose Connection having Integral ASSE 1011 Vacuum Breaker, 360 Swivel Inlet Connection, "T" Handle Key and Stainless Steel Box.

VARIATIONS:
☐ Cylinder Lock -CL

OPTIONAL MATERIALS:
☐ Polished Bronze Box Face -PB
☐ Nickel Bronze Box Face -NB
☐ Rough Bronze Box Face -RB
☐ Chrome Plated Box Face -CP

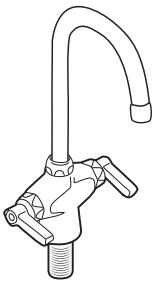
1102GN8AE3317AB

Overview

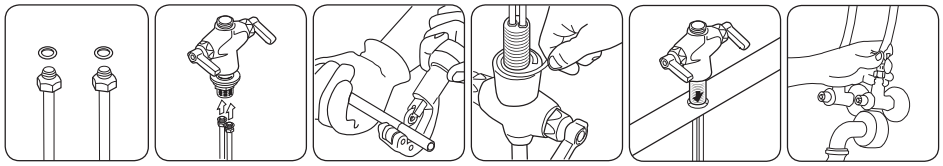
Chicago Faucets deck mounted faucets feature cast brass bodies and precision cartridges for years of reliable operation. Metering models with adjustable cycle time offer true water savings.

Notice to the Installer

- Read this entire instruction sheet before installing to ensure proper installation.
- Installation must comply with local codes and ordinances.



Pressurized plumbing fixtures shall be installed in accordance with manufacturer's recommendations. The supply piping to these devices shall be securely anchored to the building structure to prevent installed device from unnecessary movement when operated by the user. Care shall be exercised when installing the device to prevent marring the exposed surface.

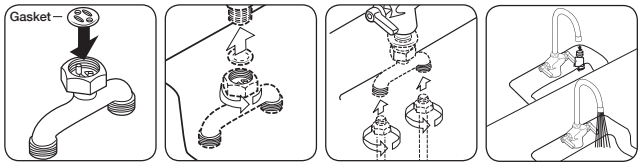


NOTE: The information in this manual is subject to change without notice.

Please leave this manual with the facility manager after completing the faucet installation. This document contains information necessary for routine maintenance and servicing.

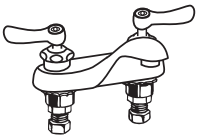
NOTE: Before installation, turn off water supplies to existing faucet and remove faucet if replacing. Clean faucet basin and clear away debris. Flush all supply lines before connecting to faucet. Failure to do so can result in debris clogging the inlets and/or cartridges.

Single Hole Mixing Fittings — Base numbers 50, 50T, 51, 51T

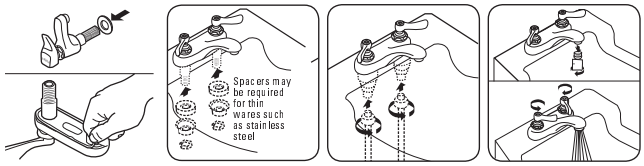


1. Ensure O-Rings are installed on hoses or tubes.
2. Install hoses or tubes.

Copper Tube Installation
2b. Cut tubes to desired length.

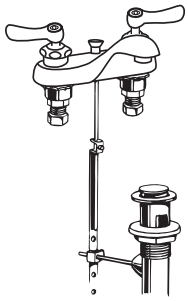


3. Apply putty to underside of faucet body to assure a good seal and level fit.
4. Place shank through hole in sink and assemble mounting hardware.
5. Attach hoses or tubes to supply stops. Make sure gasket is installed.

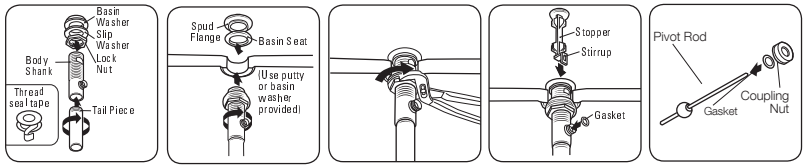


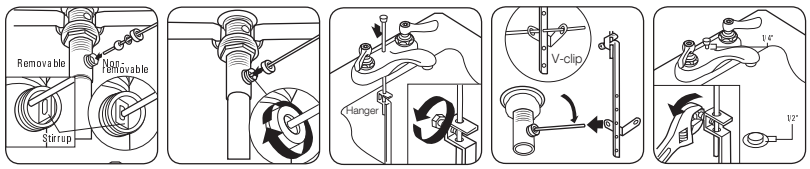
Mixing Tee Installation

1. Install tee gasket over guide pins and secure coupling nut of tee to body shank.
2. Secure coupling nut of tee to body shank. Tighten securely.
3. Attach supply lines with coupling nuts. Tighten securely.
4. Remove outlet and flush lines for about one minute. Replace outlet.



Centerset and Single Basin Fittings — Base numbers 333, 335, 349, 350, 525, 526, 527, 700, 701, 730, 797, 802, 891, 894, 895, 1100, 1102, 1891, 1895

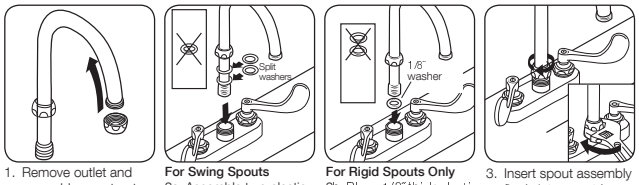




1. Apply putty or rubber washer to underside of faucet body to assure a good seal and level fit.
2. Place shank(s) through holes in sink and assemble mounting hardware. Use spacers if necessary.
3. Attach supply lines with coupling nuts and tighten securely. Attach spout if provided separately.
4. Remove outlet and flush lines for about one minute. Replace outlet.

Pop-Up Drain Installation

1. Assemble tail piece to body shank with thread seal tape. Assemble lock nut, slip washer, and basin washer to body shank.
2. Fully assemble the basin seat and spud flange to body shank assembly.
3. Position body shank toward the lift rod. Tighten lock nut until properly sealed.
4. Place stopper into body shank cavity orienting the stirrup for removable or non-removable stopper as desired. (see #6)
5. Insert pivot ball rod assembly through pivot rod gasket and coupling nut.



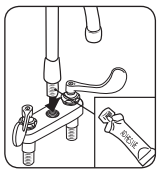
6. Attach pivot rod assembly to body shank.
7. Tighten pivot rod assembly nut as required to seal and provide smooth operation.
8. Insert pop up rod through holes in hanger and hand tighten.
9. Push pivot ball rod to lowest position, squeeze v-clip and slide pivot ball rod through v-clip and appropriate hole in hanger.
10. Test the assembly for proper function and make adjustments as necessary. Once set, tighten securely.

For additional technical assistance, call 800/TEC-TRUE (800-832-8783) or visit our website at chicagofaucets.com.

Deck Mounted Faucets Installation Instructions
(continued)

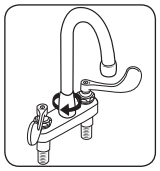
CHICAGO FAUCETS
a Geberit company

Rigid/Swing Convertible Spout Installation



1. Remove outlet and assemble spout nut over outlet end, until it rests on shoulder of spout joint.

For Swing Spouts
2a. Assemble two plastic split washers to spout joint and discard 1/8" thick plastic washer.



For Rigid Spouts Only
2b. Place 1/8" thick plastic washer into spout base bore and discard plastic split washers.

3. Insert spout assembly firmly into spout base and tighten spout nut.

RGD1 and RGD2 Only Spout Installation

1. Apply supplied adhesive to threads of spout and tighten spout into base. Back off as necessary for centered position.

2. Hand tighten sleeve until flush with body.

Chicago Faucets deck mounted faucets come with cartridges already installed. Instructions for adjusting the timing on metering cartridges are shown below. For complete instructions on servicing and replacing Chicago Faucets cartridges, see our Cartridge Maintenance/Repair Guide, available online at chicagofaucets.com/pdf/CF1081.pdf. You may also order a copy of the Guide by calling 800-832-8783.

Supplemental Bubbler Installation Instructions for 748-665CP, 748-665FHCP, 748-244CP and 748-244FHCP

Installation with Anti-Rotational Pins (Figure A)

1. Choose Two holes in bubbler base that corresponds with the deck/sink drilling and tap each anti-rotational pin with a hammer until seated. There should be approximately 1/8" length of pin exposed when fully seated.
2. Drill 3/16" diameter holes on 1-9/32" centers and 1/4" deep in the deck/sink for anti-rotational pins if mounting holes are not provided.
3. Attach Bubbler to deck using the anti-rotational washer provided.

Flow Adjustments (Figure B)

1. The projection of water flow can be adjusted by using the 1/8" hex wrench provided. Insert hex wrench and rotate control clockwise or counterclockwise until the desired flow is achieved.

Note: Bubblers have been designed to utilize the 722-013K inlet flow control. To insure proper performance, it is imperative that the 722-013K be installed with each bubbler.

Timing Adjustment on an MVP Metering Cartridge

1. With cartridge and handle installed in body and water supply turned on, purge cartridge of air by pushing handle completely down 4-8 times repeatedly, then check timing cycle.
2. To change cycle time, remove index button, then handle using a 3/32" hex wrench. (Figure C)
3. Using your fingers, change height of adjustment nut by 1/4 turn only. Turn adjustment nut clockwise to increase cycle time or counter-clockwise to decrease cycle time. (Figure D)
4. If filter and lower valve cartridge have been removed from fitting, replace them by inserting filter first.
5. If gasket has been removed from the actuator assembly, replace it by inserting into bottom of actuator assembly.
6. Assemble actuator assembly to body and tighten to 12-15 ft-lbs torque.
7. Replace handle and verify desired cycle time. NOTE: TIMING MUST BE CHECKED WITH HANDLE IN PLACE.
8. If additional adjustment is necessary, repeat steps 3 through 7 until desired cycle time is achieved. Note: Some new installations might produce a slight closing noise. This is normally the result of air trapped in the cartridge. The noise will dissipate over time.
9. Attach handle and tighten set screw with a 3/32" hex wrench. If index button is included, snap into handle.

Timing Adjustment on Push-Button (NAIAD) & Tip-Tap Self-Closing Cartridges

1. Turn off water supply.
2. Remove cartridge from valve body with 1-1/4" flat hex wrench. Use care to prevent damage to cap hex nut.
3. Locate timing hex nut on bottom of dashpot. Turn hex nut clockwise to increase cycle time or counter-clockwise to decrease cycle time (Figure E). NOTE: Turn in 90 degree increments for each adjustment cycle. Fill the dashpot with water, slide it over the bottom of the cartridge, and place both back into the faucet body.
4. Place cartridge into faucet body and fully tighten cap nut with wrench to 15-25 ft-lbs torque. Turn on water and verify cycle time by depressing cartridge fully. NOTE: Insure that cap gasket is in place within cap before assembly into valve body.

NOTE: Cartridges with 'SLO' designation include an external timing adjustment via a set screw in the top of the handle. Using a 7/64" hex wrench, turn the set screw clockwise to decrease cycle time or counter-clockwise to increase cycle time. (Figure E)

Timing Adjustment on a Push-Tilt Self-Closing Cartridge

For Push-Tilt cartridges, the timing adjustment procedure is identical to Push-Button Self-Closing Cartridges, except for an external timing adjustment feature that is integral to Push-Tilt handles. This adjustment can be used for minor cycle time changes without the need to remove the cartridge from the body.

For external adjustment, lift handle slightly to expose 1/16" hex socket set screw (Figure F). Turn adjustment set screw clockwise to increase cycle time or counter-clockwise to decrease cycle time. If greater timing adjustment is required, follow the instructions for adjusting the timing on a Push-Button Self-Closing Cartridge.

Care and Maintenance
All Chicago Faucets fittings are designed and engineered to meet or exceed industry performance standards. Care should be taken when cleaning this product. Do not use abrasive cleaners, chemicals or solvents as they can result in surface damage. Use mild soap with warm water for cleaning and protecting the surface of Chicago Faucets fittings.

For additional technical assistance, call 800/TEC-TRUE (800-832-8783) or visit our website at chicagofaucets.com.

CHICAGO FAUCETS LIMITED WARRANTY

TO WHOM DOES THIS WARRANTY APPLY? — The Company extends the following limited warranty to the original user only.

WHAT DOES THIS WARRANTY COVER AND HOW LONG DOES IT LAST?
This warranty covers the following Commercial Products:

LIFETIME FAUCET WARRANTY — The 'Faucet,' defined as any metal cast, forged, stamped or formed portion of the Product, not including electronic or moving parts or other products separately covered by this Limited Warranty or water restricting components or other components, is warranted against material manufacturing defects for the life of the Product.

FIVE YEAR FAUCET WARRANTY — Certain Products and portions of the Product are warranted against material manufacturing defects for a period of five (5) years from the date of Product purchase. Products warranted against material manufacturing defects for a period of five (5) years from the date of Product purchase are referred to by the product numbers 42X, 43X, 15XX and E-Tronic® - 4X, 5X, 6X, 7X, 8X and 9X. All zinc die cast portions of Product are warranted against material manufacturing defects for a period of five (5) years from the date of Product purchase.

THREE YEAR ELECTRONICS WARRANTY — Electronic components, including the solenoid, are warranted for three (3) years from the date of installation.

FIVE YEAR CARTRIDGE WARRANTY — The 'Cartridge', defined as the metal portion of any Product typically referred to by the product numbers containing 1-099, 1-100, 377X, 217X and 274X, excluding any rubber or plastic components, is warranted against material manufacturing defects for a period of five (5) years from the date of Product purchase. All Cartridges included in the Company's Single Control or Shower Products also are warranted against material manufacturing defects for a period of five (5) years from the date of Product purchase.

ONE YEAR FINISH WARRANTY – COMMERCIAL — For Products used in commercial applications, the finish of the Product is warranted against material manufacturing defects for a period of one (1) year from the date of Product purchase.

OTHER WARRANTIES — All other Products not covered above are warranted against material manufacturing defects for a period of one (1) year from the date of Product purchase.

Other restrictions and limitations apply. For complete warranty details, call Chicago Faucets Customer Service at 847-803-5000 or visit chicagofaucets.com.

Deck Mounted Faucets Installation Instructions

Recommended for base numbers 50, 50T, 51, 51T, 333, 335, 349, 350, 525, 526, 527, 700, 701, 730, 797, 802, 891, 894, 895, 1100, 1102, 1891, 1895 Centerset and Single Basin Fittings, Pop-Up Drain Installation and Rigid/Swing Convertible Spout Installation.

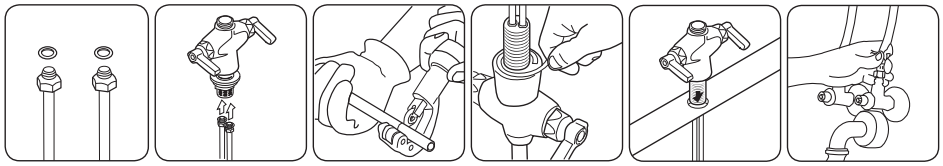
CHICAGO FAUCETS
a Geberit company

Overview

Chicago Faucets deck mounted faucets feature cast brass bodies and precision cartridges for years of reliable operation. Metering models with adjustable cycle time offer true water savings.

Notice to the Installer

- Read this entire instruction sheet before installing to ensure proper installation.
- Installation must comply with local codes and ordinances.

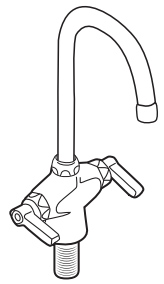


Pressurized plumbing fixtures shall be installed in accordance with manufacturer's recommendations. The supply piping to these devices shall be securely anchored to the building structure to prevent installed device from unnecessary movement when operated by the user. Care shall be exercised when installing the device to prevent marring the exposed surface.

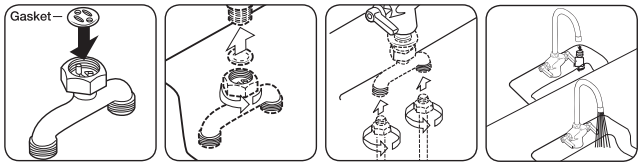
NOTE: The information in this manual is subject to change without notice.

Please leave this manual with the facility manager after completing the faucet installation. This document contains information necessary for routine maintenance and servicing.

NOTE: Before installation, turn off water supplies to existing faucet and remove faucet if replacing. Clean faucet basin and clear away debris. Flush all supply lines before connecting to faucet. Failure to do so can result in debris clogging the inlets and/or cartridges.



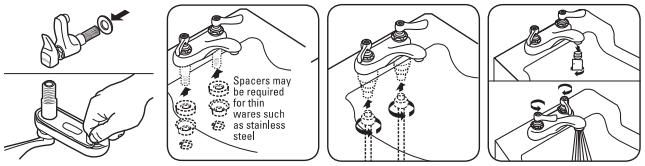
Single Hole Mixing Fittings — Base numbers 50, 50T, 51, 51T



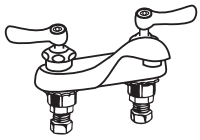
1. Ensure O-Rings are installed on hoses or tubes.
2. Install hoses or tubes.

Copper Tube Installation
2b. Cut tubes to desired length.

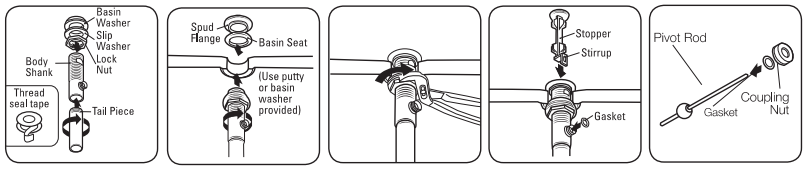
3. Apply putty to underside of faucet body to assure a good seal and level fit.
4. Place shank through hole in sink and assemble mounting hardware.
5. Attach hoses or tubes to supply stops. Make sure gasket is installed.



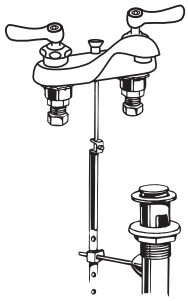
Mixing Tee Installation



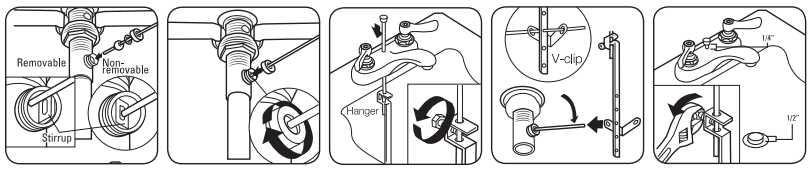
1. Install tee gasket over guide pins and secure coupling nut of tee to body shank.
2. Secure coupling nut of tee to body shank. Tighten securely.
3. Attach supply lines with coupling nuts. Tighten securely.
4. Remove outlet and flush lines for about one minute. Replace outlet.



Centerset and Single Basin Fittings — Base numbers 333, 335, 349, 350, 525, 526, 527, 700, 701, 730, 797, 802, 891, 894, 895, 1100, 1102, 1891, 1895

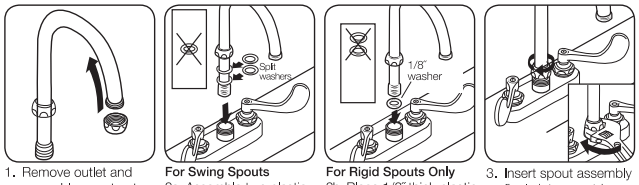


1. Apply putty or rubber washer to underside of faucet body to assure a good seal and level fit.
2. Place shank(s) through holes in sink and assemble mounting hardware. Use spacers if necessary.
3. Attach supply lines with coupling nuts and tighten securely. Attach spout if provided separately.
4. Remove outlet and flush lines for about one minute. Replace outlet.



Pop-Up Drain Installation

1. Assemble tail piece to body shank with thread seal tape. Assemble lock nut, slip washer, and basin washer to body shank.
2. Fully assemble the basin seat and spud flange to body shank assembly.
3. Position body shank toward the lift rod. Tighten lock nut until properly sealed.
4. Place stopper into body shank cavity orienting the stirrup for removable or non-removable stopper as desired. (see #6)
5. Insert pivot ball rod assembly through pivot rod gasket and coupling nut.



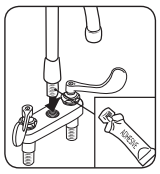
6. Attach pivot rod assembly to body shank.
7. Tighten pivot rod assembly nut as required to seal and provide smooth operation.
8. Insert pop up rod through holes in hanger and hand tighten.
9. Push pivot ball rod to lowest position, squeeze v-clip and slide pivot ball rod through v-clip and appropriate hole in hanger.
10. Test the assembly for proper function and make adjustments as necessary. Once set, tighten securely.

For additional technical assistance, call 800/TEC-TRUE (800-832-8783) or visit our website at chicagofaucets.com.

Deck Mounted Faucets Installation Instructions
(continued)

CHICAGO FAUCETS
a Geberit company

Rigid/Swing Convertible Spout Installation



1. Remove outlet and assemble spout nut over outlet end, until it rests on shoulder of spout joint.

For Swing Spouts
2a. Assemble two plastic split washers to spout joint and discard 1/8" thick plastic washer.

For Rigid Spouts Only
2b. Place 1/8" thick plastic washer into spout base bore and discard plastic split washers.

3. Insert spout assembly firmly into spout base and tighten spout nut.

RGD1 and RGD2 Only Spout Installation

1. Apply Permabond HH-040 anaerobic sealant or equivalent NSF 61 approved sealant to threads of spout and tighten spout into base. Back off as necessary for centered position.

2. Hand tighten sleeve until flush with body.

Chicago Faucets deck mounted faucets come with cartridges already installed. Instructions for adjusting the timing on metering cartridges are shown below. For complete instructions on servicing and replacing Chicago Faucets cartridges, see our Cartridge Maintenance/Repair Guide, available online at chicagofaucets.com/pdf/CF1081.pdf. You may also order a copy of the Guide by calling 800-832-8783.

Supplemental Bubbler Installation Instructions for 748-665CP, 748-665FHCP, 748-244CP and 748-244FHCP

Installation with Anti-Rotational Pins (Figure A)

1. Choose Two holes in bubbler base that corresponds with the deck/sink drilling and tap each anti-rotational pin with a hammer until seated. There should be approximately 1/8" length of pin exposed when fully seated.
2. Drill 3/16" diameter holes on 1-9/32" centers and 1/4" deep in the deck/sink for anti-rotational pins if mounting holes are not provided.
3. Attach Bubbler to deck using the anti-rotational washer provided.

Flow Adjustments (Figure B)

1. The projection of water flow can be adjusted by using the 1/8" hex wrench provided. Insert hex wrench and rotate control clockwise or counterclockwise until the desired flow is achieved.

Note: Bubblers have been designed to utilize the 722-013K inlet flow control. To insure proper performance, it is imperative that the 722-013K be installed with each bubbler.

Timing Adjustment on an MVP Metering Cartridge

1. With cartridge and handle installed in body and water supply turned on, purge cartridge of air by pushing handle completely down 4-8 times repeatedly, then check timing cycle.
2. To change cycle time, remove index button, then handle using a 3/32" hex wrench. (Figure C)
3. Using your fingers, change height of adjustment nut by 1/4 turn only. Turn adjustment nut clockwise to increase cycle time or counter-clockwise to decrease cycle time. (Figure D)
4. If filter and lower valve cartridge have been removed from fitting, replace them by inserting filter first.
5. If gasket has been removed from the actuator assembly, replace it by inserting into bottom of actuator assembly.
6. Assemble actuator assembly to body and tighten to 12-15 ft-lbs torque.
7. Replace handle and verify desired cycle time. NOTE: TIMING MUST BE CHECKED WITH HANDLE IN PLACE.
8. If additional adjustment is necessary, repeat steps 3 through 7 until desired cycle time is achieved. Note: Some new installations might produce a slight closing noise. This is normally the result of air trapped in the cartridge. The noise will dissipate over time.
9. Attach handle and tighten set screw with a 3/32" hex wrench. If index button is included, snap into handle.

Timing Adjustment on Push-Button (NAIAD) & Tip-Tap Self-Closing Cartridges

1. Turn off water supply.
2. Remove cartridge from valve body with 1-1/4" flat hex wrench. Use care to prevent damage to cap hex nut.
3. Locate timing hex nut on bottom of dashpot. Turn hex nut clockwise to increase cycle time or counter-clockwise to decrease cycle time (Figure E). NOTE: Turn in 90 degree increments for each adjustment cycle. Fill the dashpot with water, slide it over the bottom of the cartridge, and place both back into the faucet body.
4. Place cartridge into faucet body and fully tighten cap nut with wrench to 15-25 ft-lbs torque. Turn on water and verify cycle time by depressing cartridge fully. NOTE: Insure that cap gasket is in place within cap before assembly into valve body.

NOTE: Cartridges with 'SLO' designation include an external timing adjustment via a set screw in the top of the handle. Using a 7/64" hex wrench, turn the set screw clockwise to decrease cycle time or counter-clockwise to increase cycle time. (Figure E)

Timing Adjustment on a Push-Tilt Self-Closing Cartridge

For Push-Tilt cartridges, the timing adjustment procedure is identical to Push-Button Self-Closing Cartridges, except for an external timing adjustment feature that is integral to Push-Tilt handles. This adjustment can be used for minor cycle time changes without the need to remove the cartridge from the body.

For external adjustment, lift handle slightly to expose 1/16" hex socket set screw (Figure F). Turn adjustment set screw clockwise to increase cycle time or counter-clockwise to decrease cycle time. If greater timing adjustment is required, follow the instructions for adjusting the timing on a Push-Button Self-Closing Cartridge.

Alden Bath

LED CF ADA

DESCRIPTION
Dual linear acrylic shades providing both task and ambient light are accented by a minimal metal body and sleek metal endcaps in the Alden bath light fixture from Tech Lighting. Includes two GX24Q-2 base 18 watt triple tube compact fluorescent lamps (electronic ballast included) or 20 watt, 1200 net lumen, 3000K LED modules. LED version dimmable with low-voltage electronic dimmer. May be mounted horizontally or vertically. ADA compliant.

INSTALLATION
This product can mount to either a 4" square electrical box with round plaster ring or an octagonal electrical box. May be mounted horizontally or vertically. For wall mount use only.

WEIGHT
4.03lb / 1.83kg ±

acrylic

bronze chrome satin nickel

PROJECT: _____
TYPE: _____
NOTES: _____

DESCRIPTION

Via 4 is the flexible linear LED luminaire system for pendant, surface and recessed or in-wall installation, whether as discrete luminaires, continuous runs or patterns. Via 4 features numerous high-efficiency optical configurations, including separately controlled indirect/direct, wall wash and asymmetric distributions, as well as a wide range of electrical, control and trim options. See separate spec sheets for patterns and other available mountings.

OPTICS

HIGH EFFICIENCY LAMBERTIAN OPTIC (HLO) - Matte white side reflectors combined with High-Efficiency Lambertian Optic (HLO) shielding of diffusing 0.075" thick acrylic with up to 88% transmission and good source obscuration. Luminaire brightness is controlled by the flux-to-shielding area ratio.

LIGHT SOURCE - LED

Custom linear array of mid-flux LED's are cartridge-mounted with quick-connect wiring to facilitate service and thermal management. Available in 3000K, 3500K and 4000K with a minimum 80 CRI and an option for 90 CRI with elevated R9 value. Color consistency maintained to within 3 SDCM. LEDs operated at reduced drive current to optimize efficacy and lumen maintenance.
All LEDs have been tested in accordance with IESNA LM-80-08 and the results have shown L80 lumen maintenance greater than 60,000 hours. Absolute product photometry is measured and presented in accordance with IESNA LM-79, unless otherwise indicated.

PERFORMANCE PER 4' AT 4000K

LUMINAIRE LENGTH

Via 4 is made up of standard 2, 3, 4, 5, 8 and 12 foot sections that may be joined together to create longer continuous run lengths. Exact run length must be noted in the product code. The minimum individual section available is 2 foot, and continuous run lengths can be ordered in 2 inch increments.
All individual sections are joined together onsite using the joiner kits provided. LumenWerx offers joiner kits that are extremely simple to work with in the field and result in a fixture that appears virtually seamless with no light leak at any connection.

joining system Via 4 direct/indirect

ELECTRICAL

Factory-set adjustable output current electronic driver with 120-277V AC line input. Dimmable from at least 100%-5% with 0-10V control. Rated life (90% survivorship) of 50,000 hours at 50°C max. ambient (and 70°C max. case) temperature. At maximum driver load: Efficiency>84%, PF>0.9, THD<20%. Other specifiable options include Lutron Hi-Lume A (specify 2, 3 or 4 wires), EcoSystem H (100%-1%, fade-to-black) and EcoSystem 5 (100%-5%) dimmable drivers and DALI protocol drivers.

EMERGENCY

Factory installed long life high temperature recyclable Ni-Cad battery pack with test switch and charge indicator, minimum of 90 minutes operation, up to 1000 lumens per 4ft (25°C) emergency lighting output. Recharge time of 24 hours.

MOUNTING OPTIONS

Fixtures may be horizontally mounted to the wall using a bracket. For long runs, a minimum of 6" from adjacent walls is required.

FINISH

Interior - 95%, reflective matte powder coated white paint
Exterior - matte white, matte black or silver powder coating.
Custom finishes are also available.

CONTROLS

LumenWerx offers several options for integrating motion and daylight controls into Via 4 luminaires. Wireless options incorporate a wireless controller/powerpack into the luminaire, which receives signals from a wireless sensor (by others) installed in the space. The advantages of the wireless option include greater flexibility of control options, sensor coverage and system integration. Onboard options incorporate both the sensor and controller/powerpack. Onboard sensors, while inherently simpler, have limitations of control and coverage.

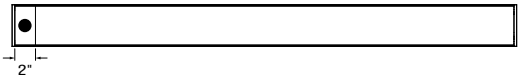
VIA 4 LED



WALL DIRECT/INDIRECT

LUMENWERX
WWW.LUMENWERX.COM

Onboard

Onboard Motion Sensor and **power pack (OMS)** provide automatic on and automatic off control, using PIR detection. Sensor is designed to detect fine-motion when installed within 6' of occupants.

Onboard Daylight Sensor and **controller (ODS)** provide input for 0-10V dimming drivers. Separate switched control of line input is required for on/off control.

Location of an Onboard sensor

Wireless

EnOcean Wireless Controller (EWC) provides both a power pack for presence detection control and a 0-10V interface for daylight harvesting. EnOcean wireless sensors (by others) mounted in the room signal the onboard EWC. This option permits manual on/automatic off (vacancy) control.

Lutron Motion Controller (LMC) and **Lutron Daylight Controller (LDC)** provide inputs to Ecosystem drivers. Compatible Lutron wireless motion and daylight sensors (by others) mounted in the room signal onboard LPC or LDC. This option permits manual on/automatic off (vacancy) control.

CONSTRUCTION

Housing - Extruded Aluminum (0.095" nominal) up to 90% Recycled Content
Interior brackets - Die formed cold rolled sheet steel 18 gauge thick
Joining system - Die cast Zinc (0.95" nominal)
Reflectors - Cold rolled steel 0.024" thick precisely die formed, 95% reflective matte white painted
End caps - Die cast Aluminum (0.95" nominal)

WEIGHT

Via 4 4ft - 13.66lbs - 6.2kg
Via 4 8ft - 27.53lbs - 12.5kg
Via 4 12ft - 41.41lbs - 18.8kg

CERTIFICATIONS

ETL - Rated for Dry/Damp locations. Conforms to UL Standard 1598 and certified to CAN/CSA Standard C22.2 No. 250.0.
DLC - Testing to DLC requirements, for this product, have been completed by an Accredited Laboratory and certified by DLC.
Lighting facts - testing products and reporting performance results according to industry standards.

WARRANTY

LumenWerx provides a five-year limited warranty of electrical and mechanical performance of the luminaires, including the LED boards, drivers, and auxiliary electronics. LumenWerx will repair or replace defective luminaires or components at our discretion, provided they have been installed and operated in accordance with our specifications. Other limitations apply, please refer to the full warranty on our website.

DESCRIPTION

Via 1.5 is the elegant, ultra-compact and flexible linear LED luminaire system for pendant, surface, and recessed or in-wall installation, whether as discrete luminaires, continuous runs, or patterns.
Via 1.5 features numerous optical configurations, which are difficult to achieve in such a compact luminaire.
See separate spec sheets for patterns and other available mountings.

OPTICS

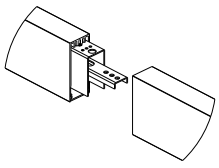
HIGH EFFICIENCY LAMBERTIAN OPTIC (HLO) - matte white side reflectors combined with High-Efficiency Lambertian Optic (HLO) shielding of diffusing 0.075" thick acrylic with up to 88% transmission and good source obscuration. Luminaire brightness is controlled by the flux-to-shielding area ratio.

LIGHT SOURCE - LED



Custom linear array of mid-flux LED's are cartridge-mounted with quick-connect wiring to facilitate service and thermal management. Available in 3000K, 3500K and 4000K with a minimum 80 CRI and an option for 90 CRI with elevated R9 value. Color consistency maintained to within 3 SDCM. LEDs operated at reduced drive current to optimize efficacy and lumen maintenance.
All LEDs have been tested in accordance with IESNA LM-80-08 and the results have shown L80 lumen maintenance greater than 60,000 hours. Absolute product photometry is measured and presented in accordance with IESNA LM-79, unless otherwise indicated.

PERFORMANCE PER 4' AT 4000K

LED output	Color Temp	Watts	Nominal Delivered Lumens	Efficacy LPW
low output	4000K	17	1400	83
medium output	4000K	24	2000	82
high output	4000K	37	3000	81

LUMINAIRE LENGTH

Via 1.5 is made up of standard 2, 3, 4, 5, 8 and 12 foot sections that may be joined together to create longer continuous run lengths. Exact run length must be noted in the product code. The minimum individual section available is 2 foot.
All individual sections are joined together onsite using the joiner kits provided. LumenWerx offers joiner kits that are extremely simple to work with in the field and result in a fixture that appears virtually seamless with no light leak at any connection.

joining system for Via 1.5

ELECTRICAL

Factory-set adjustable output current electronic driver with 120-277V AC line input. Dimmable from at least 100%-5% with 0-10V control. Rated life (90% survivorship) of 50,000 hours at 50°C max. ambient (and 70°C max. case) temperature. At maximum driver load: Efficiency>84%, PF>0.9, THD<20%. Other specifiable options include Lutron Hi-Lume A (specify 2, 3 or 4 wires), EcoSystem H (100%-1%, fade-to-black) and EcoSystem 5 (100%-5%) dimmable drivers and DALI protocol drivers.

EMERGENCY

Factory installed long life high temperature recyclable Ni-Cad battery pack with test switch and charge indicator, minimum of 90 minutes operation, up to 1000 lumens per 4ft (25°C) emergency lighting output. Recharge time of 24 hours.

MOUNTING OPTIONS

Fixtures can be mounted directly to T-Bar, drywall and hard surface ceilings, hardware supplied by others. Long runs require a minimum of 6" distance from the vertical wall.

FINISH

Interior - 95%, reflective matte powder coated white paint
Exterior - matte white or silver powder coating. Custom finishes are also available.

CONTROLS

LumenWerx offers several options for integrating occupancy and daylight controls into Via 1.5 luminaires. Wireless options incorporate a wireless controller/powerpack into the luminaire, which receives signals from a wireless sensor (by others) installed in the space. The advantages of the wireless option include greater flexibility of control options, sensor coverage and system integration.
Wireless
EnOcean Wireless Controller (EWC) provides both a power pack for presence detection control and a 0-10V interface for daylight harvesting. EnOcean wireless sensors (by others) mounted in the room signal the onboard EWC. This option permits manual on/automatic off (vacancy) control.
Lutron Motion Controller (LMC) and **Lutron Daylight Controller (LDC)** provide inputs to Ecosystem drivers. Compatible Lutron wireless motion and daylight sensors (by others) mounted in the room signal onboard LPC or LDC. This option permits manual on/automatic off (vacancy) control.

CONSTRUCTION

Housing - Extruded Aluminum (0.095" nominal) up to 90% Recycled Content
Interior brackets - Die formed cold rolled sheet steel 18 gauge thick
Joining system - Die cast Zinc (0.95" nominal)
Reflectors - Flat rolled Aluminum sheet 0.040" thick precisely die formed, 95% reflective matte white painted
End caps - Die cast Aluminum (0.95" nominal)

WEIGHT

CERTIFICATIONS

ETL - Rated for Dry/Damp locations. Conforms to UL Standard 1598 and certified to CAN/CSA Standard C22.2 No. 250.0.
Lighting facts - testing products and reporting performance results according to industry standards.

WARRANTY

LumenWerx provides a five-year limited warranty of electrical and mechanical performance of the luminaires, including the LED boards, drivers, and auxiliary electronics. LumenWerx will repair or replace defective luminaires or components at our discretion, provided they have been installed and operated in accordance with our specifications. Other limitations apply, please refer to the full warranty on our website.

Metalux

DESCRIPTION

The Vaportite LED Series is an energy efficient industrial Vaportite fixture that features rugged and durable construction. The Vaportite LED incorporates a full metal fixture liner inside a reinforced fiberglass housing with a high impact diffuser. This Vaportite series is suitable for interior and exterior applications and can be surface or chain mounted.

The Vaportite LED Series has been designed for maximum operation in commercial institutional and industrial environments and can operate in a wide range of temperatures (-20°C to 25°C) and is ideal for cold storage environments.

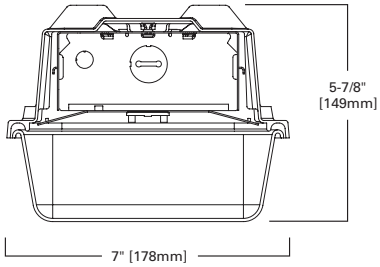
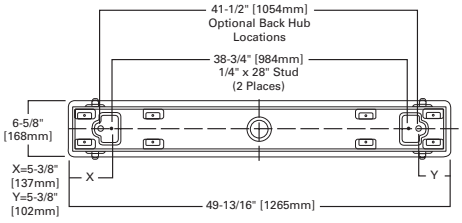
SPECIFICATION FEATURES



Construction
Fiberglass housing is reinforced polyester and self-extinguishing (ASTM-D635-74) plastic of a permanent pearl gray color. A watertite hub for 1/2" conduit entry is provided at each end of housing (standard) for continuous feed. Polyurethane gasketing is formed in the housing providing a continuous seamless seal for the diffuser. Four sturdy cam latches clamp diffuser tightly for a positive seal between housing, gasketing and diffuser. Electrical components and fixtures are UL/ cUL listed for Wet Locations.

Electrical
Long-Life LED system coupled with electrical driver to deliver optimal performance. LED's available in 3500, 4000 and 5000K with a CRI ≥ 85. Projected life is 60,000 hours at 91% lumen output. cULus listed. Electronic drivers are available for 120-277V applications. A 0-10V dimming control is available (standard). IP65 rated and NSF certified (4' only).



Lens
DR=Internal Prismatic Lens/15% DR High Impact Additive.
DR100=Internal Prismatic Lens/100% DR High Impact Additive.

Warranty
Vaportite LED features a five year limited warranty.

Compliance
DesignLights Consortium™ Qualified and classified for DLC Standard (some models are not DLC qualified), refer to www.designlights.org for details.

FEATURES AND BENEFITS

Physical :

- Aluminum optical chamber housing
- Anodized aluminum flush trim
- Polymer recycled PVC blockout housing
- Available in 1', 2', 3' or 4' sections
- Die cast aluminum end caps
- Stainless steel hardware
- Frosted glass lens
- IP68 rated for up to 1' (30cm), not suitable for permanent immersion applications
- IK10 rated
- 1000kg max load, walk over only*

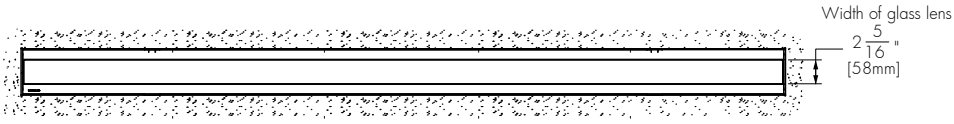
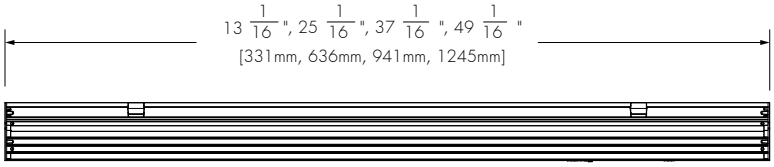
lumentalk



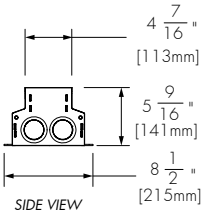
EcoSystem Enabled

Performance :



- Lumen maintenance 80,000 hrs [L70 @ 25°C]
- Lumen maintenance 60,000 hrs [L70 @ 50°C]
- Resolution per foot or per fixture
- Operating temperatures: -40° C to 50° C [-40F to 122F]

Electrical :



- Line voltage luminaire for 100 to 277V
- Power and data in 1 cable (#16-5)
- IP68 push-lock connectors
- 5W/ft
- Dimming options: 0-10 volt, DMX, DALI, Lumentalk, or Lutron® EcoSystem® enabled

ACCESSORIES

Order separately, refer to each item's specification sheet for ordering information

Control Systems:

LTO2 Lumentouch is a wall mount DMX 512 controller keypad.

LCU Lumencue is a USB / mini SD DMX 512 controller.

LID LumenID is a diagnostic and addressing DMX 512 controller.
It must be specified on all DMX applications.
Refer to LID specification sheet for details.

LTN Lumentone is a simple pre-programmed DMX 512 controller with a push button rotary dial and live feedback.

Control Boxes:

CBX DMX/RDM control box.
Up to six power and data outputs to fixtures or fixture runs.
Ethernet enabled option.
Refer to CBX specification sheet for details.

Cables **(required)**:

LOILC Leader Cable for Lumenfacade Inground 10', 25' or 50' [3m, 7.6m or 15.2m] standard lengths

LOIJC Jumper Cable for Lumenfacade Inground; 2', 4' or 10' [0.6m, 1.2m or 3m] standard lengths

Inground Junction Box (optional):

Lumenfacade Inground IP68 sealed junction box starter kit - **LOI-JBOX** order code.
*Use for stand alone fixtures and/or first of run fixtures

HOW TO ORDER

LOID	100/277				
1	2	3	4	5	6

1

Housing:

LOID - Lumenfacade™ Inground Direct View, 5W/ft

A Lumenfacade Inground fixture includes 1x optical chamber (LOIC), 1x power and control box (PACBOX) and 1x recessed blockout (RBO). The LOIC, PACBOX and RBO are provided according to the output/color, length and control configuration.

2

Voltage:

100/277 - 100-277 volts

3

Length:

12 - 13 1/16 inches (331mm)
24 - 25 1/16 inches (636mm)
36 - 37 1/16 inches (941mm)
48 - 49 1/16 inches (1245mm)

4

Colors and Color temperatures:

27K - 2700K
30K - 3000K
35K - 3500K
40K - 4000K
RD - Red (8-10 weeks lead time)
GR - Green (8-10 weeks lead time)
BL - Blue (8-10 weeks lead time)

5

Control:

NO - No Dimming
LT - Lumentalk Dimming[1]
DIM - 0-10V Dimming[2]
DMX 1FT - DMX Dimming, resolution per foot[1]
DMX 1FX - DMX Dimming, resolution per fixture[1]
DALI - DALI Dimming[1]
ES - Lutron® EcoSystem® Enabled Dimming[3]

6

Option:

ASL - Anti-slip lens

PACBOX - POWER AND CONTROL BOX
RBO - INGROUND BLOCKOUT
LOILC-10 - LEADER CABLE 10FT
LOIJC-10 - JUMPER CABLE 10FT
JBOX - FIXTURE JUNCTION BOX - REQUIRED PER FIXTURE

Notes:

[1] 1% minimum dimming value.
[2] 10% minimum dimming value.
[3] One EcoSystem® address per fixture length. 1% minimum dimming value.

GALLERY 1970LED

The 1970LED Gallery series is large scale, decorative downlight fixture with a spun aluminum shade. The dome is available with two types of shades: straight (S) and flared (F) styles. The luminaire shall measure 24" outside diameter and 16 3/8" overall height. The luminaire shall have a hinged door for tool-less driver and LED access. The luminaire shall be supplied with the line-ground, line neutral and neutral-ground electrical surge protection in accordance with IEEE/ANSE C62.41.2 guidelines. The luminaire shall be U.L. or E.T.L. listed in U.S. and Canada.

[1] Only available with HS-H and HS-C mounting. [2] Not available with Twist-lock photocell. [3] Illuminated LED glow option. [4] Only available with 1970LED-S GR and 1970LED-F GR.

Product Specs

Optical
- IP65 rated. BUG rating of U-0.
- Utilizes high output, high brightness LEDs.
- Operates at -40°C (-40°F) to +50°C (122°F) ambient air temperature range.
- Minimum CRI of 70, CCT 2700, 3500, and 4500K. Call factory for other CCT.
- LM-79 and LM-80 tests in accordance with IESNA standards.
- Lumen depreciation rating L70 > 200,000 hrs. Projected per TM-21 guideline and based on 350mA drive current.
- RoHS Compliant.

Electrical
- 120-277 volt standard and 347-480 volt option available.
- Minimum drivers power factor: >0.9.
- Electrical surge protection in accordance with IEEE/ANSI C62.41.2 guidelines (10kV).
- UL or ETL listed in U.S. and Canada.
- Illuminated LED glow options are provided with 12 LEDs in the upper housing and will increase system wattage 12W.[5]

[5] Will contribute uplight and will be a BUG rating of U-1.

Mechanical
- A large scale decorative downlight fixture. The housing is a spun aluminum bell shade attached to a cast aluminum top.
- The luminaire shall be supplied with an aluminum door frame and lens with tool-less access.
- The fixture is offered with many different hangstraight mounting options to accomodate a variety of installations. See mounting options section.
- Luminaire housing is IP65 rated (BF version only).

Controls
- Optional Twist-lock receptacle only R[1].
- Optional Twist-lock receptacle with photocell R1[1].
- Optional electronic button photocell: PEC (120-277V).[6]

[6] Eliminates IP rating fixture.

Finish
- Durable, color retentive powder coat finish.

Warranty & Standards
LED Systems and Drivers - 7 years. All fixtures shall be free from all defects in materials and workmanship for a period of 7 years from the date of manufacture. The luminaire manufacturer shall warrant the LED boards/system, during the stated warranty period, against failure defined as more than 10 percent of non-operating LEDs.

Drivers (0-10V dimming):
MDL03: 350mA, 120-277V **MDH03:** 350mA, 347-480V

Lens:
FG - Clear Flat Glass Lens
SG - Clear Sag Glass Lens
FSG - Frosted Sag Glass Lens

Soft Vue (coming September 2014)**:**
SV1* - Flat Medium Diffuse Acrylic Lens
SV2** - Flat Heavy Diffuse Acrylic Lens

* Provides moderate reduction in Brightness while only a minimal reduction in lumen output.

**Provides maximum reduction in Brightness while only a nominal reduction in lumen output. Consult photometric files for exact lumen performance.

GALLERY 1970LED

The 1970LED Gallery series is large scale, decorative downlight fixture with a spun aluminum shade. The dome is available with two types of shades: straight (S) and flared (F) styles. The luminaire shall measure 24" outside diameter and 16 3/8" overall height. The luminaire shall have a hinged door for tool-less driver and LED access. The luminaire shall be supplied with the line-ground, line neutral and neutral-ground electrical surge protection in accordance with IEEE/ANSE C62.41.2 guidelines. The luminaire shall be U.L. or E.T.L. listed in U.S. and Canada.

[1] Only available with HS-H and HS-C mounting. [2] Not available with Twist-lock photocell. [3] Illuminated LED glow option. [4] Only available with 1970LED-S GR and 1970LED-F GR.

Product Specs

Optical
- IP65 rated. BUG rating of U-0.
- Utilizes high output, high brightness LEDs.
- Operates at -40°C (-40°F) to +50°C (122°F) ambient air temperature range.
- Minimum CRI of 70, CCT 2700, 3500, and 4500K. Call factory for other CCT.
- LM-79 and LM-80 tests in accordance with IESNA standards.
- Lumen depreciation rating L70 > 200,000 hrs. Projected per TM-21 guideline and based on 350mA drive current.
- RoHS Compliant.

Electrical
- 120-277 volt standard and 347-480 volt option available.
- Minimum drivers power factor: >0.9.
- Electrical surge protection in accordance with IEEE/ANSI C62.41.2 guidelines (10kV).
- UL or ETL listed in U.S. and Canada.
- Illuminated LED glow options are provided with 12 LEDs in the upper housing and will increase system wattage 12W.[5]

[5] Will contribute uplight and will be a BUG rating of U-1.

Mechanical
- A large scale decorative downlight fixture. The housing is a spun aluminum bell shade attached to a cast aluminum top.
- The luminaire shall be supplied with an aluminum door frame and lens with tool-less access.
- The fixture is offered with many different hangstraight mounting options to accomodate a variety of installations. See mounting options section.
- Luminaire housing is IP65 rated (BF version only).

Controls
- Optional Twist-lock receptacle only R[1].
- Optional Twist-lock receptacle with photocell R1[1].
- Optional electronic button photocell: PEC (120-277V).[6]

[6] Eliminates IP rating fixture.

Finish
- Durable, color retentive powder coat finish.

Warranty & Standards
LED Systems and Drivers - 7 years. All fixtures shall be free from all defects in materials and workmanship for a period of 7 years from the date of manufacture. The luminaire manufacturer shall warrant the LED boards/system, during the stated warranty period, against failure defined as more than 10 percent of non-operating LEDs.

Drivers (0-10V dimming):
MDL03: 350mA, 120-277V **MDH03:** 350mA, 347-480V

Lens:
FG - Clear Flat Glass Lens
SG - Clear Sag Glass Lens
FSG - Frosted Sag Glass Lens

Soft Vue (coming September 2014)**:**
SV1* - Flat Medium Diffuse Acrylic Lens
SV2** - Flat Heavy Diffuse Acrylic Lens

* Provides moderate reduction in Brightness while only a minimal reduction in lumen output.

**Provides maximum reduction in Brightness while only a nominal reduction in lumen output. Consult photometric files for exact lumen performance.

VIA 4 LED PENDANT DIRECT/INDIRECT

5 YEARS WARRANTY

LUMENWERX
WWW.LUMENWERX.COM

Shown with HLO optics

DESCRIPTION

Via 4 is the flexible linear LED luminaire system for pendant, surface and recessed or in-wall installation, whether as discrete luminaires, continuous runs or patterns. Via 4 features numerous high-efficiency optical configurations, including separately controlled indirect/direct, wall wash and asymmetric distributions, as well as a wide range of electrical, control and trim options. See separate spec sheets for patterns and other available mountings.

VIA 4 LED PENDANT DIRECT/INDIRECT

5 YEARS WARRANTY

LUMENWERX
WWW.LUMENWERX.COM

Shown with HLO optics

DESCRIPTION

Via 4 is the flexible linear LED luminaire system for pendant, surface and recessed or in-wall installation, whether as discrete luminaires, continuous runs or patterns. Via 4 features numerous high-efficiency optical configurations, including separately controlled indirect/direct, wall wash and asymmetric distributions, as well as a wide range of electrical, control and trim options. See separate spec sheets for patterns and other available mountings.

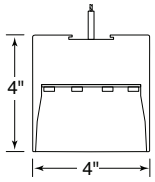
High Performance 4" Aperture (HP-4) - Direct

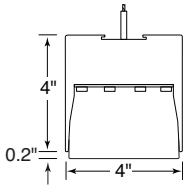
INDUSTRY BEST 10 YEAR LED WARRANTY | 2012 PROGRESS Report SELECTION | LED lighting facts A Program of the U.S. DOE

Date



Project

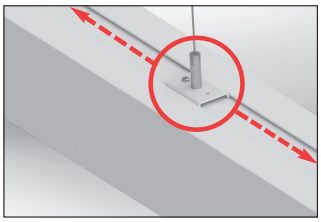
Type



Comments

DESCRIPTION

High Performance 4" Aperture Direct (HP-4 D) is a patented, linear LED luminaire with Flush and Bottom Glow™ options for the downlight. The micro shape delivers excellent performance using an advanced optical design and mid-power LEDs to achieve 90% of initial light output at 100,000+ hours.



Flush Downlight Diffuser (Standard)

Bottom Glow Diffuser (Optional)

DIMENSIONS & BOTTOM GLOW

The optional Bottom Glow diffuser adds a clean line of light along the downlight element.

FLEXIBLE MOUNTING

The flexible mounting bracket adjusts the suspension points along the length of the luminaire to accommodate existing architecture. Suspension points adjust up to 2' in from the end of 8'or 12' fixture lengths and up to 1' in on shorter lengths.

Tailored Lighting
10 working days

TAILORED LIGHTING

Any length greater than 2 feet, in increments down to 1/16th-inch (± 1/32") and 90-degree mitered corners in a single plane.

ORDERING GUIDE

Total Light Output, 3500K, 80 CRI (Lumens) - 4' Luminaire			
S*	**B***	**H***	**V****
1517	1907	2882	3705

Light Output, 3500K, 80 CRI (Lumens Per Foot)			
S*	**B***	**H***	**V****
379	477	720	926

Power (Watts Per Foot)			
S*	**B***	**H***	**V****
3.6	4.6	7.1	9.3

Efficacy, 3500K, 80 CRI (Lumens Per Watt)			
S*	**B***	**H***	**V****
104.7	103.6	101.5	100.1

* Family Correlation based on 4' luminaire 3500K Very High Output (V) test - 120V.
** Correlation based on ITL report: 85124
S - Standard Output, B - Boosted Standard Output, H - High Output, V - Very High Output

Lumen Adjustment Factors - 80 CRI	
3000K	0.985
3500K	1.000
4000K	1.032

Lumen Adjustment Factors - 90 CRI	
3000K	0.746
3500K	0.760
4000K	0.789

Apply a lumen adjustment factor to calculate lumens for the desired CCT and CRI.

SAMPLE LUMEN ADJUSTMENT CALCULATION

High Output (H), 4000K, 90 CRI

Lumen Adjustment Factor = 0.789

Total Light Output =
2882 lm x 0.789 = 2274 lm

Total Light Output per Foot =
720 lm/ft x 0.789 = 568 lm/ft

watts/foot = 7.1 W/ft

$$\textit{Efficacy} = \frac{568\ \frac{lm}{ft}}{7.1\ \frac{W}{ft}} = 80\ \text{lm/W}$$

FINELITE

High Performance 4" Aperture (HP-4) - Direct

SPECIFICATIONS

CONSTRUCTION: Precision-cut 6061-T6 extruded aluminum body. Internal joiner system, plug-together wiring, standard.

ENDCAPS: Flat diecast aluminum endcaps add 0.25" to each end of luminaire.

MITERED CORNER: Illuminated 90° corners in a single plane, with Flush downlight diffuser, standard. Custom angles are available (90° minimum on inside corners), contact factory.

REFLECTORS: Die-formed 20-gauge cold-rolled steel reflectors finished in 96LG High Reflectance white power coat paint.

DOWNLIGHT DIFFUSER: 12' maximum lens length. Flush frost white snap-in lens standard, 73% transmissive, 99% diffusion. Internal secondary diffusers at corners ensure visually seamless, uniform, continuous illumination. Bottom Glow™ frost white snap-in lens option, 73% transmissive, 99% diffusion.

LIGHT OUTPUT: Four lumen packages available, Standard Output (S), Boosted Standard Output (B), High Output (H), and Very High Output (V). A separate chart summarizes lumen distribution and wattage. Light engines are replaceable.

LUMEN MAINTENANCE: 90% of initial light output (L90) at 100,000+ hours; 70% of initial light output (L70) at 200,000+ hours.

DRIVER: Replaceable 120V/277V Constant Current Reduction dimming driver standard. Can be wired dimming or non-dimming. 0-10V dimming controls with a range of 10%- 100%. Dimming to 1% available; consult factory. Driver is fully accessible from below the ceiling. Power Factor: 0.9. Total Harmonic Distortion (THD) <20%. Expected driver lifetime: 100,000 hours.

LUTRON DRIVER OPTIONS: Lut3W-3-wire, LutES-EcoSystem, Lut2W-2-wire.

ELECTRICAL: Optional emergency to generator/inverter wiring, internal generator transfer switch, nightlight wiring, step-dimming driver, backup battery. Factory-choice low-profile backup battery available. 8' minimum fixture length for low profile battery pack. Bodine BSL722 battery pack also available; 4' minimum fixture length. Backup batteries deliver 1300 lumens. Half of a 4' section will be illuminated in emergency mode.

Daylight Sensor Occupancy Sensor **INTEGRATED SENSORS:** Integrated PIR (Passive Infrared) occupancy and/or daylight sensors available with Flush and Bottom Glow downlight diffusers. Refer to Occupancy Sensor and Daylight Sensor tech sheets for more info.

MOUNTING: 50" Fully Adjustable (FA) plated steel aircraft cable with safety stop hardware standard. Contact factory for additional lengths up to 150". The Flexible Mounting Bracket (FM) adjusts the suspension points to accommodate existing architecture. Suspension points adjust up to 2' in from the end of 8' or 12' fixture lengths and up to 1' in on shorter lengths.

FINISHES: Finelite Signal White powder coat standard. Optional Adders: 185 Tiger Drylac's non-metallic RAL colors.

FEED: Standard with one 18-gauge/5-conductor single-circuit feed. 14-gauge feed used when fixture current exceeds 5 amps.

LENGTHS: Any length, 2-foot minimum, in increments down to 1/16th-inch (± 1/32"). 12-foot maximum section length.

LABELS: Fixture and electrical components are ETL-listed conforming to UL 1598 in the U.S.A. and CAN/CSA C22.2 No. 250.0 in Canada. In accordance with NEC Code 410.73 (G), this luminaire contains an internal driver disconnect. Damp Location. Finelite products use electronic components that are RoHS compliant, and the mechanical components of the luminaire have been verified to not knowingly contain any restricted substances listed per RoHS Directive 2002/95/EC.

WEIGHT: 2.8 lb/ft.

WARRANTY: 10-year performance-based warranty on all standard components. Optional accessories such as emergency battery packs are covered by their individual manufacturer warranties.

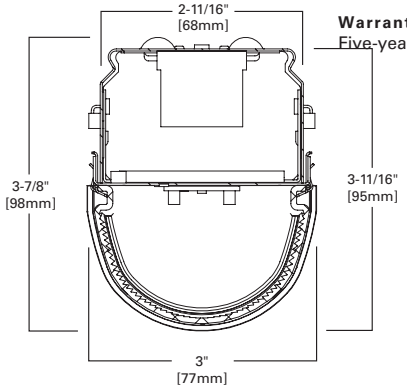
DESCRIPTION

SNLED Lensed is a narrow LED lensed striplight series. This high quality luminaire is dedicated to the latest solid state lighting and electronic driver technology for optimal performance and energy efficiency. This Lensed product is available with three different lens types.

The small size of the SNLED makes it an ideal choice for size restricted architectural applications. The SNLED Series can be the illumination solution in commercial, industrial, retail and residential applications. Fixtures can be used in storage/utility areas, coves, display cases, shops, task and general area lighting.

SPECIFICATION FEATURES

Construction
Channel is die formed cold rolled steel with numerous KOs for ease of installation. Groove for Tong Hanger. End plate quickly converts to snap-in channel connector for continuous row alignment. Channel/wireway cover secured with sheet metal screws.



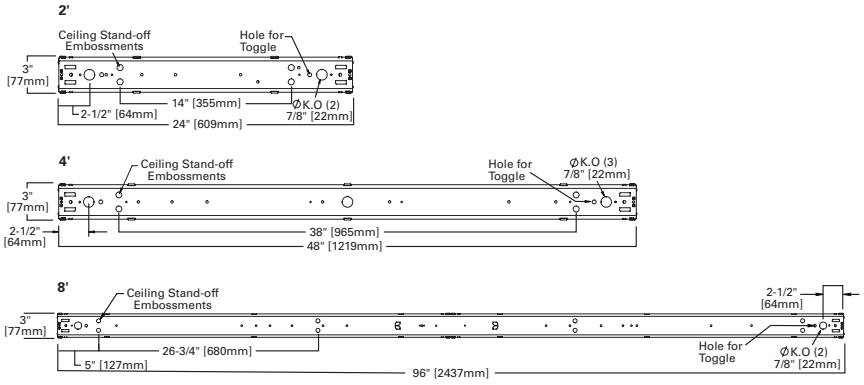
Controls
Equipped standard with a 0-10V continuous dimming driver that works with any standard 0-10V control/dimmer. Dimming range is 10% to 100%; varies by control device. Combine with energy-saving products like occupancy sensors, day lighting controls, and lighting relay panels to maximize energy savings. For motion control, reference options for both end and middle of the row applications.

Electrical
Long-Life LED system coupled with electronic (120-277V) driver to deliver optimal lighting performance. LED's available in 3000K, 3500K, 4000K, or 5000K with a CRI ≥ 85. Other color temperatures are available. Projected life is 60,000 hours at 70% lumen output. This driver is 0-10V dimming standard.

Emergency Battery Pack Option
Optional 120v-277v integral emergency battery pack is available in 7-watts or 14-watts to meet critical life-safety lighting requirements. The 90-minute batteries provide constant power to the LED system, ensuring code-compliance. A test switch/indicator button can be tested safely from the ground using a laser pointer, while the patented EZ Key prevents accidental discharge of the battery during construction. See ordering information for details.

Finish
Multistage iron phosphate pretreatment ensures maximum bonding and rust inhibitor. High reflective paint after fabrication, baked white enamel finish is standard.

Channel/Wireway Cover
Die formed heavy gauge steel. Tight fit for ease of maintenance.



Shielding
Offers three different lensed optical distributions. (LC) Clear with linear optical ribs. (LN) Semi-frost for narrow distribution. (LW) Full frost for wide distribution.

Installation
Fixture may be surface, pendant, or stem mounted. See accessories below in ordering information.

Compliance
Components are UL recognized. Indoor luminaires are cULus listed for 40° C ambient environments, RoHS compliant, damp location listed, and comply with IESNA LM-79. LEDs comply with LM-80 standards. DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.

Warranty
Five-year warranty.

NOTES: [1] 4 ft. only. [2] Nominal lumen values. [3] Two drivers required. [4] 4 ft. and 8 ft. only. [5] Motion Sensor offers dimmability. [6] For a complete listing of Fifth Light products, visit www.eaton.com/lightingsystems [7] With integral test switch/indicator/laser test. For approximate delivered lumens multiply the lumens per watt of the desired fixture by the wattage of the emergency battery pack (100 lm/W x 7=700 lumens). IES-format photometry for luminaire under emergency operation available. [8] 2 ft. and 4 ft. only. [9] Stocked by mid April 2015. [10] DesignLights Consortium™ Qualified and classified for DLC Standard (all lumen packages), refer to www.designlights.org for details. [11] 3700 lumen and above. [12] Step dimming not available. [13] HCD driver option not available with 6100, 6700, 7400, 7500 and 8300 lumen packages. [14] Not currently listed on DLC QPL. [15] Used to transfer fixture to secondary power source for life-safety operation. When used with a dimming fixture, two devices are required to ensure control is disabled while operating under emergency power.

DESCRIPTION

Via 4 is the flexible linear LED luminaire system for pendant, surface and recessed or in-wall installation, whether as discrete luminaires, continuous runs or patterns. Via 4 features numerous high-efficiency optical configurations, including separately controlled indirect/direct, wall wash and asymmetric distributions, as well as a wide range of electrical, control and trim options. See separate spec sheets for patterns and other available mountings.

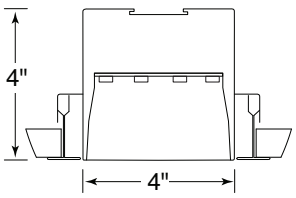
High Performance 4" Aperture (HP-4) - Recessed

Date

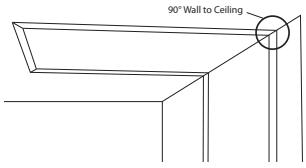
Project



Type

Comments

DESCRIPTION



High Performance 4" Aperture Recessed (HP-4 R) is a patented, linear LED luminaire. HP-4 R is the first recessed linear LED luminaire to feature On-Grid™ mounting for standard lengths, making installation quick and easy.

Flush Diffuser (Standard)

DIMENSIONS & DIFFUSER

Glare-free experience is attained with mid-power LEDs and a precise diffuser to eliminate pixilation.

MITERED ANGLES

Fully illuminated corners have internal secondary diffusers to ensure against light leaks. Custom angles are available.

Tailored Lighting
10 working days

TAILORED LIGHTING

Any length greater than 2 feet, in increments down to 1/16th-inch (± 1/32") and 90-degree mitered corners in a single plane.

ORDERING GUIDE

Lumen Adjustment Factors - 80 CRI	
3000K	0.985
3500K	1.000
4000K	1.032

Lumen Adjustment Factors - 90 CRI	
3000K	0.746
3500K	0.760
4000K	0.789

Apply a lumen adjustment factor to calculate lumens for the desired CCT and CRI.

SAMPLE LUMEN ADJUSTMENT CALCULATION

Recessed (H), 4000K, 90 CRI

Lumen Adjustment Factor = 0.789

Total Light Output =
2898 lm x 0.789 = 2287 lm

Total Light Output per Foot =
725 lm/ft x 0.789 = 572 lm/ft

watts/foot = 7.1 W/ft

$$Efficacy = \frac{572\ \frac{lm}{ft}}{7.1\ \frac{W}{ft}} = 80\ \text{lm/W}$$

SPECIFICATIONS

CONSTRUCTION: Precision-cut 6061-T6 extruded aluminum body. Internal joiner system, plug-together wiring, standard. Housing is powder coated.

ENDCAPS: Flat endcaps add 0.05" to each end of luminaire.

MITERED CORNERS: Illuminated 90° corners in a single plane, with Flush downlight diffuser, standard. Custom angles are available (90° minimum on inside corners), contact factory.

REFLECTORS: Die-formed 20-gauge cold-rolled steel reflectors are finished in 96 LG high reflectance matte white powder coat paint.

DOWNLIGHT DIFFUSER: 12' maximum diffuser length. Flush frost white snap-in diffuser standard, 73% transmissive, 99% diffusion. Internal secondary diffusers at corners ensure visually seamless, uniform, continuous illumination. Frost white snap-in diffuser option, 73% transmissive, 99% diffusion.

LIGHT OUTPUT: Four lumen packages available, Standard Output (S), Boosted Standard Output (B), High Output (H), and Very High Output (V). A separate chart summarizes lumen distribution and wattage. Light engines are replaceable.

LUMEN MAINTENANCE: 90% of initial light output (L90) at 100,000+ hours; 70% of initial light output (L70) at 200,000+ hours.

DRIVER: Replaceable 120V/277V Constant Current Reduction dimming driver standard. Can be wired dimming or non-dimming. 0-10V dimming controls with a range of 10%- 100%. Dimming to 1% available; consult factory. Driver is fully accessible from below the ceiling. Power Factor: 0.9. Total Harmonic Distortion (THD) <20%. Expected driver lifetime: 100,000 hours.

LUTRON DRIVER OPTIONS: Lut3W-3-wire, LutES-EcoSystem, Lut2W-2-wire.

ELECTRICAL: Optional emergency to generator/inverter wiring, internal generator transfer switch, nightlight wiring, step-dimming driver, backup battery. Chicago Plenum option. Factory-choice low-profile backup battery available. 8' minimum luminaire length for low profile battery pack. Bodine BSL722 battery pack also available; 4' minimum luminaire length. Backup battery delivers 1300 lumens. Half of a 4' section will be illuminated in emergency mode.

Daylight Sensor Occupancy Sensor **INTEGRATED SENSORS:** Integrated PIR (Passive Infrared) occupancy and/or daylight sensors available with Flush downlight diffusers. Refer to Occupancy Sensor and Daylight Sensor tech sheets for more info.

MOUNTING: Standard bracket design works with most lay-in ceiling types. Brackets secure luminaire to the ceiling grid from above. Tie-in T-Bar brackets. Connect luminaire to T-Bar for securing to structure. Consult local codes for tie-wire recommendations.

FEED: Standard with one 18-gauge/5-conductor single-circuit feed. 14-gauge feed used when luminaire current exceeds 5 amps. Optional 6' flex conduit whips available.

LENGTHS: Any length, 2-foot minimum, in increments down to 1/16th-inch (± 1/32"). 12-foot maximum section length.

LABELS: Luminaire and electrical components are ETL-listed conforming to UL 1598 in the U.S.A. and CAN/CSA C22.2 No. 250.0 in Canada. In accordance with NEC Code 410.73 (G), this luminaire contains an internal driver disconnect. Damp Location. IC-Rated. Finelite products use electronic components that are RoHS compliant, and the mechanical components of the luminaire have been verified to not knowingly contain any restricted substances listed per RoHS Directive 2002/95/EC.

WEIGHT: 2.8 lb/ft.

WARRANTY: 10-year performance-based warranty on all standard components. Optional accessories such as emergency battery packs are covered by their individual manufacturer warranties.

Protected by one or more US Patents: 8915613; D702,391; D702,390; D700,732

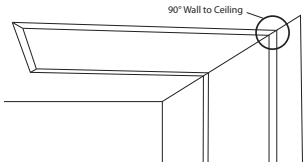
DESCRIPTION



High Performance 4" Aperture Recessed (HP-4 R) is a patented, linear LED luminaire. HP-4 R is the first recessed linear LED luminaire to feature On-Grid™ mounting for standard lengths, making installation quick and easy.

Flush Diffuser (Standard)

DIMENSIONS & DIFFUSER

Glare-free experience is attained with mid-power LEDs and a precise diffuser to eliminate pixilation.

MITERED ANGLES

Fully illuminated corners have internal secondary diffusers to ensure against light leaks. Custom angles are available.

Tailored Lighting
10 working days

TAILORED LIGHTING

Any length greater than 2 feet, in increments down to 1/16th-inch (± 1/32") and 90-degree mitered corners in a single plane.

ORDERING GUIDE

Sample Number: HP-4 R - 32' - S - 8 - 35 - F - 120V - SC - C1 - OBO

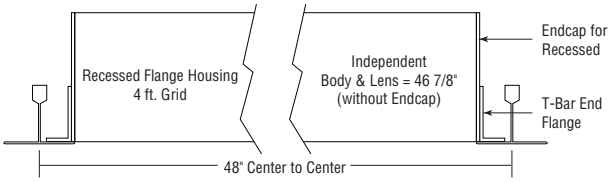
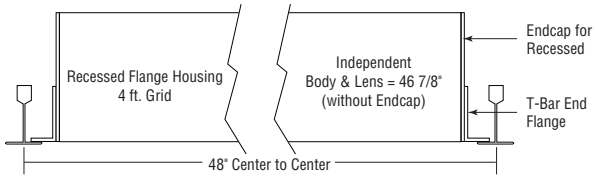
SHEET ROCK INSTALLATION:



Flex conduit is secured to top of luminaire. Support to structure using All-Thread. All-Thread support holes are located on each end of the luminaire.

T-BAR INSTALLATION:



HP-4 R for T-Bar installations comes standard with a splice plate at the end of the luminaire. Mounting brackets (supplied) secure the luminaire to T-Bar and provide support to structure location. All starter/independent luminaires are 1 1/8" shorter than nominal. All joiner/ender luminaire are normal length.

SPECIFICATIONS

CONSTRUCTION: Precision-cut 6061-T6 extruded aluminum body. Internal joiner system, plug-together wiring, standard. Housing is powder coated.

ENDCAPS: Flat endcaps add 0.05" to each end of luminaire.

MITERED CORNERS: Illuminated 90° corners in a single plane, with Flush downlight diffuser, standard. Custom angles are available (90° minimum on inside corners), contact factory.

REFLECTORS: Die-formed 20-gauge cold-rolled steel reflectors are finished in 96 LG high reflectance matte white powder coat paint.

DOWNLIGHT DIFFUSER: 12' maximum diffuser length. Flush frost white snap-in diffuser standard, 73% transmissive, 99% diffusion. Internal secondary diffusers at corners ensure visually seamless, uniform, continuous illumination. Frost white snap-in diffuser option, 73% transmissive, 99% diffusion.

LIGHT OUTPUT: Four lumen packages available, Standard Output (S), Boosted Standard Output (B), High Output (H), and Very High Output (V). A separate chart summarizes lumen distribution and wattage. Light engines are replaceable.

LUMEN MAINTENANCE: 90% of initial light output (L90) at 100,000+ hours; 70% of initial light output (L70) at 200,000+ hours.

DRIVER: Replaceable 120V/277V Constant Current Reduction dimming driver standard. Can be wired dimming or non-dimming. 0-10V dimming controls with a range of 10%- 100%. Dimming to 1% available; consult factory. Driver is fully accessible from below the ceiling. Power Factor: 0.9. Total Harmonic Distortion (THD) <20%. Expected driver lifetime: 100,000 hours.

LUTRON DRIVER OPTIONS: Lut3W-3-wire, LutES-EcoSystem, Lut2W-2-wire.

ELECTRICAL: Optional emergency to generator/inverter wiring, internal generator transfer switch, nightlight wiring, step-dimming driver, backup battery. Chicago Plenum option. Factory-choice low-profile backup battery available. 8' minimum luminaire length for low profile battery pack. Bodine BSL722 battery pack also available; 4' minimum luminaire length. Backup battery delivers 1300 lumens. Half of a 4' section will be illuminated in emergency mode.

Daylight Sensor Occupancy Sensor **INTEGRATED SENSORS:** Integrated PIR (Passive Infrared) occupancy and/or daylight sensors available with Flush downlight diffusers. Refer to Occupancy Sensor and Daylight Sensor tech sheets for more info.

MOUNTING: Standard bracket design works with most lay-in ceiling types. Brackets secure luminaire to the ceiling grid from above. Tie-in T-Bar brackets. Connect luminaire to T-Bar for securing to structure. Consult local codes for tie-wire recommendations.

FEED: Standard with one 18-gauge/5-conductor single-circuit feed. 14-gauge feed used when luminaire current exceeds 5 amps. Optional 6' flex conduit whips available.

LENGTHS: Any length, 2-foot minimum, in increments down to 1/16th-inch (± 1/32"). 12-foot maximum section length.

LABELS: Luminaire and electrical components are ETL-listed conforming to UL 1598 in the U.S.A. and CAN/CSA C22.2 No. 250.0 in Canada. In accordance with NEC Code 410.73 (G), this luminaire contains an internal driver disconnect. Damp Location. IC-Rated. Finelite products use electronic components that are RoHS compliant, and the mechanical components of the luminaire have been verified to not knowingly contain any restricted substances listed per RoHS Directive 2002/95/EC.

WEIGHT: 2.8 lb/ft.

WARRANTY: 10-year performance-based warranty on all standard components. Optional accessories such as emergency battery packs are covered by their individual manufacturer warranties.

Protected by one or more US Patents: 8915613; D702,391; D702,390; D700,732

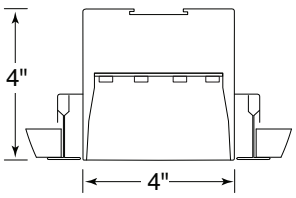
High Performance 4" Aperture (HP-4) - Recessed

Date

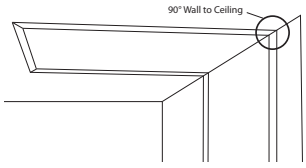
Project



Type

Comments

DESCRIPTION



High Performance 4" Aperture Recessed (HP-4 R) is a patented, linear LED luminaire. HP-4 R is the first recessed linear LED luminaire to feature On-Grid™ mounting for standard lengths, making installation quick and easy.

Flush Diffuser (Standard)

DIMENSIONS & DIFFUSER

Glare-free experience is attained with mid-power LEDs and a precise diffuser to eliminate pixilation.

MITERED ANGLES

Fully illuminated corners have internal secondary diffusers to ensure against light leaks. Custom angles are available.

Tailored Lighting
10 working days

TAILORED LIGHTING

Any length greater than 2 feet, in increments down to 1/16th-inch (± 1/32") and 90-degree mitered corners in a single plane.

ORDERING GUIDE

Sample Number: HP-4 R - 32' - S - 8 - 35 - F - 120V - SC - C1 - OBO

6' | HP-4 R | | | | | | | | | |

Finelite Series HP-4 R
Length (Minimum 2', increments accurate to 1/16th" (± 1/32"), standard)
Light Output (S - Standard, B - Boosted Standard, H - High, V - Very High)
LED CRI (8 - 80 CRI min (standard), 9 - 90 CRI min)
LED Color Temperature (30 - 3000K, 35 - 3500K, 40 - 4000K)
Downlight Diffuser Option (F - Flush (standard))
Voltage (120V, 277V)
Circuiting (SC - Single Circuit)
Mounting (C1 - 1" T-Bar, C2 - 9/16" T-Bar, C3 - screw slot, C3F - flush screw slot, VF - Visible Flange, C2T - 9/16" tegular, C1T - 1" tegular, SF - Spackle Flange, TZ6 (C1, C2, C2T, C3, C3T) - tech zone 6")
Integrated Sensor (OBO - Occupancy Sensor, OBD - Daylight)

*Contact factory for switching options.

85	70	69	70	72	71	78
90	0	0	0	0	0	

Total Light Output, 3500K, 80 CRI (Lumens) - 4' Luminaire			
S*	**B***	**H***	**V****
1525	1917	2898	3726

Light Output, 3500K, 80 CRI (Lumens Per Foot)			
S*	**B***	**H***	**V****
381	479	725	932

Power (Watts Per Foot)			
S*	**B***	**H***	**V****
3.6	4.6	7.1	9.3

Efficacy, 3500K, 80 CRI (Lumens Per Watt)			
S*	**B***	**H***	**V****
105	104	102	101

* Family Correlation based on 4' luminaire 3500K Very High Output (V) test - 120V.
** Correlation based on ITL report: 85128
S - Standard Output, B - Boosted Standard Output, H - High Output, V - Very High Output

Lumen Adjustment Factors - 80 CRI	
3000K	0.985
3500K	1.000
4000K	1.032

Lumen Adjustment Factors - 90 CRI	
3000K	0.746
3500K	0.760
4000K	0.789

Apply a lumen adjustment factor to calculate lumens for the desired CCT and CRI.

SAMPLE LUMEN ADJUSTMENT CALCULATION

Recessed (H), 4000K, 90 CRI

Lumen Adjustment Factor = 0.789

Total Light Output =
2898 lm x 0.789 = 2287 lm

Total Light Output per Foot =
725 lm/ft x 0.789 = 572 lm/ft

watts/foot = 7.1 W/ft

$$Efficacy = \frac{572\ \frac{lm}{ft}}{7.1\ \frac{W}{ft}} = 80\ \text{lm/W}$$
